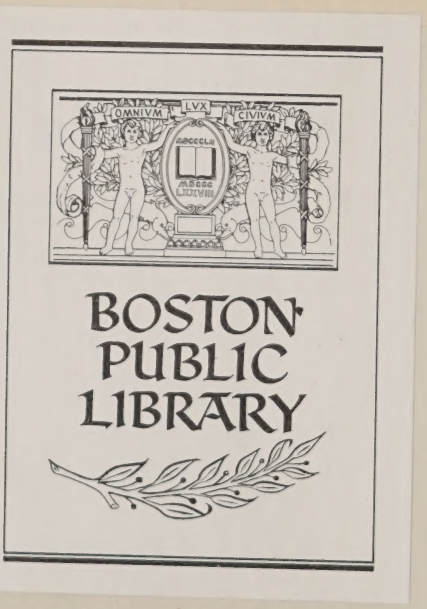
PRESENTED TO

THE MALDEN PUBLIC LIBRARY,

BY E. F. BICKFORD.

Malden, Oct. 1st, 1885.



The Nation:

A WEEKLY JOURNAL

DEVOTED TO

POLITICS, LITERATURE, SCIENCE, AND ART.

VOLUME XV.

FROM JULY 1 TO DECEMBER 31, 1872.

NEW YORK:

E. L. GODKIN & CO., PUBLISHERS.

1872.

the support of Mr. Fenton and Mr. Tweed. Mr. W. P. Kellogg runs for Governor in order that he may be sent back to the United States Senate, of which body he is now an ornament; or is not an ornament. To this end he makes an agreement with various people, and, among others, with Mr. C. C. Antoine, of Caddo, of whom it is said that, being bought and sold in the late legislature, he, on one occasion, brought the very large price of $40,000, which is "ruling high" for New Orleans. Another party to the gubernatorial transaction is Mr. O. C. Blandin, recently a tax-collector, and of such a sort that up to this time only two hundred and fifty receipts have been produced in cases where he had returned the taxpayer as delinquent. For Attorney-General on this ticket, we have Mr. A. P. Field, the gentleman who assaulted Judge Kelley in Washington. One would say that all "the great organizing ability of Mr. Casey"—as the *Times* has it—and the services of more revenue cutters than one, would be requisite to carry these candidates through. Or, rather, one would feel sure of it were it not that the most prominent Liberal Republican is Mr. Warmoth. What, now, is one to wish for Louisiana? Her politics were a simpler matter when the question was between the New Orleans rioter and the negro voter. On the whole, the Custom-house seems to be the stablest thing there.

The Republicans of Philadelphia have been making an experiment of which we can at least say that the thought of trying it is among the hopeful signs of the times, though we believe that it has resulted in no improvement in the character of the candidates for city and county offices. These nominations would regularly have been made in a convention of delegates packed in the usual way (and in Philadelphia they know how to pack delegate conventions), but in this instance they proceeded, nominally at least, from the rank and file of the party, specially summoned to vote them. The "Crawford County System" employed for this purpose has these distinctive features: a list of candidates, open to all aspirants, either by personal application or through the agency of their friends, on payment of a fee towards meeting the expenses of printing the tickets; liberty on the voter's part to choose from this list by erasing the names objectionable to him; election by plurality from among the candidates thus voted for. Thus, in the case of the City Commissioner, where but two candidates were in the field, the successful one had 15,568 votes against 10,096 for his rival—a clear majority; but there were six candidates for Recorder of Deeds, and the highest received only 9,343 votes in a polling of 28,582. Moreover, as there was no possibility of deciding off-hand whether a voter who had presented himself was truly a Republican or not, the party managers could have had no difficulty in packing the polls, where they did not prefer the good old way and simpler plan of counting out the men not of their own choice; and it seems to be agreed that some of the nominees owed their success to the suffrages of persons who commonly sell their votes to the Democratic party, and some to the figuring of the judges after the polls were closed. An election contested on these grounds would, if entertained by the courts, offer some novel issues.

The list, as we have said, is not remarkable for its goodness; it may, perhaps, be better than a convention would have imposed upon the party, but we shrewdly suspect it to be just about exactly the self-same thing. The Reformers are not content with it, and have put a separate ticket in the field, in some portions of which they will have the support of the Democrats, who have also made nominations. The struggle, therefore, will not be devoid of interest; all the more because the regular Republicans cannot be compelled to vote for the candidates of the Crawford County System, in spite of the share they took in the nomination. Is it too much to hope that the Reformers and Democrats may next time agree with the Republicans in giving a useful extension to the System on such a basis as this—the formation of a joint committee to receive and publish the names of candidates (adding to the name of each the name of the party with which he is identified); to collect the fees of enrolment, and to provide uniform ballots, each containing the nominations of all parties for a given office; to superintend the strict registration of voters in advance of the day of election, and to unite in detecting "repeaters" and "rounders"? We do not think the Crawford County System the best for an experiment of this sort, or for permanent use, but it could be equitably applied, and it would help to demonstrate the possibility of important ameliorations of our political machinery.

The Western editor who recently called his editorial opponent "a tank of mendacity," and remarked on the same gentleman's announcement that he had lost a mule that it was "the greatest case of self-forgetfulness on record," might call at this office and hear of something to his advantage. We see little prospect of being able to carry on the campaign with anything like the vigor of language necessary or the intimate knowledge of the private history of our contemporaries. We have all along been confident that we should have an unusual share of personalities during this canvass, even though we should miss hearing the familiar "You lie, you villain, you lie"; but they are coming in earlier, hotter, stronger, and faster than we ever bargained for. The first one of any great consequence was the remark from one of our exchanges, which is not an organ and shall be nameless, that another exchange's office was like "any other place of prostitution," whereupon the injured paper, an able and dignified contemporary, at once withdrew formally a conjecture which it had civilly made a day or two previously, to the effect that perhaps, no one could tell, the unorganic editor might intend to conduct himself like a gentleman in his intercourse with other journals, and very differently from the unmannerly old person who had preceded him. Things were clearly getting worse when another most dignified and able contemporary wanted to know if a man was a fit candidate for the Presidency who, in '43 or thereabouts, was accessary to the purloining of a gentleman's private letters? By-and-by, the journal "which is not an organ," as the *Evening Post* likes to remind it, replying perhaps to the petty larceny charge, said that in its opinion the *Herald* did rather a bright thing when it spoke of a certain journal as the Evening *Ghost*. But these are love-pats, and the pleasant, discreet converse of the wise, compared to the reviling, making of mouths, screaming, and bloody and murderous threatenings and defiances that are now going on between two others of our respected exchanges. The editor of one has the misfortune of having for the initial letter of his middle name the letter A; so his friend across the way spells out in full for him an alleged middle name—as, for instance, his name being let us say "John A. Smith," our quarto exchange each morning has it "John Assassin Smith," in such headlines of paragraphs as "What Assassin Smith thinks," "John Assassin Smith's views six months ago," and the like. Naturally moved by this and by the assertion that "John A. Smith is the most cowardly, venal, and reckless libeller now living," our other respected exchange, a folio, actually replies to the quarto in these words, which we quote without other change than two omissions: "Whoever says that the editor of the —— is venal, is a liar, a libeller, and a scoundrel. As to the charge of cowardice, the editor of the —— has a perpetual opportunity to put that to the test which he persistently neglects to improve." We ought to have an amendment to the Constitution extending the Presidential term to seven years. These quadrennial exhibitions come too rapidly. Meantime, we advise the appearance at least of amity and love. We know it is hard; we ourselves should like to speak out all we think about some of the brethren; but the constraint is civilizing in its tendency, and we urge the whole fraternity to imitate our example, and be always civil to everybody, even to the froward and unthankful.

The Orangemen and their Roman Catholic enemies have at last begun trying to discuss their differences in a more American fashion than is usual with those two classes of citizens; but we cannot say that they showed great capacity for the mode of arbitrament which rests upon a belief in the power of talk—unless of very warm talk. They may, however, yet bring matters to bear so that "Croppies, Lie Down"

may be refrained from when the Orange procession marches, and several other little amenities foregone. Public opinion among the Americans is very strong in favor of upholding the "right of free procession"—a new palladium of human liberties even in America, and what the feeling is which lies back of that opinion everybody knows. At the same time, we hope it may not be long before an enlightened public opinion will demand of the Orangemen that they discontinue a parade which in some of its features is symbolical of as bad and cruel a tyranny as a minority ever exercised over a majority, and which directly incites to a breach of the peace. The courage and the faithfulness to principle which these men have shown will always be respected, but small esteem can be given the fierce bigotry which so clouds their naturally strong sense and patriotism that they persist in cherishing here, on American soil, for their glory and the annoyance of everybody else, a bitter feud which surely had no right to transplantation.

We suppose everybody, except Mr. Bancroft Davis, is heartily glad to see the final disappearance into thin air and out of sight for ever of the famous Indirect Claims. It is wonderful to look back and think what a tremendous bore, and see what a piece of puerility they were. The arbitrators decided with reported unanimity that they were altogether untenable, and they were dismissed forthwith. This action on the part of the Tribunal has naturally afflicted Mr. Davis with chagrin, as he makes manifest in a despatch to Mr. Fish written after the fate of his claims was fully clear, and which the Secretary has since printed. As Mr. Davis has, however, filled all the rest of us with chagrin, we suppose him not to be attracting to himself any great amount of sympathy, and we fancy he could retire from public employment with the sincere assent of a vast majority of his countrymen, whose good name he has done about as much to hurt as any gentleman of equal prominence that we can recollect of late years. The *Tribune* of this city is perhaps the only journal likely to regret his departure; it was almost the only influential journal which continued, down to a late date, to press the Davis views, and these were not the views as to the right conduct of our international affairs which were long held by many well-informed citizens who brought good judgment to their consideration. It was not very long before the country began to exercise its good sense on the subject, and the result should be a lesson to all politicians who distrust the people's ability to decide a plain question of morals and business. By the way, as Liberal journalists, anxious to remove men on horseback, despotic Cæsars, people who "have no statesmanship," let us take counsel with each other and enquire what great statesman it was, and how long he had been in training, who invented these same wise claims? How well did he know his business of "statesmanship," for knowing which we have given him honors and emoluments these twenty or thirty years? Let us, by all means, since scapegoats are the fashion, have a large and well-selected assortment of them.

To-day a year ago, Mr. Stanley, the *Herald* correspondent who had been sent in search of Dr. Livingstone, was writing his first letter to inform the world of his progress, dating at "Kwihara, District of Unyanyembe," a point a little more than two-thirds of the distance between Zanzibar and Ujiji, his objective point, on Lake Tanganyika. On Tuesday the *Herald* printed a telegraphic abstract of letters from the same source, confirming the more or less suspicious and unauthenticated reports of Stanley's arrival at Ujiji and meeting with Livingstone, who, on the 16th of October, accompanied him back as far as Unyanyembe, "where they passed twenty-eight days together, exploring the district," afterwards returning to Ujiji to spend Christmas. The date of Stanley's sending off this intelligence is given as March 14, 1872. As for Dr. Livingstone, he ees two years' work ahead for him before he can return with proofs of the real source of the Nile. He is said to have satisfied himself that Lake Tanganyika is not among the feeders of that river, but that the Chambeze River is. Of this he followed the course for seven hundred miles till his supplies gave out, and has some one hundred and eighty yet to explore—apparently in order to establish its connection with Baker's Lake Albert Nyanza. We cannot say that this despatch leaves everything satisfactorily accounted for, Dr. Livingstone's safety alone being certified, unless we should say also his seeming indifference to the world's anxiety in regard to him. Had he been in the neighborhood of Ujiji all this time, this indifference would have been surprising, and not easy to excuse; but the scene of his explorations was, according to all accounts, in the country to the west of Lake Tanganyika, which he had to cross in order to join Stanley. If his conjecture in regard to the Chambeze be correct, the actual fountain-head of the Nile lies immediately to the north of Lake Nyassa—*i.e.*, in latitude 10° S.

It is hard to say whether the new treaty concluded between the German Empire and the French Republic, and signed last Saturday night by Count Arnim and M. de Rémusat, but still subject to ratification by the German Federal Council and the French National Assembly, is likely to strengthen or to impair the influence of M. Thiers, of late so violently assailed by the forces of the Right in the French Legislature. The main stipulations of the treaty are reported to be the following: Two months after the ratification, which is to take place within one week, France has to pay one-half of the third milliard francs ($100,000,000) of the war indemnity, whereupon the Germans evacuate the Departments of Marne and Haute-Marne; March 1, 1873, she has to pay the second half of that milliard; and March 1, 1874, the whole fourth milliard, which is to be followed by the evacuation of Ardennes and Vosges; and the payment of the last milliard, with the interest accrued on the indemnity, is to be made March 1, 1875, when the final evacuation of all French territory is to take place, the Germans to the last retaining the full strength of their army of occupation. The gain to France consists in the speedier recovery of the Departments of Marne and Haute-Marne, and the later payment of the last milliard, which to the national feeling of the French people must appear more than counterbalanced by the Germans continuing to occupy the Department of Meuse, the united remnants of Meurthe and Moselle, and the fortress of Belfort, a full year beyond the term set for the final evacuation of France by the original stipulations of the treaty of peace. Rational observers, however, will easily discover both parties to be gainers by the new arrangement.

The Government has introduced in the German Reichstag a law prolonging for one year from January next the present dictatorship in Alsace-Lorraine. The law of June 9, 1871, of which this is a proposed amendment, fixed Jan. 1, 1873 as the date at which the new provinces would come under the general operation of the laws of the Empire. The Government would even then have preferred the extension which it now asks for, but yielded in the hope, rather than the expectation, of perfecting its reconstructive work in the term assigned. Experience has shown that the task, in spite of the intelligence and prodigious industry with which it was entered upon, was too great to be compressed into a year and a half. One effect of still further delay, if it is granted, will be the postponement of the elections in Alsace-Lorraine for deputies to the Reichstag, which otherwise would fall in February next. That this is a prudent consideration appears from the fact that the populace is very much wrought up just now, and will continue to be till October, over the question whether to choose France or Germany for permanent domicile and citizenship; and in the half-year that would be left before election-time, it is clear that the passions of this crisis would hardly have subsided enough to leave the voters in a sober and patriotic frame of mind—patriotic from the German point of view not only, but from the electors' deliberate choice of a country. Eighteen months hence the measures of the provisional government will have had a fairer chance to justify themselves in practice, and generally it may be said that the problem whether the new subjects of the Empire are irreconcilable and unassimilable will be much nearer solution than it is at present.

A "POLITICAL ANOMALY."

THIS is the euphemism used by Governor Randolph to persuade the Democratic party of New Jersey that in supporting Mr. Greeley they will be guilty of nothing worse than eccentricity. We must expect during the next few months to hear persons called by their right names much more frankly than things. No canvass in our political history has ever proceeded on so shameless a negation of principles, after so hopeless an attempt to establish them as the basis of combination. As regards the new leader whom it is proposed to promote from the post of trumpeter in one host to the captaincy of the other, whom every one is swift to deny as his choice and slow to accept "at the bidding of desperation under the mistake of expediency," one of two things must be true: Either Mr. Greeley leaps into the arms of enemies he has spent a long life in fighting and reviling with might and main, driven by the notion that his bygone sound and fury will be taken to signify nothing, or else he embraces the Greeks because they offer gifts. And the party which is invited to take him for leader must choose between two excuses, alike in effrontery, for doing so. The Democrats are asked to pretend that there is some sufficient common ground on which they may join him in attacking the Administration, all former and permanent wars being composed in truce, or else they are asked to use his services as a deserter, and hang him in their triumph.

The capacity for swallowing formulas and facts along with them which Congressman R. B. Roosevelt opens his mouth to betray would delight Carlyle. His instructions to the delegates from this State to the Baltimore Convention, volunteered with such authority as an official position in the pure calm air of Washington may give them, backed by a soundness of judgment which accepts the conversion of popular sentiment "in a few days" from disgust to delight with the Cincinnati nominations, seem not very likely to impose on any thinking men among them. They will be apt to ask before even reading his manifesto, whether his steps towards his official position entitle him to a respectful hearing, and whether the kind of Christian forgiveness of newspaper-enemies which gives such a grace to individual character, affords a safe or creditable rule for party action. The thin veil he offers them to cover the deformity of the new alliance is even less decent because more hypocritical than a cynical profession of mere eagerness to regain power would be. Mr. Greeley is to be loved and elected by the Democrats, says Mr. Roosevelt, because he thinks with them on the only three prominent matters of dispute at present affecting the country, namely: corruption in office, Federal centralization opposing State rights, and the demand of the blacks for supremacy under special laws disadvantageous to the whites. The common sense of any party whatever may be trusted to save us from the last of these national dangers which we now hear of for the first time. It is a curious instance of the inversion of political rôles effected by the canvass, that the very same man should be invoked to stay an imaginary peril whose ferocious sentimentalism and want of foresight were active causes in bringing on the real perils from this quarter; that the Southern whites should be referred to their insulter for protection, and the blacks to their instigator for discouragement. As for the advice to support the Cincinnati candidate as the purifier of official corruption, it must be irony that inspires it. This augur at the Capitol is laughing in his sleeve at his rural friends. There was not time for the contemptuous surprise that saluted Mr. Greeley's name to subside, before the party hacks throughout the country caught the opportunity they had contrived, and thronged to his headquarters. What reflecting man does not dread as the most assured result of his election that this troop will become his official bodyguard, and will transfer to Washington the system of rings, gathering the bad of both parties into a conspiracy of plunder, inflamed to tenfold rapacity by the greatness of the scale and the occasions? Even with a resolute, clear-headed judge of men, this danger would be formidable.

The drift of the Government towards centralization is the most serious danger which awakens the fears of thinking men of all parties, and should be, if the intellectual history of the party means anything, the danger which the Democracy — not the Blairs and the office-hunters, but the Democracy—is most anxious to avert. Resistance to this tendency is that fundamental principle of the old-fashioned Democratic party which their successors are invited quietly to drop by putting themselves under a pilot who will steer them straight with the current. The character of his mind, his moral temper, his party training, all warp him in that direction. What the nation most needs now is a chief who will struggle against, not hurry on, this strong set of popular sentiment and circumstances. It is inevitable in a complex frame of government such as ours is. Like the system of Saturn and his rings, stability in the whole is the result of constant oscillation among the parts. While the centrifugal force was tending towards disruption, Mr. Greeley resisted it, vehemently and honestly, till it culminated and was dissipated in civil war. Now that the system sways towards its periodic inverse movement, it sweeps him irresistibly with it. His discernment is too superficial to see the new danger, his prejudices too deep to unlearn the old ways, and his will too impotent for the changed duty of resisting the popular sentiment that has come round to his side. Remembering, besides, his loose, uneducated notions as to the proper sphere of government, his ideal of its function as a meddler, not as a manager, and his *outré* theories that it must do and bid and lead and provide everything, we know no public man so singularly unfitted by his mental bent to guide events during the coming four years. It is needless to enlarge on the opportunities which his hangers-on will invent for practising to their own profit on his egotism, which sometimes working for good, sometimes for ill, nothing can chastise into caution, and his frequent astuteness, which we suppose nothing can fairly be expected to elevate to the dignity of statecraft. Those delegates who vote for him must either ignore all human experience in the childish faith that for the next four or eight years he will honestly turn his back squarely on his past sixty-two, or they must believe him to be so wholly devoid of fixed principle, so eager to grasp place without honor, that he will accept the semblance of power and leave its substance to the party that makes him its stalking-horse. It would be matter neither for surprise nor regret if, as the result of this political mismatch, egotism, with a due share of wilfulness, should in the end get the better of unprincipled flattery.

This barefaced appeal of Mr. Roosevelt's to the delegates to barter their convictions for the shadow of success, gains no strength from the intimation that their support of Mr. Greeley would be welcome to the cloud of locusts and army-worms he has helped to bring down upon the South. To hint that his election would aid them "to gain or recover social position among the people with whom they have made their homes," is to promise an impossible reconcilement of opposites. Of course, in return for their support, this contingent of Southern Republican outcasts will demand the maintenance of the system by which they thrive. They could lose respectability by no change, even that of party treachery; but Democratic eagerness for place must pause at the offer of such auxiliaries—the lees and refuse left by the crude experiments in government imposed by Mr. Greeley's aid on the Southern States.

Perhaps in the coming canvass the tried discipline of the Democratic party may not fail, though for the first time in their history it must constrain their masses only. No reasoning member of the party can, we venture to say, honestly feel bound by the nomination at Baltimore which now seems a foregone conclusion. If he is too faint-hearted to throw off the tyranny of convention as to candidates, and too forgiving to revolt at the fierce vilification of thirty years, he must revolt at a platform which will demand the surrender of his honesty and common-sense, if nothing better can be found to put in it than the flimsy pleas we are dealing with. None of the worn generalities ought in decency to serve as a bridge over the chasm Mr. Greeley must cross to join his allies. Party drill without conviction, missing the usual spirit and action of intelligent leaders, may keep the ranks together, but the

half-hearted tone of the Liberals warns them that not a vote can be spared. Four months between the nomination and the election give ample time for all disintegrating influences to work, and ample time for the melting away of that phantom of the candidate's popularity, without whose illusive beckoning he would never have been seriously thought of.

THOSE BROKEN RINGS.

THE zest in the detection of rogues and the pleasure of the public in inspecting them have noticeably subsided. We have seen knaves as audacious and interesting as any that the future can provide, so that public virtue must not expect any aid from the novelty and romance of their pursuit. All the activity left us by the hot weather is engrossed in the lazy contemplation of the Presidential question. Moreover, our lamentable failure in bringing Tweed and Connolly and Fields to justice has been followed by a very reasonable despondency. "What is the use of catching any more scoundrels only to let them go?" Were a few of the pioneer rogues now in the penitentiary, it would be comparatively easy work dealing with those outside of it. As it is, they have worn out the public persistence, and we show signs of giving up the chase. Newspaper readers do not care to hear anything more about defaulters and robbers—which is a natural, excusable feeling, but certainly not the very best one. If everybody goes to noticing that everybody else is despondent, and relinquishes his sense that it is imperative to punish rogues, why, of course, nothing can be done.

We wish the charges of fraud against the persons who have had the management of the Brooklyn Park and the building of the East River Bridge had been more simply and succinctly stated, but amid the many accusations made we will beg the attention of our readers to one or two with reference to Prospect Park. We see here a kind of robbery which the many other rascalities of the past year have supplied only a few instances of. The charges against Tweed and Connolly are that they robbed the public treasury and that they corrupted the public virtue. We never thought of them as the robbers of individuals or classes of men. Nobody suffered sufficiently to make his grievance a theme for public interest or indignation, but from the dishonest greed of the persons who bought and managed the Park some individuals have evidently suffered. Here is an incident which will show the spirit of these men: it is one of those neat and portable little curiosities of fraud which the memory holds after graver things are forgotten. The Ring which had bought the patent for the Nicholson pavement wished to pave one of the fine broad avenues of the city. The property-holders did not care to pay $5 a foot for work that was worth $2, and objected. The consent of a majority of the property-holders along any avenue is necessary before a pavement can be laid. The Ring accordingly bought a lot in some cheap part of the street and vested the title in one hundred and four persons. This gave the Nicholson pavement a majority. The scheme did not succeed, but the astonishing impudence of the attempt is worth notice and recollection.

The people living in the neighborhood of the Park have felt very heavily the tyranny and oppression of the Ring. The quietest manner in which a public officer can rob a community is by buying up property, and then making improvements in such a way as to enhance its value. Only hypercritical people, it has been thought heretofore, could object to this; it was Tweed's most decorous and most profitable card. The management of the Park and its vicinity has been just of this same kind. To the ground originally set apart as a park there have been several additions. The statute of 1864 directed that in the purchase of land for the Park, no allowance shall be made for enhanced value of property, but in all subsequent acts this provision was omitted, so that the Ring was able to buy property for the Park and force it upon the city at immensely increased prices. Kingsley bought up land in the neighborhood before anybody outside the Ring knew that it was to be added to the Park. He immediately went to work to get the city to buy it. This he accomplished about a year and a half after his purchase, and the property for which he paid $61,000 he sold for $141,000. So far he cannot be said to have harmed anything but the public treasury and the public virtue, and to have taken a dishonest advantage of the opportunities of his position; he cannot be said to have injured the persons to whom he paid the market value of their property. It was in the sale of a part of the Park that we see how unfairly and heavily the tyranny of the Ring bore upon certain individuals. After the additions had been made, the Commissioners came before the people with a proposition to sell what we are told was much the finest portion of the Park. A bill authorizing its sale they forced through the Legislature at Albany. Of course, as soon as this sale was made, the property in the neighborhood of that part of the Park depreciated enormously. The loss might easily have ruined the owners. It had been known as the Park for years, and honest people had bought lots near it with no idea but that it was still to be the Park. If there were any public reason for the sale, it was right enough that it should be made, and the sufferers must bear their misfortunes as best they could. But if, as is most probable, it was merely to gratify the selfishness of speculators, then these honest people were grossly outraged. In some cases, it seems that members of the Ring sold their own property to persons whom they assured that the eastern part of the Park would not be sold, and got rid of it at a handsome price.

Or take the case of the Brooklyn Water Board, and we have a rather picturesque and recollectable sort of thievery, the evidence of which rests on sworn affidavits submitted to the citizens by their Committee of Fifty—a body of gentlemen alike in composition, in interests, and, we fear, alas! in fate, to our own Committee of Seventy. A principal game of the Kingsley Ring, as of all the rings in all our cities and States, was the game of the profligate spendthrift's stewards, who induce as large expenditures on the part of their masters as possible, that so their own "steals," as the phrase now goes, may be the greater. With this end in view, they decided to have a new reservoir, which should cost a certain number of hundreds of thousands of dollars—more than a million—of which a good share should be conveyed by the gentlemen "inside" to their own pockets. To induce people to build a reservoir, however, they must be persuaded that there is need of storing up water, and to persuade them of that a wise man, if he is "inside" and really thinks a reservoir ought to be built, goes to the officials who have charge of the reservoirs already in existence, and tells them that a committee of the city government is coming out to look at the water, and that unless the gates are opened and the water allowed to run to waste, there will not be any evidence of "a water famine," and a water famine has been decided upon. Then the water *is* allowed to run waste, and the Ring newspaper "is informed" that there exists the most pressing danger of a water famine, and begs the citizens to display the utmost frugality in their use of the precious liquid, so absolutely essential to health, and without a copious supply of which the whole city might burn down in a single night. The public mind thus prepared, the Ring drinks more champagne and "salts" some more greenbacks, unless somebody who has been "inside," or somehow got hold of some figures, "denounces" it. In case that occurs, we know what happens by our own experience with Tammany and the Committee of Seventy. Some paper gets hold of the figures and publishes them with commendable pride; indeed, it is lucky if it does not fall to believing that the thunder is what kills, and not the lightning, and fancy itself the born destroyer of the iniquitous, and increase greatly in spiritual pride. The figures convince the taxpayers, who become angry, investigate, threaten, become angrier, and make a wrathful clean sweep of the thieves, who usually get out of office pretty peaceably, and cast as many anchors to windward as possible by fraudulent assignments and dilatory motions in the courts, and then lie snug, waiting for "this thing to blow over." By-and-by, it does blow over pretty well, people getting tired of the whole subject. We hear, for instance, that "the Boss"—meaning

Mr. William Tweed—having been urged by the kindness of friends to reorganize the Americus Club, an organization of thieves in diamonds, has just done so, inviting the boys "with his well-known genial hospitality to partake of the champagne which was bounteously provided." In our neighborhood they have come out of their holes again, and are looking with hope and confidence to the pending Presidential election. In Brooklyn, they have not been driven to earth, and such is the difficulty of the hunt and the fatigue of the chase that we suppose they will be active in the autumnal campaign, and will once more roll up a noble Kings County majority on the right side.

ENGLAND.

LONDON, June 14, 1872.

BY the time I write to you, the Washington Treaty appears to be in a state of almost hopeless collapse. Whether some faint spark of vitality may still remain in it is a question still discussed, but discussed with little hope. The House of Lords had their grand debate on the subject, and, as usual in such cases, showed a capacity for the discussion of international questions which is not always rivalled by the Lower House. The most effective speech of the evening was delivered by Lord Cairns, who, in the vigor of his assault upon the Government, placed himself almost upon the American ground. The general feeling of the House, as indicated by the division upon the motion for adjournment, was clearly against the Government. General Schenck's letter, however, signifying that, in the view of the United States Government, the acceptance of the supplementary article would extinguish the indirect claims, prevented the renewal of the debate. The hopes so raised are apparently destined to disappointment. To-morrow is the fatal day, and as the United States have refused to join in requesting an adjournment, there seems to be no probability that the arbitration will proceed. Under these circumstances, we are beginning to discuss the question—which seems to be enveloped in as much mystery as all the other parts of this dreary negotiation—whether the remainder of the Treaty will continue to be binding. On that matter I have nothing to say, except that it appears to be the impression here that, as Mr. Gladstone apparently holds, the other proceedings need not be affected. Nor in regard to the falling through of the Geneva arbitration can I express much more than a regret at this most unfortunate misunderstanding. Who is to blame? is a question which will be discussed with infinite acrimony, to the wearying of all ordinary minds. The foregone conclusion, however, is that everybody is more or less to blame. Whatever share of the reproach may justly fall to the lot of General Grant and Mr. Fish, it is impossible for our ministers entirely to exonerate themselves. Doubtless they acted with the best intentions—Mr. Gladstone always acts with the best intentions—but they have succeeded, somehow or other, in landing us in such a hopeless bog of general perplexity that one cannot believe that their management has been judicious. In fact, the secret seems to be a very easy one, though, in spite of all the badgering the Government has undergone, the details have not yet been unravelled. The unfortunate desire to make things pleasant, even at the price of sacrificing distinctness in the Treaty, has been at the bottom of all their misdoings; and it matters little, even if human patience were equal to the task, to discover the precise points in the labyrinth where they first lost their way. I do not envy the future Dryasdust who is doomed to plod through the files of despatches that have accumulated, or even the unfortunate politicians who are endeavoring to make a case for one side or the other out of the voluminous Blue-books now before us and the revelations that are to come. That the result is a heavy blow to Government needs no demonstration; but how far their political antagonists will be able to take advantage of it is another question.

Is the breaking down of this negotiation an indication not only that Mr. Gladstone's Government is weak, but that there are grave defects in the whole system of parliamentary government? This is a conclusion which would apparently be advocated by a small but conspicuous party, of which Mr. Frederick Harrison is the most effective mouthpiece. In a manifesto published in the last number of the *Fortnightly Review*, and marked by his usual vigor of style, Mr. Harrison informs us what the Positivists think of the British Constitution in general. The paper deserves a reading, both for its literary merits and as the expression of a feeling which is perhaps more general than a superficial observer might imagine. The Positivist Church is small in numbers, and generally mentioned only to be ridiculed. They hold meetings every Sunday morning at a small room, which to the warmer enthusiasts represents the upper chamber from which Christianity was propagated to the world at large. The religion of humanity is at present in an embryonic state; the church is not yet organized, and it has no retreat or place of worship. Yet the discourses which are delivered in Chapel Street have about them the ring of a new gospel. There you may see some twenty or thirty enthusiasts gathering to listen to lectures, one of which commemorates the anniversary of the Paris Commune, and shows that, in virtue of its performances, the sacred city of Comte is to be to the republics of Europe what Rome was to the mediæval Christians. The next lecture may probably give an historical account of the idea of God, and argue that the disappearance of the devil from the practical beliefs of mankind implies the approaching dethronement of the present Ruler of the universe. The theories thus advocated savor slightly of extravagance to the ordinary mind; but undoubtedly they produce their effect upon those young men of talent who are always anxious to be up to the very latest lights in theology and philosophy. Any one who knows, for example, the English universities will find that the rising generation of professors and tutors, though not often converts to Positivism, are yet profoundly influenced by the ideas of which it represents one development. The political influence of this school is at present infinitesimal. Still, Mr. Harrison is not only one of the most rising of our younger writers, but his opinions in this case possess much interest. The title of the paper is "The Monarchy." His argument sets forth that England is really a republic, inasmuch as Englishmen substantially accept the primary articles of the true republican faith, that power should rest on fitness to rule, that it should be directed to the public good and supported by public opinion. It retains a monarchy, as in the animal kingdom we find a rudimentary organ which has been atrophied for want of use. It has, too, an aristocracy, which is certainly of more apparent importance; but the House of Lords is fast sinking to the level of the throne, and our rulers are really rich men chosen by tradesmen. England, as he epigrammatically puts it, is "a republic which, with a makebelieve democracy and a waxwork sovereign, is governed by a sort of counting-house aristocracy." In all this, though very eloquently expressed, there is not much that is very new; and, further, Mr. Harrison accepts the ordinary opinion that any attack upon our titular monarchy would at present be out of place and really playing into the hands of the reactionary party by attacking them in their strongholds. And yet Mr. Harrison is anything but a Whig, or even an ordinary Radical. His politics are best described by saying that they are Carlylism in a new shape. The monarchy is a sham—in itself an institution which we might be content to regard with a benevolent and rather melancholy historical interest, but still a sham—and therefore tending to danger. In any real convulsion of sentiment it would go by the board at once. At present, our tradesmen rally round the throne, and advertise themselves well at a royal procession. It is to them a symbol of order and internal peace, as the Empire was to the shopkeepers of Paris. If intemperate Conservatives try to make a reality of it, they will discover that it is really an instant menace to order, and will throw it over as readily as the Parisians pulled down the Imperial arms. All this, and much more, is substantially what has been long thought by the venerable philosopher who is now living in peaceful retirement at Chelsea, and has, I regret to say, finally abandoned the intention of giving us any more of his inimitably picturesque and vigorous Jeremiads. The moral, indeed, is in some respects different from that which Mr. Carlyle would advocate. Nor is it very easy to say what precisely is the remedy to our evils which Mr. Harrison would suggest. In a general way, however, it may be said that he longs for a strong government, representing the national will fully and energetically. The evil against which he protests most emphatically is the position of our real ruler, the Prime Minister. The head of the state is forced by his position to become "a mere gladiator in a mob of rhetoricians, the plaything of a tangle of factions, of necessity a demagogue, by office a stopgap." There is no other instance in history, he says, of the head of the executive being liable to dismissal "by a single vote of an assembly as fickle as the chops of the Channel." Parliament becomes yearly more of "a scramble, a free fight, a game of blindman's buff."

The effort of maintaining their place in the front rank of that turbulent assembly absorbs all the energies of our statesmen, and fetters their hands at every movement. The labor strains the constitutions and extinguishes the practical activity of our best men. In short, the great blot on our system is that for which Tocqueville and other such writers used specially to admire it, the complete identification of the executive and legislative bodies. Mr. Harrison does not propose any definite change, and indeed advocates moral in preference to political action; his reforms would go much further than to any mere institutional enactment, for they would involve the remodelling of our whole social and religious system. But this particular evil is undoubtedly felt very strongly, and the evil tends steadily to increase. I know not if, as Mr. Harrison seems to anticipate, the parliamentary system is doomed finally to break down by coming to a hopeless dead-lock. But certainly such a dead-lock seems to be among the possibilities. Whilst Parliament pushes its restless activity into every department of public and pri-

vate affairs, it becomes more palpably unequal to its self-imposed task, and the position of its leaders becomes more and more onerous. Whether the impatience which is being generated by the sight of session after session ending in empty talk, and of our real rulers wasting their power in endeavoring to regulate the flow of talk, will come to anything, I know not; perhaps it is merely a proof of the impatience which we all feel in witnessing the slowness with which facts conform to theories. Still, the cumbrous weakness of our present system is tending to disgust many thinking men, and leading them to consider reforms of a different kind from the extension of the suffrage and changes in the mode of voting which still occupy the attention of hack politicians.

From this perhaps too theoretical discussion, I must return to facts, in order to chronicle the escape of the Church of England from a threatened narrowing of its borders. Mr. Bennett of Frome—a well-known leader of the extreme Ritualists—has been acquitted, though he has been saved, as it were, only by the skin of his teeth. It has been decided that he did not announce the dogma of the Real Presence so unequivocally as to deserve expulsion. The chief reason alleged was substantially that the doctrine was so mysterious that anybody might say almost anything so long as he did not expressly contradict the Articles. As the *Pall Mall Gazette* put it, a clergyman must not say hocus-pocus, but he may, if he pleases, say ocus-pocus. And thus the Establishment retains for the present that peculiarity which so pleases Dean Stanley, that its ministers may preach anything, from Romanism to rationalism, so long as they are careful to avoid putting their thoughts into certain specified formulæ.

I will make a rapid descent to one other fact of international interest. The American crew was easily beaten the other day; and if any of your readers care for an explanation, I may tell them that, in the English opinion, it is an easy one. Over a long course, it is an established rule at the University races that the heaviest crew wins. The Americans averaged fourteen pounds less than the Londoners, and were therefore beaten, as Cambridge in former days was beaten by Oxford. Let them send next time a crew averaging 170 pounds instead of 147, and there is nothing in their style to prevent a victory.

A EUROPEAN SUMMER.

I.—CHESTER.

IF the Atlantic voyage is counted, as it certainly may be, even with the ocean in a fairly good humor, an emphatic zero in the sum of one's better experience, the American traveller arriving at this venerable town finds himself transposed, without a sensible gradation, from the edges of the New World to the very heart of the Old. It is almost a misfortune, perhaps, that Chester lies so close to the threshold of England; for it is so rare and complete a specimen of an antique town that the later-coming wonders of its sisters in renown—of Shrewsbury, Coventry, and York—suffer a trifle by comparison, and the tourist's appetite for the picturesque just loses its finer edge. Get the first impressions of an observant American in England—of our old friend the sentimental tourist—stir up within him such a cloud of sensibility that while the charm is still unbroken, he may perhaps as well dispose, mentally, of the greater as of the less. I have been playing at first impressions for the second time, and have won the game against a cynical adversary. I have been strolling and restrolling along the ancient wall—so perfect in its antiquity—which locks this dense little city in its strong circle, with a certain friend who has been treating me to a bitter lament on the decay of his relish for the picturesque. "I have turned the corner of youth," is his ceaseless plaint—"I suspected it, but now I know it—now that my heart beats but once where it beat a dozen times before, and that where I found sermons in stones and pictures in meadows, delicious revelations and intimations ineffable, I find nothing but the stern, dark prose of British civilization." Little by little I have grown used to my friend's sad monody, and indeed feel half indebted to it as a warning against cheap infatuations. I am especially grateful for having been able to remain indifferent to it when viewing not as a novelty, though after an interval of some years, the native English image—the hedged and measured acres of rain-darkened sod, with the sturdier and leafier oak or elm, the further-drooping ash, or brightly blooming thorn, and the shaggier and juicier pledges of wool and mutton which adorn them; the weather-blunted belfry tip overtopping their bordering copse, and the huge, high-piled, solidly modelled mountain of vapor, trundling through the mild blue and dividing them with its shadow into ill-matched breadths of velvet. It is another atmosphere, and the American feels that, to his intellect at least, it is a normal one, and that in this moist and comfortable air the English names of things took birth.

"A garden," I said to my friend as we sat at dinner, "is surely no garden but that": for the room looked out through ivy-bordered panes—profane inn parlor though it was—upon a "flowery close," as Mr. William Morris would say, which would do no discredit to a college or a bishop's palace. Walled about up to mid-air, and tapestried and carpeted with the richest verdure, it seemed hardly more than an arrangement for taking the clouds and the ivy, the grass and the flowers, into the confidence of one's domestic privacy. An Englishman's garden implies walls quite as much as his house.

There should be no talk of walls, however, till those of the city have received justice. There could be no better example of that phenomenon so delightfully frequent in England—an ancient monument or institution, readopted as if new, and consecrated to some modern amenity. The good Cestrians may boast of their walls, without a shadow of that mental reservation which is so often the tax paid by the picturesque, and I can easily imagine, that though most modern towns contrive to get on comfortably without this stony girdle, these people should have come to regard theirs as a 'prime necessity. For through it, surely, they may know their city more intimately than their uncinctured neighbors—survey it, feel it, rejoice in it as many times a day as they please. The civic consciousness sunning itself thus on the city's rim, and glancing at the little, swarming, towered, and gabled town within, and then at the blue undulations of the near Welsh border, may easily deepen to delicious complacency. The wall encloses the city in a continuous ring, which passing through innumerable picturesque vicissitudes often threatens to snap, but never fairly breaks the link. So that starting at any point, an hour's easy stroll will bring you back to your station. I have quite lost my heart to this charming wall, and there are so many things to be said about it that I hardly know where to begin. The great fact, I suppose, is that it contains a Roman substructure, and rests for much of its course on foundations laid by that race of master-builders. But in spite of this sturdy origin, much of which is buried in the well-trodden soil of the ages, it is the gentlest and least offensive of ramparts, and completes its long irregular curve without a frown or menace in all its disembattled stretch. The earthy deposit of time has, indeed, in some places climbed so high about its base, that it amounts to no more than a terrace of modest proportions. It has everywhere, however, a rugged outer parapet and a broad hollow flagging, wide enough for two abreast. Thus equipped, it wanders through its adventurous circuit; now sloping, now bending, now broadening into a terrace, now narrowing into an alley, now swelling into an arch, now dipping into steps, now passing some thorn-screened garden, and now reminding you that it was once a more serious matter than all this, by the occurrence of a rugged, ivy-smothered tower. Its present mild innocence is increased, to your mind, by the facility with which you can approach it from any point in the town. Every few steps as you go you see some little court or alley boring toward it through the close-pressed houses. It is full of that delightful element of the crooked, the accidental, and unforeseen, which, to American eyes accustomed to our eternal straight lines and right angles, is the striking feature of European street scenery. An American strolling in the Chester streets finds a perfect feast of crookedness—of those random corners, projections, and recesses—odd domestic interspaces charmingly saved or lost, those innumerable architectural surprises and caprices and fantasies which offer such a delicious *échappée* from a mental horizon of brown-stone fronts. An American is born to the idea that on his walks abroad it is perpetual level wall ahead of him, and such a revelation as he finds here of infinite accident and infinite effect gives a wholly novel zest to the use of his eyes. It produces, too, the reflection—a superficial and fallacious one, perhaps—that amid all this cunning *chiaroscuro* of the *mise en scène*, life must have more of a certain homely entertainment. It is at least no fallacy to say that childhood—or the later memory of childhood—must borrow from such a background a kind of ineffable beguilement in which young America has little share. And all know how in the retrospect of later moods the incidents of early youth "compose," visibly, each as an individual picture, with a magic for which the greatest painters have no corresponding art. There is a vivid reflection of this magic in some of the early pages of Dickens's "Copperfield" and of George Eliot's "Mill on the Floss," the writers having had the happiness of growing up among old, old things. Two or three of the phases of this rambling wall belong especially to the class of things fondly remembered. In one place it skirts the edge of the cathedral graveyard, and sweeps beneath the great square tower and behind the sacred east window of the choir. Of the cathedral there is more to say; but just the spot I speak of is the best standpoint for feeling how fine an influence in the architectural line—where theoretically, at least, influences are great—is the massive tower of an English abbey, dominating the homes of men; and for watching the eddying flight of swallows make vaster still to the eye the large calm fields of stonework. At another point, two battered and crumbling towers, decaying in their winding-sheets of ivy, make a prodigiously picturesque diversion. One inserted in the body of the wall and the other connected with it by a short crumbling ridge of masonry,

they contribute to a positive jumble of local color. A shaded mall wanders at the foot of the rampart; beside this passes a narrow canal, with locks and barges and burly watermen in smocks and breeches; while the venerable pair of towers, with their old red standstone sides peeping through the gaps in their grim mantles, rest on the soft grass of one of those odd fragments of public garden, a crooked strip of ground turned to this pleasant account—which one meets at every turn apparently in England—a tribute to the needs of the "masses." *Stat magni nominis umbra.* The quotation is doubly pertinent here, for this little garden-strip is adorned with mossy fragments of Roman stonework, bits of pavement, altars, and baths, disinterred in the local soil. England is the land of small economies, and the present rarely fails to find good use for the odds and ends of the past. These two hoary shells of masonry are therefore converted into "museums," receptacles for the dustiest and shabbiest of tawdry back-parlor curiosities. Here preside a couple of those grotesque creatures, *à la* Dickens, whom one finds squeezed into every cranny of English civilization, scraping a thin subsistence, like mites in a mouldy cheese.

Next after its wall—possibly even before it—Chester values its Rows—an architectural idiosyncrasy which must be seen to be appreciated. They are a sort of Gothic edition of the blessed arcades of Italy, and consist, roughly speaking, of a running public passage, tunnelled through the second story of the houses. The low basement is thus directly on the drive-way, to which a flight of steps descends, at frequent intervals, from this superincumbent piazza. The upper portion of the houses projects to the outer line of the arcade, where they are propped with pillars and posts and parapets. The shop fronts face along the arcade, and admit you to little caverns of traffic, more or less dusky, according to their opportunities for illumination in the rear. If the picturesque is measured by its hostility to our modern notions of convenience, Chester is probably the most picturesque city in the world. This arrangement is endlessly rich in opportunities for effect. But the full charm of the architecture of which it is so essential a part must be observed from the street below. Chester is still an antique city, and mediæval England sits bravely under her gables. Every third house is a "specimen"—gabled and latticed, timbered and carved, and wearing its years more or less lightly. These ancient dwellings present every shade and degree of historical color and expression. Some are dark with neglect and deformity, and the horizontal slit admitting light into the lurking Row seems to collapse on its dislocated props like a pair of toothless old jaws. Others still sit square-shouldered and sturdy, with their beams painted and straightened, their plaster whitewashed, their carvings polished, and the low basement covering the breadth of the frontage adorned with curtains and flower-pots. It is noticeable that the actual townsfolk have bravely accepted the situation bequeathed by the past, and the large number of rich and intelligent restorations of the old *façades* speaks well both for their tastes and their means. These elaborate and ingenious repairs attest a pious reverence for the peculiar *cachet* of the city. I indeed suspect many of these fresh antiques of being better royalists than the king, and of having been restored with interest. About the genuine antiques there would be properly a great deal to say, for they are really a theme for the philosopher, but the theme is too heavy for my pen, and I can give them but the passing tribute of a sigh. They are fatally picturesque—horribly realistic in the images they evoke of the past. Fix one of them with your gaze, and it seems fairly to reek with mortality. Every stain and crevice seems to syllable some human record—a record of unillumined lives. I have been trying hard to fancy them animated by the children of "Merry England," but I am quite unable to think of them, save as peopled by the victims of horrible Old-World pains and fears. Human life, surely, packed away behind those impenetrable lattices of lead and bottle glass, just above which the black outer beam marks the suffocating nearness of the ceiling, can have expanded into but scanty freedom and bloomed into little sweetness.

Nothing has struck me more in my strolls along the Rows than the fact that the most zealous observation can keep but uneven pace with the fine differences in national manners. Some of the most sensible of these differences are yet so subtle and indefinable that one must give up the attempt to express them, though the omission leaves but a rough sketch. As you pass with the bustling current from shop to shop, you feel local custom and tradition—the foreign tone of things—pressing on you from every side. The tone of things is, somehow, heavier than with us; manners and modes are more absolute and positive; they seem to swarm and to thicken the atmosphere about you. Morally and physically it is a denser air than ours. We seem loosely hung together at home as compared with the English, every man of whom is a tight fit in his place. It is not an inferential, but a palpable fact, that England is a crowded country. There is stillness and space—grassy, oak-studded space—at Eaton Hall, where the Marquis of Westminster dwells (or I believe can afford to *se passer la fantaisie* of *not* dwelling), but there is a crowd and a hubbub in Chester. Wherever you go, the population has overflowed. You stroll on the walls at eventide, and you hardly find elbow-room. You haunt the cathedral shades, and a dozen sauntering mortals temper your solitude. You glance up an alley or side-street, and discover populous windows and doorsteps. You roll along country roads, and find countless humble pedestrians dotting the green waysides. The English landscape is always a "landscape with figures." And everywhere you go, you are accompanied by a vague consciousness of the British child hovering about your knees and coat-skirts, naked, grimy, and portentous. Well, perhaps it will die, perhaps it will emigrate. Where there are many men, of course there are many needs, which helps to justify to the philosophical stranger the vast number and the irresistible coquetry of the little shops which adorn these low-browed Rows. The shop-fronts have always seemed to me the most æsthetic things in England, and I waste more time than I should care to confess to in covetous contemplation of those vast, clear panes, behind which the nether integuments of gentlemen are daintily suspended from glittering brass rods. The manners of the dealers in these solid luxuries seldom fail to confirm these agreeable impressions. You are thanked with effusion for expending twopence—a fact of deep significance to the truly analytic mind, and which always seems to me a vague reverberation from certain of Miss Edgeworth's novels perused in childhood. When you think of the small profits, the small jealousies, the long waiting, and the narrow margin for evil days implied by this redundancy of shops and shopmen, you hear afresh the steady rumble of that deep key-note of English manners, overscored so often, and with such sweet beguilement, by finer harmonies, but never extinguished—the "struggle for existence."

The Rows are picturesque and entertaining, and it is a pity that, thirty years ago, when they must have been more so, there was no English Balzac to translate them into ingenious prose, with a psychological commentary. But the cathedral is better, modestly as it stands on the roll of English abbeys. It is of moderate dimensions and rather meagre in form and ornament; but to an American it is a genuine cathedral, and evokes all the proper emotions. Among these is a certain irresistible regret that so much of its hoary substance should give place to the fine, fresh-colored masonry with which Mr. Gilbert Scott—that man of many labors—is so intelligently investing it. The red sandstone of the primitive structure, darkened and devoured by time, survives in many places, in frowning mockery of all of this modern repair. The great tower, however—completely restored—rises high enough to seem to belong, as cathedral towers should, to the far-off air that vibrates with the chimes and the swallows, and to square serenely, east and west and south and north, its embossed and fluted sides. English cathedrals, within, are apt at first to look pale and naked; but after a while, if the proportions are fair and the spaces largely distributed, when you perceive the light beating softly down from the cold clerestory and your eye measures caressingly the tallness of columns and the hollowness of arches, and lingers on the old gental inscriptions of mural marbles and brasses, and, above all, when you become conscious of that sweet, cool mustiness in the air which seems to haunt these places, like the very climate of Episcopacy, you may grow to feel that they are less the empty shells of a departed faith than the abodes of a faith which is still a solid institution and "establishment." Catholicism has gone, but the massive respectability of Anglicanism is a rich enough substitute. So at least it seemed to me, a Sunday or two since, as I sate in the choir at Chester, awaiting a discourse from Canon Kingsley. The Anglican service had never seemed to my profane sense so much an affair of magnificent intonations and cadences—of refined material effects of distance and resonance and harmonies of form. The vast oaken architecture of the stalls among which we nestled—somewhat stiffly, and with a due apprehension of wounded ribs and knees—climbing vainly against the dizzier reach of the columns—the beautiful English voices of certain officiating canons—the little rosy "King's scholars" sitting ranged beneath the pulpit, in white-winged surplices, which made their heads, above the pew-edges, look like rows of sleepy cherubs—every element in the scene gave it a great spectacular beauty. They suggested, too, what is suggested in England at every turn, that conservatism here has all the charm, and leaves dissent and democracy and other vulgar variations nothing but their bald logic. Conservatism has the cathedrals, the colleges, the castles, the gardens, the traditions, the associations, the fine names, the better manners, the poetry; Dissent has the dusky brick chapels in provincial by-streets, the names out of Dickens, the uncertain tenure of the *h*, and the poor *mens sibi conscia recti*. Differences which in other countries are slight and varying, almost metaphysical, as one may say, are marked in England by a gulf. Nowhere else does the degree of one's respectability involve such solid consequences, and I am sure I don't wonder that the sacramental word which with us (and in such correlatives as they possess, more or less among the continental races), is pronounced lightly and facetiously, and as a quotation from the Philis-

tines, is uttered here with a perfectly grave face. To have the courage of one's opinions is in short to have a prodigious deal of courage, and I think one must need as much to be a Dissenter as one needs patience not to be a duke. Perhaps the Dissenters (to limit the question to them) manage to stay out of the church by thinking exclusively of the sermon. Canon Kingsley's discourse was one more example of the familiar truth—not without its significance to minds zealous for the good old fashion of "making an effort"—that there is a mysterious affinity between large accessories and slender essentials. The sermon, beneath that triply consecrated vault, should have been of as fine a quality as the church. It was not; and I confess that a tender memory of ancient obligations to the author of "Westward Ho!" and "Hypatia" forbids me saying more of it. An American, I think, is not incapable of taking a secret satisfaction in a incongruity of this kind. He finds with relief that mortals reared amid all this rich æsthetic privilege are after all but mortals. His constant sense of the beautiful scenic properties of English life is apt to beget a habit of melancholy reference to the dead-blank wall which forms the background of our own life-drama, and from doubting in this fantastic humor whether we have even that modest value in the picturesque scale that he has sometimes fondly hoped, he lapses into a moody scepticism as to our value in the intellectual, and finds himself wondering vaguely whether this is not a mightier race as well as a lovelier land. This of course will never do, so that when after being escorted down the beautiful choir, in what, from the American point of view, is an almost gorgeous ecclesiastical march, by the Dean in a white robe trimmed with scarlet, and black-robed sacristans carrying silver wands, the officiating canon mounts into a splendid canopied and pinnacled pulpit of Gothic stonework, and proves not a Jeremy Taylor in ordinary, our poor sentimental tourist begins to hold up his head again, and to reflect with complacency that opportunity wasted is not our national reproach. I am not sure, indeed, that in the excess of his elation he is not tempted to accuse his English neighbors of being indifferent, unperceptive, uninspired, and to affirm that they do not half discern their good fortune, and that it takes a poor disinherited Yankee to appreciate the "points" of England.

Correspondence.

A BALTIMOREAN AND MR. GREELEY.

To the Editor of the Nation:

Sir: The regret which thousands of Conservatives feel at your final repudiation of Horace Greeley and endorsement of Grant is the best evidence of their great respect for the character and opinions of your admirable journal, and which entitles them to an occasional hearing in its correspondence. There is no doubt in regard to these facts, viz., that you have for a considerable period of time inveighed most eloquently against the errors of Grant's Administration; that you heartily endorsed the Cincinnati movement and warmly eulogized its leaders; and that you would have supported its nominees had your wishes been consulted or your individual preferences satisfied in their selection. For instance, you would have supported Charles Francis Adams, had he been the choice of the Convention.

With these facts in view, we cannot see how the reasons given by you in your issue of the 20th, in answer to the enquiries of a young man from Boston as to how he should vote, can bear you out in seeking to bring to naught the movement you did so much to inaugurate. What amazes your friends in this part of the country is that, in drawing your parallel between Greeley and Grant, or rather in making up your indictment against Greeley, you do not even allude in the remotest manner to what they regard as by far the most important issue in this campaign, viz., the past, present, and future condition and treatment of the South. You have portrayed better than any one else the miseries of carpet-bag government, and exposed the enormities of the miserable, shameless, and cruel Ku-klux Law. You should have told the Boston young man that the acts of public thieves and plunderers have been, if not approved, at least winked at by this present Administration. You should have told him that the Ku-klux Law was actually solicited by Grant, and that if Greeley ever did approve of it, he does not *now*, after having witnessed the baleful effects of its operation; whereas, on the other hand, Grant, only two or three weeks since, used his utmost endeavors to have its provisions extended. This he did not from motives of public policy, but in consideration of party necessity. This shows the animus of the man, and what we are to expect of him in the future.

In addition to this, you concede his "nepotism," "gift-taking," and "ignorance." Now, in the name of all that is reasonable and just, how can you vote for or use your influence for this man, when all your objections to Greeley consist of *possibilities* or *probabilities* in the event of his election? You approve of the Cincinnati platform, of which Greeley approves, and you believe him to be an honest man. Why make so much ado about "civil-service reform," etc., when the very foundations of American liberty as well as of our political institutions are being undermined? Why busy ourselves with patching up the "ship of State" when it is driving full upon the breakers of absolute centralism, if not of despotism? You must bear in mind that Democrats have much more and many more serious objections to Greeley's record than you have, but are willing to accept him, and for this reason alone.

Hoping that the enquiring young men of Massachusetts may get the benefit of these views before they make up their minds to vote for Grant,

I am, yours very respectfully, Malcolm H. Johnston.

Baltimore, June 24, 1872.

[We are very willing that Mr. Johnston's views should reach the public, and print them as requested. There are yet four months before we shall be called upon to vote, and full discussion of this Presidential question in all its aspects ought meantime to be had, and can but be beneficial.

Our correspondent must not think that we are opposed to the Greeley and Brown ticket because "our wishes were not consulted and our individual preferences gratified." We disliked much that the Administration had done, more that the Republican majority in the Senate and House had done and left undone, and we earnestly supported the Cincinnati movement first in the hope of influencing the party, afterwards in the much more dubious hope that it might result in the formation of a new party of reform, and even a party that should be successful at once. Instead we got a party with "anything to beat Grant" for its motto, and which, as we sincerely believe, has in it more and worse scoundrels than even the regular Republican organization. Many rascals are in the latter, but round Mr. Greeley are most of the unsuccessful "frauds" in the country, and we confess to being frightened. "An organized raid on the Treasury," as Judge Stanley Matthews called this coalition of Blairs, Fentons, McClures, and Cochranes, is not our notion of a reform party into which we can see our way clear to invite any voter.

Of "the past, present, and future condition of the South" we have never been unmindful; we have, for a longer time than we need care to remind the *Tribune*, held the doctrine first taught by Governor Andrew of Massachusetts, that the political guidance of the South naturally belonged to its leading white citizens, and that no settlement of its affairs on any other basis could be stable or lasting. Is it the fault of General Grant, or is it the fault of what we may call the *Tribune* majority in Congress and of impracticable, misled men at the South, that the carpet-baggers have been fastened upon the reconstructed States? Was it General Grant who made Southern legislatures reject sensible and clement terms of readmission to the Union? Was it he who taught them to put their faith in Andrew Johnson? The blame is not so easily to be laid upon one man, nor, indeed, upon one section. The past and the present of the South are more its own work and that of headlong partisans such as Mr. Greeley on the one side and the other, than the work of General Grant. As to the future of the South, we believe it to be in more danger from another reopening, however slight, of the interminable negro question, and from the thoughtless and heated political activity of the new white voters, than from a now thoroughly frightened Congressional majority which is pretty certain to be in a minority next year whoever is President.

We do not know how much change was effected in Mr. Greeley's feelings in regard to Ku-klux laws, the carpet-bagger, and a strong paternal government by his visit to the South; a visit to the South was not necessary, we should have thought, for any sensible man to have long since come to a conclusion on those matters, and a conclusion different from that which the *Tribune* has vigorously supported.—Ed. Nation.]

DO THE FRENCH LISTEN?

To the Editor of the Nation:

Sir: Your remarks on the communication of your correspondent "L.," giving the equivalent of "écouteur" as generally in the sense of "eaves-

dropper," not "listener," are entirely correct. I will, however, venture to assert that the French have a word corresponding to the English "listener." It is the word "auditeur" (*s. m.*, celui qui écoute un discours, une lecture, dans quelque assemblée.) "Ce prédicateur à toujours un grand nombre d'auditeurs." "Il émeut, il attendrit ses auditeurs." "La lecture de sa tragédie endormit la plupart de ses auditeurs."

There is another word still corresponding to the English listener. It is "auditoire," though that being used as a collective noun corresponds more closely to "audience." "Les applaudissements éclatèrent dans tout l'auditoire."

I believe that the French idiom, though poor when compared with the English, yet has words to express every thought, and if it sometimes lacks the exact equivalent, yet the general idea can be expressed. "Les soldats rentrèrent dans leurs foyers." "J'aime mon foyer." In both cases the "foyer" can only be translated by "home," and yet it is generally asserted that the French have no word corresponding with "home."

Very truly yours,

GAULOIS.

IRVINGTON, N. Y., June 28, 1872.

[The question in dispute being one of shades of meaning, in fact of an "exact equivalent" of the simple and definite notion conveyed by "listener," the writer in *Blackwood* seems to us not yet proved to have been in error. For "auditeur" and "auditoire" we have precise synonyms in "auditor," "auditory," "audience," and "hearer," no one of all these words implying the *attention* which is so essential a part of the conception of "listener," and all having reference, as "Gaulois" points out, to a *formal* relation between *celui qui parle* and *celui qui écoute*. It is probably true of "auditeur," as it is of "hearer," that it is used a hundred times in the plural to once in the singular.—ED. NATION.]

Notes.

LITTLE, BROWN & CO. announce "The Birds of North America," by Prof. Spencer F. Baird, aided by Dr. T. M. Brewer and Robert Ridgway; and the tenth and concluding volume of Bancroft's "History of the United States." Some idea of the magnitude of the work first named may be had from the remainder of the title: "A Complete Account of the Birds of the whole of North America north of Mexico, arranged according to the most approved system of classification, with descriptions embodying whatever is necessary to the proper definition of the species."——Macmillan & Co.'s announcements embrace E. A. Freeman's lecture on the "Unity of History"; "Michael Faraday," by J. H. Gladstone; "Goethe and Mendelssohn (1821-1831)," from the German of the composer's son, Dr. Karl Mendelssohn.

—In this New World it is doubtful if the word ancient may ever properly be applied to the establishments of man, especially if they do not antedate the last quarter of the eighteenth century. Older and less old are perhaps the only admissible terms in a country where, for example, scarcely two centuries and a half make Harvard College venerable, when Cornell or Vassar is brand-new. Yet it is impossible not to feel that we have a real antiquity in a school which, like Phillips Academy at Exeter, N. H., though founded in 1781, has had in the eighty-four years since 1788 but two principals — the last of these a graduate of the school itself, of now fifty-nine years' standing. Still more does its age impress us when we run over the list of graduates, four thousand strong, and note the number of eminent men who there received their college preparation: among the dead, Webster, Cass, Everett, Sparks, and Hildreth; among the living, Bancroft, Palfrey, Dix, and Hale—a remarkable group of historians, scholars, and statesmen, to which many, if less illustrious, additions could be made. The Academy dedicated, on the 19th of June, a new building to replace the one which had stood from the commencement till burnt down a couple of years ago. The celebration was marked by an incident which forcibly carried back the minds of all present to the good deeds of the founder, John Phillips, whose benefactions to various schools and colleges besides Exeter even now seem extraordinarily liberal. One of the graduates, Mr. John Langdon Sibley, the well-known librarian of Harvard College, "was revealed to the alumni as having endowed the Academy, from his own small estate, with the sum of $15,000 to increase the charity scholarships." He himself had been a scholar "on the foundation," that is, at the cost of the Academy, and had never forgotten his indebtedness. When his father died and left him a moderate inheritance of $5,000, he immediately transferred it to the trustees of the Academy to be invested for the benefit of poor scholars; subsequently added an equal amount from his own earnings, and promised at the celebration to contribute a third five-thousand next January if other alumni would in like manner remember their *alma mater*. No more honorable endowment, it is safe to say, will appear on the list of such charities prepared by the National Commissioner of Education in his report for 1873; and it is grateful to reflect that Mr. Sibley is but the newest observer of a custom which is as old as any that we have, and one of which we may certainly be most proud.

—It is a common saying that one must go away from home to get the news. New Yorkers have a familiar test of the truth of this when they look in the telegraphic columns of the press of any other city for intelligence from the metropolis. They then perceive, what forty years' residence may have failed to teach them, that life in New York consists chiefly of bar-room murders, sun-strokes, pestilence, executions, and boiler explosions, and learn for the first time that the public mind is occupied with this or intensely agitated by that, in favor of this or resolutely opposed to that, has had a great sensation "produced" upon it—in short, is variously affected as if it were a single, individual mind, and as if a population of from eight hundred thousand to a million souls was a homogeneous, compact, and conscious body, having the same sources of information, the same intelligence, and the same temperament. Everybody knows, however, that it is as true of a great city as of the world—that one half of it does not know how the other half lives or what it is doing. This is the case in New York, and has been strikingly exemplified in the experience of Paris; and it is one of the causes which renders the union and co-operation of good citizens against the sudden violence of the bad so difficult and increasingly difficult. The press, the telegraph, and steam have not yet succeeded in putting any great city beyond the contingency of a temporary reign of terror and ignorance such as we witnessed here in July, 1863. The first success of the Commune was due even more to the ignorance than to the terror of the Parisians, whom a like ignorance of the progress of the struggle prevented from bringing any substantial aid to the Versaillists on the eve of the catastrophe. Recalling the eventful 21st of May, 1871, a recent French writer tells of going home at eleven o'clock that night from a Communist club, at which the entrance of the Versaillists had been declared simply impossible. The narrative continues:

"The streets were, as usual, perfectly silent and almost deserted. There were no carriages, and almost no passers. The night was calmer and more tranquil than most of those which had preceded. We were so much accustomed to hear almost constantly the sound of cannon or of small arms that often, if the fire was not brisk, we scarcely remarked it. But I think I did not hear, on the night of the 21st, a single detonation during the half hour and more that we were returning to our lodgings. This extraordinary quiet struck all of us, and one of us remarked that things were not getting on. We then retired without having the least idea in the world of the grand event which had been accomplished in the course of the day. Ever since four o'clock in the afternoon the French troops had been in Paris, and nobody in our quarter, which was, nevertheless, very near the Champs Elysées, knew anything about it."

—If animosities are not unknown in Italy, neither is the art of laying them aside when the cause is past. The Pope's monument to his mercenaries who fell at Mentana stands undisturbed in the burying-ground of the new capital, as a "lasting testimony of calamitous times." On the 4th of June, the little borough of Magenta, aided by contributions from the King and from Milan and other Lombard cities, celebrated the thirteenth anniversary of the famous battle by gathering into a special receptacle the indistinguishable remains of French, Italians, and Austrians, who fell there as enemies. The inscriptions on the four sides of the truncated pyramid, which surmounts a chamber in the form of a Greek cross, contains not a single allusion that could give offence to Austrian sensibilities. "Here," says one, "disputed the palm soldiers of Austria and of France: the latter gained it. Let posterity be mindful of the solemn day, auspicious for Italian independence." Another expresses epigrammatically the same sentiment as this from the speech of General Petitti: "We offer here a last tribute of honor to all those, without distinction, who bravely, on one side or on the other, sacrificed themselves on the altar of duty. May they sleep in peace, so mingled in our respect as their bones will rest mingled in this sepulchre." The British Guard, if it has leisure while in Boston to forget its handsome reception on the anniversary of the battle of Bunker Hill, may contrast this Italian example with the conspicuous bad taste of the tablet which, but a few years ago, was put up on the front of the old South Church; taste so bad, we are tempted to say, that it reconciles one to the fate which threatens soon to overtake this venerable relic of Revolutionary days in consequence of the value of its site for business purposes.

—The German navy, if not of much use hitherto for purposes of warfare, has nevertheless its contribution to make to the statistics of hygiene. Prussian ships, to the number of five, in the past twelve years, have been kept pretty constantly at the East Indian station, with an average total force of 1,620 men. The number of sick in one year has averaged 2,552, or 157·53 per cent., and the number of deaths 15, or 0·92 per cent.; whereas at the home station at Kiel, in 1871, with an average force of 1,711 men, the sick amounted to 1,910, or only 111·58 per cent., and the dead to 11, or only 0·64 per cent. In other words, every man at home was sick 1·11 times; every man abroad, 1·57 times; and the mortality was three in a thousand greater in the latter case than in the former. The official reports on the health of the British navy in the same waters, covering a period of twenty years, afford some interesting comparisons. The annual percentage of sick was 178·8 per cent., so that each man was sick 1·78 times; the percentage of deaths, 3·13. The difference in mortality is very noticeable, and, not unlikely, may have arisen, as has been suggested, from the different methods of recruiting for the navy in the two countries. Since there is no law in England making service compulsory, the material secured by bounties can hardly help being of inferior quality—such as the merchant marine has no employment for or even rejects.

—A grandson of Friedrich Arnold Brockhaus, founder of the great publishing firm at Leipzig, has undertaken a life of his illustrious ancestor, of which the first part forms an octavo of some four hundred pages. As a literary production the work is not remarkable, being deficient in method, and so more or less of a jumble; but it is rich in material and full of interest. It leaves off at the beginning of the year 1817, at which date, however, Brockhaus was well out of the difficulties which had beset him from the very commencement of his career, so that in the narrative of these, in the present volume, we probably have the most diversified and attractive portion of the entire work. His father, it appears, was Johann Friedrich Brockhaus, of a line of Westphalian preachers, broken for the first time in many successive generations by himself, who became a tradesman in the free imperial city of Dortmund, where, by a fortunate marriage, he acquired local distinction. Prudent in business, he was not "transcendental," as his son said of him, remembering how he was sent by his father to book auctions to bid in folios and quartos for waste paper; and how for buying Voltaire's "History of Charles XII." for his own reading he came near receiving a paternal chastisement. At the age of fifteen, the future publisher engaged himself to a wealthy draper of Düsseldorf, who soon reposed great confidence in him, and gave him commissions to Coblentz, Liége, and Hanover, and would have had him marry a niece of his, but that Brockhaus was unluckily robbed at Brunswick of a hundred louis d'or. This circumstance brought about a rupture and the return of the boy to his home, which he presently left again to go to Leipzig to complete his education. Here he had almost formed an engagement with a mercantile house of Manchester to become their agent at Leghorn; but on the 15th of September, 1796, he established himself, with two partners, at Dortmund, for the sale of English manufactures. The firm was Brockhaus, Mallinckrodt & Hiltrop, the last the moneyed man of the concern, who withdrew in 1798, though out of his connection there grew a lawsuit which was not settled till 1828, five years after the death of Brockhaus. Mallinckrodt was bought out in 1801–2. The troubles inflicted at that period by Bonaparte upon all Europe at last compelled Brockhaus to remove to Amsterdam, where he set up as a bookseller, with the high-sounding name for his establishment of "Kunst- und Industrie-Comptoir." Here he began at once three periodicals, a Dutch politico-literary newspaper, a German historical monthly, and a French quarterly of belles-lettres—all short-lived. In 1808, visiting the fair at Leipzig, he purchased the "Conversations-Lexicon," which was almost on its last legs (but four parts had appeared from 1796 to 1800, and no other till 1806; and in 1808 two more, completing it and almost finishing the publisher). To this enterprise he gave new life and a great extension, and with it his name will ever be associated. Of his trials and pecuniary straits during his whole stay in Amsterdam, and for some years after he had removed to Leipzig (1810), we have no space to speak, nor of his two marriages and two romantic love affairs, in all of which his character appears to advantage. His *Deutsche Blätter* in 1813, which had been preceded by patriotic political tracts which had a good deal of vogue, were still more successful, and amid the fulfilment of German unity Brockhaus may well be remembered with gratitude as a precursor.

—In the first June number of the *Academy*, Duncan H. Weir offers a very plausible emendation of the Hebrew text of Psalm cxxxvii. 5. The verse runs thus: "If I forget thee, O Jerusalem! *let my right hand forget*" (*tishka'h ycmini*)—with the object left out. This gap the English authorized version fills by the addition of the words "her cunning," which has appeared so little satisfactory to more recent translators that many attempts have since been made to render the word *tishka'h* by an intransitive verb, following the example of the Septuagint, which saw in it a passive form (*tishshakha'h*, let be forgotten). The writer for the *Academy* now suggests the substitution for *tishka'h* of the two words *yibash koa'h* (let be dried up the strength of), which in the vowelless text requires only the easy breaking up of the letter *tav* into the letters *yod* and *beth*. The entire passage will then stand thus: "If I forget thee, O Jerusalem! let the strength of my right hand be dried up; let my tongue cleave to the roof of my mouth, if I do not remember thee"—an alteration which he justly remarks is borne out by the parallel lines in Psalm xxii., "*My strength is dried up* (*yabesh ko'hi*) like a potsherd, and my tongue cleaves to my jaws." On the other hand, the suggestion in the *Academy* finds support in the *vattibash yado* (and his hand . . . dried up) of 1 Kings xiii. 4. The only critical objection that can be made to this is, that we are equally tempted to change the *yabesh ko'hi* of the passage just quoted into *yabesh 'hikki* (my *palate* is dried up), in which case the expression "let the strength of my right hand be dried up" would remain without a parallel, and hardly be considered idiomatic. To those who would not hesitate to read *'hikki* for *ko'hi*, we would suggest the substitution of *tishshaber yemini* (let my right hand be broken) for *tishka'h yemini* (let my right hand forget), supporting this suggestion by the comparison of *ezroi tishshaber* (let my arm be broken) in the analogous self-imprecation of Job (xxxi. 22). Logically considered, however, though not linguistically, the rendering of the authorized version appears, after all, to be the best.

—One of the disagreeable necessities of an attempt to provide a *modus vivendi* for a higher civilization side by side with a lower, is the system of mixed courts in which the culprit is sentenced according to the laws and usages of the country to which he belongs. In March last, a Chinese mob attacked some foreign contractors and their employees in the village of Poomwantang, in the jurisdiction of Shanghai, and the Chinese authorities were so successful in apprehending the rioters that twenty-one were convicted and punished. Five of these had already suffered infliction of sentence, when, on suspicion that means had been found to evade the severity of the execution, it was decided to suspend punishment of the remaining sixteen till the 12th of April, when it should take place all at once in presence of the Mixed Court, the foreign authorities, and such other spectators as chose to attend. The performance came off according to the programme, but there were few foreigners who could endure the spectacle long, the U. S. Consul-General, Mr. Geo. F. Seward, retiring after the first two punishments had been inflicted. The instruments of "justice" consisted of the cangue—a wooden collar weighing from 20 to 30 lbs., on which is pasted the nature of the offence committed by the wearer; bamboos, light and heavy, the latter being considerably the larger and four times as severe, requiring both hands; and "a leather arrangement, in size and shape closely resembling the sole of a slipper, but which, on examination, was found to be three ply of hard thin leather sewed together towards the heel, but hanging separate towards the toe. This was the flapper for blows on the mouth." It was the most atrocious of the three instruments, eighty blows of it reducing the victim's face to a "blue, swollen, shapeless mass." The beating with the bamboo is confined to one portion of the thigh about two inches broad, and 100 blows were the minimum inflicted on this occasion; what sort of an appearance is presented after 300 have been administered (as they were in one case), may be faintly imagined. One wretch was punished both with the flapper and the bamboo, and the cangue was generally ordered in addition to the latter torture.

—There were a number of Chinese spectators of all this, and many of them, "with the callousness to physical suffering characteristic of the race, seemed amused by the groans and writhings produced by the flogging." The victims showed a greater or less degree of fortitude, but only one is mentioned as having been superior to his sufferings throughout. The question has been often discussed whether the Chinese are really of tougher fibre and blunter sensibilities than the rest of mankind, but the history of criminal procedure, of religious persecution, and of popular amusements, such as bear-baiting and cock-fighting in European countries, may well make us hesitate to draw too hasty an inference from the barbarities of the Chinese code. Except for the moral element, there would be little to choose between a face spoilt in the prize-ring with fists, and before the Mixed Court with a "flapper." The Tower of London is grim enough with the apparatus of tormentors and executioners. Nevertheless, there would appear to be a real constitutional difference between Chinese and Europeans. The report of the London Mission Hospital at Hankow for 1870 says of them that

"Their flow of animal spirits, if even and subdued, is unintermittent. . . . They make admirable patients, being very susceptible of the influence of remedies, and rallying well after operations without anything like the risk of reaction and secondary fever which is the dreaded tendency of the

European constitution. One man had both his feet amputated for gangrene, and next day the pulse was still under 100, and he ate a meal of rice and slept soundly afterwards. A girl had a large part of the foot removed for diseases of the bones; next day she managed to run away without assistance."

This view is confirmed by a writer in a Shanghai journal, who says that, in addition to whatever explanation may be found in certain considerations, such as the want of continuous political tranquillity in China, the misery of overpopulation, the toleration of infanticide, and the cruel exhibition of punishments by the Government—all tending to make human life cheap and human suffering common:

"We must add the prevalence of a phlegmatic temperament which enables them to bear mental and physical suffering in a very surprising manner. We are not quite sure that they do suffer as Europeans do. The difference is, we think, one of feeling, not of fortitude. Conscious of an ability to bear, they are not slow to inflict, and this principle is clearly capable of indefinite extension. Whoever has had an opportunity of witnessing the infliction of torture, or the performance of a surgical operation, or the mutilation caused by a fearful accident, the sufferers in each case being Chinese, must have observed the coolness with which the orders of the magistrate or the preparations of a surgeon are received. The same absence of excitability which renders lunacy rare comes into play here. The man of nervous temperament tortures himself about nothing. The Chinaman, who has no more nerves than are necessary to his life as a reasoning animal, suffers what are apparently the acutest tortures without a groan, and in turn is only too ready to put his fellows to the proof."

TYERMAN'S WESLEY.*

MR. TYERMAN'S life of John Wesley makes its appearance at a good time. The extraordinary growth of the Methodist denomination, or "connexion" (to use the awkward term which they prefer, and against which, with its derivative adjective, "connexional," we cannot restrain a passing protest), has made it, in size and strength and opportunity of usefulness, one of the foremost organizations of Protestant Christendom. And it is nowadays so conscious of its strength, especially on this side of the Atlantic, that for that reason, if for no other, it would require from one who studies the tendencies of things a closer and more thoughtful scrutiny than ever before. Moreover, there are some matters of conspicuous significance in the recent history of Methodism in regard to which public opinion, outside the denomination, has been widely and earnestly expressed. At the meeting of the General Conference in Brooklyn in May last, there were present, for the first time, as constituent members of the body, lay delegates from the churches; and there is no reason to doubt that the democratic tendency which this fact expresses will, before long, extend to the subordinate bodies of the denomination. Already some results, and apparently good results, begin to show themselves as the consequence of this change. The great scandal of the Book Concern, also, naturally invites enquiry into the antecedents of a body in which a state of things so extraordinary as that which has recently been witnessed in it could be possible. And so, as Methodism is logically to be studied in the life and character of the great man whom Mr. Tyerman properly calls its founder, he has brought out his volumes at a favorable moment.

Mr. Tyerman puts his worst foot foremost and repels his reader, unless the reader be a Methodist of zeal no less undiscriminating than his own, by an introductory chapter which it is hardly too severe to call absurd. "Is it not a truth that Methodism is the greatest fact in the history of the Church of Christ?" is the sufficiently surprising question with which he sets out. And he proceeds to answer it by statistics exhibiting the remarkable rapidity with which the denomination has grown, and the immense work which it has done, in a space of time comparatively brief. This constitutes it "the greatest fact in the history of the Church of Christ" in Mr. Tyerman's judgment—that it has spread itself so broadly and so swiftly. Area and numbers are everything; depth and permanence are scarcely taken into the account. We need not point out how utterly unphilosophical nor how completely without historical soundness is Mr. Tyerman's method. The planting and training of the Christian church in the first two centuries was, according to him, a lesser fact than Methodism, and so was the great Reformation in the sixteenth century. We find, also, even in this introductory extravagance, a trace of that confident assurance in regard to the most sacred and invisible realities with which the author constantly offends the good taste of his readers. "A day never passes without numbers of its (Methodism's) converts being admitted into heaven." But upon this point, and as to the exact number and rate of the daily admittance, the statistics are no further explicit.

The same tendency to narrow and sectarian views is more or less evident throughout the entire work, and was, indeed, to have been expected from the very nature of the case. To regard as distinctively Methodistic, excellences which Methodism has in common with other Christian bodies; to place an undue emphasis upon, and attach an exaggerated value to, occurrences of merely incidental or sentimental interest; to indulge in some occasional obloquy against the adversaries of the "connexion"—these are faults into which a Methodist minister, writing the life of the great founder of the Methodists, may be easily excused for falling. Mr. Tyerman has not escaped them. Of the first, his exaggerated estimate of the significance of the Methodist movement (to which we have already referred) is an illustration. Of the second, his incessant fondness for the "last words" of the persons of whom he makes incidental mention (often telling us little more concerning them than what their "last words" were) is an example—sometimes grotesque and ludicrous in the extreme. And of the third we cite, almost at random, the passage (vol. ii. p. 99) where he denounces the Moravian "hymns and literature" as "loathsomely luscious," and their leader as "ambitious and overbearing, if not insane"—which is strong language and unpleasantly concise and sweeping. On the other hand, Mr. Tyerman's concise vigor is sometimes a great merit. He tells his story with a straightforward honesty and clearness which leave no doubt about his meaning. Often, indeed, the business-like tone of the narrative is extremely entertaining, as, for example, when the principal incidents of Wesley's voyage to Georgia are condensed into a few lines, as follows:

"A boy fell overboard, but was rescued by a rope; in the Downs, a servant was set on shore because he had the itch; the passengers had prayers twice a day; Wesley and his friends expounded the Scriptures and catechised the children, and ate at Oglethorpe's table; the Germans sang songs and served God in their own way; and the only person punished during the voyage was a boy for stealing turnips" (vol. i. pp. 119, 120).

Or, again:

"Great power, however, began to attend his preaching. On one occasion six or seven people dropped down as dead; and, at another time, several of the genteel people were constrained to roar aloud for the disquietness of their hearts" (vol. i. p. 392).

We cannot forbear to cite one other instance of a style so extraordinary and so unconsciously diverting:

"In an island near Limerick he preached to thousands seated on the grass, row above row. Here he overstrained himself, and next morning began spitting blood, and for a week was laid aside. Rest, however, and 'a brimstone plaster, and a linctus of roasted lemons and honey,' so far restored him that, in a week, he resumed his ministry at Cork, *and interred James Massiot*" (vol. ii. p. 304).

The italics are ours. But it is impossible for us to judge of the completeness of Mr. Wesley's restoration till we know how much the interment of James Massiot may have involved. If James was a vigorous and able-bodied man, who had first to be made "ready" (as Mr. Artemus Ward once said in reference to a similar duty), then of course the "brimstone plaster and the linctus" must have been wise precautions. In this queer and matter-of-fact style Mr. Tyerman tells his story, setting down the details of Mr. Wesley's long and laborious life with the most exact minuteness of method, and introducing judicious quotations from his correspondence and his published writings.

There are few lives which would bear the test of such microscopic scrutiny so well as Wesley's. Few men have ever lived who wrought with such amazing industry, and with so little waste of time and power, the work which their hands found to do. Greater by far than his genius, greater, if anything, than his devoutness, was his conscientious and painstaking energy. Even after he was eighty years old, he could fall down-stairs, head foremost, without serious injury; and at eighty-seven he could ride seventy miles in a single day, in his itineracy among the circuits, and could kill his horse with overwork. Commensurate with the industry of his life were its success and usefulness. No one can deny that he left the world a great deal better than he found it. The ignorance, the immorality, the brutality, against which he had to contend at almost every step, when he began his work in England (not knowing or even suspecting what that work would prove to be), were enough to have discouraged an army of reformers. And it is fine to follow the course of Mr. Tyerman's narrative, and see the process by which the indifference of the public gave place to derision, and the derision to violent antagonism, and the antagonism to acquiescence and admiration and popular applause. Before John Wesley died there were thousands of people in Great Britain to whom his goodness had helped to make their "faith in goodness strong," more than almost any other influence of which they were aware; and to whom the figure of the old man standing in the open air, in harsh and bitter weather, and at the life-long sacrifice of ease and comfort, to preach his Master's message to the poor, was a spectacle with which all their best and most practical ideas of saintliness were naturally connected. Making all allowance for the more or less frequent influence of the wave

* "The Life and Times of the Rev. John Wesley, M.A., Founder of the Methodists. By the Rev. L. Tyerman, author of the 'Life and Times of Rev. S. Wesley, M.A.'" In three volumes. New York: Harper & Brothers. 1872.

of revival which his preaching set in motion (for which influence he left room both in his doctrinal opinions and in his practical calculations), it is impossible not to see that the improvement of morals and religious earnestness which dates from his ministry has steadily increased till now, and is a permanent and not a transient historical result. The figure by which to represent it is not that of a tide, with ebb and flow the same, but rather that of an encroaching sea, that surely "gains upon the shore" of worldliness and vanity.

It is a little difficult to say how much of this extraordinary movement was in consequence and how much in spite of the character of the man who was most conspicuous in it. For the greatness of John Wesley appears in nothing more remarkable than in the fact that he was wise enough to see how vast and sacred, beyond the power of merely human management, was the work in which he was engaged. He followed it almost as much as he led it, feeling his way from step to step with a humility and reverence really touching. Singularly inconsistent with this wisdom, on the other hand, are the occasional evidences of a lack of practical common-sense where we should least have expected to discern such a lack. Few men, for example, have ever shown a greater want of ordinary wisdom in their matrimonial ventures (proverbial as is the blindness of the human mind in matters of that sort). Again and again he tried to entangle himself in alliances so every way unsuitable that one suspects him of a half ascetic purpose, resolute to find a wife whose discipline of him should be a means of grace. He found her at last with a vengeance, and the discipline was not lacking. She was a widow, and his intimate acquaintance with her seems to have commenced only a few days before the marriage. A short time longer only was required to develop the most unpleasant incompatibility of temper between the parties. And while it is impossible to excuse Mrs. Wesley for the outrageous violence with which she seems to have treated her husband, dragging him on one occasion (if we may trust the witness whom Mr. Tyerman cites) by the hair of his head; yet one cannot help suspecting that he may have been a somewhat exasperating man, and he certainly was to blame for the provoking calmness with which, in one instance, he persisted in a correspondence which might have infuriated a less unreasonable woman.

This story of his domestic infelicity illustrates pretty well some of the defects of a character which, on the whole, is worthy of great admiration. With an almost childish simplicity, which sometimes became credulity, he united a confidence in his own judgment, and an obstinate adherence to his own methods, which made him sometimes arbitrary and oppressive in his dealings with his equals or subordinates. He was never quite rid of the ascetic temper by which his religious life at Oxford was so strongly marked; and the sumptuary regulations which he endeavored to enforce upon his followers were sometimes inconsiderate and unreasonable. He was never quite able to keep from intermeddling with matters of which his knowledge was too slight to justify his attempt to manage them. Without any medical skill or education, for example, and with only such uncertain help as he could get by taking into his counsels an apothecary and a surgeon, he prepared a work on "primitive physic," which he circulated with no less zeal and confidence than he devoted to the circulation of his strictly religious tracts. With similar readiness he interfered in the private and personal concerns of his preachers, forbidding marriage, for example, in cases where his prohibition was a cruel and oppressive act, resulting in great wrong and suffering. His facility and audacity of judgment upon all sorts of questions which came before him were, of course, one secret of his administrative success; but that it was the occasion of much incidental mischief, also, there can be no doubt. That Methodism comes legitimately and by direct inheritance from its founder into possession of its somewhat narrow confidence in itself, believing what it does believe so vehemently and exclusively, and withal so practically, no one who studies this biography of Wesley can fail to see. Intensity rather than depth, a practical and industrious activity for the present, rather than a thoughtful and religious care for the future, a willingness to be satisfied with the best theory for immediate working application, rather than what was absolutely best and truest—these, which are among the characteristics of Methodism throughout the whole course of its development to the present day, were characteristics also of John Wesley. And in these, as in many other respects, the denomination is the child of its father.

Mr. Wesley's attitude in regard to the Church of England was, as Mr. Tyerman frankly admits, a very inconsistent one. It reminds us of a member of a temperance society who, on being surprised in the act of taking something stronger than water, explained, not without embarrassment, that he was "a partially-total-abstinence man." That Mr. Wesley did reckon himself, and did desire to be reckoned, to the day of his death, as a regular member and minister of the Church of England, is certain. That he would not suffer the Methodists to break with the Church during his lifetime is clear enough; but that he saw how sure that separation would come after he was gone, and acquiesced in it as in the inevitable, is also pretty clear. Among the hitherto unpublished utterances of Wesley on this subject is one of great significance written towards the close of his life, in his eighty-seventh year. We cite the last half of the letter in which it occurs:

"I do not know what you mean concerning talking 'about the church.' I advise all our brethren that have been brought up in the church to continue there; *and there I leave the matter. The Methodists are to spread life among all denominations, which they will do till they form a separate sect*" (vol. iii. p. 605).

We have italicized the last words because they indicate the recognition which the old man somewhat sadly gave to the fact that his movement had outgrown the limits to which he hoped to restrict it. His view of the Church of England was, to be sure, a very broad view, but all the more for that reason the organization of another sect seemed to him a calamity the responsibility for which he was unwilling to assume, and yet the probability of which he was unable to ignore. So he could simply "leave the matter." How the matter has resulted the world can see. But this inconsistency of Mr. Wesley has left traces of itself in the great denomination which he founded. Even yet the transition from its original function "to spread life among all denominations" to the distinctive functions of "a separate sect" is not perfectly accomplished. The centralized authority, the more or less strict and rigorous drill of the membership, the management of great funds and forces in the interest of special masures or particular men—these, which are among the obvious dangers from which Methodism has not yet liberated itself, are the natural and logical outcome of the movement as it existed in the person of John Wesley, and as it may be traced in his personal history. And Mr. Tyerman's biography, so much more full and accurate than any that have preceded it, and, we may add, so singularly candid and honest in its spirit, is to be heartily welcomed for the additional facilities which it furnishes to those who desire to study the tendencies of Methodism.

SUMMER READING.*

THE "anguish of the solstice," as Mr. Rossetti very justly calls the disgraceful weather which takes place, if that is the right word, during this month and next in most parts of Christendom, will probably not much alter the character of the reading done by most of our fellow-citizens. Summer reading, as winter reading, in America, especially in years when a President is to be elected, is made up in very great part of the Bible and the newspapers. Our fellow-citizen will have to be a very hot one on the third day of next month who does not call early after his *Tribune* or his *Times* for a lucid and sufficient explanation of how it has happened that "the Old North State" has not been "redeemed," or has been redeemed, as the case may be, and has not been carried, or has been carried, by the triumphant Liberals or by the bayoneted minions of Grant. "Campaign Lives of Grant and Greeley he will also read to some extent, but the Bible on Sundays and the newspapers on week-days will constitute his main reliance. On the whole, he is hardly to be called a reader in any strict sense of the term, belonging though he does to the best educated people on this or any other globe; and the "summer reading" will be done by exceptional Americans rather than by the President-making American.

Of summer reading in general it is true, we suppose, that it is appreciably lighter than that done at other seasons, and that when it is not absolutely lighter, it may nevertheless be so called on the ground that it is done with a view to recreation. The miner who, like a miner of our acquaintance, spends his vacation in a hard attack on Mr. Darwin's volumes, and, instead of killing stray rattlesnakes, speculates curiously on the relation of the rattle to the survival of the snake in its struggle for existence, is not doing what most people would call holiday reading, but in the change of work he finds genuine mental refreshment. So, too, of the business man who uses his summer resting-time in catching up with the world, in Mr. Morris's poetry, or in Mr. Browning's last book, or in Mr. Stopford Brooke's sermons, or in Mr. Sumner's recent speech, if the term recent can be applied to so much hoar antiquity, or in the latest new author who is making a name for himself

* "Fifine at the Fair, and other Poems. By Robert Browning." Boston: J. R. Osgood & Co. 1872.
"Fly-Leaves. By C. S. C." New York: Holt & Williams. 1872.
"Legends and Fairy Tales of Ireland." New York: P. M. Haverty. 1872.
"Pope. Satires and Epistles. Edited by Mark Pattison, B.D." Oxford Clarendon Press Series. New York: Macmillan & Co. 1872.
"Shakespeare's 'Hamlet, Prince of Denmark.' Edited by W. G. Clark, M.A., and W. M. Wright, M. A." Oxford Clarendon Press Series. 1872.
"The Great Prophecy of Israel's Restoration. Isaiah, chapters 40-66. Arranged and Edited by Matthew Arnold, D.C.L." New York: MacMillan & Co. 1872.
"Mountaineering in the Sierra Nevada. By Clarence King." Boston: J. R. Osgood & Co. 1872.

among the rest. His line of reading might or not alleviate the anguish which the solstice brings to this or that one of his neighbors, but it is to him light reading, as being in the nature of play, just as the hard labor of cricket is fun to the school-boy to whom Horace is dismal toil and who would prefer the treadmill to Cowper's "Task." But regular readers, also, who would almost as little think of life without books as of life without meals, obey the common law which, when the weather is most intolerant of human existence in our climate, prescribes a season of comparative idleness, and their July and August reading is apt to be less in quantity and less important in matter than that which they go through while the frost is in the ground or on it —the period when, no matter what Dr. Johnson ignorantly or viciously grumbles in his peevishness over the Whig Milton, the wits and intellects of men work more accurately, vigorously, conjubilantly, and to greater profit than at other times and seasons.

For the regular reader who expects to languish away the next two months in populous cities, and for him or her who may have the better fortune of an escape into coolness, we propose to recommend a few books of various kinds which we have recently received. All of them, or most of them, may, we think, safely be packed up and sent to the seaside or into the country with the other impedimenta; and some one or two of them may be taken away even by the hasty tourist who is not journeying so hastily but that he may expect a rainy day or so in the course of his trip, and find that a stray volume may be mitigatory of the tedium in an Adirondack camp, or a White Mountain hotel, or a Labrador yacht cabin.

First, as a book to be religiously carried out and carefully brought home again unopened, certainly unread, we wish to recommend "Fifine at the Fair." We have read in it, and expect to read it, but not now, we believe. Yet the poems are not interminably long, like "The Ring and the Book," and one of them is even of the sort with which Mr. Browning's earlier dramatic lyrics made us acquainted. This poem, "Hervé Riel," most of our readers have no doubt seen, for it appeared some two years since in English periodical literature, and in American as well. In halting verse of occasional vigor and felicity, the story of a fine action is so told as to secure for the hero, and, in a degree, for the poet, the admiration of the reader, even though his ear protests against verses such as these on a subject such as this, by a master who, when he is harsh, is harsh from choice and not necessity:

> "So for better or for worse,
> Hervé Riel, accept my v- rse!
> In my verse, Hervé Riel, do thou once more
> Save the squadron, honor France, love thy wife, the Belle Aurore!"

These are not the most unmusical, either; but they are easy and unfatiguing in comparison with the hobble of "Fifine," or the tiresome psychologizing in "Prince Hohenstiel-Schwangau" on that eminently tiresome psychological subject, Louis Napoleon, into a sort of belief in whom Mr. Browning has one way and another persuaded himself. Of "Fifine," so far as its music is concerned, these verses are a fair sample:

> "And what dependence! Bring and put him to the test,
> Your specimen disciple, a handbreadth separate
> From you he almost seemed to touch before. Abate
> Complacency you will, I judge, at what's divulged,
> Some flabbiness you fixed, some vacancy outbulged,
> Some—much—nay, all, perhaps, the outward man's your work;
> But inside man?—find him wherever he may lurk,
> And where's a touch of you in his true self?
> "I wish," etc, etc

Of course, of the principal matter which Mr. Browning puts into a seriously presented poem of his it is usually right to speak with respect—able man and good poet as he is. The external form is what we now are speaking of, and it is here so repulsive that we admit a feeling of joyful satisfaction at seeing it soundly abused as it is by the next author on our list. This is a Mr. "C. S. C.," an Englishman, who has made as pleasant a book of light humorous poetry as we have seen in a long time, and whom we heartily commend to the attention of all our readers. Better reading for a hot summer afternoon we do not recollect, the only objection to it being that one is every little while tempted to the exertion of reading some of it aloud for the benefit of the rest of the company. The travesty of Browning is perhaps not one of the pieces which the reader thus tempted would choose, but we may quote a part of it as fairly illustrative of the preposterous style of Mr. Browning's "Hohenstiel-Schwangau" poem, as of many another of his poems, and illustrative also of our author's skill in imitation and travesty. "The Cock and the Bull" Mr. "C. S. C." calls the parody, referring to the long-winded, paradoxical, impertinent, and resultless manner of narrative affected by Sterne in "Tristram Shandy":

> "You see this pebble-stone? It's a thing I bought
> Of a bit of a chit of a boy i' the mid o' the day—
> I like to dock the smaller parts-o'-speech,
> As we curtail the already cur-tailed cur
> (You catch the paronomasia, play o' words?)
> Did, rather, i' the pre-Landseerian days.
>
> Well, to my muttons. I purchased the concern,
> And clapt it i' my poke, and gave for same
> By way, to wit, of barter or exchange—
> 'Chop' was my snickering dandiprat's own term—
> One shilling and fourpence, current coin o' the realm.
> O-n-e one and f-o-u-r four
> Pence, one and fourpence—you are with me, sir?—
> What hour it skills not: ten or eleven o' the clock,
> One day (and what a roaring day it was!)
> In February, eighteen sixty-nine,
> Alexandrina Victoria, Fidei
> Hm—hm—how runs the jargon? being on throne.
>
> "Such, sir, are all the facts, succinctly put,
> The basis of substratum—what you will—
> Of the impending eighty thousand lines.
> 'Not much in 'em either,' quoth perhaps simple Hodge.
> But there's a superstructure. Wait a bit.
>
> "Mark first the rationale of the thing:
> Hear logic rivet and levigate the deed.
> That shilling—and for matter o' that, the pence—
> I had o' course upo' me—wi' me, say—
> (*Meum*'s the Latin, make a note o' that)
> When I popped pen i' stand, blew snout, scratched ear,
> Sniffed—teh!—at snuff-box; tumbled up, he-heed,
> Haw-hawed (not hee-hawed, that's another guess thing:)
> Then fumbled at, and stumbled out of, door,
> I shoved the door ope wi' my omop at:
> And in *vestibulo*, i' the entrance-hall,
> Donned galligaskins, antigropeloes,
> And so forth; and, complete with hat and gloves,
> One on and one a-dangle i' my hand,
> And ombrifuge (Lord love you!), case o' rain.
> I flopped forth, 'sbuddikins! on my own ten toes,
> (I do assure you there be ten of them),
> And went clump-clumping up hill and down dale
> To find myself o' the sudden i' front o' the boy.
> Put case I hadn't 'em on me, could I ha' bought
> This sort-o'-kind-o'-what-you-might-call toy,
> This pebble-thing o' the boy-thing? Q. E. D."

Poems and tales concerning cats are rather numerous and commonly amusing, but this lament of a cat who though often caressed yet longs for death, we find worthy of a place with any literary cat known to us. "Sad Memories" is the title of the poem:

> "Why was I born to be abhorred of man and bird and beast?
> The bullinch marks me stealing by, and straight his song hath ceased;
> The shrewmouse eyes me shudderingly, then flees; and worse than that,
> The house-dog he flees after me—why was I born a cat?
>
> "Men prize the heartless hound who quits dry-eyed his native land;
> Who wags a mercenary tail and licks a tyrant hand.
> The leal true cat they prize not, that if e'er compelled to roam,
> Still flies, when let out of the bag, precipitately home.
>
> "They call me cruel. Do I know if mouse or song-bird feels?
> I only know they make me light and salutary meals:
> And if, as 'tis my nature to, ere I devour I tease 'em,
> Why should a low-bred gardener's boy pursue me with a besom?
>
> "Should china fall, or chandeliers, or anything but stocks—
> Nay, stocks, when they're in flowerpots—the cat expects hard knocks:
> Should ever anything be missed—milk, coals, umbrellas, brandy—
> The cat's pitched into with a boo-, or anything that's handy."

It is to be confessed that there is not very much thought in these poems; if Mr. "C. S. C." had been living in the latter part of the seventeenth century, it would probably still have been Sir Isaac Newton who would have discovered the law of gravitation; but there is in these verses a grace, wit, good sense, and good-natured fun which make the little volume very agreeable. We might perhaps remind the author that a favorite device of his—that of giving a grotesque and comical turn to a poem which maintains seriousness almost to the close—is a device which becomes worn out after being used but few times. He hardly needs the warning, however, unless we are mistaken as to his good sense, and we presume the fault was committed before there was any thought of a volume which should exhibit it. A few of the pieces parody individual poets; but Miss Jean Ingelow comes in for a scoring like that administered to Mr. Browning; and Tennyson and other popular favorites are treated with good-natured satire.

Letters, says Mr. Matthew Arnold, literature, is the great need of English schools for the people. Of science they are pretty sure to get quite enough; the English mind is tending towards science just now, and then again the scientific men are always ready with some excellent, compact little treatise, eminently capable of being used in teaching, while on the side of literature there is great deficiency—a much greater deficiency than exists in the schools for the youth of the upper classes. In those the student at least gets some knowledge of one or two literatures besides his own, and of how much importance Mr. Arnold thinks this to be, the readers of his works will recollect. For twenty years he has been of that opinion, he says, and in the quarrel about the reading of the Bible in schools, he thinks he has found his opportunity to strike a blow in behalf of that sort of knowledge which interests the feelings and the imagination. Now the real power of literature best makes itself felt either by means of an acquaintance with all literature, or by knowing thoroughly one great literature besides one's own, or one great work, with a beginning, middle, and end, which must be known as a continuous whole. From the literature of Greece, whether in whole or in part, or that of Rome, or France, or Ger-

many, the pupil in the common school is debarred; the Hebrew literature is the only great literature except his own to which he has access, and of that he can learn thoroughly only a small part. Looking about for such a portion of Scripture as might serve this literary purpose, Mr. Arnold hit upon the last twenty-seven chapters of Isaiah as the most suitable. Their theme is the great restoration of exiled Israel out of Babylon to their native Jerusalem; both theme and treatment are highly poetical; the action has unity and coherence; the spirit is lofty, and the exultant tone exhilarating and bracing; the Hebrew language and literature are there at their greatest height. For these reasons, Mr. Arnold offers these twenty-seven chapters as a Bible reading for schools in which the Bible is the pupil's only means, or almost his only means, of coming in contact with poetry and eloquence. "The Great Prophecy of the Restoration of Israel" is its title, and this title points to the reason why, ingenious and plausible as Mr. Arnold's argument may be, his little book will probably fail to accomplish his purpose. It is not as a prophecy of Israel's restoration that the last part of Isaiah would be described by the persons who upon the one side and the other are earnest in this contest about the Bible in the schools. "The Great Prophecy of the Messiah as revealed in Christ" would be the title which the whole Christian world would demand for this part of the Scriptures, and we suppose Mr. Arnold may have already learned from the religious press that his proposal to keep to the sense of the literal prophecy is very strange, not to say scandalously wicked. We ourselves have not in its full force the feeling which impresses Mr. Arnold so strongly, that for the average school pupil a knowledge of some great foreign poem as a continuous whole is a means of culture sure to be efficacious and greatly salutary. We think it would be well—that perhaps it might be even very well; but we are not clear that an acquaintance with a pretty wide range of authors, old and new, represented in a comprehensive reading-book, might not more effectually give a fillip to the imagination of the average boy and girl and more strongly engage their feelings. The perception of the unities is not very vivid in the youthful Anglo-Saxon mind, while its capacities for being roused by fine emotion are considerable, and capable of rewarding the cultivator. Perhaps Mr. Arnold's work may have a trial in this country. We think that at any rate older persons than school children might very profitably take a look at the evangelist prophet under Mr. Arnold's guidance through his poetry. We all know, who read our much-praised authorized version with a view to getting the exact sense and preserving the poetical thread, that admirable as its diction almost always is, it is nevertheless like almost every other translation from one language to another and remote language, and in many places is a most baffling and trying book, which it is impossible for the ordinary reader to take up for purposes of intelligent pleasure. We can imagine that Mr. Arnold's paraphrase—which is so slightly changed as not to be really a paraphrase—may be of great service to a good many readers.

To go back to an author early read and carefully so, a little of what may be called duty-reading of him is an employment not inappropriate for a summer day. The duty is a light one, too light to be fatiguing and not too light to give to idleness that flavor of work demanded by the American man under "the yoke of conscience masterful," which is apt to gall him whenever he is not spending his time in shortening his life. For this purpose we recommend any one of the Clarendon Press series of English authors, as, for instance, the "Satires and Epistles" of Pope now before us, or the excellent "Hamlet." They are well annotated, a good essay accompanies them, the volumes are small enough to slip into the pocket of a fishing-jacket, and the type and paper are good.

We at first thought we were rather disappointed in the collection of "Legends and Fairy Tales of Ireland," published and, we presume, compiled by Mr. P. M. Haverty of this city; but have since made up our mind that it has considerable merit, and that it may with advantage be added to the collection of almost any one who delights in this sort of literature, and who finds the Irishman in his native bog an amusing personage. The stories here told are not all new; the book is the first general collection of Irish fairy tales, Mr. Haverty says, ever published in this country, and this consideration has perhaps caused him to admit, for completeness' sake, tales familiar to those who have other collections. Nor are the stories very well told. In particular we find that our compiler has too little of the frank acceptance of absurd impossibilities which is a frequent charm of the Irish popular fiction, and at the same time has not enough of the slyness and drollery with which, on the other hand, the absurdities are often skilfully indicated. Nor is he a well-practised story-teller. But he has an appearance of honesty that gives one confidence in the correctness of his local coloring, and if many of his stories are bald and poor, many are amusing and some are affecting in pathetic touches as others in drollery and nonsense. With such a book as this and Mr. Baring-Gould's Oriental legendary lives of Biblical characters, an idle man might lazily occupy a fortnight of spare moments. Mr. Haverty's book would not be a bad one to give as a present to a boy, and, indeed, it might be worth while for us to consider whether, as a means of softening prejudices of race, it might not be well for us to bring up our children in closer acquaintance with a literature so rich in fancy and imagination, and as full-charged with affectionateness as with wit and fun. Bridget in the kitchen, throughout the length and breadth of the land, is, in many a family, a potent ally of the Know-Nothing and the violent Protestant; but a cheap edition of Carleton's "Traits and Stories of the Irish Peasantry" would do a good deal to neutralize her baleful influence.

Of Mr. Clarence King's "Mountaineering in the Sierra Nevada," we have at different times spoken favorably. We advise any one who is an enforced denizen of the town this summer, and who expects in future summers to breathe the invigorating air of the Far West in the Yo Semite Valley, or the Yellowstone region, or the Colorado Parks, to prepare himself for the journey at the same time that he consoles himself for its delay by reading Mr. King's captivating book. We shall not urge him to believe every word of it; we ourselves own that we had not faith enough for "Cut-off Copples's," but we have read the book with great pleasure. We might counsel the taking of notes for such descriptions of scenery and adventure as we have here, amid the sights and the events which are described; but we believe Mr. King's literary style would be improved if, before he worked his notes up, he would come down out of the mountains where he climbs and rides such wonder-horses, and narcotize himself a little with the fatter and duller air of the level of the sea, or thereabouts. He evidently has it in him to make an excellent writer, and has made one of the best books of travel that any American has made of late years, and that is saying something too, for the American of to-day is about as racy a traveller as he of fifty years since was timid and commonplace. We will quote, not the most spirited and forcible, nor the most fascinating, nor the most amusing of Mr. King's descriptions, but one which not unfairly represents his better style:

"We stopped to bow good morning to my friend and stage companion, the donna. She sat in the threshold of her open door, sewing; beyond her stretched a bare floor, clean and white: the few chairs, the table spread with snowy linen, everything shone with an air of religious spotlessness. Symmetry reigned in the precise, well-kept garden, arranged in rows of pepper-plants and crisp heads of vernal lettuce.

"I longed for a painter to catch her brilliant smile, and surround her on canvas as she was here, with order and dignity. The same plain, black dress clad her heavy ample figure, and about the neck heavy barbaric gold beads served again as collar.

"Under low eaves above her, and quite around the house, hung, in triple row, festoons of flaming red peppers, in delicious contrast with the rich adobe gray.

"It was a study of order and true womanly repose, fitted to cheer us, and a grouping of such splendid color as might tempt a painter to cross the world."

Turgenef's newly translated novel, "Smoke," we hardly know whether to put in our list or not. The tragic interest and the profound searching of this author's best work make him anything but "the idle singer of an empty day." Yet we have known old readers of Turgenef—and of everything else—to take up "Smoke" for the third time and go on, fascinated, to the end of a hundred or two pages. On the whole, then, perhaps we had better recommend the novels of the famous Russian to our sojourner. And together with him, and we confess with more of heartiness and without any doubt or reservation, we advise everybody who has not read "Björnson" to get "Arne" and "The Fisher Maiden." With these, although the shade is at ninety-nine degrees above zero, as the apothecary-shop thermometers informed us yesterday, he may be transported not only to the Norwegian fiords and floes, but to an idyllic and Arcadian Norway which will to the tired mind be delightful as not even an iced real country can be even in weather like this—as to which the term "probabilities," applied by the Weather Bureau people, is an exasperating misuse of language. Impossibilities, surely, are inherently more probable; and have the advantage of not happening.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Arnold (M.), Bible-Reading for Schools	(Macmillan & Co.) $0 50
Calverley (C. S.), Fly Leaves	(Holt & Williams)
Clark (W. G.) and Wright (W. A.), Hamlet	(Macmillan & Co.) 0 75

NEW BOOKS

PUBLISHED BY

J. B. LIPPINCOTT & CO.,

715 and 717 Market Street, Philadelphia.

BLACK ROBES; or, Sketches of Missions and Ministers in the Wilderness and on the Border. By Robert P. Nevin. 12mo, extra cloth, $1 50.

"One of the most interesting books which have come before us of late having to do with religious topics. . . . So fresh a book is indeed rare."—New York Eve. Mail.

SEVEN DECADES OF THE UNION. By Hon. Henry A. Wise. 8vo, extra cloth, $2.

"One of the most pleasing and remarkable books of the day."—New Orleans Times.

THE SCIENCE OF WEALTH. A Manual of Political Economy, embracing the Laws of Trade, Currency, and Finance. Condensed and arranged for popular reading and use as a text-book. By Amasa Walker, LL.D. Student's Edition. 12mo, extra cloth, $1 50.

WOMEN HELPERS IN THE CHURCH; their Sayings and Doings. Edited by William Welsh. 12mo, fine cloth, $1 25.

"A valuable and practical addition to religious literature."—Philadelphia Age.

THE LIFE OF CHARLES DICKENS. By John Forster, author of "Life of Landor," "Life of Goldsmith," etc. Vol I. 1812-1842. With Two Portraits from Steel, and Fac-similes. Fifth Edition. 12mo, extra cloth, $2.

"A life of Dickens worthy of the man and of the enduring creations of his brain."—London Daily News.

INJURIES OF NERVES, and their Consequences. By S. Weir Mitchell, M.D., Member of the Nat. Academy of Sciences, etc. 8vo, extra cloth, $3.

PHILADELPHIA AND ITS ENVIRONS. A Profusely Illustrated Description of the City and its Surrounding Points of Interest, embracing Fairmount Park. With nearly One Hundred Engravings. Beautifully printed on toned paper. 8vo, paper cover, 50 cents.

NYSTROM'S MECHANICS. A Pocket-Book of Mechanics and Engineering. By John W. Nystrom, C.E. Eleventh Edition. Revised and Greatly Enlarged by the addition of Valuable Original Matter. Fully Illustrated. 16mo, pocket-book form, gilt edges, $3 50.

NEW NOVELS.

ELEONORE. After the German of E. von Rothenfels, author of "On the Vistula," etc. By Frances Elizabeth Bennett, translator of "Lowly Ways." 12mo, fine cloth, ornamented, $1 50.

"A vivid reproduction of German life and character."—Boston Globe.

"A bright, readable novel."—Phila. Evening Bulletin.

"IT IS THE FASHION." From the German of Adelheid von Auer. By the translator of "Over Yonder," "Magdalena," etc. 12mo, fine cloth, $1 50.

"A more natural and graceful book of its kind we have never read."—Richmond Dispatch.

"Full of delightful pictures of social life."—Albany Journal.

MINNA MONTE. By "Stella." 12mo, extra cloth, $1 25.

"A delightful mental recreation."—St. Louis Republican.

THE LITTLE MOORLAND PRINCESS. From the German of E. Marlitt, author of "The Old Mam'selle's Secret," "Gold Elsie," etc. By Mrs. A. L. Wister. Fourth Edition, 12mo, fine cloth, $1 75.

"By far the best foreign romance of the season."—Philadelphia Press.

"A charming story."—New York Observer.

ISRAEL MORT, OVERMAN. A Story of the Mine. By John Saunders, author of "Abel Drake's Wife." With numerous Illustrations. 16mo, fine cloth, $1 25.

"Intensely dramatic. . . . Some of the characters are exquisitely drawn, and show the hand of a master."—Boston Saturday Evening Gazette.

WAS SHE ENGAGED? By "Jonquil." 12mo, extra cloth, $1 50.

HOW WILL IT END? By J. C. Heywood, author of "Herodias," "Antonius," etc. 12mo, fine cloth, $1 50.

WEARITHORNE; or, In the Light of To-Day. By Fadette, author of "Ingemisco" and "Randolph Honor." 12mo, extra cloth, $1 50.

LEFT TO HERSELF. By Jennie Woodville. 12mo, fine cloth, $1 50.

For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by the Publishers,

VAN NOSTRAND'S ECLECTIC ENGINEERING MAGAZINE. No. 1, Vol. VII. July. Now Ready. Contents: Major-General Q. A. Gilmore. a Biographical Sketch, with Portrait. A New Theory of the Discharge of Gas and Steam from Orifices On the Theory of the Steam Engine (Illustrated). Rolling vs. Hammering Ingots. The Australian Overland Telegraph. Loads on Girders. West of the Mississippi in 1872. Uses of Blast Furnace Slags. Telegraphy without Insulation. The Madeira and Mamore Railway. Acoustic Illustrations of Measurements of Stellar Motions. Hydraulic Mining. The Measurement of Ships. Pressure on Foundations. Gun cotton. The Adaptability of Titaniferous Ores for the Production of Iron.* A Review of Berthelot's Essay on the Force of Explosives. Experiments upon the Mechanical Efficiency of Pulley-blocks. The Manufacture and Wear of Rails. Nominal Horse-power. Indian Bridges. On the Construction of Vessels in Relation to the Changed Modes of Naval Warfare. Paragraphs.—Reports of Engineering Societies. Iron and Steel Notes. Railway Notes. Engineering Structures. Ordnance and Naval Notes. Book Notices. Miscellaneous.

Terms—Issued in Monthly Numbers. 112 pages, royal 8vo, illust a ed, at $5 per annum; single numbers 50 cents. D. VAN NOSTRAND, Publisher, 23 Murray Stre.t, and 27 Warren Street.

The Nation.

NEW YORK, THURSDAY, JULY 11, 1872.

The Week.

APART from the certainty that the Greeley and Brown ticket will be taken up by the Democracy, there is, we believe, nothing new. Some Greeley clubs have been formed in Connecticut, and we hear of numbers of good and respectable Republicans being in some of them—men quite different from some who have figured in reports of the *Tribune*, a rather credulous journal in certain matters. Also, we hear of more Greeley Republicans in this State than would be imagined by the readers of the *Times*. It is, indeed, idle to attempt showing that there are no Greeley Republicans in a State where Fenton has been able to contest with Conkling possession of the State offices, and we wonder the *Times* should think it worth while to try. A division of the Democratic vote in this city, inability in these dark days of the Ring to send Greeley out of this county and Kings with a Seymour or Hoffman majority, and Democratic abstentions in the country, are much better reliances for the *Times* and its candidate than counting up only seventeen Greeleyites in this county and only ten in that. From New Hampshire, also, we hear news of Republican disaffection and Republican apathy, but it is all too early yet for talk of this kind. We advise everybody to disbelieve the partisan newspapers and wait a month before disquieting his soul. After the hush before Baltimore is over, and the loud bawling after Baltimore has subsided a little, we shall be able to see whether there is any "prairie fire" sweeping all before it, or whether there is to be an excessively tiresome fight.

Greeley himself has visited the Boston Jubilee, travelling under the respectable chaperonage of Mr. Theodore Tilton — whom the Boston Woman's-Rights Women, we see, are charging with base apostasy. The Sage — perhaps because he had got away from his managers, who, he says, had warned him against oratory—made a speech which, if there were gratitude in man, and reverent credulity in newspaper man in particular, might have been described as sagacious, by way of ingratiating himself with our honored profession. As it was, he might as well not have made it, as nobody expected it; and the gist of it was that people said he had bad men and low men for his companions, but that really he had always been surrounded by newspaper-men and newspaper-women. As for other Greeleyite news, we are informed that Southerners of standing—it is not said of how much sense the political Southerner is just now—are advising each other to support the Cincinnati candidate, because during the war he was in favor of paying them for emancipated slave property, and might, as President, be expected to favor that policy. One would have supposed the South would have learned by this time the moral impossibility and the physical impossibility of certain things; but she has some things to learn yet, we fear.

Mr. Greeley appears to be "boiled crow" to more of his fellow-citizens than any other candidate for office in this or any other age of which we have record. The anti-Free-Trade Cincinnati men say he is boiled crow to them; the Free-Trade and Revenue-Reform Cincinnati men say he is boiled crow to them; boiled crow he is to his former Republican associates; and now the Democrats are saying in a curious way that to them also he is boiled crow. "Whatever you do, don't nominate him at Baltimore," say the Missouri *Republican*, Springfield *Republican*, and Cincinnati *Commercial;* he is boiled crow to us, but he could get more Republican votes if he was not to be swallowed along with you; make no nomination, 'recommend' him, and go home out of sight." "But he is boiled crow to our men," the Democrats say; "we must nominate; we cannot get him taken down and kept down unless we draw the lines tight and command the party to take him as the Democratic party candidate regularly nominated in full convention."

The Straight Ticket Democrats in their turn declare that he is too much boiled crow for them, and that if he is nominated they will bolt. Was ever candidate in such a position before? And where are the people to come from for whose delusion this impudently open scheming is done? Is it no longer "in vain that the net is spread in the sight of any bird"? Is it that there are no Democrats to revolt at this performance? or no Republicans to be alarmed at the apparition of "the unterrified" again in full array? The Democracy, which was to have been buried about this time, as our soft-hearted Liberal Republican friends used to say, appears on the contrary to be a lively corpse, and one with an appetite for eating whatever undertakers gather about it.

We are constantly receiving more letters than we can print from those who, as one correspondent says—with reference to our remark that we use parties as we do coaches or railroad cars, as a means to an end—have concluded to go afoot rather than ride in company with either Grant or Greeley. A Pennsylvanian has left it optional with us to insert for him an advertisement requesting the cards of "gentlemen willing to combine to the end that we shall have educated and experienced statesmen to fill the honored and honorable positions of President and Vice-President," and agreed as to the eminent fitness of Charles Francis Adams for the first-named office; but as he counts upon our co-operation in afterwards bringing these gentlemen together "for consultation and action," we have been obliged to discourage him from proceeding. Another correspondent, who thinks "the spectacle of the politicians, a small and repulsive minority, confronting statesmen and people with the defiance, 'What are you going to do about it?' too humiliating and degrading to be borne without another struggle," would not mind trying another convention and another nomination in the weeks which yet remain, or a hearty endorsement of Groesbeck by influential men. "Even," he contends, "if his election be hopeless, the nucleus of an opposition invaluable for intelligence and weight of character might thus be formed, to watch and check schemes in Congress. Either Grant or Greeley, with such an opposition, would give the country a better administration than either of the two would without this check, so that it is more important to form such a party than to choose between these two candidates."

We differ from this only as regards the practicability of forming any further organization for affecting the election in November. The contest has at last become a simple and narrow one, and it would be utterly futile to attempt anything now in the way of party-founding. All men who sincerely think that there should be a new party, and that something should be done for the elevation of our politics, have it for their immediate duty during this next four months to find an answer to these questions: Can I as a Reformer support Greeley as a "Reformer," nominated as he was, of such a character as he is, backed as he is? Is he a Reformer? Is it or is it not my duty, for the sake of preserving the *status quo*, and getting ready for 1874 or 1876, to refuse my endorsement to Greeley and cast a vote for Grant? On these and related questions we shall have more to say as the canvass is fairly opened. Our own mind is pretty clear.

The Chicago *Tribune* appears to have forgotten for a moment a piece of excellent advice which Governor Cox gave to the Reformers who took part in the Fifth Avenue Conference. It was to the effect that whatever difference of opinion might then exist

among them, some future day would probably see them all together again working for a common end, and that therefore it would be well for them so to conduct this campaign as that each should have as little as possible to forgive when once again all were in harmony. We like forgiving as little as anybody, and we would say that, if the *Tribune* will look once more at our remarks upon Senator Schurz's attitude towards the Greeley movement, it will see that it has completely misunderstood them, and taken them to mean precisely the reverse of what they really mean. Our opinion of Senator Schurz is well known to our readers. We have for him sincere respect and admiration, and begrudge him to the Greeley and Brown party more than any other man who has gone into it. Our judgment and his as to the right and the expediency of his present course are at variance, and this we regret; we hope that at the end of the contest we may still be regretting it for his sake; we do not deny that it is possible we may be regretting it for our own. When we said that Mr. Schurz appeared "deeply touched by the Southern enthusiasm for Greeley," we surely meant nothing to his injury, but merely to say that he sympathized with the Southern men who, at the Conference, deplored the carpet-baggism and tyranny under which they have been suffering. It is a view of their condition that may well be held; we pity them also; but we believe the statement of their case to be by no means the statement of the whole Southern case, and we as yet do not give them unreserved confidence. However, that is neither here nor there just now; all we wished to say was that we certainly meant no disrespect to Senator Schurz, and his efforts for true reform we hope to see resulting in success. We hope he may be even able to do more than he was expecting when the Conference met, and may not only be able to offer Mr. Greeley to the country as an instrument for bringing about chaos, but may be able to announce, what he must have little hope of announcing, that his candidate stands pledged to certain definite reforms.

A notion has got some currency, and the Chicago *Tribune* is giving it some more, that the members of the late Fifth Avenue Conference were pledged to secrecy concerning what went on at that meeting, but this is all a mistake. There certainly was laid upon nobody the obligation not to give an account in a general way of what was there done. Such a pledge would have been foolish and impracticable, if for no other reason because had it been taken there would have been no means of correcting the false impressions about the meeting which would inevitably have been formed and expressed by outsiders, to say nothing of the men inside. That it either was not made, or that there was immediate, continued, and universal breach of it, was at once evident to everybody; one had only to read the morning papers for the few days succeeding. The truth is, it was not made.

The *Times* makes its frequent contributions to the personalities of the campaign, and they are some of them such as it may or may not be well to make; we should probably differ with our contemporary as to the expediency of making some of them; but it certainly has plenty of temptation from the other side. One contribution it has made to which we suppose it is fair to call the attention of all friends of clean politics who have not yet decided on their course in November. It is one side of a story to which, as to most stories, there are doubtless two sides; but we should seldom hear any story if we waited to hear the whole at once, and as this is told with a deliberateness and exactness that will probably secure it a contradiction, successful or not as the case may be, it is worth attention in these days of political confusion. The *Times* devoted three full columns—a very unusual number in our journals to be given to one article—to an elaborate attack on Mr. Trumbull as a senator who, by his personal record in the matter of soliciting offices, is debarred from making charges of nepotism against anybody, or accusing others of undue eagerness for patronage. The position is tenable, no doubt, which requires that a man fighting for reform in the civil service, and asking voters to accept his guidance on the ground that he hates the spoils system, should be of cleaner record in this respect than the average senator, content with things as they are. Now, the charge is that Mr. Trumbull has been in no way different from other senators in regard to this matter, but has, if anything, been worse, and is, in fact, a Reformer from policy rather than principle, if not, indeed, from disappointment at failing to get more patronage than his due share. We remember Mr. Trumbull's declaration and proposed bill or resolution, to the effect that office-seekers were the bane of office-holders' lives, and that members of Congress should be punishable for making recommendations to office. We know, too, the value of newspaper assertions in a heated canvass for the Presidency. But these assertions in the *Times* have a somewhat different look from those which mere newspaper assertions usually wear; and because Mr. Trumbull, with Mr. Schurz, has given the post-Cincinnati Greeley movement its greatest respectability, an answer to these charges will probably be valued by a great many people who look up to him and who are at the parting of the ways; and we hope that it may soon be forthcoming.

It is literal truth that the weather in this city for a week or so has been deadly, very many persons having perished in the heat, and the death-rate having been unexampled in the history of New York. 1,569 persons died during the week ending at twelve o'clock, noon, of Saturday last, and of these we are told that about 200 of the adults died from the more indirect effects of the sun's rays, and about 100 from *coup de soleil*, technically so called. Apart from these cases, the mortality among adults was not much greater than in the corresponding weeks of other years, but among children it was enormous. As in the case of the adults, the children's case illustrates what seems to be the general rule in these elemental attacks—the heat finds out the weak. The death-roll, indeed, is a long one, the longest New York has ever had, and the objurgation of the street-cleaning contractors and the owners of the tenement-houses is of course loud, though it would be an American city council of a prevision which we shall not hear of in such quarters for at least a hundred years, that would ever think of providing against the thermometer's being for seven consecutive days at nearly a hundred in the shade. As for the tenement-houses, if the weather is to be called deadly, they are almost to be called murderous, and their owners said to kill with malice aforethought, while our street-cleaning is—well, it is vain to say what it is. Streets in general, the world over, with their cruel pavements, their barbarous noise, are a disgrace to the civilization of this nineteenth century after Christ, but in New York they have to be all that other streets are and enrich the Ring besides. To these various causes of mortality is to be added this—that we always have here a large number of persons who, while yet unacclimated, are exposed to the worst climatic trials. In our long and narrow island, with a magnificent tidal stream on each side, and a great bay at the foot, we have one of the best ventilated and healthiest of sites for a city. But we have a mixed Tammany and Tammany-Republican Government, and an Irish constituency behind it, and against that combination nothing avails much for decency. The population of the better quarters of the city was very visibly diminished during the heat. In New York, at all events, "everybody out of town" means that a very great many really are.

McCunn, the judge of the Superior Court of this city who was last week convicted of corrupt conduct in office by a unanimous vote of the Senators—except Tweed, who was absent—died on Saturday last of a broken heart, as he himself said, and as indeed appears of the effects of chagrin combined with those of the heat and an attack of pneumonia. He was of a vain and cowardly

nature, and though so long ago as when he was at the bar, and for these eleven years that he has been on the bench, he was notorious as a man of thorough-paced dishonesty, he had held his head high among his ignorant compatriots, and his downfall before their eyes was too much for him. We at once had from the press, the guardian of the public morals, a singular outbreak. It praised McCunn's bright abilities, his genial temper, his literary tastes, his industry, his large fortune, amounting to a hundred thousand a year, and no doubt set several intending thieves wondering why they had deliberated in a world where such are the rewards of virtue. That McCunn had been an unjust judge, had prostituted justice, had been a standing disgrace to the country of his adoption and of baleful example to his fellow-Irishmen, that he had robbed right and left, hardly at all appeared from these obituary notices, which, on the other hand, informed us that he was a good son, and had manorial estates in Ireland. The maxim *de mortuis* is well enough, one would say, for people like its inventors, the ancient Romans, among whom there was a way in vogue of making their public enemies into *mortui* whenever it seemed utile so to do; but it has only a very questionable fitness for this latitude, where, unless one of our public enemies shoots another one, it is rare that anything but overdrinking and overfeeding interferes with their natural longevity. It would be money in the pocket of the taxpayer of this city if the newspapers would for ten years utterly forget this elastic maxim, and condole with the country, and not the next of kin, when the Fisks and McCunns evade justice by death.

The Reichstag adopted on the 8th of June the military code substantially as it was first submitted by the Government. This code (see *Nation* of May 23) was strongly opposed upon sentimental and sanitary grounds, and was referred to a commission, of which its chief opponent, Lasker, was a member; but after protracted labors the commission reported it back with only slight modifications, retaining the feature of harsh confinement, though shortening its duration. A terse, clear, practical speech from Count Moltke had great weight in settling this point. The question of army regulations, he said, could not be considered exclusively in a civil, a legal, or a sanitary point of view, but must be decided mainly by military reasons. Authority above, obedience below, in one word discipline, is the very soul of the army. An army without it is a costly plaything, useless in war and dangerous in peace. Where military science is compulsory upon all citizens, it is impossible to maintain uniformity of discipline without severity of punishment. In justification of this position, Count Moltke referred to the fact that the very worst elements of the nation were swept into the army along with the best—a point on which there was some discussion in these columns during the late war. Many, he admitted, come into the army who ought to be in the penitentiary, and perhaps the taste of severe confinement which they get as soldiers tends to keep them out of prison in later years. The force of these arguments, coming from such an authority, was too great to be resisted, and all that Lasker could accomplish against them was to get a committee appointed to enquire into the sanitary effects of the punishments which he deprecated.

The successful effort of the combined forces of the extreme and moderate Left of the late Hungarian Diet in talking to death the election law proposed by the Ministry and supported by the Deák party, has resulted in ultimate defeat to the imitators of our own Congressional filibusterings. In the general elections held towards the close of last month for the next triennial Diet, the Right achieved a victory apparently surpassing its own most sanguine expectations. This is attributed partly to the unfavorable impression produced upon the electors by the violent manœuvres of the Opposition, and partly to a most strenuous application—perhaps not without a stretch of legal powers—of the old election law by the ministerial authorities and their supporters. The Opposition suffered the greatest defeat in Pesth, the metropolis, where all its candidates were defeated—among them the popular novelist and journalist Jókai, the editor of the leading Liberal organ, *Hon*, who, however, acknowledged his discomfiture with calm resignation, and summoned his political friends to temper the acerbity of party feeling developed by the late contest. The acrimony with which the struggle was conducted all over the country is said to have exceeded anything witnessed since 1847, when Kossuth was elected to the Diet of Presburg. That election was the prelude to the Hungarian Revolution of 1848; those of last month are regarded as cementing the new union between the two divisions of the Austrian Empire, which Beust and Deák carried through in 1867. The party named from the latter statesman has, however, achieved a success which may prove too great for its integrity, and result in a split into two wings, the more liberal one to be headed by Deák himself—for which indications are not wanting.

Pius IX. celebrated on the 21st of June the twenty-sixth anniversary of his pontificate. In view of it and of the accidental concourse in Rome of a number of Italian and foreign clerical deputations, and more especially in view of the acquittal of the murderer of one of his gendarmes at the Porta Cavalleggieri, and of the Government's announcement of its intention to introduce a bill next session for the suppression of religious orders at the capital, the Pope has given to the light a letter which he had for some time been nursing, and which is stated to have been written for his signature by one of the high functionaries in his foreign-affairs office. It is addressed to Cardinal Antonelli, and may be summarily described as a last appeal to Catholic powers and peoples to free him from his miserable state of moral captivity and all but bodily duress. He enumerates all the steps by which his authority in Italy has been circumscribed and diminished, and declares that they lead to but one end, the overthrow of Papacy itself. He speaks contemptuously of the "absurd system" of so-called guarantees designed to produce harmony in the relations between two irreconcilably hostile powers, and reiterates his intention not to surrender for the sake of peace any part of his pretensions. He apologizes for his stay in Rome after its occupation as the seat of government, and says that he is prepared to die there if that is required of him among the greater sacrifices of the future. He begs Cardinal Antonelli to communicate these views to the representatives of foreign powers at his court, and lays down a convenient proposition to meet the case of liberal and Protestant countries, that "if every Catholic (*fedele*) has the right to demand of his own government an assurance of personal liberty in the matter of religion, he has as good right to demand it for him who is the guide and interpreter of his faith and religion."

The suddenness with which this document was launched upon the world gave it a temporary interest in the Italian talk of the day. The clericals complained of it that its tone was too mild; elsewhere it made little more impression than any one of the Pope's previous manifestoes against Italian independence and modern civilization, but, in consideration of the directness with which he identified himself with his accusations, the Government is not unlikely to take some notice of them. Perhaps never was there a time when the legations at his court were so few and so diminished in grade. A simple secretary is all that represents Austria since Baron Kübeck took his leave, and another is all that Bismarck troubles himself to keep there since the high and mighty rejection of Cardinal Hohenlohe. In fact, barely one ambassador, a minister from Belgium, and one from South America, are all that remain to testify a lingering respect for the shadow of the temporal power; nor will time increase the show. Meanwhile the Pope cannot have witnessed with a very deep satisfaction the reception in Germany of the Crown Prince and Princess of Italy, nor the latter's part as sponsor in the Protestant baptism of the seventh child of the Crown Princess of Prussia.

THE PERVERTED CANVASS.

WE have always held that there were good and sufficient reasons why General Grant should not be re-elected, and reasons which concerned him personally. The mistakes which he and his friends admit that he has committed, and the civic incapacity which they revealed in him, furnished irrefragable grounds of objection to his being entrusted for another four years with the honor, not to say the destinies, of his country, so long as any one else could be found with superior qualifications for the office of President. Nobody has pretended that such a person, indeed one every way fitted for the place, was not obtainable, just as nobody has ever shown that the American people was under the slightest obligation to extend President Grant's term of office. So generally was his unfitness recognized, that the promoters of the Cincinnati movement were at first in doubt whether the Convention which they were calling had better put an opposition candidate in the field at all, or simply endeavor to exert a moral influence strong enough to throw out General Grant at Philadelphia; for even up to the first of May the feeling prevailed that the regular Republicans had it in their power to bring the Liberal movement to naught by the sacrifice of Grant as the beginning of an attempt at self-purification. The resolute purpose of his partisans to renominate him by "previous question," as it were, without debate or any toleration of dissent, would of itself have justified the Cincinnati movement, and was undoubtedly the proximate cause of it, but could never have invested it with the moral breadth and dignity which it actually possessed, and which it has lost as rapidly as it acquired it. It was the platform of the original call which brought out so impressive a response; and that was an enumeration of general abuses and an invitation to general reforms, looking to something more than a party "for this day only," with the sole object of beating Grant.

What the country, therefore, had a right to anticipate from such a diversion in politics was at least a thorough and earnest discussion of the principles at the bottom of it, and that was certain to do good whether the Cincinnati candidate was chosen or not. It is the one salutary result which of necessity attends a change of parties when the break-up is due to real differences of opinion, and not to quarrels about plunder or to the rivalry of leaders. Up to the first of May the political education which the country was receiving was of the highest value and the greatest promise. The very contempt which the Administration journals heaped upon the Liberal opposition was calculated to rouse independent judgment by exhibiting the depths to which party subserviency could descend, while their scurrilous attacks on the prominent advocates of reform made clear the urgency of a change in the direction of public sentiment as well as in the conduct of the Government. There was every reason to expect from the orators of the canvass the most wholesome lessons in revenue reform, in civil-service reform, on the subject of the Presidential term, of amnesty, of strict adherence to law, of jealous solicitude for the purity of the judiciary, of executive encroachments and Congressional encroachments—in short, lessons concerning the entire nature and structure of the Federal Republican form of government. To send the schoolmaster abroad on such an errand would have been glory enough for any party, whatever its ultimate success at the polls. Upon such a campaign it would have been perfectly proper to enter with the cry of "Principles, not men"; and it is hardly extravagant to say that the candidate would have been so much a matter of indifference, the platform of such prime importance, that "anybody" not positively immoral would have sufficed not "to beat Grant" with, but to preach and educate with.

This, we say, is rather what should have been, according to the purest conception of the Cincinnati movement, than what, allowance being made for the human weaknesses and mixed motives of its supporters, would have been the case. It would have been as nearly so as possible had Mr. Adams been the nominee, because there would have been no room for invidious comparisons of him with any candidate that could have been selected by any other party. He would have stood *facile princeps*, unassailable on every side. His character and "record" would have taken care of themselves, and no breath would have been wasted in defending or clearing them. All hands would have been free to deal with the issues which had brought about his nomination, and the contesting party or parties must have shown cause why the country ought to prefer an inferior candidate representing inferior principles. The sincerity of the reformers having been attested by the man they had placed at their head, all the vigor of their assaults would have resided in their platform. As it is, both the Cincinnati and Philadelphia platforms have ceased to represent anything, or to have any vitalizing and proselyting power, and we are given over, from now till November, to a barren interchange of personalities, growing more and more bitter and vituperative, and only serving to reveal the extent of the rottenness of our politics. The public attention is to be—is already—drawn off from the real elements of division, to be fastened on the puppets and counters of the Presidential game. Before the nomination of Greeley, when all our complaints were considered answered by the reiteration of Grant's integrity, we used to say: We make war on him only as a part of the evil, not the whole. We aim at the custom-houses of New York and New Orleans, at the arbitrary Republican majority in Congress, at the carpet-baggers in Congress and out of it, at the Pennsylvania Legislature, at the "reformed" New York Legislature, at Kellogg, and Morton, and Harlan, and Butler—at corruption wherever it has intrenched itself in the Republican ranks and obtained control of the party organization. We should as little have thought then of laying upon Grant all the sins and errors of the past three years, as of allowing him personal credit for such purely legislative action as paying off the national debt. Now, we have no paint-pot too black for him, for the reason that only by contrast can we whitewash Greeley.

In all this we see only a logical deduction from the "anybody to beat Grant" doctrine. If its apostles can, as civil-service and revenue reformers, put up with a candidate whose whole life has been passed in the practice of seeking and awarding the spoils of office, and who is totally opposed to a scientific adjustment of the tariff, what other planks of their platform would they hesitate to dispense with for anybody else qualified to beat Grant? What solitary splinter would they not "leave to the Congress districts" for a fair prospect of driving Grant from the White House? Almost, we might ask, what plank would they not insert? Even Providence, it is sometimes supposed, is scrupulous about the instruments it employs, but so far as we can make out, those who have chosen Mr. Greeley for their instrument are so careless of what their candidate believes in common with them or in contravention of their avowed purposes, that there is no reason for supposing they would slacken in their support of him, if he were to tell them as frankly what he thought of them as they did at the Fifth Avenue Conference what they thought of him. They must know, indeed, that they are as much of an "emetic" to him as he is to them, and would say so to their faces if it were prudent before election. Temporary retirement from the *Tribune* must have wrought great changes in him if he can regard his opponents on the tariff question as probably honest and possibly patriotic, or his new allies in the Democratic camp as anything but the dangerous knaves he has never wearied of calling them. For all that, they afflict us with the spectacle of a conflict of distinct and intelligible principles perverted into a duel between leaders who stand for nothing, for the sake of a change from which nothing is certain of issuing except chaos, and with the result of introducing not a single new idea into our politics, of persuading anybody in regard to a single measure of reform, or of laying the first stone of the foundation of the party of the future.

This is what the Lorelcy of Success has done with her singing. We hazard nothing in saying that inscrutable as are the ways by which good is educed from seeming evil, and better thence again, and confident as we are that not even the present painful and humiliating conjuncture can bring permanent disaster upon the country, the reckoning may be postponed, but it cannot be averted. It is time to pronounce the last word concerning the doings at Cincinnati,

and if, as we believe, they were a breach of political morality, and a sacrifice to expediency of the plainest requirements of an honest consistency, we cannot withhold our judgment that the penalty must come. Whether it be in the shape of financial disaster, or a revival of the negro difficulty, or a flagrant increase in jobs, and rings, and the barter of offices, the false and unnatural combination which now seems inevitable, and bids fair to triumph, must needs bear fruit after its kind:

"The bubble floats before, the spectre stalks behind."

"FELLOW-CITIZENS, LADIES, AND GENTLEMEN."

THE quarrel is hot in some of our colleges over the question of teaching the young men to declaim, but it seems clear that they will have to be taught something besides declamation and rhetoric if they are to come out of college, go into political life, and, by public speaking, become influential in our politics. That they should become influential in politics is the end sought by those who believe in the inculcation of oratory; but the testimony of our great oratorical day just past would appear to be rather in favor of the doctrine that oratory declines in the popular estimation, and that the Americans increase in number who are of the opinion of the "man of understanding" mentioned in the Book of Wisdom, where the son of Sirach says, "The eloquent man is known far and near, but the man of understanding knoweth when he slippeth." As a specimen of just antithesis, by the way, we might recommend this figure to the attention of the parties to the rhetorical dispute. The orations on Thursday last were probably fewer absolutely, they certainly were fewer relatively to the number of American citizens, than we remember them since we have known the history of the Republic; and some, at least, of those that were delivered were of a kind very different from the traditional Independence Day oration, and very well worth the careful pondering of everybody, men of understanding and all.

Originally the Fourth of July oration was an excellent thing, useful to the country as well as agreeable to the feelings of the auditor. Our American forefathers had undertaken grown men's work when, with their small numbers, in their poverty, divided as they were in their counsels—neighbor against neighbor in honest difference of opinion, and bitter difference as only honest difference can be—they undertook a struggle against the strength of so great and so well-beloved and so obstinate a mother. Small wonder that the young men whose fathers had fought Gage at Boston, Burgoyne at Saratoga, Howe in the Jersey Marshes, Tarleton and Cornwallis in the Carolinas and at Yorktown, should be proud of their defeat of the empire which, under their own eyes, organized one after another five coalitions against the French Cæsar, and never rested till an English ship carried him to the end of the world to die in British custody. It would have been strange if the young orator, as he saw "the downtrodden millions of Europe" sending over here annually the populations of new States to be reared in the boundless lands stretching miles after thousands of miles away towards the shores of the western ocean, had not felt pride and complacency in thinking of his inheritance as an American citizen, not only free of all monarchies, effete or otherwise, but free to take for his own a township or two of virgin soil.

But not only did he, as "Walt" Whitman says, "celebrate himself" in his Fourth of July oration, and rejoice in his native land; he remembered the bitterness and the doubtfulness of the struggle which had secured the independent existence of his country—his in a sense in which no other men than Americans could call their country theirs; he remembered that many of his fellow-citizens, and among them some of most consideration, had been lukewarm in the contest, or had indignantly fled the country predicting its ruin; he remembered the strength of his former "dread sovereign," and that when our independence was won that potentate was fighting France also, and Spain, and Holland, and was that England of which he, too, used to say, with Falconbridge, that "come the four corners of the world in arms, and we shall shock them"; he remembered that it was not in despondency, indeed, but in the full knowledge that it was an experiment which most men declared chimerical, that the foundations of our form of government were laid; very likely he knew that the clergyman whom his mother venerated, and the squire to whom he himself looked up, were half inclined to believe that a republic was a pernicious provisional stage on the way to anarchy; and it was partly to keep his own courage up that he flew the eagle at so lofty a pitch, and called on all the world for an admiration which the world, as it often enough informed him, had not at all made up its mind to give. Yet at the bottom of his heart he believed unshakably in the sufficiency of his countrymen to govern themselves and possess the land, if only they would feel as ardent an attachment for their Constitution and their native country as Epaminondas felt for Thebes, a state which no monarchist could contemn, or an Athenian freeman for Cecropia, or Brutus for the liberties which the ambitious Cæsar crushed; and he honestly did his duty in calling his fellow-citizens to cherish in their breasts the fires of patriotic devotion, and against all tyrants to uphold freedom—this dear-bought freedom; the light at which the victims of kings might scoff, but without which the world would be in outer darkness. And he was not so far wrong. The Fourth of July oration, whatever its faults, was distinctly useful in encouraging the timid and doubtful republican, in rousing his confidence in the people, and gratifying their pride in themselves and their untried and despised scheme of government. Certainly it could very ill have been spared from the culture and political training of our early days. The Daniel Webster who, in his young attorneyhood, used to deliver florid Fourth of July speeches in Portsmouth, was the same Daniel Webster who, with grand oratorical weight and dignity, defended the fabric built by the fathers against the attacks of Calhoun and the States-Rights men, and he might have vindicated them in vain, and his words might have fallen on dull ears, had he not had the Portsmouth preparation, and if numerous others like him all over the land had not practised their art. This, to be sure, is an extreme case; most of his contemporary orators, were they alive now, would probably be more efficaciously employed in cultivating patriotism and good citizenship if they were doing sound writing in newspapers; but he had a special gift which, after he had outgrown his declamatory and sophomoric period, and learned oratory before juries, became an immense power in American politics. Still, extreme no doubt as his case is, it not unfairly illustrates the services which could be rendered at "Independence" time by "the orator of the day" in days gone by, and which were rendered by many thousands of our fathers.

What the Fourth of July oration by-and-by became we all know. It was not long before the country went far and fast on an unexampled career of prosperity—a career of which we talk often enough, but which we do not realize to our imaginations. We forget that men are still among us, and not old, who have killed Indians this side of where the last President of the United States lies buried, and that his grave is far to the east of our Mediterranean State. The "banded monarchs of an effete civilization" would indeed have had what is called a hard time to make much impression on the United States of the adult Webster and Clay. Long before their time it required a lively disbelief in American human nature, and an aged variety of Federal politics, or the possession of a large number of negroes on plantations in border States, to make anybody believe that any American Cæsar would cross a Rubicon, or any new George the Third lie in wait for our sacred liberties with any hope of catching them. The stump speech, however, continued to be much the same, the only difference between it and its creditable parent being that it was rather discreditable, and that it exaggerated all its parent's defects of thought and rhetoric. It was, indeed, no longer done by men sincerely believing in what they said, and in the necessity of saying it, and who said it to people who seriously desired and needed it. It was done now to flatter vanity by men who either were honestly on the level of thoughtless vanity themselves, or by that tribe, the pest of republics, where they are more noxious than

anywhere else, who, for their own aggrandizement, seek the blind side of the mass of men. The real work of instructing the people had come to be done elsewhere than on the platform, and the platform became the possession of the rogue and the weakling, and fell into a contempt which has made the term "Fourth of July oration" synonymous with blatant nonsense or platitudes in thought, tawdry rhetoric in diction, and crude, egotistical chauvinism in spirit.

That the Fourth of July oration is going to be again useful we seem to see some hopeful signs, the speeches of Mr. Colfax at his home in Indiana, and of Mr. Adams at Boston, being among them. In both of these speeches glorification was indulged in very sparingly or not at all, and in Mr. Adams's in particular the duties of the immediate future rather than the glories of the retrospect were what was insisted upon. This surely is well. We Americans certainly do honestly think ourselves "the most favored nation" on which the sun is shining, and further think that we are deserving of all the favor shown us, and are capable of making as good a use of it as any other breed of men. We are in as little danger as any other people in the world of taking heed to our steps and walking carefully, and we do not know that a little croaking is not the most patriotic thing that the Fourth of July orator can do. Our veins bursting with new blood, "glad, confident morning" in the air around us, our hearts full of buoyant self-reliance, with no enemy on earth and reckless if we have, indifferent to our carelessnesses and mistakes as a vigorous youth is indifferent to the exposures which would kill a man in the decline of life and threaten even the mature, it is warnings and cautions that are salutary for us rather than encouragements and laudations. The time is to come when we shall live as close together here as in older countries; when there will not always be perpetual opportunity for new careers when folly or ignorance or misfortune has made failures of the old; when a thief like Tweed in carrying on his robberies will ruin individual incomes; when his thieveries will mean to many men in New York that their sons must come home from college or their daughters go out to teach school; when States will be aware that talk of repudiation is a crime against the body politic; when, in short, we shall no longer all be living in a country so large, and naturally rich, and so empty of that most valuable animal, man, that each man finds almost unlimited elbow-room, and may almost do as he pleases; when we shall be living so close together that we shall discover that unless our elbows, and our pickers and stealers likewise, as Hamlet says, are moved with some regard for law, and for the general convenience which law subserves, we shall discommode our neighbor, and shall ourselves be seriously discommoded—even to the extent, say, of being put into jails instead of being sent up to Albany to the Senate. To us, as to other people, that time will surely come, and then beyond a doubt we shall be found not one whit different from other people in our belief in the utility of care and pains—except as we shall differ from those publican nations by being a great deal better, and perfectly able by that time to thrash them if they deny it. But the Fourth of July orator may well remind himself that for some years to come that coming time has not arrived yet, and may properly do what he can to make us less self-confident and careless and headlong. A nation is certainly not overburdened with cautiousness which so much as talks of making Horace Greeley its chief executive officer and principal adviser to the national legislature.

THE RICE NEGRO AS AN ELECTOR.

CHARLESTON, S. C., June 1, 1872.

TO a stranger in a Southern latitude, a ride along the causeway of a rice-field in the month of May presents an interesting sight. The rice-field of to-day is in most respects the rice-field of "slavery times." In the vast tracts of land lying along the coast the current of life is almost as stagnant as the water of their swamps, and, to outward appearance, the past seven years have made few changes. The month of May is the most favorable season for observation, for at that time a single sweep of the eye over one of those fields of hundreds of acres will show nearly the whole process of rice growing. From the causeway of one of the largest fields on Mr. B.'s place I was favored with just such a view. On one side of the causeway a hundred negro men were at work, using their heavy, clumsy hoes in cutting down "volunteer" rice, one of the pests of the planter; while upon the other side another hundred—all women—were performing the same work, using the same implements, and receiving the same pay as their male comrades. The Woman-Rights party should take courage; Mr. B. informed me that the work of the women was fully up to that of the men, and was apt to be more thoroughly done. Both sets or "gangs" of workers were doing "task" work, and were paid at the rate of fifty cents a task. In former times a day's work for a slave was laid out in tasks, or half acres, and this custom Mr. B. still keeps up, finding it to be the most satisfactory wherever the nature of the work will admit of it. By rising betimes, the negroes finish their tasks by one o'clock P.M., after which no pay can keep them in the field, and the afternoon is spent in working their own parcels of land, in fishing, or in sleeping. The fifty cents, however, is but a small part of the pay—all the elements which go to constitute negro happiness—house and fire, bacon and rice—are furnished him in addition. Mr. B. has over two thousand negroes scattered over fifty thousand acres of land, and each family has an almost unlimited choice of a spot upon which to settle. To clear a space and build a log-hut chinked with mud takes but a short time, and nothing better is desired. Each one can cultivate all the rice he wishes upon the land set apart for the purpose, and there are hundreds of acres of woodland through which his hogs may roam and from which he cuts his fuel. Their bacon and rice, however, are generally carried to Mr. B. to be purchased. This he never fails to do, even if he pays above the market price. To him labor is a necessity, and he says he finds that so long as the negro has enough to eat, nothing can induce his further exertion until necessity compels it. But rice, bacon, and money gone, hunger and labor follow as a natural sequence; and even then, one who works the six days of the week is the rare exception. The foremen of the gangs are paid by the day, at a higher rate, the wages varying according to ability and rank. Each field hand is paid for his day's labor in coming from his work, and either immediately or by Saturday night the money will be spent at some one of the stores erected by Mr. B. on different portions of his estates. The negroes can buy at them to better advantage than elsewhere, and thus there is a mutual benefit.

The negro foremen are chosen either from long experience or superior sagacity; and in the rice-field referred to, the head-foreman of each gang, assisted by several sub-foremen, was moving about correcting and assisting the rest at their work. On the causeway sat the white overseer on horseback overlooking the whole. A little beyond where these hands were at work, separated only by an embankment, mule-teams were breaking the ground for planting. Still further along were rice-fields covered with the first or "sprout" flow of water, and others again with the second or "stretch" flow. From others the latter had been drawn off, and the rice, weak and flaccid, lay flat on the ground, receiving new life from the burning rays of the midday sun. Far away in the distance miniature figures moved along an embankment, and a nearer approach showed another gang of hands engaged in the repair of a leaking gate. Earth was to be removed, and to accomplish this an endless chain of "half-hands" of both sexes were slowly moving to and fro, each bearing on his or her head a basket made of a peculiar wiry grass filled with the dripping sod. The sun was in one of his warmest moods, causing the disturbed soil to give forth a deadly miasma distinctly perceptible to the senses. There were at least a couple of dozen of these half-grown hands engaged in this somewhat shiftless manner on work which a half-dozen Irishmen with shovel and wheelbarrow would have done better in less time. Mr. B. said it was impossible to induce them to use wheelbarrows, and that, so long as such labor was to be had in abundance at half price, it was his best policy to keep them employed.

It should be understood that the "low country" negroes are in many respects entirely distinct from those of any other portion of the South. As a class, they are undoubtedly the purest specimens of the native, unadulterated African on Southern soil. Among the hundreds coming under my observation, I saw but one mulatto, even the copper or tawny complexion of the up-country is lacking; coal-black is the universal color. In speech they make use of numberless contractions in addition to the usual negro dialect, and the rawest Yorkshireman is not more distinguishable than the low-country negro, wherever met with. The vowels, too, are given a peculiar significance, and to a stranger these causes combine to create a great difficulty, if not an utter impossibility, in understanding the simplest remarks. In appearance these negroes are simply brutish—the word is not too strong. The projection of lip and flatness of nose struck me as remarkable even for the negro, and I called attention to this fact while riding with Mr. B. Stopping a passing negro, he called him up close to the carriage, and, taking a knife from his pocket, applied one end of the handle to the tip of his nose, endeavoring at the same time with the other end to touch his chin. But the projection of the lips was too great;

and the lower end of the knife-handle stood out an inch or more from the chin. If the operation had been of daily occurrence the man could not have stood it more stolidly, and when told to move on did so without a word or a smile. "Now," said Mr. B., "if I were selecting a negro, and wished a common field hand, all muscle and no brain, I should choose just such a man, while if I wanted intelligence I would bring my knife into play, the straightness of nose and thinness of lips being indicative in a direct ratio of the desired quality." The same experiment was repeated a half-dozen times in the course of this afternoon, always with precisely the same result.

The knowledge of an ordinary town negro is limited enough; but it is wisdom compared with his country cousin. "Cain," said Mr. B. to one of his head-foremen, in a rice-field where upwards of three hundred "hands" were at work, "how many among these can read or write?" "Not one, sah," was the reply, "'cep' Jim Crow: him spell um letters berry little." This was true. Out of the whole number, not one could read or write. Their ignorance is dense. I saw but one foreman who could read or write intelligibly. The representative of the district at Columbia was an old family servant of Mr. B.'s, and was taught to read by his mistress, that he might be the better able to follow his vocation as a preacher among his fellow-servants. His acquirements were not so great, however, as to prevent his rising in his seat, when an additional tax of several mills on the dollar was under discussion, and declaring that "Mas B. had more mills now on his place than he could use, and he didn't see how any more could be needed."

A striking element in the negro's character is his emotional nature—in fact, it may be said to include his religious perceptions. They are perpetually falling from grace, and their religious life is a continual ascent and descent. But their method of ascertaining the genuineness of the reform in each other is novel: When at one of their meetings an individual of either sex professes a return to a better life, a ring is formed upon the floor or ground by loosely dropping broken bricks in a circle. Around this circle, on and among the bricks, the unfortunate individual must hop, on bare knees, while those present join in singing a chosen hymn. If the hopping is not completed by the time the hymn ceases, the backslider is considered unworthy of readmission, and is consigned back to the dominion of Beelzebub, or *vice versâ* if the result is different. They do not enjoy having outside observers of their proceedings—preferring the darkness and some retired spot in the forest. Here they frequently dance, sing, and shout the livelong night, falling into paroxysms of excitement, and practically illustrating their own idea of "religion." Here is a field for missionary labor unsurpassed by any under the care of Boards of Foreign Missions. Honesty, Mr. B. said, was a virtue he never expected to find; it was the rare exception. He made allowance for so much to be stolen, and only guarded against its becoming ruinous by selecting the worst thieves and placing them on guard around the rice store-houses and buildings generally. For any negligence, their wages are "docked" to the amount of the loss incurred.

In manner they are very much the same as formerly—perfectly respectful as a rule, and invariably using the prefix "mas" or "massa." The very great objection upon their part to seeing one of their own number show evidences of wealth is worthy of note. They consider it only right and proper that their old masters should ride good horses or drive handsome equipages; but let one of their own number do so, and there is a furious hue-and-cry of "he's notin' but a nigga." Mr. B.'s own conviction in regard to the conduct of the negroes with whom he had come in contact since the war was that under the circumstances they had done *as well and even better than could have been expected*. This opinion I find very general. But there can hardly be a doubt that had they been properly "let alone," there never would have been the present trouble or the jealousy and suspicion with which the races now regard each other. The trouble has come from outside sources and from the formation of leagues for political purposes. The power of these associations over the negroes is something amazing. If there is a symptom of rebellion, all the leaders need do is to raise the cry, "You will be put back into slavery," and it is reason enough to look upon any candidate with suspicion for whom their old masters or present employers vote. Their release from slavery is of course attributed to the Republican party, and there seems to be a charm in the name which is perfectly fascinating. "There is Scowling," said Mr. B., pointing to the foreman over a gang of a hundred hands in a rice field; "I consider him one of my most reliable, trustworthy men. He knows me well, and I really think he would do anything I would ask him except vote for me; and if he had his own choice he would do that, but as matters stand now it would be as much as his life is worth to attempt it. He would vote in preference for the veriest rascal in the district—one whom he *knew* to be such—provided he called himself a Republican. Although I do not know that I have a single personal enemy among them, I could not count on more than eight votes out of all the men I employ." Mr. B. never meddles in politics, and these remarks were made in reply to my question as to what chance he would stand were he to run for office. To the question whether he "knew" General Grant, Scowling replied, "Yest, sah, I vote f'r um." "And you knew Mr. Lincoln?" "Fader Abrum! Ah, yest, sah." "And Mr. Charles Sumner?" "No, sah, nebber heered o' dat gemman." "But you know Mr. Greeley?" "No, massa, I nebber did." Concerning the two latter I tried to aid his memory, but it was useless—he had "nebber heered," he said, and I could not find a single man who had. I will venture to say that his case is identical with that of four-fifths of his race in his State. Scowling struck the key-note. "Scowling," said Mr. B., "just suppose I was running for the office Robert holds at Columbia, and a Republican ran against me. Suppose you *knew* he would *lie* and *steal* whatever he could—which would you vote for?" He tried to evade the point, but upon Mr. B.'s exhorting him "to tell the truth," he said, "You knows berry well, Mas B., I hasn't no d'jections to voting for you, but de rest wouldn't let me. I must vote de 'Publican ticket. Dat's de trut, sah." The same questions put a score of times, both in Mr. B.'s absence and in his presence, elicited a like reply.

THE REFORMED CHURCH SYNOD.

PARIS, June 21, 1872.

THE General Synod of the Reformed Church of France convened on the 6th of June in the Temple of the Holy Spirit; and, even in the midst of a political crisis, and of the all-important discussion of a new military law at Versailles, this religious event attracts general notice. There has been no general synod of the French Reformed Church since the Synod of Loudun in 1660, more than two centuries ago. The present Synod has been convoked in virtue of a decree of the 29th of November, 1871, at the special request of M. Guizot. For some years civil war has been raging inside the Reformed Church; two parties were organized, the Orthodox party, faithful to the principles and to the creed of the French reformers of the sixteenth century, and the Liberal party, which had ceased to accept in its integrity the confession of faith of La Rochelle. The sittings of the Synod are not public; but a certain number of tickets are each day given out by the delegates to their friends, and I am able to give you a general idea of the proceedings. They are opened each day with the reading of the Bible and with prayer; and they terminate by a short invocation. The delegates have taken their places in the church according to their religious opinions; as in a parliament, there is a very distinct Right and a distinct Left. The Orthodox sit on the right, and the Liberals on the left. Both sides seem, however, to mix in the most amicable manner in the intervals of the discussions.

The most striking feature of the Assembly for Frenchmen, accustomed to see religion always represented by *clercs*, is the great preponderance of the lay element. The various churches of the country are represented not only by their ministers, but by delegates, chosen by ballot, who had on the first day to show their credentials. The leader of the Orthodox party sits on the first bench on the right; it is M. Guizot. The fine old gentleman sits erect; the beautiful lines of his face, his brilliant eyes, his majestic manner, are very impressive. He has now, in his eighty-second year, completely deserted the field of politics; and he devotes the remains of his ardor—"les restes d'un feu qui s'éteint," as Bossuet said of himself—to the question of theology. He has published his "Meditations on the Christian Religion," and he has entered into a crusade against those who attempt to bring into the Reformed Church the spirit of Renan, of the German exegetes. His will is as unflinching as his frail body is still erect, and nobody can help admiring the vigor of his character, the sternness of his eloquence, and firm beauty of his elocution.

The conflict of the two parties began immediately when the Synod chose its President; the candidate of the Orthodox party, M. Bastie, minister (the French say pastor) of Bergerac, was elected by 56 votes; M. Viguié, the Liberal candidate, only polled 45 votes. The Vice-Presidents elected were M. de Clausonne, of Nismes, and Louis Vernes. Six secretaries were appointed from all parts of the Assembly. The Liberals, feeling that they were in a minority, opened a discussion on the competence of the Synod: "What was its object, and what was the extent of its rights? Was the Synod sovereign, and could it make a new confession of faith? or was it simply assembled to consider the state of the Church?" M. Jalabert, dean of the Faculty of Law of Nancy, first denied the right of the Synod. "The Government," said he, "has only asked you to offer advice to the state; on the other hand, the electoral bodies which have sent you here are numerically very unequal, and the basis of representation is defective." M. Laurens, of Saverdun, showed in answer that since 1802 the Reformed Church of France has become more and more independent of the State. Napoleon I. permitted the consistories and the small synods; the Revolution of 1848 accepted the parish church as the nucleus of the religious organization. M. Thiers,

finally, has allowed the Church a General Synod. M. Guizot spoke in the same sense. "Three things," he said, "are certain: there is a Reformed Church of France which dates from three centuries ago, and not from the law of Germinal; secondly, since the sixteenth century, the principle of liberty of conscience and of worship has entered our societies; thirdly, we must accept as a fact the alliance of church and state. Since Napoleon, who made us in 1802 what we are, successive governments have refused us a general synod. Now we have it: it will be the central power of our Church. Our liberty cannot be indifference, nor the reception of all creeds in one Church. We admit that there are particular opinions which constitute a Church." A young member of the Synod, a very ardent Liberal, replied by saying that the Orthodox majority was very small. "What you want," said he to M. Guizot, "is a schism; you wish it, and are preparing it."

This discussion, which lasted two days, and in which other gentlemen took part, ended in the moving of two orders of the day. The resolutions of the Liberal party were thus worded:

"The Assembly, called upon to pronounce on its character and its powers, admits that the electoral basis adopted for convoking it cannot give a certainty that all the tendencies of French Protestantism are well represented in just proportion to their importance. But, with this reserve, it considers itself, in its various fractions, as being before the state the authorized organ of the wishes and the feelings of the various parts of the Church, and as being called upon to make, in what concerns the Protestant communities, a work of union and pacification under the inspiration of Jesus Christ, Chief of the invisible Church, in communion with whom it desires to work for the advancement of the kingdom of God in all truth and charity."

The opposite resolution was thus expressed:

"The General Synod, considering that it has been convoked and united according to the terms of the laws and decrees which have regulated the Reformed Church of France since its establishment; considering that the convocation and the election of the General Synod tend to recognize and to consecrate the liberties and the autonomy of the Reformed Church of France in religious matters; considering that the elections have been made freely, with the support of all the religious authorities called upon to take part in them, and that the right of the Reformed Church of France to modify, if need be, its interior regulations, and especially the electoral system in future synods, remains wholly and fully reserved, moves for the order of the day."

This last proposition was carried by 61 votes against 46.

On the following days, the question of the Confession of Faith was argued on both sides. The debates were conducted with the greatest decorum and dignity, as befitted the place where they occurred. A moderator had been named with power to interfere between the speakers, but he had literally nothing to do. At the beginning of every sitting, addresses were read from various churches of Scotland, of England, of the United States. The real object of the Synod was the construction of some sort of *Credo*. Under a modern form, the discussion, conducted on both sides with great ability, reminded one of the old antagonistic theories of the visible and the invisible church. The Catholic theory has always been that of a visible church, having its *Credo*, its institutions; and many reformed churches adopted it at first. When Bossuet asked Jurieu, "Before Luther, where was your church?" many Protestant doctors and many Protestant churches were led to admit the theory of the invisible church, "a church which always was and alway will be, the Assembly of the Saints and the Faithful, who know God and worship him in word and body." The liberals of the Reformed Church of France wish to remain in the invisible church; Coquerel, Martin-Paschoud, and others would hesitate before entering a visible church, with a visible confession of faith, asserting the divinity of Christ, the inspiration of the Holy Book; they believe in the beauty and the purity of Christian morals, as they believe in the beauty of the doctrine of Socrates or Marcus Aurelius. They prefer a vague atmosphere of Christianity, where the dogmas appear as clouds, changing in form, and carried here and there by invisible currents, to the Christian positivism on which M. Guizot and his friends take their ground.

M. Clamageran made one of the most impressive speeches against the system of obligatory confessions of faith. He considers that faith is and ought to remain individual. There has been no common *Credo* at Geneva since 1725, none in France since the beginning of this century; none between 1521 and 1559, in the heroic age of French Protestantism. The confession of faith and Discipline of Calvin adopted in 1559 in the first Synod, though very remarkable, gave to the French Reformation a stern and absolute character which has hampered its progress. M. Clamageran showed by many examples that creeds do not contribute to preserve the purity of faith or of morals; men sign the articles of faith, and then forget them. The Christian mind ought to be brought face to face directly and constantly with the Bible. The perpetual hypocrisy which is forced upon many minds by the contrast between a strict profession of faith and the interpretations and aspirations of the mind, is a great dissolving power. Whoever does not feel in exact accordance with the official faith of the Church is at liberty to retire and to make a new church; but these perpetual amputations would finally leave the Church a body without any life. The greatest reproach brought against the liberal Protestantism of the French Church is this: The liberals have taken the *supernatural* out of the Bible; their doctrine is more historical than theological. "It is true," said M. Clamageran, "that the figure of Christ" (this was his expression) "is not in their eyes the figure of a God, but it is just as dear and as useful to them." "We are," he added, "of the same family and of the same religion as the orthodox; we live amidst the same thoughts; we believe as they do in the triumph of Christian ideas; we will not retire from the Church, nor exclude our adversaries. A confession of faith implies a real want of faith."

M. Vaurigaud of Nantes replied that the Orthodox party means to remain faithful to the Protestant principle of the free interpretation of the Holy Scriptures. But before all, all the members of the Church must admit the sacred authority of the Scriptures and the truth of the great supernatural facts which constitute the foundation of the Christian faith, such as the resurrection of Christ. A church ought to be composed of all those who in their free interpretation of the Bible have come to the same result. There is no use in forcing together those who take the most different views. MM. Colani, Professor of the Theological Faculty of Strasbourg, Viguié, Pastor of Nismes, Fontanès, Pastor of Havre, and Coquerel were the most eloquent exponents of the principles of the liberal school. M. Viguié said that the ardent Protestants of the South of France, who among a fanatical population of Catholics had remained faithful to Protestantism, would not receive with pleasure a confession of faith. They felt already that their communities were too small, they were swamped by the great Catholic currents. How would it be if there was a schism in the Church, and what effect would the discords of the Protestants have on the Southern Catholics?

Fontanès of Havre is perhaps the most eloquent of the liberal pastors. "Catholicism," he said, "has one fundamental error; it substitutes the church for the individual conscience. In the Protestant world, we are all *priests* by right. Let each man, said Luther, be his own Pope and his own Emperor. The most humble Christian can be a better interpreter of the church than the theologians and the councils. We none of us believe in the dogma of infallibility. We do not excommunicate; diversity among us is not only legal, it is a necessity. The religious city, like the state of Aristotle, is not composed of similar men, but of different men. "Some say that with such privileges there is no church possible. What is religion? Is it the doctrine, or the rite, or the act? No, it is the feeling which is expressed in the dogma, and the rite, and the act. The Christian religion is nothing else; it is the religious feeling marked only with the special mark of Christ. You say that this is too vague, and that we must proclaim the true Biblical Christ. We know him not; for, as for his nature, we find in the New Testament various conceptions, from the simple humanity, from the Messiah, to the Alexandrine *Logos;* and as for his life, what is it to us if he made or did not make miracles? The Orthodox are themselves looking beneath the miracles for the moral lesson which they express. We can say of the miracles that the day they are discussed, they cease to exist. Let us come to the most important: the resurrection of Christ. Everybody believes that Christ ascended from an inferior life to a superior life. We do not care to know what has become of a cadaver."

This is strong doctrine, as you see. I do not discuss it; I will only give you the elements of this great dispute. The limits of this article will force me to write you another on the same subject as soon as the vote on the confession of faith is taken.

PARTIES AND PARLIAMENTS IN ITALY.

FLORENCE, June 14, 1872.

IF the great Irish dean were to be restored to life and chanced to spend his days on the Continent, I think he would be sorely tempted to draw sharp satires with his terrible pen on "the mischief done to the world by Great Britain's glorious institutions." How he would ridicule our French and Italian juries; how he would rail at Prussian and Austrian Houses of Lords; what fun he would make of our local self-government; how he would sneer at our income tax which only attacks those who have no income; and what an inexhaustible roar of laughter he would set up at the sight of our parliamentary and party life! And nowhere would he find, I am sure, more entertaining materials for his wit to exercise itself upon than in this country. Not that Italy is badly governed. On the contrary, her statesmen are not only honest without an exception, but exceedingly clever also, and they have managed, in spite of most difficult circumstances, to achieve the independence of the whole peninsula, province after province, to avoid bankruptcy, to strengthen the credit of the state, and, if not to give an impulse to, at least not to impede, the wonderful commercial and industrial rise and development of the country. Only their government must not be called a

parliamentary and party government. Real, actual, powerfully constituted parties, there are none. For the Catholics, who form perhaps the most numerous and at any rate the most compact party in Italy, profess the principle of *nè elettori, nè eletti* (neither electors nor elected), and do not deign or venture to descend into the open arena, thus withholding from the conservative party the powerful and essential element of an established church. As to the Left, it is one of those radical parties so frequent in Europe, made up of conspirators, lawyers, and professors, strongly addicted to general ideas, and intensely ignorant of practical business, overflowing with the "milk of human kindness," and teeming with hatred of tyranny, but utterly incapable, as, indeed, they secretly feel themselves to be, of forming any government which would last longer than a week. Thus we see the famous equilibrium of parties reduced in fact to a balance of the various fractions of one governing party—*i.e.*, the moderate liberals. And, moreover, these dissensions are of a purely personal and provincial character, having nothing in common with principles or general interests. I say of a provincial character, for indeed the parliamentary groups, though not strictly divided into Tuscans and Neapolitans, Piedmontese and Venetian, pretty nearly correspond to the former states and provinces, although we should be greatly mistaken were we to see in this fact any symptoms whatever of a desire to break up Italian unity.

Now, this liberal, moderate party has remained in office ever since the existence of the new kingdom, and, with few exceptions in 1862 and 1869, it was the Consorteria or predominantly Tuscan branch of it which held office. Since 1869, however, it is the Piedmontese middle-class element, not the aristocratic portion of it, as in Cavour's and Azeglio's days, which is at the head of the administration, and, to do it justice, it has proved not only the most durable, but the best working government new Italy has had. If the present Pope be the first whose reign exceeded the twenty-four *annos Petri*, the cabinet Lanza-Sella is certainly the first which has outlived the fatal twenty-four *menses* of existence, hitherto granted by Providence and parliamentary intrigues to any Italian ministry. I use the term parliamentary intrigues, because till now no Italian cabinet has been overthrown by the open vote of their adversaries or replaced by men taken from the opposition: all have fallen by means of hidden personal machinations behind the scenes.

We may say without exaggeration that Italy is in fact governed by about a hundred individuals. The whole country counts about 500,000 electors, out of 25,000,000 of inhabitants. Of these, mostly shopkeepers and professional men, only the fifth part, about 100,000, really take part in the election. Again, of the 515 deputies elected, there are generally not more than 200 present, and only on great occasions do their numbers reach 350. But there are about a hundred able, hard-working, ambitious or patriotic, I will not decide, but we may truly say uncovetous individuals, who devote themselves entirely to the affairs of the country. It is from them that the ministers and secretaries of state are taken. They sit in every parliamentary committee. They alone do the work there, and consequently become the reporters of every bill presented to the house. They preside over the different banks and railway companies. They are in the Council of State, at the head of the influential newspapers, and are besides very often professors at some important university. There is no harm in all this, as these men are really able, honest, and laborious, and public affairs thrive under their management. There is no reason, indeed, why everybody should take part in politics, and accomplish his "civic duties," as it is the fashion on the Continent to say; and it is much better perhaps in ordinary times that people should attend to their clients, customers, patients, etc., and leave politics to men who have made them the study of their lives, provided the nation in general be ready to fulfil its political duties at extraordinary conjunctures and when it imports to wrench the power from unworthy or incapable hands. It is also perfectly immaterial whether towns and provinces are administered by self-government or by paid officials, provided the work is well done and constantly under the control of the public. Only we must not call parliamentary government what is in fact a totally different thing.

Let us, for instance, take the last great discussion which has been occupying the Italian Parliament at the end of the session which is expected to close to-morrow. The object of it was the budget, *i.e.*, the primary object of all parliamentary government and its origin in its native land, England; the mainspring of its mechanism, the one instrument by which monarch and ministers are controlled. Did not this long discussion greatly resemble a sham-fight or an academical display, in spite of its interminable protraction? First of all, it was not the budget of next, but that of this year, 1872, which was discussed—in June, 1872! The Italian Parliament, indeed, has invented a strange system of financial control. Not only is the budget divided, as in France, into an ordinary and an extraordinary portion; but it is besides subject to two discussions—one called *di prima previsione*, the other styled *definitive;* the one of which *ought* to take place in March, the second not later than November of the *preceding* year. Practically, however, the first discussion never takes place before December, when there is little time left, and the second twelve months later, when the money has already been spent. So we may register a great progress this time, half only of the money having been spent when the definitive budget came before the House. The natural consequence of this unnatural system is that the *items* of the ministry are very summarily touched upon in the first debate, everybody reserving himself for the second and definitive one, and that when this comes on, most of the deputies may think it hardly worth while to examine a budget closely which has already been submitted to a previous discussion. So everything is granted which the ministers propose. However, this seems to the Italian deputies no reason why they should reduce their speeches; only instead of speaking to any definite purpose, such as to obtain a diminution of the sums proposed by the Ministers, they content themselves with expounding their own personal ideas upon religion, justice, liberty, war, and peace, etc. Still, to give every one his due, things go pretty much in the same way in all our Continental parliaments; nor would one complain of the Italian financial eloquence which has consumed the last four weeks, if it had only been dramatic and amusing as is the case usually in France. But if it was neither amusing nor practically influential on public finances, it was not the less instructive in the highest degree concerning the disposition of the country towards the Pope, France, and Germany, its state of defence, its commercial development, etc., of all which another time. Suffice it for the moment that this long session which has lasted from November till now, counted during the last six weeks as many sittings as during the first six months. Consequently no one will be justified in accusing our Parliament of laziness and abuse of holidays, if it is true that all's well that ends well.

P.S.—The trial of the murder of a Papal gendarme by Italian National Guards, of which I wrote at length in my letter of the 14th of April, is now before court in Rome, and is creating the liveliest and most universal excitement. The verdict will probably be given to-morrow, and reach you by telegraph before this.*

Correspondence.

BARON DALLING AND SECRETARY CLAYTON.

To the Editor of the Nation:

Sir: My attention has been attracted to an extract from a letter of the late Baron Dalling and Bulwer (formerly Sir Henry Lytton Bulwer) written a short time before his death, referring to proceedings in Parliament concerning the Treaty of Arbitration, which is in these words:

"I do regret indeed not being in England. The prophecy I made in withdrawing my motion about America has been too closely fulfilled. Of course the time to settle the question was when every sensible man in the United States was disgusted by Sumner's speech. By allowing it to lie on the public mind, it sank into it and has become now a semi-national theory. How, when our only inducement to make a treaty was to set this claim for indirect damages at rest, we could frame one which opened it, is to me miraculous. How they could introduce into such a document the term 'growing out of,' which would hardly occur to any one but a market gardener, is also a marvel. As to the confidence displayed to American statesmen—when I had to make a treaty with them I took the trouble of going over all their own treaties, and in important passages I only used such words as they had used in the sense in which they had used them. Then, when they began their usual disputes about interpretation, I quoted their own authority. All their own newspapers acknowledged I was right, and that I had outwitted Clayton, who died, they said, in consequence."

Now, it is certainly news to the family and friends of the late Secretary, that all, or any respectable number, of the newspapers of the country ascribed his death to his having been "outwitted" by his British antagonist in the negotiation of the Clayton-Bulwer Treaty. The Baron must have been imposed upon, in his latter days, by some good-natured friend. The death of Mr. Clayton did not take place until he had attained the usual age of his family; it was six years and a half after the treaty was concluded. In the meantime, and up to within a twelvemonth of that event, he enjoyed robust health; and not to his most intimate friends did any expression ever escape him that the Treaty was not what it ought to have been. He always considered it a decided success for his own Government in two respects; (1) that it secured for the Interoceanic Canal the protection of Great Britain as well as the United States, and (2) it effectually disposed of the British Protectorate of the Mosquito King, and caused the abandonment or evacuation of Greytown—by the engagement that neither party would ever obtain or

* The National Guards were acquitted, although there was a clear case against them.—Ed. Nation.

maintain for itself any exclusive control over the said ship canal; agreeing that neither would ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor would either make use of any protection which either afforded or might afford, or any alliance which either had or might have, to or with any state or people, for the purpose of erecting or maintaining any such fortifications, or of occupying, fortifying, or colonizing Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America, or of assuming or of exercising dominion over the same, etc.

It should be understood, in order to a proper knowledge of what is meant by the above language, that Great Britain had, for a considerable period before the Treaty was negotiated, assumed a Protectorate over what it chose to consider as the kingdom of Mosquito, a quite large region (represented on maps as the Mosquito Coast) lying on the eastern coast of Nicaragua, and had also taken possession of San Juan de Nicaragua, in Central America, which its agents Anglicized by calling it *Greytown*. The necessity for the Treaty of joint protection for the ship canal between the oceans furnished our Government with an opportunity for negotiating, if possible, that of her Majesty out of Central America where, to the extent referred to, it had established itself in violation, as was believed, of the famous Monroe Doctrine; and Mr. Clayton, as the representative of President Taylor, availed himself of it. What success attended his labors is shown by the fact that the Protectorate was given up, and the settlement at Greytown abandoned! How, then, it could be imagined that the American Secretary had been *outwitted* by the British negotiator, or why it should have been alleged that Mr. Clayton died of his adversary's superior diplomacy, it is difficult to conjecture. Mr. Clayton always thought he had achieved a great success in negotiating the English out of Central America (for they are slow to leave when once their standard is planted upon foreign territory); but his personal regard for the able diplomatist who contended with him never allowed him to repeat what his own countrymen felt, and the non-partisan of them said, that he had got the better of (*outwitted*) the British Envoy. The Treaty was not, at the time it was made, sufficiently appreciated—partly from ignorance of the subject matter beyond the mere canal question, and also because some partisan enemies of the American negotiator did not intend that it should be. But time has vindicated its wisdom on our part, and after Mr. Clayton's death, Mr. Seward, in pronouncing his opinion of him in the Senate, referred to the Treaty in these words:

"A very distinguished French savant (Mons. Ampère) begins his journal as a traveller with an account of his visit at the World's Fair, held, I think, in 1852, in London; and he pronounces that great exhibition of the industry of so many nations as the first universal fact in the history of the human race. He egregiously erred. That great event was neither the most important, nor was it the first, of the universal facts which have transpired in our own day. The first universal fact—a fact indicating an ultimate union of the nations—was the Clayton and Bulwer Treaty, that Treaty which provided for the opening of passages of communication and connection across the Central American isthmus to the growing civilization of the western and modern, and the declining civilization of the eastern and ancient world. It was the felicitous good fortune of John M. Clayton, not more than his genius and ability, that enabled him to link his own fame with that great and stupendous transaction, and so to win for himself the eternal gratitude of future generations, not only in his own country, but throughout the great divisions of the earth. Whatever difficulties have hitherto attended the execution of that great Treaty, whatever future difficulties may attend it, the Treaty itself is the bow of promise of peace, harmony, and concord to all nations, as it is an imperishable monument to the fame of him whose worth we celebrate and whose loss we deplore."

J. P.

July 3, 1872.

POLITICAL CANDOR—MR. CURTIS AND MR. SCHURZ.

To the Editor of the Nation:

Sir: Your last issue has suggested to me to ask the question whether the character of the political addresses of the approaching canvass cannot in some degree be improved. The well-known tendency of the heat of the struggle is to compel political speakers to abandon their self-respect in their partisanship, and to undo in this way any good work which belief in the honesty of their aims and the morality of their methods may have hitherto done.

Such conduct seems to me worthy of grave animadversion, because of the injury it does to the cause of political morality and of good government, as it forcibly tends to persuade voters that all those who are demanding the reform and purification of our politics are of the class of "Pete" McClure of Pennsylvania, or "Hank" Smith of New York.

It really seems to me, therefore, to be one of the most important questions of the political situation at present, whether Mr. Schurz will maintain or abandon the high ground he occupied at the recent conference, and whether in the brilliant and forcible statement he is expected to make of the reasons why the honest men of the country should prefer Mr. Greeley to General Grant, he will refuse to ignore the defects and weaknesses of his candidate, and speak with becoming freedom of Mr. Greeley's incapacity for executive trusts and the evil reputations of the politicians who surround and are likely to control him. And if Mr. Schurz, with chivalric courage, thus discharges his duty, will Mr. George William Curtis, in the brilliant and forcible statement he is expected to make of the reasons why the honest men of the country should prefer General Grant to Mr. Greeley, refuse to ignore the defects and weaknesses of his candidate, and give fit expression to the reprobation with which the country resisted General Grant's course in reference to San Domingo and his appointment of Mr. Murphy, and still resists his retention of Mr. Kramer and Mr. Casey?

If these two distinguished and accomplished orators set the example, it is safe to predict that it will be followed by hundreds of others of lesser note, and in this manner the whole truth will be told to those most needing to hear it; the political education of our voters generally assisted, and the reform of our public life rendered far more feasible. X.

June 28, 1872.

SUNDAY AND SABBATH.

To the Editor of the Nation:

Sir: There is a short notice of a magazine article on the above subject in your No. 365, page 426, June 27, which seems to convey the idea that there may legitimately exist a wide difference among men in the manner of observing the Sabbath, and that bull-baiting, cock-fighting, horse-racing, dancing, theatre-going, etc., are as proper on that day as on any other. My eye happened to light not long since upon a passage in an old French writer which, I think, may serve to illustrate this subject. Malherbe, writing in 1628, shortly after the settlement of Plymouth, gave utterance to the following sentiments:

"There are but two kings in Europe capable of managing artillery in a campaign; if I have not told you so before, I tell it to you now, for it is the truth. There are only two powers in Christendom—France and Spain; as to the others, they are mere imitators and nothing more."

Now, it so happens that the leading nations at the present day observe the Sabbath in a very different way from that in which it is observed in France and Spain; and is it not probable that the ascendency of these leading nations is due chiefly to this fact? In working out the practical problems of social and national life, is not that nation the most likely to succeed best which makes the strictest and most accurate applications of the axioms of moral science? These axioms are not mere matters of opinion which may be put to vote and carried by a majority for or against. The manner of observing the Sabbath is prescribed by the Decalogue, and it is as binding upon us as any other article of the Decalogue. That opinion which makes free with one of these articles will be naturally prone to make free with all the others.

You allude to "Brattleboro, in rural Vermont," as an American town where the Sabbath is still observed, Plymouth fashion, but where, nevertheless, lies buried—"his tomb a place of honor"—"a man who was one of the most colossal thieves, one of the steadiest liars, and one of the loosest livers that have ever disgraced recent Christian civilization." It is true that the remains of this man were received back to his native State from un-American New York with a demonstration of mingled curiosity and respect due to his New-York-made distinction, where the Sabbath is studiously desecrated, and where murder and covetousness seem to be becoming as little revolting as Sabbath-breaking. It is true, too, that, besides a Fisk and Gould, Vermont has produced an Abner Kneeland, a Joe Smith, a Brigham Young, a Stephen Douglass, who were generously willing that the people should have slavery and polygamy or not, just as they pleased; but individual exceptions can in no wise be taken as evidence of the goodness or badness of a general system. The Puritan observance of Sabbath may have become a mere habit with us, just as our political machinery has done, without much discernment or living principle, and it may be rapidly degenerating. We in New England may be merely following good general habits, moral and political, as the Jews did, without applying their essential principles to the exigencies of the times, proceeding from routine rather than from forethought and reflection; our sense of principle may become obtunded; but if we should as a people ever come to make the desecration of the Sabbath a habit, we shall then probably have a community of such individuals as you allude to instead of one or a few only, and must change our form of government. Our defects, whatever they may be, are not owing, I think, to what remains of our Puritanical observance of the Sabbath.

The energizing moral influence of the Sabbath on individual and national

character is due rather to its disciplinary than to its laxative or indulgential effect. It is natural that democratic tendencies should revolt at discipline, and our manner of observing the Sabbath is therefore undergoing a change, but not, it appears to me, for the better.

J. W. PHELPS.

BRATTLEBORO, Vt., June 29, 1872.

[If he will allow us to tell him so, our correspondent draws inferences which are more swiftly than correctly drawn. We have said nothing that need lead anybody to suppose that we regard going to a Sunday bull-fight, in Vermont or elsewhere, as no worse than going to a Monday bull-fight. We think it would be worse for various reasons. It is to the Puritanization of Sunday that people object, not the observance of it.—ED. NATION.]

Notes.

MR. ALEXANDER H. STEPHENS, Professor-Elect of History in the Georgia University, signalizes his accession to a post in which he may yet do considerable harm by writing a "Compendium of History of the United States," of which E. J. Hale & Son, New York, are to be the publishers.——Mr. Edward McPherson's "Hand-Book of Politics for 1872" will be more than commonly acceptable in the approaching campaign. It will make the usual thin octavo of 240 pages, and be issued by Philp & Solomons of Washington.——The Collector of the Port of Boston and the Rev. Elias Nason have undertaken a "Life of Henry Wilson," which will be published early next month by B. B. Russell, Boston.

—Tourists in search of a new sensation this summer might do worse than visit the Wyandotte Cave of Crawford County, in the southwestern part of Indiana. It is probably as extensive as the Mammoth Cave, and, while "it lacks large bodies of water which diversify the scene in the latter," abounds more in stalactites and stalagmites, some of the former having a very peculiar wormlike or macaroni-like form, and twisting and winding in masses "like the locks of a Medusa"; and it is superior to its Kentucky rival "in its vast rooms, with steplike domes, and often huge stalagmites on central hills." Such is a portion of the very interesting description given by Professor E. D. Cope in the *American Naturalist* for July, from which we further extract this incidental remark, which we dare say has been anticipated in the minds of many who read it:

"I believe that wild animals betake themselves to caves to die, and that this habit accounts in large part for the great collection of skeletons found in the cave deposits of the world. After much experience in woodcraft, I may say that I never found the bones of a wild animal that had not died by the hand of man, lying exposed in the forest. I once thought I had found the place where a turkey vulture (*Cathartes aura*) had closed its career, on the edge of a wood, and it seemed that no accident could have killed it, the bones were so entire as I gathered them up one by one. At last I raised the slender radius; it was broken, and the only injured bone. I tilted each half of the shaft, and from one rolled a single shot! The hand of man had been there."

The hand of man has another tribute paid it in this month's *Naturalist*, by Mr. J. A. Allen, in his "Ornithological Notes from the West." The Mormon is the man referred to, and what his hand has done in a little more than twenty years is not only to change a sage-brush and grease-wood desert into fruitful fields of farms and orchards, but to produce corresponding changes in the fauna of the great Salt Lake Valley, "increasing the number of all the smaller birds, but especially the granivorous and frugivorous birds," and materially reducing the number of the water-fowl. The European house-sparrow, the common Eastern quail, and the Californian quail are among the birds for which Utah is thus under obligations to polygamy. Dr. H. Hagen's article on "Mimicry in the Colors of Insects" introduces, if we mistake not, some useful distinctions in the discussion of this interesting branch of the Darwinian hypothesis.

—One of the most remarkable traits of the Society of Jesus has always been its literary productiveness. Wherever its members went, no sooner had they founded a house, a college, a mission, than they began to write books. The result has been a vast literature, not theological alone, though chiefly that, but embracing almost every branch of knowledge. Several members of the Society have attempted its bibliography—Ribadeneira, Alegambe, Southwell, and for the historians Stoeger—and their works were long regarded as marvels of diligence and completeness, but they have been entirely superseded by the Fathers Backer, who published from 1853 to 1861 a "Bibliothèque des Ecrivains de la Société de Jesus," in seven volumes or series, and in the seventh promised an eighth. But the inconvenience of so many alphabets, and the number of additions and corrections that have accumulated in eleven years, have induced the compilers to recast the whole, so as to have one alphabetical series of names, and it now is to form three folio volumes of about 2,350 columns each. The work is wonderfully complete, giving full titles, careful collations, short biographical sketches, and even including the titles of all works written about and against each author. It is well printed. The folio form, to be sure, is unfortunate; and the compilers would have done better to print the lives in a different type from the titles, but good bibliographers are often bad typographers. We fear the commercial success of the first issue was not great, as only two hundred copies have been printed of the new edition, at a very high price. The first two volumes have just reached the Boston Athenæum, and, as often happens in that neighborhood, no doubt before the end of the year three of the two hundred copies will be within three miles of the State House.

—The first article in the *Contemporary Review* for June, on the "Religious Education of Women," by the Rev. Richard Frederick Littledale, deserves attention both for the importance of the subject and the ability with which it is treated. The author asserts that the great preponderance of women in the church seriously affects the clergy; that their low standard of education is "one of the chief intellectual drawbacks which unnecessarily limit the due and reasonable influence of ecclesiastics as a teaching body in the state"; that "when men come to church they hear for the most part sermons written from the woman's lowered point of view, and practically addressed to women only"; that "preachers have acted, consciously or unconsciously, on the principle that there is no use trying to influence men, and that it is better to devote their energies to women." He declares that the pulpit instruction for women is in itself erroneous, appealing chiefly to "the emotions, affections, love of order and regularity, and the necessity of submission to authority"; that it advocates only a negative code, "passive blamelessness, leading to spiritual atrophy," and is particularly mischievous in treating of the relation of women to men in religion—"He for God only; she for God in him," being about the amount of it. This sort of narrow instruction, he declares, reacts on the teachers, who come to have as small a horizon as that they are constantly endeavoring to depict. For the position women occupy in the church to-day, that is, the submissive, receptive position, doing none of their own thinking, shoving every responsibility on to the shoulders of men, and counting a certain blind self-abnegation as the highest virtue, Dr. Littledale blames Justinian and the lawyers, who declared that woman never comes to years of discretion, and not the spirit or intention of Christianity, which gives women an equal responsibility with men before God. In pointing out the faults of women, arising partly from education and partly from nature, Dr. Littledale makes no very new charges; injustice, untruthfulness, stinginess in money-matters, want of imagination, cowardice, and folly, every one has heard brought forward before. Each writer accounts for them in his own way, and the way of the present essayist is suggestive and interesting, and ought not to irritate any sensible woman. He dwells on the importance of a thorough general education, of "getting rid of the peculiarly English notion that the domestic ideal is the highest"—one "never countenanced for so much as a moment by Christian theology"; and that religion, if taught at all, should be taught fully and accurately. The article is one of a kind which would naturally be reproduced, if only for criticism, in the organs of woman-rights advocates; but the *Woman's Journal*, we presume, is very far from entertaining such a thought.

—Our correspondent "L." returns to the charge, in the controversy over the capacity of the French for listening, and cites the following from the dictionary of Littré, than which, of course, there could be no higher authority:

"1. Celui qui écoute, qui prête l'oreille à ce qu'on lui dit, à ce qui est dit.

"'Je connais peu d'écouteurs aussi intelligents. Les bons écouteurs font les bons parleurs.'—*Méré*, Œuvres posthumes, i. 23.

"2. Celui qui écoute par indiscrétion."

This appears to be conclusive evidence that *écouteur* is sometimes used as an exact equivalent for "listener." Perhaps the writer in *Blackwood*, to whom we must now leave the further defence of his position, will find sufficient justification for it in the fact of the infrequent use of the word in this its proper sense, and in the implication contained in the secondary and popular meaning that in France one who listens is oftener overhearing what is not addressed to him than heeding what is. One more remark may be worth adding, and that is that Littré's definition is probably to be taken as historical and not as indicating present usage, for which (say) Spiers and Surenne is likely to be quite as useful a guide. For instance—and this touches the gist of the discussion—if a translator from English into French were seeking a synonym for "listener," would he or would he not be liable to mistake in selecting *écouteur* on the strength of Littré and the citations given; or would he fare better by following Spiers and Surenne, which gives but one mean-

ing, "listener," and qualifies it with "bad sense," allowing no other? If, as we suppose, the author "Méré" is Méré (1610–1685), the tendency of French usage since his day is strongly in favor of *Blackwood's* line of argument; and of Méré it is asserted in Bouillet's "Dictionnaire Universel d'Histoire et de Géographie" that "son style était déparé par l'affectation et par la manie de se singulariser."

—Father Gagarin, whose work on the Russian clergy has just been translated into English, is also editor of a collection which may fairly claim attention, now that his order is on the point of being suppressed in Germany. "Les Jésuites en Russie, 1772–1785," relates how the Society of Jesus, in spite of its suppression by Clement XIV. in 1773, managed to survive in Russia under Catherine II., Paul I., and Alexander I. It consists of a series of original documents, memoirs, etc., beginning, in the first volume, with the Latin text and French translation of a "Récit d'un Jésuite de la Russie Blanche," whose name is unknown, but who wrote in 1786, and whose narrative serves very well as a general introduction to the subject. More readers will probably be found for the "Journal et Correspondance de André-Marie Ampère," the great discoverer of electro-dynamics. Few autobiographies permit such intimate glimpses of character and feeling as this, in which there is scarcely an allusion to science, but an unreserved transcription of Ampère's emotions during courtship and after marriage—"written in Lyonnese, with a constant abuse of the past-definite." Other recent French publications of note chiefly concern the war and the Commune. For the history of the latter, these two works will be found valuable for reference: "Dépositions des Témoins de l'Enquête Parlementaire sur l'Insurrection du 18 Mars," in 3 vols., by Henri Ameline; and the digest of this mass of testimony made by Edmond Villetard—"L'Insurrection du 18 Mars. Extraits des Dépositions. . . . classés, discutés et résumés." A theme which has not yet lost its interest finds illustration in "Les Ballons pendant le Siége de Paris," by G. de Clerval, which embraces narratives of sixty aerial voyages, compiled from various sources.

—The "Philosophische Bibliothek," edited by Von Kirchmann, and published by L. Heimann of Berlin, is a decided success. Nearly 150 weekly parts have already been issued at 5 groschen each. The complete works of Kant, of Spinoza, and of Descartes have been published in this cheap form, and may be had either in volumes or by separate topics. Fichte, Hegel, and Schleiermacher are in course of publication. Books of Aristotle, in Ueberweg's version, and of Plato, in Schleiermacher's, have appeared, and also translations of Bacon, Berkeley, and Hume. The type is good, the size a small duodecimo, and each volume is accompanied with indexes, notes, and essays. Some of the latter are expanded into separate volumes, and are valuable not only for the criticism of the author under review, but as independent contributions to the philosophy of the present. Viewed in all these points, the Philosophical Library furnishes a very complete and satisfactory apparatus for the use of the student; and American students who read German would do well to avail themselves of those sections of it which are not accessible in English.

—We have had lately, in book and lecture, something in the nature of advice and encouragement to those who aspire to become journalists. A perfectly just and broad statement of the kind and amount of preparation which the ideal editor should have had, would probably not tend to recruit the profession, while it might even have the mischievous effect of confirming the popular notion that a journalist—that is, a man who writes for the newspapers—must necessarily have an official and regular connection, as proprietor or salaried employee, with some particular paper. Journalists of this kind there must be, just as there must always be persons who make a business of politics; but one of the causes why both professions degenerate as they do is the withdrawal of nearly all interest or participation in them on the part of men who, without neglecting their proper pursuits, could easily overmatch the Bennetts and Forneys and Butlers and Mortons in the fields which they and their kind so largely monopolize. In Italy, one of the most active and useful members of parliament, Bonghi, is at the same time a university professor, a regular contributor to quarterly reviews, and the editor of a daily paper second to none in influence in the peninsula, part of whose preparation as a journalist and statesman has been a thorough study, unremittingly maintained, of English and American affairs and institutions. The late Jan Rudolph Thorbecke, who died at the age of seventy-four, when Premier for the third time of the Dutch Cabinet, and who had more influence than any other person on the political development of his country during the present century, had for his preparation in practical politics, first, university training at Amsterdam and Leyden (1815–20), where he gave himself to philology, history, and philosophy, being made a doctor of literature in 1820; then two years' study, in the German universities, of the philosophy of Schelling and Hegel; then two years as *Privatdocent* in Giessen and Göttingen; then a professorship of history at Ghent (1824–30); then a professorship in the law faculty at Leyden, till 1840, when he first took his seat in the Dutch Chamber engaged in a revision of the constitution which he had advocated in a work published the year before, and which consolidated, as it were, the liberal "Thorbeckian" party which his university lectures had raised up in the previous twenty years. There are a number of examples like these, which may be pondered by those who ask themselves, "What shall I do to become a journalist?" or, "How must I prepare myself to become a statesman?" or, "How can I help to influence politics?"

—There has been much unsatisfactory speculation as to the origin of the word "Maroon"—a fugitive slave—which seems merely an abbreviated form of the Spanish-American "Cimarron," denoting the same thing (primarily an adjective signifying "wild, unruly," applied to men and beasts). Whatever be the true etymology, the maroon himself has been found wherever, in the West Indies or South America, slavery existed and its victims have had to choose between the cruelty of men and the terrors of the wilderness. As long ago as 1804, Robert Charles Dallas, uncle of our late Minister to England, could write a "History of the Maroons" in his native island of Jamaica; and those who took part in the campaigns to suppress them have also left memoirs possessing all the interest of romances. Nor have romances been wanting. What Mrs. Stowe did for the anonymous maroons of the Great Dismal Swamp, and what another novelist might have done for those of the Florida everglades, has just been done for the banditti-fugitives of Brazil by Sr. Bernardo Guimarães, in his "Lendas e Narrativas," a volume containing three tales, of which the first and much the best is "Uma Historia de Quilombolas." The quilombola and the maroon are one, but the former gets his name from the company (*quilombo*) to which he belongs. This is an association of runaways who live by plunder, but are subject to strict regulations among themselves. They used to abound particularly in the mining districts in the province of Minas Geraes, where no sooner was one suppressed than another sprang up; and though every *capitao do matto* who brought in the head of a quilombola received from the authorities fifty octaves of gold, their audacity was undiminished, and finally the miners and planters were compelled to secure themselves from molestation by a regular tribute to the quilombos. These bands dwelt in the thickly overgrown caves which the province so generously provides for all outcasts, and connected with which were natural or artificial subterranean outlets, making capture difficult. Initiation into the quilombo was attended with ceremonies partaking of fetichism—such as making an incision in the breast with a knife, and catching the blood in a leather bag filled with the trumpery of the witches' caldron, which was afterwards hung about the neck of the novice, the whole being confirmed by an oath of fearful import in cabalistic African lingo. According to the *zambi*, or chief, the discipline was more or less severe, sometimes almost monastic in its restrictions as regarded drinking, dancing, and the treatment of captured women. The rules protecting the latter were not a little remarkable for their stringency. The various quilombos were united by a sort of freemasonry, and traffic with the outer world was constantly kept up, often by means of persons who occupied a high social position. The story of Sr. Guimarães, who, by the way, is a native of Minas Geraes, and is able to pain from the life, is a tale of negro love and abduction, of which the date is 1820, or two years before the declaration of Brazilian independence. Nevertheless, many of the incidents and customs which he describes are far from being obsolete, however deserving of extinction.

MISS M. F. ROSSETTI'S "SHADOW OF DANTE."*

MISS MARIA FRANCESCA ROSSETTI may be said to have hereditary qualifications for standing as an interpreter of Dante between our English-speaking public and the great mediæval poet. Her family, originating in Italy, has long lived in England in a not uncongenial exile; her father was an enthusiastic student of Dante, an acute and learned commentator upon his poems, and, we may almost say, a faithful disciple of the poet as a political leader; he and Miss Rossetti's brothers have been translators and explicatory critics of the poetry of Dante, his predecessors, and his contemporaries; she, her sisters, and her brothers have for their lives long breathed the atmosphere of art, and practised art in more than one of its branches; some of them, we do not know if not all of them, have been at one with the poet in faith, and partakers with him in his high desires for Italy, humanity, and religion.

That there was need of such an interpreter there can be no doubt, either in this country, where our most popular poet, a marvellously accomplished

* "A Shadow of Dante. Being an Essay towards studying Himself, his World, and his Pilgrimage. By Maria Francesca Rossetti." London: Rivingtons. Boston: Roberts Brothers. 1872.

translator, has done so much to popularize the "Divina Commedia," or in England, where, if there has been much translation of Dante, there is a reading public not, upon the whole, very responsive to the lofty religious idealism and the narrow political intensity of this wonderful Italian embodiment of intellectual mediævalism. Miss Rossetti may properly hope that she has in this little volume done good service to the object of her reverent love and to the cause of poetry. To the general reader, Dante is known by the episodes of his poem; for one person who has studied the whole of his great work, for every ten who have so much as read the first third of it through, there are fifty among those who know his name who have read of Paolo and Francesca, of the everlasting gate of hell, of Ugolino and Ruggieri, and who have but very little further acquaintance with the scenes of that tremendous pilgrimage, and with its vast fabric of poetry, philosophy, theology, and science, false and true. Miss Rossetti's plan has been first to set forth briefly and in plain language, made plainer when necessary by pictures and diagrams, Dante's scheme of the universe, and to show what biography and history reveal his experience in life to have been; then, in the second place, to expound in greater detail the physical and moral basis on which he constructs his three worlds of the damned, the blessed, and the expiating, and, by way of doing this, to narrate, now in the poet's own words, now in a prose summary of her own, the course of his journey. Her main object, she adds, in adopting and carrying out this plan was to allow Dante to present the reader with his autobiography as written in his poem—a poem written from the whole brain and the deep of the heart, if any ever was; to enable us to study his character; "to be spiritualized by his spirit and upborne on his wings," and subsidiarily to exemplify his treatment of his main themes. Thus it is that what is episodical in the poem is omitted, and thus that Miss Rossetti has been careful of literalness in the choice of translated versions. One principle of translation, she holds, should govern the writer who wishes to set before the reader the thoughts of common authors, and quite another should govern him who would set before his reader a style and an author immortal and unique. She, therefore, uses Mr. Longfellow's version of the "Purgatorio" and "Paradiso," and her brother's, Mr. W. M. Rossetti's, version of the "Inferno."

Avowedly it is to general readers that Miss Rossetti makes her address, and it may perhaps be questioned whether such readers will not find her somewhat too reverent and submissive a devotee of the poet and philosopher, too loving and sympathetic a fellow-worshipper; and whether they will not find in her book a shadow of the man as he was, so sharply distinct and austerely true as to be repellent in much the same way as he himself. We partly think the volume would practically have been shorter had it been lengthened by more discursive comments, biographic and historic, and more of the mere poetry which keeps for Dante a place in the common heart of mankind, in spite of all that offends in him, in spite of all that puzzles, all that time has consigned to dusty death, all that transcends the possible experience of common minds and spirits, all in which the great Florentine is beneath the intelligence of to-day, opposed to the sympathies and beliefs of our age and race, obscure to our understanding, above us in rapt contemplation of heavenly things. Not many of our fellow-citizens or of their transatlantic cousins have had the training which enables them to live long at the altitudes whither Miss Rossetti eagerly and easily soars with her guide's help; not many of them have more than a faint care for the two-natured Gryphon, ruddy and white, symbolic of the central figure of Christianity; nor for the Lake of Light, effulgent with the Unspeakable Light shining upon the convex summit of the Primum Mobile; nor for Rachel, the Contemplative Life, with her mirror, and Leah, the Active Life, with her woven garlands; nor for the golden Heavenly Rose, whose petals are the saints; nor the choral dance of the three Theological Virtues in red, white, and green, and of the four Jewish Cardinal Virtues, in robes of a purple color; nor the cleansing purgations and the hopeful agony of the terraced mount. Everywhere, even in the poet's native land, it is the "Inferno" by itself that makes for him his name among all classes of his readers save the very best, and we dare say that part of the Sacred Poem may, for pleasing his English-speaking readers, have a particular aptitude. To them, as to other men, its easily apprehensible spiritual truths, the pleasure its spectacle of such torments for such crimes affords at once to man's love of exercising power, to his rude sense of justice, and to his love of strong emotion, its gloom, sometimes grand, oftener painful and mean, answering to the gloom within and around man—these qualities must make it always universally acceptable, and perhaps, as we say, to them more than to other men. But as for the "Purgatorio," it is an Englishman of a very rare sort who has done anything worth while with purgatory; it was Mr. J. H. Newman who wrote:

> "Take me away, and in the lowest deep
> There let me be,
> And there, in tears, the lone night-watches keep,
> Told out for me," etc., etc.

A soul's desire to be purged by submissive penitential sufferings such an Englishman as Mr. Newman could conceive, with a true faith and fondness, but of his fellow-countrymen, or of ours, not very many could enter heartily into his feeling. Do what you know is right and go to heaven, do what you know is wrong and go to hell, and stay there, is their simple creed. Nor do the theological abstractions or the religious raptures and intensities of the "Paradiso," any more than the remorseful supineness of the "Purgatorio" : the sense of unworthiness born of a clinging love to God, hold the average Englishman or American by any strong attraction. The cosmogony of the Mount of Purgatory answering to the hollow cone of hell, and antipodal to Jerusalem, surrounded by the nine heavens and the Empyrean in concentric spheres, have about the same charm for him as the groups of saints disposed in garlands, or the discourse of Saint Bernard concerning the Elect Babes and their degrees, or the astrological causes which make sons to be sometimes more avaricious than their fathers, or the eyes of Beatrice, or the apparition of the very Living Light

> "Of threefold color and of one dimension."

But if Miss Rossetti, in her worship of the poet, has perhaps made her "Shadow of Dante" less capable than it might be of conciliating the kindness of the general public which she wishes to bring into the true Dantean fold, there are several classes of readers who will welcome the book as a great assistance and a great means of pleasure. It is much to have a comment on Dante's poem by a well-learned writer living in our own time, and writing our own language, to whom the Gryphon is actually a dread symbol that fills the soul with adoring awe and love, whose heart stands still when the shades chant *In exitu Israel de Ægypto*, who, in short, shares all the fears and hopes of the poet, and to whom every thought of his is weighty, pregnant with meaning of utmost concern to us both in this life and the life to come; and such a commentator Miss Rossetti is. To her, as Ahithophel to the chosen people consulting him, Dante speaks as if one took counsel of the oracles of God. In his song she hears less the music than the voice declaring the nature of sin, the way of cure, the pains through which redemption is sought, the bitter and sweet of forgiveness and amendment, the bliss of reconciliation with the soul's Maker, the ecstasy of the redeemed, not "sweltering in quiet waves of immortality," but burning in love and joy ineffable, at the end of all things, at the heart of all things, content. This oneness of feeling with the poet makes of Miss Rossetti a guide through Dante who will to many be of more service than many commentators of more learning and parade of learning. In other books, provided they are numerous enough, her readers will find more knowledge explaining the intricacies and obscurities of the poems, but we believe they will nowhere else find in one volume so much help towards an understanding of the details of the poem, and at the same time towards getting into a mood of mind somewhere in the neighborhood of sympathy with the poet's religious feeling and thought. Something not contemptible the book also does towards another end, and doubtless it will avail to send readers where more will be done in the same direction—the intelligent appreciation of the ages of which Dante was the product, and of which his poem is but the principal literary expression. Miss Rossetti's strength is otherwise employed; the man, his faith, which is her faith, his religious sufferings and aspirations, are her theme rather than his poetry or the history of him and of his time; but she will point her intelligently curious reader to this fruitful field of study. Thus she speaks of it in her preface:

> "Are we of those who, deeply and intelligently interested in the past, love in every period to dive below the surface and welcome as peculiarly precious every ray of contemporary light thrown on persons and events? Dante is a focus of such rays: bask we in them, and we shall know what at the end of the thirteenth and the beginning of the fourteenth century—among the most intellectual people of the West—were the highest attainments of the highest minds in physical science; what natural and moral problems received an astrological solution; what judgment was passed at the time, or soon afterwards, on such personages as Frederick II. of Germany, Philippe le Bel, Charles of Anjou; what was the character of the petty Italian states and princes of the period; what manners and customs prevailed; what corruptions revolted dignified and pious souls; how nearly on the same level of reality mediæval habits of thought and study placed historic fact and classic fable; what were the speculations of philosophers, what the contemplations of theologians, what the general tone of moral and religious thought in those who by reason of use had their senses exercised to discern both good and evil."

And however far her readers may go in their investigations, there are many of them who will still find it profitable to return to Miss Rossetti's modest volume for a light which no critical commentator or historical biography will be likely to shed.

CALVERT'S "GOETHE."*

A BOOK on Goethe is so far from being an ordinary production of the American press that the mere fact of its appearance is noteworthy, and when, moreover, we receive one that shows a generous appreciation of much that is best in this great man, and a delicate, intelligent sympathy with his life and works, we cannot withhold praise. In this volume, Mr. Calvert gives us the fruits of careful study and of long—if anything, perhaps too long—reflection. The book is not a biography, but rather a collection of essays that treat with great fairness different sides of Goethe's complex character and varied life. This is no simple task. Goethe, who so nearly represented the civilization of two widely divergent centuries, demands more serious consideration and a broader treatment than is generally acceptable to the essayist who tries to find one word that shall be most applicable to his subject, as if, by some happy chance, the secret of the universe could be expressed in a *bon mot*. This is by no means an error into which Mr. Calvert falls; he is everywhere painstaking in his quest of accuracy, as well as generous, even enthusiastic, in his method. The very titles of his various essays show this, stating very well the salient points that need discussion. They are "Weimar and Italy," "Poetry and Science," "Schiller," "Friendships," "Loves," "Faust," and, in conclusion, a brief biographical sketch.

In every one of these essays we find proofs of Mr. Calvert's delicacy and knowledge. He illustrates all that he has to say by copious extracts from Goethe's own writings, tempering all by good, and often excellent, criticism. For example, we quote the following brief account of the "Westoestlicher Divan":

"Its origin is peculiarly characteristic of Goethe. In 1813, the translations by Von Hammer of the poems of Hafiz fell into his hands, and by these he was so affected that, in his own words, he 'had to become productive in order not to be overwhelmed by them.' The strong effect was much owing to his sympathy, especially now in his autumnal life, with the serenity and cheerfulness and wisdom of the famous Persian poet. . . .

"The poems of Hafiz moved Goethe to embody in verse, with an Oriental coloring, much that lay stored and ripened within him, waiting just for this stimulus. . . . The 'Divan,' lifted on the gradually self-refining judgments of criticism, has now taken its lasting place among the choice creations of poetic art, uniquely enjoyed because, under a captivating mask of Orientalism, it combines solidity with grace, depth with lightness, wisdom with wit. By some of Goethe's contemporaries it was disparaged as unpatriotic and far-fetched: unpatriotic, because begun during the war of liberation in 1813; far-fetched on account of its Eastern dress."

The limits of the volume forbade that everything should be said that might be said; but, this considered, Mr. Calvert offers to the careful reader a very complete impression of Goethe. In the treatment of his life, especially in the chapters upon his friendships and his loves, we think that we have the best of the book. The little sketch of his intimacy with Zelter is particularly good, in spite of its brevity. In treating of Goethe's love-affairs, Mr. Calvert is the most lenient of judges. He finds fault, very properly, with those critics who would wish to have had the power to arrange Goethe's flirtations and marriage in the way they would like to settle those of their own sons and daughters. But while Mr. Calvert is far from any such perversion of the critic's duty, and makes due allowance for Goethe's warm nature, it seems to us that he ignores one of his most prominent traits, namely, his intense egotism. This was shown most clearly in his love-affairs, but not by any means in them alone, though it is in relation to them that the world is most nearly agreed about what goes to show this fault. If this were simply a personal fault, merely affecting one in his relations with his more intimate companions, the essayist might well omit all mention of it; for who cares for Herder's irritability or Voltaire's testiness? But in Goethe this egotism was so much of the man, it was so important an element of his intellectual growth, it was indeed such an intellectual process in itself, so directly the result of his intelligence in struggle with his passionate nature, that its omission seems to be serious, although one that is due to Mr. Calvert's desire to be free from any imputations of petty fault-finding. In this chapter, *apropos* of his leaving Wetzlar, we find the following description of some points of Goethe's character:—

"A characteristic of Goethe was a demand for sensuous presence in the object of his interest. He required personally to feel, or to have felt, a passion or emotion in order to represent it poetically. And the range of his representations is so wide because the gamut of his sensibilities was so full and fine. Certain passions and conjunctions had not been deeply experienced because they had been resisted. Near enough he had calmly stood to be singed by the flame and smoke of volcanoes whose craters he would not explore to the bottom; he had gazed into abysses whose depths he withheld himself from sounding. To the poet this was enough: it gave him a clear right of usufruct. He could not rest until he had seen Italy, and had stood face to face with its bays and mountains, its sun and moon, and its marvels of art. His imagination asked for solid stuff, palpitating reality, out of which to shape its creations: it could not snatch men and women from the air. Both the perceptions and the affections of Goethe were keen and strong; and while they fed his larger faculties of thought and emotion, they upheld and strengthened each the other. He loved a person the more for seeing him or her: presence bred love, and love throve on presence. . . . Being, from the wealth of his sympathies and vivacity of temperament, very impressible, new objects made themselves readily welcome. By no means were the old lost or effaced, but for the moment their place was supplied. Add to this his joyousness, his activity of intellect, his practical sense, his self-control, and we can understand how he could, in most cases, inwardly master what he felt ought to be mastered."

The last few lines express, to our thinking, as we have implied, but part of the truth, although it is certainly an important part. The first few lines seem to express a quality of Goethe's mind which is generally neglected in the long-drawn comparisons between him and Schiller, and in the equally interminable discussion as to whether he was more a subjective or objective poet, and this is his subjectivity in the choice of a subject and his objectivity in the treatment.

While Mr. Calvert's essay can be recommended for what he says, his manner of saying it deserves a different qualification. There is hardly a page which does not contain at least one sentence, and very often more, that require to be read twice or thrice before the meaning is perfectly clear. This singular intricacy of our author's style is much to be regretted for the sake of the subject, the reader, and the author. It is unfair for all. A book thus handicapped has no chance in comparison with one of even less genuine merit. To the reader this ruggedness gives much the same impression that would be made upon him by visiting a picture-gallery in which all the pictures were hung upside down: the better the pictures, the greater would be his regret. We need give no examples of what will be plain enough to the many who, we hope, will read this excellent book in spite of its occasional difficulties. They will be well repaid. It lacks literary smoothness, but it contains the results of hard thinking and much cultivation; the faults of style to which we allude often but hide subtle thought. In conclusion, we would call Mr. Calvert's attention to the misquotation at the bottom of page 73 and the top of the next page, which could be easily corrected in another edition.

* "Goethe. His Life and Works. An Essay. By George H. Calvert." Boston: Lee & Shepard. New York: Lee, Shepard & Dillingham. 1872.

"PAPER MONEY THE 'ROOT OF EVIL.'"*

IT is said of a distinguished professor of mathematics that the only grades of merit he ever recognized among his pupils were the highest and the lowest. Either a pupil understood the subject, or he did not; in the former case he received the highest mark, in the latter the lowest. Writers on the currency may be classified in the same way. One who clearly sees that "dollar" is only a word which cannot change the nature of anything to which it may be applied; that stamping a piece of paper "one dollar," declaring it one dollar by act of Congress, and compelling every one to receive it as one dollar, does not give it any definite value and does not make it worth twenty-three grains of gold rather than five grains or one grain, any more than declaring a stick picked up at random a lawful yard would make it three feet long—a writer, we say, who clearly and constantly sees this may be said to *understand*, and what he has to say will probably be worth consideration. Not seeing this, he does not comprehend the elements of his subject, and all his speculations may be summarily rejected as chaff.

It is pleasant to find that Mr. Mann fully understands this fundamental principle, and has therefore produced a work which is something more than a course of visionary and impracticable speculation, and something better than we should expect from its unfortunate title. And yet we are greatly disappointed in the book. We would scarcely have believed that a writer of the class who understand could have been led into so much weak and inconclusive reasoning. If he had confined himself to showing the great wrong that was done when the legislature changed the meaning of the word dollar, so that instead of a coin containing twenty-three grains of gold it signifies only a piece of paper stamped "United States will pay one dollar," and the absurdity of the legal decisions to which this change gave rise, and to devising some practical measure for giving the dollar a fixed value, we should have commended his work most heartily. But the book would then have been a very small one, and it is apparently to fill it up that he opens with a discussion of currency, paper money, credit, banking, and other matters. The object of such a discussion should have been the refutation of the fallacies which surround these subjects. For instance, one of the most deep-seated of popular errors is that which ascribes to the kind of currency, whether paper or metallic, a controlling influence over national prosperity. This error may be met by showing that in the daily transaction of current business, the choice between metal and paper is merely one of convenience, and that, in fact, where busi-

* "Paper Money the Root of Evil. An Examination of the Currency of the United States, with practical suggestions for restoring Specie Payments without robbing Debtors. By Charles A. Mann." New York: D. Appleton & Co. 1874. pp. 374, 12mo.

ness is transacted on the largest scale, money is hardly used at all, its place being taken by credit. Now, when Mr. Mann tries to show that a mixed currency "lessens the share of the laborer by diminishing the purchasing power of wages, injures the agriculturist by causing him to receive a smaller quantity of the commodities he needs for consumption in exchange for what he produces, and increases the rates of interest and profits received by the capitalist," and that the same is true of the whole credit system, he shows that, far from being qualified to correct the error, he is completely under its dominion. Again, the public at large cannot see the precarious nature of that immense portion of the national capital which is invested in bank stocks, bonds, and evidences of debt of various kinds. The only right which the owner of such capital possesses is that of receiving a specified number of "dollars" at some future time. As matters now stand, nothing is more uncertain than the future dollar. It is only a few years since it took twenty of them to buy a barrel of flour. Five years hence it may take forty to pay for a dinner. If so, what will a thousand-dollar bond amount to? The man who will bring this danger clearly before the mind of the public will be a great benefactor. Notwithstanding his qualifications for the task, Mr. Mann has failed to do it.

When we reach the question how this evil is to be remedied, we again dissent from our author. He begins by asserting that the appreciation of our dollar to the coin standard will do as great a wrong to debtors as the legal-tender act did to creditors. He conceives that justice can be done only by having each creditor paid some amount which shall be the mathematical equivalent of his debt at the time it was incurred. Here he overlooks a most important feature of the case. Before 1862 every contract to pay dollars meant dollars in gold, and nothing else, these being the only kind of dollars that had ever been legally recognized. No one anticipated that Congress would change the dictionary, so that the word which formerly meant a certain weight of gold should thereafter mean only a certain piece of Government paper, or that judges would be found to decide that such a contract should be construed according to the new dictionary, and not according to the meaning of the terms at the time it was entered into. But, after the legal-tender act was passed, every one who agreed to pay or receive dollars has himself to thank if he did not know that he had to pay or receive just such dollars as Congress might legalize before the time of payment, and that he must take his chances of their value. The agreement is quite similar to one to deliver a specified commodity at a future day. It is desirable that the value of the commodity shall be the same when delivered as when contracted for; but neither party has cause of complaint if the value is not the same.

The remedy which Mr. Mann actually proposes is briefly this: gradually to withdraw the legal-tender notes from circulation entirely, to make coin the only legal tender after a day to be named, and to settle the contracts made before that day on some equitable basis. He proposes to issue treasury notes convertible into bonds for the payment of such debts, but the proposal is couched in language too vague to admit even of intelligent criticism. We can only remark, in general terms, that the great objection to this plan is the confusion it would introduce into the operations of banks and life insurance companies, whose assets consist mainly of indebtedness continually cancelled and continually renewed. To provide an equitable adjustment for every case would require a more elaborate law than can be got through Congress, and a knowledge of political economy on the part of our judges which they do not possess.

The heart of the evil consists in this, that the promise to pay expressed on the face of the greenback means nothing, and worse yet, that Congress and the country are quite satisfied that it should continue to mean nothing. The remedy consists in so correcting public sentiment that Congress and the people shall see the danger of this apathy, and the fallacy of the arguments by which it is defended, and thus be forced to give the promise some definite meaning. When the dangers and fallacies are once seen, there will be no difficulty in devising measures to meet the case. The most simple and practicable measure would be to make greenbacks redeemable in coin at par —the coin, however, being payable not on demand, but a definite length of time, say six months, after the greenback was surrendered to the treasury; in other words, to make the greenbacks convertible into bonds payable in coin without interest six months after their issue. It would probably be found that the purchasing power of the greenbacks would then be less liable to fluctuations than if they were payable absolutely on demand.

Singular Creatures, and How They were Found; being Stories and Studies from the Domestic Zoölogy of a Scotch Parish. By Mrs. George Cupples. (Boston: Lee & Shepard.)—Neither the present catch-title, nor the original "Tappy's Chicks" of the English edition, has been happily selected to "accuse," as architects say, the nature of this work. It consists of a series of anecdotes, more or less connected in respect of the personages who figure in them, about the barnyard fowls of the minister's wife who writes the book, about the Tailor's Cat, the Cobbler's Terrier, the Rookery, the Poacher's Ferret, the Sailor's Monkey, the Weaver's Starling, etc., etc. They are told in a manner to charm irresistibly a nursery audience, though to be quite intelligible at all times the Scotch brogue must either be softened or interpreted; and their effect upon the observing powers of children and their treatment of pets cannot fail to be excellent. While far from being intended as a contribution to the discussion of what constitutes instinct, or whether it exists, it furnishes many effective arguments in favor of those who take the highest view of the reasoning powers of animals, and (exception made of some obviously fictitious passages) really outweighs in value almost any volume produced by doctors of divinity on the other side. The author's humor will be chiefly appreciated by the elders, but will not miss the juvenile hearers already referred to, as will be found on putting them to the test. The book, in short, commends itself highly to every household in which there are children to be entertained, and as it has a great deal of wear in it, its purchase may confidently be advised. A few extracts will serve to show that our good opinion of "Singular Creatures" is not unfounded.

The clucking-hen, Tappy, having for some reason taken a spite against one of her brood, and expelled it from the coop, Miss Tiny is made a house favorite, and has a perch assigned her on a chair in the kitchen by the maid Barbara. It is this warm-hearted Scotch girl who one day rushes into the parlor, "somewhat unceremoniously crying,

"'O, mem, what dae ye think wee Tiny did the noo (just now)?'

"'I really could not say,' I replied. 'Pushed the chicken off its perch again, perhaps?'

"'No, she just tried to craw like a cock, mem!' said Barbara, almost in a whisper.

"'Well, Barbara,' I said, 'nothing very wrong in that, I hope—though there is a saying that crowing hens are no canny.'

"'But what if she *is* a cock, mem?' said Barbara, with a gasp; 'no *hen* at a'.'

"The thought of such an idea flashed upon me for the first time, and my look of surprise must have expressed itself in my face to Barbara, who said,

"'I never thocht the crater could be onything *but* a hen. It's awfu'!'

"This was certainly a rather alarming piece of news, and what no one had ever supposed could happen; but as Tiny continued to crow every day, it became evident to all that the 'crater' was really a cock after all; and, as Barbara said, 'It was just another proof of its impudence, to deceive folk that way so long!'"

Johnnie Smith, loth to be made apprentice to the tailor, declares in favor of the ploughman's vocation. Mrs. Cupples enquires:

"'Is it because you will have horses to drive, and sometimes get a ride on their backs?'

"'Yes, but for more than the horse.'

"When pressed further, however, he seemed unable to explain, and for some minutes I sat looking as fixedly at him as little Midge, who lay watching every turn of his master's face, evidently in distress at the gloomy countenance. It was a bright spring day, one of those days when sounds are heard a long distance off, and the air is full of the sweet scents of earth and grass. A lark rose from the sprouting corn-field close at hand, up and up, with a wild, sweet gush of song. I had often listened to the warblings of a lark before, but there was something in the boy's face that made me feel its beauty in a new way. I felt keenly then, that having been brought up in a city, I had not been able hitherto to enter into the boy's feelings. I tried, therefore, to fancy myself in his place. His life, up to this time, had been as free and as joyous as the lark that fluttered above us. It was pleasant almost to listen to the harsh croak of some crows flapping in the trees of the wood surrounding an old ruin; for when he turned his head that way, I knew he was thinking of the days he had spent in climbing those high trees, to take the young birds; and when a half-smile appeared at the corner of his lips, he was no doubt recalling a time when he had perhaps outstripped all his companions, for he was known to be a fearless climber. . . . .

"Had he become a ploughman he must have given up much of this, to be sure; but there always would have been the blue sky for a ceiling, and the innumerable sounds and scents of Nature."

The old fable of the Spartan boy and the fox is brought to bear with effect, but

"If I'm to be like a Spartan laddie," said Johnnie, trying to keep his lip from quivering, "Midge wunna be like his dog, at any rate."

A Dictionary of Words and Phrases used in Commerce. With Explanatory and Practical Remarks. By Thomas McElrath. (New York: Taintor Bros.)—The reason which induced the author to add another to the not small number of commercial dictionaries, is stated in the preface to have been his experience, in the discharge of his duties as appraiser-general of foreign merchandise at this port, of "the need of some book which might be conveniently referred to for the meaning of unfamiliar terms contained in foreign invoices, and for the technical signification or import of certain words and phrases used in mercantile transactions." It will be found accordingly

that this dictionary differs from its predecessors in its compactness and its adaptation to American use, not to mention other particulars in which it shows marks of originality and labor. Some examples, chosen almost at random, will best exhibit the nature of this compilation. Under "New York" we have a description of its advantages as "the greatest emporium of the New World," a view of its foreign and domestic commerce, and the rates of commissions recommended by the Chamber of Commerce, of cartage by city ordinance, and of pilotage, wharfage, and dockage. Under "Tariff," the controversy in this country between free-trade and protection is fairly stated, and some curious abuses of the tariff instanced, as "when, the law having failed to make specific provision for Chinese fire-crackers, and having provided for non-enumerated articles, an officer of the customs, in order to take the article out of the latter provision, returns them as *manufactures of paper*"; or, again, "where shoes, subject to a duty of 35 per cent., because lined with wool waste are returned as manufactures of wool, and subjected to a duty of 50 cents per pound, and 35 per cent. *ad valorem*." The U. S. tariff as it was till recently tinkered is given in full, with blanks in which to note alterations. Under "Corner," the definition is followed by this intelligence:

"The Board of Trade at Chicago, in order to relieve merchants involved in time contracts, adopted a rule that whenever any member of their board shall claim that the fulfilment of his contract is interfered with by the existence of a 'corner,' a committee shall investigate as to its existence, and if the committee find that a 'corner' existed at the time of the maturity of the contract, such contract shall be settled on the basis of actual value as compared with other property of the same kind, but of a different grade, in other markets; such value to be ascertained as near as may be, and a price to be fixed by a majority of such committee."

Under "Photographs," we learn that "by the internal revenue laws of the United States ambrotypes and daguerreotypes, for the purposes of taxation, are considered as photographs. They are not commercially classed with engravings." Under "Peaches" we have statistics of the trade in that fruit, making nearly a page of the dictionary.

Each alphabetical section is preceded by a table more or less full of synonyms in different commercial languages, viz., English, French, German, Dutch, Italian, and Spanish. On this side it invites and will bear some comparison with the admirable "Pocket Dictionary of Technical Terms used in Arts and Manufactures, abridged from the Technological Dictionary of Rumpf, Mothes, and Unverzagt, with the addition of Commercial Terms" (in three volumes—English, German, French. New York: L. W. Schmidt. 1872). This little book must be a godsend to professional translators, and is a model of neatness and brevity, combined with fulness. One finds there the synonyms for *T-square, cradle-scythe, dish-clout (econ.), town dues, shunt* and *switch, composing-stick, polarization, Jumel cotton, repoussé, give bail, turn-table*, etc., etc. It omits, however, *gambrel (arch.)*, and speaks of *collar-beam* as being an obsolete expression, which is hardly the case; omits *day-book*, and, as does also McElrath, *tickler*, a book-keeping Americanism. The railway euphemism of *côté des hommes* is not recognized, though the vulgar designation for it in French and English is retained. A hundred criticisms of this kind would not seriously impair the value of the "Pocket Dictionary," and we can heartily recommend it along with the "Commercial Dictionary" to all whom these handy works of reference concern. They are both well printed, and the former with singular accuracy.

Autumnal Catarrh (Hay Fever). With three maps. By Morrill Wyman, M.D., late Hersey Professor Adjunct of the Theory and Practice of Medicine in Harvard University. (New York: Hurd & Houghton.)—Dr. Wyman, who has learned in suffering what he has taught in song, was the first to describe autumnal catarrh in the year 1854, and to vindicate its claims to the dignity of an independent disease. His investigations, which have extended over many years, have now been put into a very readable book. The cause of this disease, which has not spared such shining marks as Chief-Justice Shaw and Daniel Webster, is not known; but fortunately the remedy is an easy and pleasant one: the sufferer has only to repair to a "non-catarrhal region" two days before the 15th of August and tarry forty days in the wilderness. After this he may go back to the amenities of life in the lowlands, secure from attack till the dreaded 15th of August returns. For the benefit of those readers who have not learned to map out their country into "catarrhal" and "non-catarrhal regions," we will briefly say that the "non-catarrhal regions" are high regions. Dr. Wyman has taken great pains to ascertain precisely what these non-catarrhal regions are, and has made it plain to the eye by maps. The book is a model of wary, shrewd, and methodical investigation, and is full of interest for the layman and general reader, as well as for the medical man.

LEISURE HOUR SERIES.

Published This Day.

FLY LEAVES. A Volume of Verses. By C. S. Calverley. $1 25.

"Often as we read his volume did we burst into that spontaneous solitary laughter, which is the highest of all possible testimonies to a humorist's power. It was aggravating, doubtless, when one's feelings had been stirred by some unmistakably beautiful poetry, by some bright picture of nature or pathetic description, to find, time after time, that one had been cruelly hoaxed; . . . [yet] should we quote one of the pieces complained of, to show how great was the offence, the court would certainly be dissolved in laughter, and the accused would escape."—London Spectator.

"We wish that some of those prolific small poe ts, against whom we are for ever taking up our parable, would write as good poetry in earnest as Mr. Calverley does in play."—London Athenæum.

"A real poet, with a cross streak of burlesque."—New York Evening Mail.

"Deserves to be read from cover to cover, and the proper place (we may say for once w th fitness) is on every drawing-room table."—Chambers's Journal.

FATHERS AND SONS. By Ivan S. Turgenef. $1 25.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

"Unites the skill of the surgeon with the vigor of the executioner. . . . Reminds us of some of the best passages in Thackeray, whom, indeed, M. Turgenef strongly resembles."—London Athenæum.

MADAME D'HERVILLY, Principal.

IN imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

The Nation.

NEW YORK, THURSDAY, JULY 18, 1872.

The Week.

MR. GREELEY has been formally notified of his nomination by the Democrats, and accepted without many words, referring the committee and the party to his letter accepting the Cincinnati nomination. His managers are full believers in the doctrine held by many of our statesmen, that good and available candidates among us masses must either be born naturals, or are at once, on nomination, stricken by heaven with such imbecility that they must at all costs keep their mouths shut. The candidate was, however, allowed to say a few words to the committee on the following day when they visited him, but the speech was about farming at Chappaqua, and vindicated the Sage from the charge of wasting money in fancy farming. He said his wife wanted him to get a place with a cascade and a spring, and that was why he purchased in that vicinity, and not because he calculated on making money. The *Times* correspondent who was with the party says that when the committee came up to the spring to drink, a man had to be stationed there with a stick to drive away the bull-frogs, which abound; but the *Times* is prejudiced in these matters.

That the Greeley strength has increased until it is now absolutely overwhelming, so that only obstinacy and a dogged and blind desire to be unbeneficent to the South keep Grant still in the field, we have the authority and evidence of the *Tribune*. Everybody is for Greeley and Brown, the *Tribune* says, except the office-holders and the enemies of their brethren. It is preparing its readers, we see, for a possible defeat in North Carolina by articles which declare that although Grant men are demoralized, the Greeley men enthusiastic, the Administration pouring in money by the hundred thousand dollars, every Southern State but South Carolina sure for Greeley and Brown, yet it may nevertheless be that local issues may so govern the people's political action in August that North Carolina may go for the Republicans now, though certain to go against them in November. We ourselves cannot tell our readers how much money has gone into North Carolina. We advise them to believe that less has gone in than the *Tribune* is saying, for we are not admirers of the way in which the *Tribune* is at present conducted, and do not find ourselves believing all it says nowadays. And we advise them to believe that more money has gone there than the *Times* or Marshal Carrow would seem to desire us to suppose. Everything indicates a sharp struggle in that State and a dubious result, though, as things stand, the Regular Republicans are likelier to beat than their opponents. It is the gong that is to be beaten up here, and very thoroughly that labor is performed; down there it is the enemy in the field, and that is another matter.

Governor Gratz Brown, being at the Commencement dinner at Yale last week, was invited to address his fellow-alumni, and did so. He said that Yale must improve her methods of instruction; she needed fewer recitations and closer communication between tutors and pupils; she should go to the West to be taught how to teach; Missouri could teach her, and the West in general was further advanced than the East in matters of education; the reason of this was that the West had got ideas from Germany rather than from the Atlantic States. These remarks brought up the President, Dr. Porter, who remarked that the authorities of the college might put Mr. Brown upon one of the examining committees next spring, when he would learn what had been done at Yale during the twenty-five years since he had visited New Haven. To this Mr. Brown replied that he expected to be in other business next spring. After this Professor Sumner spoke, briefly recounting some of the changes and improvements which have made Yale so different an institution from the Yale of 1845, and the subject was therewith dropped. Considering that the Commencement dinner is an occasion when college men meet to shake hands, to remind each other of old times, to hear about the condition of the college, and devise means of increasing its prosperity—to renew their own youth and their Alma Mater's; and considering that the conciliation of the German Vote and the Hoosier Vote and other Votes is commonly tabooed at these gatherings, and thought to be not just the thing; and considering that Mr. Brown, as it appears, was but ill-informed as to the educational condition of the college, this advent of his into the canvass of the East may be called felicitous—creditable to his good sense and good information and good taste. In the evening the candidate was serenaded, and made a speech, in which he said that in the November election General Grant would perhaps not carry three States of the Union, and that Horace Greeley is the ablest man in this country. Time was, in American politics, that the man who went about with any appearance of eagerness in seeking for high office, injured his chances in proportion as he appeared to be craving and importunate. This would appear to be the case no longer. All "records," it seems, are to be forgotten, and all proprieties of time and place disregarded, in pushing one's personal claims.

Now that President Grant is up for re-election, is it too much to expect that he will pay a trifle more attention than formerly to the expostulations of people who have begged him to get rid of Mr. George H. Butler? What with his dancing girls and his capacity for brawling and drinking and slander and general indecency, he has been a disgrace to us ever since his excellent uncle secured him his position, and now, at this present writing, we have him figuring in a shooting affray in the streets of Alexandria. There appears to be a fatality attending both the Butlers, in virtue of which they are sure to bring to mortification and open shame all who have anything to do with them except in the way of opposing them, and the younger one in particular has had a career of unredeemed scandals. For the information of Greeley journalists, for whom we foresee great anguish of mind when they read of this last brawl, we would remind them that at the time of the unsavory McFarland mess, when Mr. A. D. Richardson of the *Tribune* was shot, and Mr. George Butler had just got his appointment, a supper was given at the Astor House to the new consul-general. His character was just as well known to New York journalists then as it is now; he was notorious as a blackguard; and nobody who had the opportunity of knowing him thought him anything but a most unfit person for the place. Yet the most noted gentleman who was present at the "ovation to a distinguished journalist" and who, we think, presided for a part of the time at least, was the present Liberal Republican and Democratic candidate for the Presidency. He wouldn't make any such appointments. Butler at Alexandria is not a pleasing spectacle, we agree; and we can all agree, we trust, that Butler receiving complimentary suppers in New York with Mr. Greeley in the chair or at the table is not very pleasing either; nor one that need elate the Reformer.

The canvass in the Northwest has been opened by Ex-Governor Blair, of Michigan, in behalf of Greeley and Brown, and in the Central West by Mr. Bingham, of Ohio, in behalf of Grant, Mr. Blair being a "Great War Governor," and Mr. Bingham an impassioned orator, fairly "magnetic." Governor Blair brought out some facts which have been singularly overlooked thus far, and which the future historian of the Cincinnati movement will do well to make a note of. He said that Greeley's nomination "fell upon the country as a surprise. Nobody expected that a man like Greeley would get the nomination. They expected that a few political bummers and tricksters would go down there and nominate one of their number," instead of a great and good man. Governor Blair himself shared the general incredulity. When told by some person before the Convention met that Greeley was the best candidate and would stand a good chance, "Why," says he, "I looked

on that man with surprise—just as if he had come along with some circus or show." So did we, we remember, though some of our political friends in this city advised us to bet our money on Greeley and the Hutchins delegation. While Greeley has been "a Reformer from the day he began life, and a powerful reform writer," Charles Francis Adams, says the Governor, "has not the hold on the hearts of the laboring classes of the country," and his "whole family is a family of office-seekers," one of the sons "wanting to be Governor of Massachusetts" and "to be President as soon as he gets old enough." Turning to the Administration, Governor Blair said that, "as a whole, it is simply damnable." He was especially severe on the Postmaster-General, and announced his intention "to meet the people face to face, and ask them whether they will be *particeps criminis* with this scoundrel Cresswell." He quoted with satisfaction from Daniel Webster the sentiment that "we want a change for the sake of a change," and concluded by crying "Down with the corruptionists! Perish all rings! Hurrah for Horace Greeley!"—words which find an echo in the hundred-gun salute fired last week in the City Hall Park as "Tammany's response to the Baltimore nominations." On the whole, if the Governor is as good a prophet as he is an historian and observer, he will sweep the Northwest like a prairie fire, and Greeley and Brown will be elected long before November.

Mr. Bingham spoke the simple truth when he said that "Horace Greeley was not selected by his party as their standard-bearer because he possessed any eminent fitness for the Presidency of the United States," and that it was the South which nominated him at Baltimore. He reviewed effectively, though he mentioned but a tithe of them, the errors of judgment and of conduct by which Mr. Greeley's war record stands fatally disfigured, and held him up as the Southern favorite on account of his early admission of the right of secession. He made a good point in saying that "nothing has been taken back by the Democratic party by accepting the Cincinnati platform," and that what is wanted of the Democrats is that they shall expressly "reject the principles heretofore announced and acted upon by themselves"—not merely give in their adhesion to principles against which they have up to this time contended, and avowedly give it because "with Greeley we can win." Mr. Bingham was less happy in his defence of Grant and his Administration; indeed, it is not unfair to say that he made a very poor fist of it. Grant's nepotism was reduced to his having kept his aged parent in a small post-office, and then justified by this piece of unseemly puerility: "The President has respect for that law given of God to man, and of universal and perpetual obligation: 'Honor thy father and thy mother, that thy days may be long in the land which the Lord thy God giveth thee.'" "The law given of God to man" also tells man that gift-taking corrupts a ruler, and that Eli lost his office because he would not rebuke the bad conduct in office of his relatives Hophni and Phinehas, and tells him many other things useful to be remembered but which it is best to keep off the stump. As for San Domingo, Mr. Bingham wisely made no allusion to it, though in speaking of the administration of foreign affairs he had the fatuity to praise the negotiation of the Washington Treaty.

One passage in Mr. Bingham's speech may have been misreported, but it would still be false in its intention, and deserves to be exposed. It is the one in which he is represented as having asserted that "during the four years of Andrew Johnson's Administration, with taxation at the rate of nearly $100,000,000 a year more than at any time since Ulysses S. Grant entered upon the duties of his office, he only made out to pay $13,000,000 of the principal of the funded debt." Now, Mr. David A. Wells showed in these columns, only three months ago (*Nation* of April 18), on the testimony of the Hon. Geo. S. Boutwell and Secretary McCulloch, that while Grant's Administration had in the three years March 1, 1869–1872, paid off $299,649,762 of the national debt, the Johnson Administration reduced the debt in three years and seven months by the sum of at least $470,236,000. Mr. Bingham, bringing down the reduction to the first of the present month, puts the Grant reduction at only $333,000,000 in three years and four months, and would have us believe that "it is without a parallel in history." He should reflect that if he continues to repeat this fable, he is likely any day to be put to shame by some one of his listeners; and if he persists in giving Grant all the credit of reducing the taxes, he may be confronted by the fact (to quote Mr. Wells again), that "by far the greater proportion of the reductions of the war-taxes made since 1865 was the result of legislation before Grant assumed office." So we should hear no more of this sort of thing:

> "When he [Grant] came to the chair in 1869, a great debt, a part of the price paid for the nation's life in the struggle against the rebellion, had been incurred *and was not perceptibly reduced*. . . . The problem to be solved was, how to reduce the burdens of taxation upon the people and reduce at the same time the debt of the nation, and thereby maintain its credit. He set himself quietly to the work without noise, without parade," etc., etc.

The fact is it is the American Congress that plans our taxation—not very wisely; and it is the American people—which does not grumble enough—that pays them.

Throughout this last three or four months of political conventions, explanation of records, changing of sides, and so on, Senator Sumner has occupied a position which may be described as sedulously non-committal, except on the one point of his profound dislike of General Grant and his determination not to support him. For the President he has a true antipathy, due, no doubt, to the natures of the two men, neither of whom is capable of appreciating what of goodness and greatness there is in the other, and Mr. Sumner, for one, being very much alive to the bad qualities of a man who holds Mr. Sumner in disesteem. Mr. Sumner never forgets that he is Mr. Sumner, and General Grant has on several occasions shown that if he remembered that fact, it had a different signification to his mind from that which it had to Mr. Sumner's. He now tells Mr. L. U. Reavis, that as between Mr. Greeley and "one who shall be nameless," he is earnest for Mr. Greeley. Why Grant is "one who shall be nameless," it would be curious to know. Perhaps because of a circumstance which naturally must have exasperated the Senator very much, and which he imparted the other day to Ex-Senator Shields: it is the negro for whom Mr. Sumner is anxious; it is on the negro's account that he hesitates to go over to the Democrats; the safety of the black man is with him the primary, almost the sole consideration; but the negro writes to him that with Grant he feels secure, and has recently complimented the Senator by telling him, *apropos* of some speech in advocacy of the negro's civil rights in theatres, cemeteries, and so forth, that "he must be Grant's brother," he thinks so much of the colored man. This naturally is a little too much. But probably it will not long prevent Mr. Sumner from coming out for Greeley. Grant is no different from what he was; and silence on Mr. Sumner's part is neither so dignified in him nor so efficacious against his enemy as speech will be.

The Orangemen—four or five policemen to each Orangeman—marched in procession last Friday without disturbance. All the contention was done previously, either in the office of the *Irish Democrat*, or in a convenient lager-bier saloon where negotiations looking towards peace were carried on by "General" Meany and a friend on behalf of the Ribbonmen, and an exile, Wemyss Jobson, Esq., and a Mr. Johnson, the Protestant leader, on the part of the Saxon and Far Downer. A proposal that Mr. Jobson should visit Canada for the purpose of fighting duels with the Meany faction was, if we are to believe the General, the only definite upshot of these negotiations, and he adds with great significance, in a published correspondence, that he did not observe, when this plan was broached, that Mr. Jobson showed any alacrity in putting his hands into his pockets to defray the expenses of the journey to her Majesty's dominions. The General did not advance this Canadian proposition, we should inform the reader, as being a peaceful solution of the question at issue; he simply felt compelled to come

to a rupture with a man who could stand up to his face, in his own newspaper office, and avow himself "the hired traducer and defamer of Thomas Francis Meagher"—Meagher of the Sword. That was why he challeged Jobson; and, if we recollect, he requested Jobson later in the proceedings to leave the office of the *Democrat*. As for the remark about the expenses, that, we suppose, points to lethargy on Mr. Jobson's part when the idea of the duel was brought into prominence. The Jobson side, however, say that they paid for the lager-bier which was drunk and also for the brandy, and allege that the Meany side were very weak-kneed; they not only offered to march in the Orange procession bearing a green flag in token of amity and benevolence, but, to the best of the Jobson side's knowledge and belief, if their side had stayed, and continued paying for the brandy-and-water, the Meany side would soon have been offering to wear orange sashes in the procession, and to engage themselves, by the virtue of their oaths, to applaud the tune of "Croppies, Lie Down," and request the musicians to play it over again. Each of the parties to the negotiation now represents the other as being the one that first began to knuckle, and each wishes the thought to perish that it ever entertained the idea of yielding to the other.

The Stokes-Fisk case has ended for the present in a disagreement of the jury, who, after being out sixty-odd hours, reported themselves unable to unite upon a verdict. Apparently a minority of them were not satisfied that there had been sufficient premeditation, and the prosecution certainly failed to show that there had been any such pursuit of Fisk as his friends in the newspapers asserted at the time. The trial has been of some value in showing us once more a picture of the sort of tyranny under which we have been living. Fisk's and Stokes's mistress testifies that the assault upon Mr. Dorman Eaton, a highly respectable lawyer of this city, which left him for dead, was procured by Fisk, who had failed to frighten him by blackmailing affidavits; another witness testifies that Stokes, when in his company, was dogged by roughs; Fisk tells Stokes that he "has graves for his men" when they drive him to take extreme measures with them; and that he can "railroad Stokes into State prison"; a Supreme Court judge, who no doubt is relied upon to do the railroading, sits by conversing with a woman of ill-repute when this threat is made; Fisk is shot on the public staircase of a hotel, and one doctor who attends him talks to another of "punching at him for half an hour" to find the ball; Tweed and Gould, his partners in many of his enterprises, are quick to reach his bedside in his last hours, and he is kept insensible with narcotic medicines. "Verily he died as the fool dieth," and in conformity with his life. His last moments, by the way, recall those of the late County Auditor Watson of the Ring, who, being mortally wounded in the streets, was hurried away and carefully shut up from his friends till he died, and with him much of his knowledge.

The *Herald* published on Monday a batch of letters from its correspondent Stanley, covering the period from September 20, 1871, to March 12 of the present year. They have been substantially anticipated by the telegraphic résumé previously sent from London, except in regard to the connection of Lake Tanganyika with the Nile. It now appears that it is not certain that such a connection does not exist. "The western coast has not all been explored; and there is reason to suppose that a river runs out of the Tanganyika through the deep caverns of Kabogo far underground and out on the western side of Kabogo into the Lualaba [Chambeze] or the Nile." The Lualaba Dr. Livingstone descended as far as latitude 4° S., that is, within one degree of the limit assigned by Baker to the southern watershed of the Nile. This interval, now that he has been re-equipped by Mr. Stanley, he has hopes of exploring in the course of the next two years, besides a large tract of country to the west and south of Tanganyika, offering numerous points of interest. The *Herald's* expedition has not only thus given him a fresh start, which he greatly needed, but will probably secure him hereafter a prompt and regular communication with the coast. He is described as being hale and hearty, and as capable of fatigue as ever. For six months he was laid up with ulcers in his feet, but there is no confirmation of the report that he had been crippled by a buffalo, nor of that other rumor which has obtained some vogue in London, that his unwillingness to return to England was due to his having taken for a second wife a native woman.

The disappointments of the French Right are evidently increasing. Defeated in the late elections, they have vainly applied for a kind of redress to M. Thiers. The President of the Republic has given them in his reply less than no comfort. His present interpretation of "the compact of Bordeaux" seems to imply the obligation, not of passive allegiance to the Republic, but of actively defending and maintaining it. M. Gambetta has become his eulogizer, and the *Journal des Débats* his ally. The ablest monarchical contributors to this paper, Saint-Marc-Girardin, Auguste Léo, and Eugène Dufeuille, have been obliged to announce their withdrawal from it, the first-named after forty-five years of distinguished co-operation. The birthday anniversary of General Hoche, that model of a plebeian and republican officer in the eyes of the French Democrats, being celebrated, a few weeks ago, at Versailles, near which the hero was born, the self-styled Conservatives not only had to swallow a speech of Gambetta's which extorted admiration from the *Gaulois* itself, but also a letter of the President, eulogizing the deeds and character of the Revolutionary general, and closing with these words: "They form noble examples for future generations, which will know, I trust, how to imitate the manly virtues of their fathers, and to place our new Republic on an unshakable foundation." The discussions on taxation in the Assembly have become very stormy, and graver conflicts between M. Thiers and the Monarchists are apprehended.

Indications are multiplying to the effect that the Chancellor of the German Empire, provoked by the more and more developed hostility of the Ultramontanes, has determined, and determined with his wonted energy, to carry the war into Africa—that is, into the domain of the Church of Rome—and thus to renew to a degree the conflicts to which the rival pretensions of the Papal and Imperial powers gave rise in the Middle Ages. His recent utterance, made in the Reichstag, that he and his Emperor were not going to go "to Canossa"—to do penitence before Pius IX. as Henry IV. did before Hildebrand—has been received and applauded in Germany in an aggressive sense, for Bismarck is not considered the man to boast of passive resistance. Nor have semi-official comments to the famous phrase been wanting, confirmatory of that popular interpretation. The most important of them has been furnished by the well-inspired *Norddeutsche Allgemeine Zeitung*. According to this paper, the new warfare foreshadowed by the powerful statesman now again rusticating at Varzin means interference, in one way or another, in the next Papal election, because this "can be no matter of indifference to any government ruling over Catholic subjects," and "such governments are bound conscientiously to examine whether they can approve the choice made," the elected person claiming "rights, which from certain points of view, approach sovereignty itself." The announced visit at Berlin of the Emperor of Austria, who is to be accompanied by Count Andrássy, is naturally brought into connection with these presumed schemes of Bismarck, but whether justly, the future must show. Meantime, the Italian Liberals view with a sort of simple amazement this serious manifestation of interest in an event which may be very remote, and which, whether near or remote, is to them a matter of almost complete indifference. Dwelling in the midst of such a feeling, they admit that the Roman Curia tends to become "more arbitrary, furious, and blind in its action," and "finds no incentive to hope for salvation in anything but war to the knife." For all that, be the new Pope a Boniface VIII. or a Benedict XIV., it is no concern of the Italian people or Government.

THE HISTORIC DEMOCRACY.

WITHOUT a natural basis and a logical development, the Democratic party could never have held power almost unbrokenly through two generations. For twenty-four years, then again for twelve, once more for four, and in its last period for a term of eight, it has been sustained by popular approval. Such vitality in a party must be fed from deep sources of sympathy in a people. It was the party of the nation's youth, born in the aurora of a new light for the world—the party of progress against tradition, of onward-looking hope against timid experience. Jefferson's famous inaugural only formulated the creed he has the credit of inventing. Condensed out of generalities, and reduced from theory to working precepts, that creed prescribes for the individual the greatest freedom consistent with others' equal freedom; for Government, distribution of power to its widest safe limit; and, as a corollary peculiar to our complex system, sharp distinction and firm conservation respectively of State and Federal authority. The political history of the country, commented by the flux and reflux of the vote for President, shows how long and faithfully the Democratic party guided its action by those principles. Its fierce revolt against Adams's alien and sedition laws, its jealousy under Jackson of moneyed power, its sturdy resistance to Clay's American system of incidentally helping the few to the harm of the many—above all, the rout of nullification and those strict constructions of the Constitution which gave effect to all these demonstrations of its power—are a few instances in the record of honorable fidelity to its ideal of the national welfare. The party has always been keen to interpret and prompt to flatter the popular wish, nor has it often wanted the leadership of eminent intellect. As its power culminated in the designation by Jackson of his successor when, enthroned at Washington, and buttressed on the one hand by the Albany Regency, and on the other by the Richmond Junta, it enlisted hard Northern sense and Southern political skill for its maintenance, its ascendancy in national politics seemed assured for many years.

It was forfeited through faults inherent in the structure of the party. It was not a want of truth to its fundamental principles that destroyed it, but the carrying out of those principles rigidly to their logical conclusion, without any allowance for the growing political intelligence of the world or for the changed circumstances of the state. The first grave mistake made by the Democratic party was a generous one, but it was fatal, because it weakened the power of correcting future missteps. It surrendered to mere numbers that control in political affairs which should have been refused to the absolutely illiterate. This extension of the suffrage was logical, no doubt, and liberal, but it was an irreparable mistake. Theorists may talk as they please of the exercise of the voting function as an education in itself. Doubtless it is, but let the ignorant master their primer first. The choice of school trustees and road commissioners in their several districts would have taught the personal meaning and local bearing of the ballot, and prepared them by sure degrees for the delicate duty of choosing legislators, which they now misperform as blind partisan proxies. And the gravest of all errors in this category, both for themselves and the state—a blunder amounting to a crime—was committed by the Democratic party when it flung the judicial office into the scramble. The increased party strength to which this just principle of individual freedom unwisely lent itself deserted the contrivers. The general suffrage weapon shows a black as well as a white edge. And such mischiefs have ensued of unprincipled combinations among electors and unworthy choice of the elected, that the shame and the loss of prestige and the abandonment of patriotic supporters far outweigh any gain to the Democratic party from this capital mistake. Again, the party has carried the policy of distribution of power far beyond its necessary or safe limits. For the selfish perfecting of party tactics, they have reduced the Executive of the General Government to a mere tool of a senatorial oligarchy. It does not excuse them that others better the bad lesson they set. In deference to a false view of equality, they have stripped the Governors of States of their useful functions, one after another, and deprived the judicial office of all its dignity. When authority is thus dissipated, what else takes its place? Obviously, allegiance to party. The mass of mankind must have some power, above themselves in some way, to respect. Above the common level to which the judicial, the executive, and the legislative seats are cast down, rises the power of party. Discipline usurps the place of reverence. Independent thought and speech are lashed as insubordination, and party cohesion is preserved by the distribution of offices, high and low, through a few political hucksters. The outcome of all this is the immoral axiom that "to the victors belong the spoils," and the counter-cry for civil-service reform, to which the Democratic party has made itself wilfully and incurably deaf. Once more, it is within the memory of all how the party has defeated its own ends and destroyed its remaining power by pushing to the extreme its fundamental doctrine of State rights. It seems scarcely credible that the statesman whose firmness extinguished the Calhoun heresy should have been the President of the same party which cheered the non-resistance palaver of its chief twenty-eight years later, while its present head was for permitting secession. It would have been impossible, in spite of the corrupting influences already noted, but for the stifling embrace of another power, hostile in its nature and ideas to true Democracy. The parasite of slavery rooted itself in that vigorous party growth, and, while lending it a false show of strength, drained away its life.

We are not among those who can look at the rosters of the Union regiments and call the Democratic party of that day, as a whole, false to the country. It had not then officially approved the disunion notions professed by the man whom it to-day hails as leader. But because as an organization it was halting and double-tongued, and but half turned its back on its revolted associates, multitudes of its strong men abandoned it for the party which gave to their love for the Union a freer and clearer voice. Then the Democratic party had outlived its time, and it has since been living on its name. The slave influence debauched it, the war dealt it a mortal wound, and it now gives its better self the *coup de grâce* and consents to an ignoble end. The last chance of revival was thrown away four years ago, when it rejected Chase with all his offered compromises as still too Republican, only to find itself driven now to the feet of a chief who refuses to hide its friends' scalps dangling at his belt, even while getting himself bedaubed with its new war-paint.

The need of a party with the principles originally professed by Democrats is as great as it ever was, but we can probably endure that need better than we could bear what they would bring us if restored to power. Their theory of State rights is belittled into plans of revenge for needed repression. Has the country any guaranty in the party's past compliance with Southern demands, that the ex-slaveholders will not ask the President for the four hundred millions once offered by the editor? Will the virtue of his bodyguard be proof against the temptation of dividing that splendid spoil, or his own credulous benevolence resist their importunity? What safety for the public credit is there in the party which once talked of nominating a repudiator, under a leader who clamors for the impossible, in instant specie payment, as a child cries for the moon? As for those who expect neutrality on the subject of free-trade from a passionate protectionist, or delude themselves with the fancy of civil-service reform while the consideration for such enormous bargaining remains to be paid, we wish experience may not come to them as a cure. And what as to the new questions which are looming up—the attack on the menacing power of corporations, and the conflict between labor and capital? We should be sorry to trust their disposal to politicians apt at buying legislatures, or demagogues eager for a promising new field.

The force of all these reasons for distrusting the new composite Democratic party is multiplied a hundredfold when we contemplate the leader they have chosen. If they take him for the sake of place, of course they are not to be trusted. If they profess to take him for principles, he does not even pretend to surrender his own, dia-

metrically opposed to theirs; he answers their nomination with the boast, "I am still a Republican." If they fail to elect him, then disheartening defeat coming upon demoralizing disgrace destroys all that remains of them. If they succeed, the irrepressible conflict between opposing ideas breaks at once the truce in which they have joined their standards. The attempt of a weak man to conduct an administration which carries an opposition within itself, must plunge the country into discord and confusion from which it will be glad to escape through the crystallization of new party forms out of the ferment and dissolution of the old.

CIVILIAN LAWLESSNESS.

IT appears to be one of the settled things of this political campaign, that to everything done during the last four years by the Radical Republican majority in Congress we are to give the name of Grant. Fair or unfair, this seems to be a fixed assumption, and, together with the statement that at all events Greeley is *personally* honest, it is not to be questioned in public, whatever one may think of it privately. Does a Senate full of educated lawyers and politicians agree to the confirmation of Mr. Alexander Stewart as Secretary of the Treasury, and take a day or two before discovering that his appointment would violate an enactment? Why, then, let us oust General Grant forthwith; evidently he is disgracefully ignorant of law. Does a majority in Congress go to the President and say to him, "We, as sworn conservators of the law of the land, have deliberately decided that we must endow you with the power of suspending at the South the writ known to lawyers as the writ of *habeas corpus*," and does it straightway confer that power upon him? Of course, then, our duty becomes plain; let us visit the righteous punishment of so shameless an assault on our liberties upon President Grant; in his youth he was trained in the West Point Military Academy; he has had no familiarity with writs of *habeas corpus* and the other legal safeguards of civil liberty; the best five years of his mature manhood he spent in the field, where he became accustomed to the use of military methods; when there is question of setting aside civil methods, he is obliged to look to the jurists of the Senate and House for advice, and does look to them; clearly, now, such a man is unfit for the office of executing the laws; let us put him out; Mr. Shellabarger's bill for carrying "the Nation into the State," as Mr. Sumner says, and which it is only a pity, the *Tribune* says, that we cannot enforce North and South in every elective district, is a bill whose passage stamps General Grant as a dangerous enemy of constitutional liberty. Or does the Senate, following, with just one dissenting voice, the lead of a statesman who has "sat at the feet of Story and learned of him," and who has spent a lifetime reading the books of treaty-makers and Foreign Offices—does the whole Senate give its sanction to claims upon a foreign government which the common sense of mankind scouts as untenable and even absurd? Beyond doubt, then, such conduct of affairs is disgracefully incompetent, and Mr. Sumner and Mr. Greeley are right to ask us to come up to the punishment of General Grant as a contemner of law, a military man, a person who does not know all he ought about treaties, a man ignorant of enactments of which one senator, at least, out of seventy, has some knowledge.

Seriously, we think this question of the contempt for law, for legal methods and restraints, which is alleged against General Grant, will profitably bear pondering by every citizen who wishes to do his duty this fall, and who proposes to do it thoughtfully and conscientiously, without heed to the outcries of partisans; and perhaps as profitable a way of pondering it as any other is to reflect upon the relative recklessness of the two candidates now before the country. There is no doubt of the importance of the question, either intrinsically or as regards its relations to this contest. Senator Bayard remarks, in his published letter deploring the candidacy of Greeley and Brown, that he shall, nevertheless, support those candidates, because, bad as are the evils of our present financial policy, burdensome as they are, they are immaterial in comparison with the great evils threatening constitutional liberty itself which are involved in the continuance in power of Grant and his friends; and the Opposition, in general, appear to share the Delaware Senator's feeling, and to be willing to lose annually their hundred dollars or more a head to the monopolists, provided they can put a stop to evils which address their imaginations more powerfully than the evils of Tariff and Finance.

Now, much as has been said, much as has been honestly said, about General Grant's military disregard of law, and incompetence in civil life, which of the two men, he or Mr. Greeley, has given proof of greater lawlessness and of incompetency by reason of wilfulness and want of training? We have suggested for consideration in this light the case of the Force Bill, drawn up by Mr. Shellabarger, amended into greater rigor and centralizing harshness and unrepublicanism by Mr. Sumner, applauded frantically by Mr. Greeley in the *Tribune*. The appointment of Mr. Stewart, too, is another commonly cited case, and it is strictly fair in thinking of it to think of the connection of the Senate with that appointment as well as of the President's connection with it. And if, pursuing this train of reflection, one is led along to the President's request that the Senate should abrogate the inconvenient enactment, and to the Senate's refusal to abrogate it, and to the denunciations of his attempt to override the Senate, no harm will be done if amid the senatorial objurgations we recall this fact—that the one department of our Government which has latterly shown a disposition to devour the others is not the judicial department nor the executive department, but the legislative, and that of the legislative bodies the one distinguished for overbearing imperiousness and haughtiness has been the Senate. "I have no influence with senators," the President is accustomed to say.

The San Domingo business is another principal ground of complaint against the President. As regards this, we apprehend that the investigation into it would be none the less fairly carried on if the investigator approached it with the thought that President Grant holds very strongly the old-fashioned not very enlightened or laudable notion that it is true patriotism to extend the "area of freedom" by all decent means, and that we are greater and happier and more powerful and respected according as we fly the stars and stripes over more acres—whether the acres are "a wilderness of monkeys" or the icebergs for which Mr. Seward paid seven millions. At all events, at the same time when, according to Mr. Sumner's last speech, General Grant was committing all kinds of illegalities in Dominica, and showing himself unfit for leadership in civil life, what was Mr. Sumner doing, and doing with Mr. Greeley's very vehement approval? He was urging with all his might the passage of a law which put into the hands of this incapable and violent tyrant the power of suspending, at his discretion, the writ of *habeas corpus* throughout the Southern States. The month of last year which saw General Grant's Commissioners in Haytian waters, saw Mr. Sumner and Mr. Greeley engaged—the one at Washington, the other in this city—in the business of reducing our Constitution, so far as the Shellabarger Bill could do it, to the level of French constitutions, and of changing the form of government under which we had been living to a dictatorial government, with Mr. Sumner's "colossus of ignorance" as dictator. And of these two law-abiding, constitution-reverencing, unmilitary civilians, so much safer men than West Point men, Mr. Greeley had the felicitous luck of agreeing with his friend the Senator in forcing the Ku-Klux bill upon the country, and of agreeing, too, with his enemy the President in that personage's fiendish subversion of a "sister republic." For the *Tribune*, which was hot for the "Cæsarist legislation" of the Radical majority in Congress, was not at all in sympathy with Mr. Sumner's San Domingo oratory of the same date; and in the very pages which lauded Mr. Sumner's "fire" in behalf of feudal government for the South, Mr. Greeley advised his friend to hold his tongue about San Domingo, and wait for the return of Messrs. Wade and Howe, and the reading of their report. So, too, we may add, a year previously, during the pendency

of the investigation into the case of Hatch, imprisoned by Baez, Mr. Greeley could see nothing wrong in the President's and General Babcock's course; and in June, 1870, declared, in so many words, that President Grant's Administration, "though that of the most successful and renowned soldier of his age, is earnestly seeking peace with all nations, and avoiding entangling alliances"; and in the same month, after the investigation had been concluded, and the Sumner side of the case had been fully presented, the *Tribune* said, by way of summing up in regard to this "conspiracy against a sister republic," that "General Grant's enemies are taking the best course to ensure his election for another term."

The President, as we all know, abandoned his plan of getting for us the Haytian island and Samana Bay, just as Mr. Seward, General Grant's exemplar in annexation, abandoned the plan for securing the Island of St. Thomas. No doubt it was with reluctance that General Grant gave up his project; a quality of his from which the country has derived some advantages and some disadvantages is his tenacity, and he submitted slowly. He submitted, however, and the scheme is dead, no doubt much to the regret of some speculators and much to the relief of all thinking men. What would President Greeley have done in such a case? We believe that among all living men, himself included, nobody can tell. As likely as otherwise, any doubts President Grant may have felt from his inexperience as a statesman, or any respect which he may have had for the opinions of better-trained civilians, would have found no place in the mind of Mr. Greeley. From the outset of his public life, he has been more wrapt in his own omniscience than is usual even with that curiously overrated product of our civilization, the self-made man. His sure insight always, in all cases, reveals to him rules as clear and unerring as those whispered into Mohammed's ear by the celestial dove. He is his own Ægeria, with the advantage of re-editing and readjusting his interpretations of law whenever his changed impressions may require. His favorite phrase, "the higher law," had a solemn meaning for the statesman who first pronounced it. It was that rule of moral conduct to which human legislation may slowly and tentatively be made to approach and conform. To Mr. Greeley's perception it apparently has meant, and still means, his own ideal, broad or narrow, of right, which must be wrought into instant practice, whatever respect of tradition or usefulness of habit or reverence for lawful authority stands in the way. He would forthwith and instanter erect sheer principles, as they show to his vague, passionate view, into institutions, without reckoning with any obstacles. His reference of things to his variable inner standard of conviction results in very lawlessness of action. It is not pure truth he worships, nor even truth as it has taken shape through experience for the wisest men, but his own shifting vision of truth, to which all must bow. And if his fetich of one week becomes a stick the next, it is not that he is inconsistent; it is merely that a new revelation of his infallible judgment guides him. When the South attempted to break up the Government, and its success through war seemed for a moment possible, he would have flung the Constitution to the winds, and bartered nationality for peace. Incapable of constant principle, he offered to buy the chattels which he had denounced their owners for treating as property. Restless under as much of law for himself as is implied in that party allegiance he vehemently imposed on others, he intrigued against Mr. Lincoln's re-election. And, the crown of inconsistent wilfulness and radical lawlessness of nature, he offers himself to govern the country as the instrument of that party which, if he has been telling the truth for thirty years, is the enemy of decency, order, and law. If this instability is unconscious, then it betrays a weakness which would be no less dangerous in a high functionary than bad intention. If it is conscious, it bespeaks a contempt for law as a power external to man which would make his oath of office as chief magistrate almost a foregone perjury. In any case, the charge of lawlessness coming from him is very curious.

Such an occupant of the White House would assuredly require as careful watching as any military man we have ever seen installed there. Looking to the high probability of a Democratic majority in the Lower House at some time during the next four years, either as the result of continued discontent with Grant's Administration, or as the fruit of the arrangement through which his opponent hopes to oust him, and remembering the present temper and the old tactics of the Southern branch of the party, we may well ask under which President the country would have the better assurance of stable and peaceful government. The present evils we can at least measure, and the Republicans will find difficulty enough in re-electing their candidate to suggest a warning not to be trifled with against their continuance. But who can sound the sea of troubles that would rush in upon us in the event of the success of the coalition?

THE BALTIMORE CONVENTION.

BALTIMORE, July 10, 1872.

THE remark said to have been made by a Liberal Republican manager, that "the arrangements for carrying Cincinnati for Greeley were simplicity itself compared with the arrangements for putting him through at Baltimore," appeared to be verified by all the action of the Convention. If Judge Doolittle had been selected to preside solely because of his management of the Arm-in-Arm Convention called together by President Johnson, in 1866, he could not have made his management of this Baltimore Convention an exacter transcript of that at Philadelphia six years ago. It was nothing less than ludicrous to hear the Permanent President incessantly reminding the members that they were "a deliberative body" and not a mass-meeting, he all the time as resolutely applying what Senator Bayard called "gag law," as when he padlocked the mouths of the Vallandigham men at Philadelphia. It is true that the Convention helped him, appearing to desire nothing more than that refractory members should hold their peace and the business in hand be finished as soon as possible. For example, the first thing of consequence done on the second day was to act upon the report of the Committee on Resolutions. The chairman of that Committee, Mr. Burr of Connecticut, promptly came up on the stage, and announced that by direction he submitted the Cincinnati Platform in its integrity, and that upon the adoption of the report he moved the previous question. Senator Bayard, of Delaware, was on his feet and addressing the chair before Mr. Burr was down, and amid much confusion, applause, counter-applause, and hisses, endeavored to prevent the success of this motion. The theatre in which the Convention was held was, acoustically considered, execrable, and the delegations half-way up the hall could have had not the least notion of what was under discussion, and some even in the front had to be instructed by special message from the stage how to vote. What with this ignorance, and ignorance of what would be the effect of voting the previous question, and inability to hear or to understand Judge Doolittle's explanation of what would be the effect, and reiterated requests from various parts of the hall for an answer to these enquiries, the Convention was speedily in a state of great and noisy confusion. At last, it was understood that if the motion for the previous question was supported, Mr. Burr, as maker of the motion, would have one hour at his disposal which he might occupy in advocacy of his report, or might cut up and allot to other speakers. The opposition to the motion was determined, for it was known that just here, if anywhere, the fight of the Anti-Greeley men must be made; but the majority against them was overwhelming, and the previous question was ordered. Then Senator Bayard was granted ten minutes by Mr. Burr, Mr. Burr himself, by the way, having a voice which could scarcely have been heard three yards away from him. Almost every one of the speakers, indeed, was inaudible, to those of us at least who were behind them or on the right or left hand of them, and apparently to the vast majority of those in front. Judge Reagan, of Texas, for example, a burly man resembling Mr. John Morrissey in physique and countenance, made a speech which was literally so much dumb show, but which he delivered with a fortitude proof against the outcries of the sweltering delegates. General O'Connor also, a fine specimen of the flamboyant stump speaker, not afraid of spoiling his throat, made a speech at the top of his lungs which was semi-audible to people a couple of rods away.

The vote having been taken, and the previous question ordered, Senator Bayard came forward to show how strong, or how weak, were the straight Democrats, and for ten minutes spoke on the merits, protesting against cramming the words of aliens and enemies down the throats of the Democracy, and demanding original resolutions. He was listened to with some applause, and some hisses, the hisses being rebuked by the chair and the greater part of the Convention, and at the end of ten minutes Mr. Burr gave up to him ten minutes more. This was not done without protest, there

being a few irrepressible members who did not yet understand the great previous question device, and could not see how it was that "the gentleman from Connecticut held the floor" against all comers. The second speech of Mr. Bayard was less audible than the first, though delivered with equal energy and with a gallantry and a grace of demeanor which were very taking. The "Blue Hen's Chickens," as represented by the Senator, are evidently game. No man in the Convention seemed so well able to make a good impression, and his praises were freely spoken by people who were angry with Delaware's conduct, and eager for harmony and Greeley forthwith. Even the horrible, impassive, sodden visage of a notorious New York gambler and editor, who was sitting near me—Mr. Greeley's first vice-president at the Cooper Union—and the gushing countenance of another of our editors, indicated some respectful interest in the orator. Every one could afford civility, for how the thing was going was of course perfectly well known; perhaps, too, it was secretly not unpleasing to the audience to be allowed one draught of pure Democratic doctrine before the other draught was swallowed. General O'Connor followed Mr. Bayard in an oration which was thus far relevant to the point at issue, that the Senator having strongly deprecated the surrender of the Democracy, General O'Connor, coming from South Carolina, could offset the Delaware plea by an entreaty to the Northern half of the party to have mercy on the wretched condition of their Southern brothers, who desired nothing better than deliverance and forgiveness, even as they were willing to forgive and let bygones be bygones. Hon. Judge Reagan followed after a little interval of renewed explanations of the "previous question" to some of the most irrepressible delegates, who even yet did not comprehend that they were bound hand and foot, and after some confusion caused by the efforts of a much excited Tennessean, Mr. McRae, to "rise to a question of privilege." This gentleman, by the way, recalled the former days by having "a personal difficulty" in the afternoon at the Carrollton House with another gentleman, Mr. George N. Sanders I was told, the Niagara negotiator. There was a dispute between this diplomatist and Mr. McRae about some old-time difference, and McRae drew his knife and was for killing the other on the spot. "His friends restrained him," as it would have been well if they had in the morning; he so irritated gentlemen in my vicinity, especially the 4-11-44 gentlemen, that they expressed a very warm desire to have him "shut up" and "put out," and said to one another, "That feller's drunk"; "that feller'll get hit if he don't look out." Judge Reagan's speech appeared to be mainly for report in Texas, and had no effect whatever on the delegates, most of whom, I fancy, did not hear five words of it. I was going to say that I have never seen a convention which, for so willing a body of men, was so unbiddable and noisy. Continually the chairman had to admonish it and implore the galleries for quiet. The fact is, however, that it was not unbiddable; but not to know what the chairman was saying, to be addressed by speaker after speaker and to hear not a word or very few words, must have been trying; and the immense majority knowing that everything was cut and dried, and that the Convention was so far from being the "deliberative body" that Mr. Doolittle called it that it was eminently a recording body and nothing else, was all the more inclined to be talkative and careless. The heat, too, was very great; the thermometer must have stood considerably above one hundred degrees in the galleries, which were made needlessly hot by gas-lights burning away incongruously in the clear daylight. Mr. Reagan's pantomimic exercise over, the vote was taken on the passage of the Cincinnati resolutions unaltered except by a short preamble of no significance, and they were at once adopted by almost seven hundred votes out of seven hundred and thirty-two. This made it plain what was to become of the opposition, and definitely settled the practical unanimity of the nomination. Immediately a stout man, in one of the stage-boxes if I saw right, sprang to his feet and proposed three cheers, brandishing his arms to mark time. The first cheer was fairly good, the third was joined in by about thirty people, I should say; and this incident will give you a not unfair idea of the amount of "enthusiasm" that was displayed throughout.

It was the second day of the Convention when I reached Baltimore, and what enthusiasm there had been had assuredly pretty well exhausted itself on the first day. But the fact is, I take it, that the enthusiasm said to have been exhibited was a figment of the Liberal Republican brain, and had no existence. There was noise certainly, but the cheering was in rare instances more than very half-hearted, and I believe I give you the spirit of the assemblage as well as any other correspondent when I say that Mr. Vance, of North Carolina, being complimented on his story of "Old Grimes" and the hymn-book, and assured that the other delegates also as well as himself would "sing Greeley through if it killed them," said in reply that he had another story, a good deal better, which it was a pity he could not tell on the stump as illustrative of the feeling with which the North Carolina Democracy regard Greeley's nomination. It was, in fact, unrelatable; but, as Mr. Vance said, it was very expressive, and it expressed extreme and contemptuous disgust. The sharpest cheering was called out when before the call to order the band played snatches from loyal and rebel airs, such as "Dixie," "Yankee Doodle," "The Bonny Blue Flag," "John Brown," "The Star-Spangled Banner;" the yelling sort of cheers greeting the Southern tunes the more heartily, and the solider hurrahs the Northern. The stage where the two or three hundred reporters and editors were seated was a principal seat of applause for the loyal tunes, and the galleries of the applause for the Southern; the pit, where the Convention was seated, was neutral, I should say, and comparatively undemonstrative. The "wild enthusiasm" on the announcement of the nomination was evidently labored, and it was something rather depressing to see the seventy New Yorkers rise in their place, hold out palm-leaf fans at the stretch of their arms, and lead off in the enthusiasm. Governor Hoffman waving a palm-leaf fan in honest enthusiasm is not a very exhilarating object. A great deal of such wild spiritual excitement he can endure, I fancy, without shortening his life. Some hearty applause, however, the Governor called forth by a speech some ten minutes long, in which an hour or so later he assured the Convention that New York would be carried for Greeley not by fifty thousand majority, as somebody had promised for Missouri, but by a majority of as many thousands as Missouri had legal voters—something like three hundred thousand, I suppose. So too there was applause when Mr. Wallace, of Pennsylvania, a recalcitrant State, with some very bitter opposition to Greeley, went forward after the balloting, in which his delegation's vote had been obstinately divided, and announced that Pennsylvania bowed to the will of the national Democracy. This by the way is the same Mr. Wallace, I believe, whom the *Tribune* charged with the wicked manufacture of fraudulent naturalization papers, and the staining of the same with a decoction of coffee to produce in them the appearance of age. But reminiscences like these were too numerous to make durable impressions; a Pennsylvania politician casting the vote of the Berks Democracy for Horace Greeley was not particularly impressive when one could see such Southern men as the Duke of Sonora, or Bradley Johnston, or Thomas Bocock fanning themselves with the "Greeley fan"—a repulsive, ghastly, flesh-colored thing, a portrait head of the candidate fastened to a stick and fringed with wool to represent white hair and whiskers.

The resolutions had been adopted—Delaware still sullen—and several delegates rose to catch the eye of the chair, there being a natural desire on the part of many gentlemen to be the person who should move the nomination of "the distinguished son of New York, Honest Horace Greeley, for the office of President of the United States." An Indiana man was very pertinacious in this respect, would not sit down, and, I believe, finally carried his point. I saw him standing some ten minutes. But meantime Mr. Doolittle recognized the delegate from New York, Governor Hoffman, who said he wished to present a memorial addressed to the Convention by German citizens of New York City. The clerk was ordered to receive it, and was given a large roll of paper with a brief heading and a long list of signatures. This memorial, in substance, informed the Convention that the German citizens of New York had been said to be opposed to the nomination of Mr. Greeley; that, on the contrary, they were not opposed to it; and that in proof of their assertion they sent up a request for his nomination, signed by more than fifteen thousand German voters. Meantime, while this had been reading, the roll was unwound and passed from hand to hand, trailing up the whole length of the central aisle of the theatre. This bit of stage effect, and the accompanying assurance of the candidate's popularity with the German voters, was loudly cheered, and was more effective than another piece of plaudit-manufacture, one in which this Convention imitated the Grant Convention last month: when the nomination was made—Delaware unreconciled still, and declining to give her vote for it—a picture was let down behind the correspondents' platform, which represented the White House. It was let down too low, however, and, as the reporters and other visitors were standing up, and did not at first sit down, the exhibition was not very successful.

Mr. Brown was nominated for the Vice-Presidency amid greater noise than ever, for the delegates soon began dropping out of the theatre. The building was full, though the insufferable heat prevented the uppermost semi-circle, away up by the roof, from being packed at any stage of the proceeding; thousands of fans were fluttering; delegates were moving about and talking; the dozen or so of telegraphic instruments, like noises in a delirious dream, were sharply clicking, constantly without a moment's cessation; the chairmen of delegations got up one after another as the roll of States was called, and cast the vote of the delegation; the motion of Judge Abbott's lips, or Mr. Ingersoll's, rather than the sound of their voices, showed that Massachusetts or Connecticut was for "B. Gratz Brown, of Missouri," and, by one o'clock, or a few minutes past, the work of the Convention, which began its session a little after ten o'clock, was complete, and the

members dispersed for dinner, and drinks, and talk, and the ratification meeting in the evening.

The Convention was not an ill-looking body of men, though to my eye it had less of a look of practical ability and responsibility than the Convention which met at Philadelphia. The Southern element was, of course, more prominent. The same sharp faces with which the war made so many Northerners acquainted for the first time; the long hair; the eccentric dress, in which the waistcoat was apt to be conspicuous by its absence; the odd intonation, were all noticeable. One could see the old politicians who have so long been absent from national conventions, famous war-horses and eaters of fire, who used to take part in the conventions of the days before the deluge, when there was no North, and Arkansas gave the law to Massachusetts, and who have since been statesmen in the Confederacy, emigrants to Brazil, residents in Canada. There were old men too, curiously dressed in black clothes, with large linen cuffs to their shirts, wearing the look of planters who have been ruined and are still somewhat in a maze over the citizenship of the negro, to say nothing of the prospect of voting for the editor of the incendiary *Tribune* instead of seeing "the boys" burn him in effigy. Many of these were victims of the carpet-bagger, apparently, and moved one's pity; and there were younger men to whom, no doubt, the carpet-bagger and his negro supporter may have now and again been victims. Perhaps the Northerners were inferior in appearance to their Southern associates, take them one with another. I believe the only out-and-out odious faces were on the shoulders of Northern men—Democrats and Liberal Republicans; and one might perhaps have proved physiognomically the position that if the most intellectual portion of the Democratic party of the North is not surpassed, and perhaps not equalled, in clear, intellectual force and keenness, by any portion of the Republican party, the rank and file of it, nevertheless, does certainly include a greater proportion of ignorance and brutality than the rank and file of the Republicans. A higher general average of intelligence and character was, I think, discernible at Philadelphia than here; and, indeed, there was no very successful representation of that intellectually able class which may be called the legal-minded constitutional Democracy, as distinguished from the negro-hating and office-seeking Democracy. Mr. Benjamin Wood and Mr. Hoffman were there; Mr. Bayliss W. Hanna, Mr. George N. Sanders, Gen. John A. McClernand, Mr. William Wallace, the Confederate ex-General J. B. Gordon, Mr. Burr, of the Hartford *Times*, Mr. John Cochrane, ex-Senator Doolittle, and other such in plenty; but Mr. Reverdy Johnson, of this city, who was an invited guest upon the platform, was the most noticeable representative of the O'Conors, Thurmans, Groesbecks, Hendrickses, Nelsons, and Churches. Very few of these were in this council.

The Convention, as I have said, was not enthusiastic; on the contrary, it was dull, but the members were confident in their assertions that the candidate was certain to be elected. New York was sure, I was told; Pennsylvania was sure, Illinois and Indiana were sure, Ohio was sure, New Hampshire was sure, Connecticut, the delegation said, would go for Greeley by from five to ten thousand; North Carolina the Administration might buy, but probably could not; Greeley would get more electoral votes than any President since Monroe; Grant would not carry four States; there never was so enormous a popular uprising. Facts in support of these views were sparingly produced; but the Connecticut men named a number of towns in which Greeley clubs had been formed, and were either mistaken in their assertions or rational in believing that if the State were to vote now, Grant and Wilson could not carry it; and not irrational in supposing that the Greeley party will be larger yet in November than in July.

The Democrat with whom I had any conversation of much interest was a gentleman from Georgia, not a delegate, who had been sent up here by a number of Straight-out Democrats to look on and report. According to him, a great deal of the disaffection in Georgia was due to a belief that the Greeleyite movement was simply an attempt of a disappointed faction of the Radical party to get control of the Government; and good-will towards the South, and a desire to relieve her and welcome her home again, were believed to be as far from Greeley's thoughts as from Grant's or Sumner's. This view seemed the more reasonable, because Ben Hill and Joe Brown at once became Greeleyites, and these two gentlemen are utterly distrusted by the true white men of Georgia, because they have been partakers with the Bullock Ring, against whom the honest white men are now every day finding true bills in the courts as thieves and swindlers. It was thought that a movement could not bode good to the Southerner in which these friends of the carpet-bagger were prominent; hence much of the Georgia reluctance to accept Greeley and Brown. My informant, however, was convinced by what he had seen that these candidates might safely be accepted, thought he should recommend them to his fellow-citizens, and thought the State could be carried for them. I was surprised to hear him speak with so little of certitude on this last point, but he had only been converted about twenty-four hours, and was still a little ashamed at finding himself under conviction. The ground of his dubiety appeared to be that the whole employers of the Black Belt, or cotton region, might be so disgusted with Greeley's nomination that they would refuse to do what they had done before, and would not use their influence to keep their negroes away from the polls. It was negro abstention, he said, which had given them so large a majority in Georgia. Still, he thought Mr. Stephens and Mr. Toombs would withdraw their opposition as soon as they understood the true disposition of the Liberal Republicans, and that the State was safe.

This gentleman was full of stories about the rascality of the carpet-baggers and about the Ku-klux, whom he had several times seen, and who, he declared, were a necessity. They were originally called into existence, he said, in Tennessee, where he then resided, to put down stock-thieving, and not to burden their Northern friends and themselves with the accusation of Ku-kluxery. They had to his knowledge refrained far more than could have been expected of them from punishing the scoundrelism which had been robbing and ruling the South since the war. What are you going to do, he said, when one carpet-bagger gives his note of hand to another, making it, almost in so many words, payable "after the next steal"? "Is not it a credit to us that we do not Ku-klux them? What does a carpet-bagger deserve who, for the sake of the nine or ten dollars a day salary, procures his election for a county which he never saw in his life, and which he actually leaves Georgia for good without ever having seen?" To these questions it was hard to find a reply; yet I could recollect another phase of recent Southern history which had passed under my own observation, and did not respond warmly to the gentleman's invitation to myself and the friend who was with me, to go down and settle in Georgia and be welcomed.

ENGLAND.

London, June 28, 1872.

WHEN I last wrote to you, the Geneva arbitration had been given up for lost by the most experienced doctors. Directly afterwards, the bulletins showed a visible improvement, and last night the favorable reports were confirmed by ministerial announcement in the two Houses of Parliament. What is to be said except that all's well that ends well? Even the Conservative organs can only get up a feeble growl, and try to make out that in some way or other the result is altogether in favor of the United States. As the arbitrators have rejected part of the claims, they will be all the more ready to concede the others. The Americans, with their usual supernatural cunning, foresaw this; they saw that, having gratified England by the rejection of one unfounded claim, the arbitrators would be anxious to prove their impartiality and gratify the United States by admitting another though equally baseless. The *Pall Mall Gazette*, which has all along shown a singular bitterness against the Treaty, which some people set down to personal hostility to Mr. Gladstone, tries to make out even now that the question is not settled, and that we are once more entering a fool's paradise. In spite of these arguments, there can be no doubt that the settlement, real or fancied, is received with general satisfaction, except by those patriotic persons who hold that everything which strengthens the Government weakens the country. There is some satisfaction in seeing the end, or supposing one's self to see the end, of so wearisome a controversy; but, on more reasonable motives than this, I do not think that anybody with a soul above that of a petty politician can be otherwise than gratified. Mrs. Ward Howe is at present in this country, and is going to hold a great meeting in London next week to induce women to put an end to war. I hope that she may succeed; but I confess that, with all its drawbacks, the prospect of finally settling the outstanding differences between ourselves and the United States gives me more hope than a great deal of enthusiastic oratory; and with that remark I dismiss the subject, as I fondly hope, for ever.

Meanwhile, Government is of course materially strengthened, or at any rate relieved from a pressing danger. The probability now is that, in spite of the various blows it has received, Mr. Gladstone's administration will have a tolerably easy time for the rest of the session. We are about, indeed, to have one more repetition of the rather dreary farce that has been played so often of late years. The House of Lords, not having the courage to reject, has attempted to emasculate the Ballot Bill. It has passed amendments making the secresy optional; and, according to our constitutional doctors, that is no better than having no secresy at all. The amendments will be considered this evening by the House of Commons. They will all be rejected with the exception of two or three, which are to be accepted by way of compliment, as it is supposed that they have no practical importance. Then a

match at brag will take place. Liberals will announce that the House of Lords must be bullied, and that if it cannot stand bullying it will have to be radically reformed. Conservatives will declare the constitution in danger; Lord Salisbury will be eloquently indignant; and Lord Granville will be amiable but firm. After a good deal of talk, the House of Lords will either collapse at once—which is perhaps the most probable result—or it will stand its ground and be contented with collapsing next session, after a few more months of wearisome repetition of old arguments. It is not very interesting to look on at a play when the catastrophe is foreseen and the only question is whether it is to be reached in the fourth act or the fifth. However, that is the task before us, and I am rather inclined to hope that we may be put out of our misery as soon as possible.

Meanwhile, a war is breaking out which interests the inhabitants of London a good deal more keenly. There is a strike in the building trade on a scale which bids fair to make it one of the most prominent events in the history of the great war between labor and capital. Wages have been rising for a long time, and the watchword of the men is now nine hours and ninepence an hour, which would raise the weekly wages by about four shillings. A great deal of discussion has taken place as to the rights and wrongs of the question; the most conspicuous result being that no one outside the trade is competent to form any trustworthy opinion on the subject. It is obvious that at the present moment trade is unusually flourishing. In many districts of London houses are rising at a rate which reminds one of New York, if not of Chicago. In the west, for example, a whole quarter has sprung up within the last few years, and the picturesque old suburb of Kensington is being swallowed up in rectilinear lines of bricks and mortar. There is something almost pathetic in the sight of the poor little suburban villas which are everywhere being engulfed in the advancing deluge; and where, by some accident, they have escaped demolition, they remind the wandering Cockney how recently green fields have been swallowed up by the monstrous metropolis. In many districts, it is true, the houses thus rapidly springing up stand empty, and there has been decided overbuilding. But on the whole we may safely assume that the trade is prosperous, and that the artisans have a fair chance of insisting upon a share of the extra profits. That is, of course, the simple state of the question, though some attempts were made to put the demand for shortened hours on a sentimental ground distinct from that which supports the demand for more money. The battle will doubtless be to the longest purses and the greatest obstinacy; but at present no one seems to know which way victory is likely to incline. The masters made an attempt at securing arbitration, and proposed to leave the question to Lord Derby and Lord Salisbury. The men objected to the names, and urged that a joint committee of masters and men would form the only proper tribunal. On that point the negotiation broke off; though indeed there does not appear to be on either side a very strong disposition towards conciliation. If the masters give in, the effect will of course be to raise the price of houses, and, considering the rapidly-increasing difficulty of obtaining houses in London, and especially houses for the poor, at anything like moderate terms, the results to the working-classes will by no means be of unmixed benefit. Indeed, the effects of a general rise in the prices of labor are already making themselves felt. The price of coal has risen in an unprecedented manner, in consequence, partly, of the difficulties with the pitmen; and the increase in the cost of living for the poorer classes keeps pace very unpleasantly with the increase in the rate of wages. However, we are just now on a general flood of prosperity. The taxes increase so fast that Mr. Lowe will probably find himself burdened with an unprecedented surplus. Pauperism declines steadily, whilst, at the same time, it is curious to remark that emigration has made a corresponding start, and for the first time for very many years the English exceeds the Irish exodus in absolute numbers, though, of course, not in proportion to the population. That wages should rise under such conditions is inevitable, but it seems that, in this instance at any rate, the concession will not be made without a very obstinate struggle. Meanwhile, it is pleasant to remark that the question is discussed with a very observable diminution of bitterness. The working-classes are not treated to arrogant doses of political economy with the same freedom as formerly, and indeed the tendency is perhaps to pay too little regard to such important considerations. On the other hand, they seem to be more ready to accept arbitration as a peaceable solution of the questions at issue; and there are still hopes that in some form or other it may be adopted by the building trade.

One little incident which occurred in the House of Commons last week deserves a few words in this connection. The people of Birmingham, which has now a population of 350,000, are suffering, like the rest of us, under the difficulty of disposing of their sewage. They accepted a plan for buying a waste piece of land in the neighborhood, which was to be made into a sewage farm according to the most approved precedents. The bill which was necessary for effecting a compulsory purchase of the land in question was unanimously approved by a committee of the House of Commons. The ordinary course of affairs is that a bill which has passed that ordeal is accepted as a matter of form. The land, however, belonged to Sir Robert Peel, who has inherited some of the talents, but very little of the discretion, of his eminent father. Although it was at a distance of three or four miles from his house, he chose to consider that it would be an intolerable nuisance for him to have the sewage of so large a town coming between the wind and his nobility. Accordingly, he opposed the third reading of the bill, and, to the general surprise of the persons concerned, it was thrown out by a very small majority. The moral appears to be that, in the opinion of a House consisting chiefly of landholders, it was considered better that a population of 350,000 people should be prevented from getting rid of their sewage than that the same unsavory article should be in the smallest danger of offending the nostrils of a country gentleman and a Member of Parliament. Obviously, so long as there is sewage, and the resources of science have not as yet enabled us to do without it, it must be put somewhere; and unless, according to our present most uncivilized plan, it is used to defile our rivers, poison our fish, and waste its agricultural powers, it must be put upon land. It will be very difficult to select land for the purpose without some chance of its being occasionally perceived by the nostrils of a local magnate, and quite impossible to dispose of it without more or less annoying somebody. The action of the House of Commons, therefore, strikes most outsiders as singularly unreasonable, especially when the plan had been approved by their own committee; and there is not the smallest reason to suppose that any of the gentlemen who voted with Sir R. Peel had given the smallest attention to the subject, or, in fact, knew anything except that Sir R. Peel objected to the scheme. It is bad enough for Parliament to take matters out of the hands of those members who have been specially directed to examine them, and in such a case as this it amounts to a scandal. There are undoubtedly worse forms of jobbery from which the House of Commons is happily free; but the practical objection to jobbery of this kind is that it is jobbery in the interest of a small dominant class, whose supremacy is already the object of much jealousy and may at any moment be seriously threatened. If, in short, landholders choose to use their power for such purposes, it is not improbable that they may before long have more of that agitation for a land law which has often been threatened, but which has hitherto produced little result.

Meanwhile, as I have said, the political atmosphere will probably be calm for some time to come. Government will drift quietly on its path with a certain amount of friction and disturbance, but without any serious opposition; and though Mr. Disraeli took occasion to speak more confidently than usual of the contempt which they had incurred, and the strength of the rising tide of Conservative reaction, there seems to be no immediate prospect that we shall have an opportunity of testing the reality of the feeling.

Correspondence.

HOW TO PRODUCE A RESPECTABLE TEMPERATURE.

To the Editor of the Nation:

Sir: It seems extraordinary, that although it is some thousands of years since men began to moderate by artificial means the cold of winter, we still lack appliances for reducing the sometimes more intolerable heat of summer. Especially wonderful does it seem that such a want continues in the United States, where, on the one hand, we have a climate with a greater range of temperature from winter to summer, and consequently more debilitating in the latter season than that of any other wholly civilized country, and on the other hand, the population is one which has shown itself more than ordinarily ready and able to provide for new emergencies.

As this subject is an interesting one (will seem unusually so, indeed, to many of your readers, should the weather of early July hold until this communication comes before them), perhaps you will permit me to confide to you my feelings with reference to it, and just what for my own part I propose to do. I shall thank you heartily if I can obtain any practical suggestion in return. This weather is too hot to work in, and by rights, therefore, too hot to live in. I have waited every summer since many years for some inventive genius to furnish me an apparatus to cool my office and my house. Neither he nor it has appeared. I have passed in consequence many sleepless nights and—what has been still more trying—many almost workless days. And now I am going to try to help the matter myself. May I tell you how I propose to do it? I ask because I hope to get some hints from some of your readers as to how I may do it better.

I shall try to cool air down to 60° or 65°. I think there will be no difficulty in effecting it in the following manner:

I mean to lead a considerable number of small air-pipes several times

through a very large box or bin, which is to be packed full of some light substance—moss, for instance—through which air could easily find its way. Water from above will be suffered to drip all over the top of this moss and will trickle through it to the bottom of the bin. Through the moss, from the bottom upward, I shall force a current of air, and thus produce rapid evaporation. And this will cool the air-pipes, and they will cool the air which passes through them. To force a current through these pipes, and to force another one through the moss, I shall use a very large, but light, pair of bellows; and the bellows will be worked by a sort of clock arrangement, in which the immediate motive power will be a heavy weight. I calculate that a horse will with ten or fifteen minutes' heavy pull (once a day or once a week, according to the heat of the weather) wind this clock affair. It shall [illegible] pendulum, and be started or stopped at pleasure, and by altering the length of the pendulum, will run fast or slow according to the heat. The cold air which the air-pipes furnish will be led through cheap wooden pipes to the various rooms of the house, always near the ceiling, and be turned on or off like the hot air of ordinary furnaces. My doors and windows will be kept closed in the hottest weather as carefully as in the coldest. I shall have no flies nor mosquitoes nor dust. My blinds will be open and my rooms light. The air will be as dry as that outside, and the temperature of it will be between 60° and 70°, according to my belief as to what degree may be the healthiest. I have not carefully estimated the expense of this machine, but I am sure it will not cost much, and am equally sure that the extra work it will enable me to do in the hottest weather will soon repay me for the outlay.

I believe that in future, as soon as good and cheap cooling machines shall have been invented, and the public shall begin to appreciate their usefulness, we may reasonably expect to find one in every respectable dwelling both in cities and in the country. In cities, such machines could easily be "wound up" from the outside of the house by means of movable steam-engines travelling from door to door. Whenever this shall be the case, our churches and theatres will, even in the hottest weather, be delightfully cool. Patients in hospitals will not be lost merely through the "unfavorable heat of the weather." Offices and workshops will not be too warm for active mental or physical labor. Throughout the summer we shall dine in comfort and sleep soundly. If we go to the country, it will be for the sake of its attractions and not because we are driven thither by the heat. And the early decay of our women will be a matter of the past, I might almost say. M. N.

[We wish all success to every honest device for any sort of evaporation that shall be in the interest of cool weather. Whatever may be the result of our correspondent's scheme, everybody will admit that he shows the right spirit.—Ed. Nation.]

NOVEL-READERS AND OUR PUBLIC LIBRARIES.

To the Editor of the Nation:

Sir: The report of the well-known and accomplished librarian of the Cincinnati Public Library, which has recently been published, and noticed in many of the papers, contains an able discussion of a question which was the subject of a recent paper in the *Nation*—namely, the character of books most in demand in public libraries. The Cincinnati librarian takes the same view of the matter that the writer in the *Nation* seemed forced to, and considers the large popular demand for the lightest and most sensational kind of fiction legitimate and justifiable; and mainly on the ground that this demand comes from a class of minds unfitted by education, or by the reaction of severe bodily effort, for anything higher in the scale of literary values. Thus far I can perfectly agree with both these writers, who so well agree between themselves. But in the experience of the public library of which I know the most, it has been found that the demand for this literary confectionery (highly colored with poisonous drugs) proceeds not from the class of readers above referred to, but from all classes, excepting the genuine students. That is to say, a very large proportion of all who read for general entertainment prefer Southworth, Hentz, Stephens, Holmes, *et id omne genus*, to Scott, Dickens, Muloch, Macdonald, or even George Eliot. The ladies of leisure, the pupils of both sexes in our High School, are with few exceptions included in this class. No one can say of these, as of the poor laboring man or woman, that nothing better could be expected of their literary taste. So that while the great popularity of Mrs. Southworth is owing largely to the low culture of the laboring classes who patronize our library, it is owing no less to the want of a refined taste and a correct mental ambition among those who ought to have them. There is, therefore, need of whatever effort can be made to form the tastes of the people, and so manipulate the public library that the readers shall be led on from lower to higher levels. The supply of trashy reading (which is doubtless indispensable in a free library) can be limited, so that its more eager devourers shall be brought to the end of it often, and in waiting anxiously for additions may be enticed into taking up something better.

Again, the public library ought to advertise its good books. There is this in favor of a general alphabetical catalogue, as opposed to the "subject" system, that those who are looking for novels are constantly seeing the titles of other and better books. Give the people a catalogue of the fiction by itself, and they will forget that there are any other books. But more than this, the readers ought to have placed in their hands from week to week such a statement of the additions to the library as shall effectually inform them of the merits and excellences of the books; a statement prepared by the librarian, or other competent person, not as a piece of literary criticism, but purely as an advertisement—not simply of the titles, but of the contents of the books. Where there is a local newspaper, it can well be made the medium of such information in case the library is unable to afford the issue of a "Bulletin" from week to week.

Other means of informing the public of the merits of good books, and inciting a love for them, can be found in lectures and "readings"; and the time cannot be far distant when the library, the lyceum, and the public schools shall be so arranged as to work harmoniously together as parts of a system for the higher education of the whole people, and then we may hope for the restoration of the kings and queens of literature to the place in the popular heart which is so foully usurped by the nitro-glycerine school of novelists. F.

Waterbury, Conn., July 12, 1872.

Notes.

Figuier's "Insect World"; Flint's "Physiology of Man"; "Doctor Vandyke," a novel, by John Esten Cooke; "Life-Lessons from the Book of Proverbs," by Rev. E. H. Chapin; "Sociology," by Herbert Spencer; "Forms of Water," by Prof. Tyndall; "The Vine-Dresser's Guide"; and the "Coal Regions of America," by James MacFarlaine, are among the works in preparation by D. Appleton & Co.——"A Constitutionalist" has undertaken a "Review of Stephens's 'War between the States,'" a task which one would hardly propose to himself in the hot weather. It will be published by Lippincott.

—Governor Gratz Brown's absurd performance at Yale in asserting the marked superiority of the West over the East in the means and methods of education, is in noteworthy contrast with the report which the curators of the State University of Missouri have just addressed to him. It is true that the President of the Board says that the "University is rapidly taking position as one of the great seats of learning in the nation"; while the President of the University thinks "it has attained a most honorable position among the educational institutions of the highest grade in our country," and that "its rank as one of the leading institutions of the nation is everywhere recognized." But the report proves this to be rather the language of hope, based on very recent progress, than an exact representation of all the facts in the case. Up to the summer of 1866, the "University" had been twenty-five years in existence, and had graduated but about 200 students; it had no other department but the academic; it received no State aid till 1867. It expects to have during the present year 300 students in all its departments (including the Preparatory and the Normal), of which the Mining School is but a year old, and the Scientific and Law Schools will be opened for the first time in the fall; the Congressional land-grant for the Agricultural and Mechanical College was only secured in 1870. In view of these facts, it is clear that a little modesty in regard to "means and methods" of instruction in Missouri, at least, would have been becoming in Governor Brown when speaking before so venerable and thoroughly appointed a foundation as Yale. The curators, for their part, allude always with respect and deference to Harvard, Yale, Michigan, Wisconsin, and Cornell, and say expressly, in comparison with the first-named, "We, with a lower grade of scholastic education and discipline" (p. 22), while on p. 9 occurs this admission, which Governor Brown appears to have overlooked:

"The first class, consisting of two members, graduated in 1843. Although the institution was reasonably flourishing, few students reached the attainments required for graduation. This is, in fact, a usual condition in our Western institutions for higher education; nor is the amount of good which they accomplish to be measured by the number of those who complete the full course and attain graduation."

—We hasten to explain that in pointing out these shortcomings our object has been, not to disparage the University itself, but to hold the most convenient mirror up to the gentleman who expects to have engage-

ments next spring which will prevent his serving as one of the examiners at Yale. For the University we have no words but those of encouragement. There is abundant reason for the confidence in its growth and future usefulness expressed by its officers. It labors under a great disadvantage in being situated in Boone County, one of the unwhipt and therefore irreconcilable rebel communities, in which the dark and "bloody chasm" gives no sign of closing, as may be seen by the delicate allusion to it on p. 11: "The successful party [in the Civil War] was in special political antagonism to the majority of the people where the University was located." Perhaps Messrs. Greeley and Brown will change all that, however. The University admits women on equal terms with men, and the report states a fact which we have not had brought to our attention before, that "not an Agricultural College in the West excludes females," and names specifically Michigan, Wisconsin, Minnesota, Iowa, Kansas, Illinois, and California. That Missouri easily surpasses these States in liberality is proved by the plan of the University campus prefixed to the report. Two references are made to its having been improved and beautified by Major McMurray, which will, "it is believed, produce an excellent influence upon the moral and æsthetic culture of the students" (p. 21); and (p. 4) afford "a delightful retreat," and an aid to "the culture of good manners and good taste." This desirable end is to be reached, so the uncultivated Eastern mind discovers, not only by an agreeable treatment of a happily diversified surface, but by such a nomenclature as would turn the stomach even of the principal of a girls' boarding-school. One enters the campus by "Emma Gate," and has his choice between "Ida Way," and "Flirtation Walk" (!), and before he completes the tour of the grounds, he crosses "Bettie's Bridge," "Nettie's Bridge," "Bertie's Bridge," "Victoria Bridge," "Mary's Bridge," winds around "Lake Saint Mary," and traverses "Anna Dale," "Camilla Dale," "Minnie Dale," "Ada Avenue," and "Flottie Way." There are just seven other names of paths which are not borrowed from the female sex. "Flirtation Walk" leads from "Via Curatorum," the main avenue, to the President's house! How long will it be before it is extended to "Elopement Gate"?

—Among the educational statistics of the month just elapsed, we do not know of any that surpass in interest those which are contained in the report of the Committee on Education and Agriculture in the Ockmulgee Council, Indian Territory. The various tribes which inhabit this reservation tax themselves annually to the amount of $140,000 and upwards for schools attended by some five thousand children, the Choctaws having ten of their youth at college in the States, and the Chickasaws sixty, whose education in similar institutions outside the Territory is provided for at the rate of $350 each per annum. It is, doubtless, from among these that the ranks of the teachers will be recruited when they return; and already there is a fair proportion of Indian teachers. As for the agriculturists, they are all prosperous, and many can afford to own and use the most improved machinery. By way of stimulus, however, the formation of agricultural societies is recommended. They would certainly mark, in the strongest way, the progress from nomad life to civilization. Encouraging as these facts are, the Cherokees are perhaps wise in opposing the movement to establish a regular Territorial government, as the associated tribes certainly are in not pushing the measure regardless of such weighty dissent. They can doubtless dispense with the costly forms of administration for a long time to come, better than risk anything by having their attention called away from the cultivation of the soil and the improvement of their minds, on which they must depend to maintain themselves aloof from the savages of the Plains, and in the "struggle for existence" with their white countrymen and fellow-citizens.

—Last year it was the Howes and Lymans, this year already the Mansfields have had their family gathering in Massachusetts, at which part of the attendance was from California and Louisiana. Evidently these reunions are going to form a fixed feature in the physiognomy of the New England summer, answering to the homeward flight at Thanksgiving, but commemorating a broader relationship. The intensity of this family feeling among New Englanders and their descendants is not generally realized even by those who are favorably situated for observing it. We have been forcibly impressed by a "List of American Families whose genealogies are being investigated, either in whole or in part, with a view to publication," which appears in the *New York Genealogical and Biographical Record* for July, where it occupies ten pages. The number of families enumerated in it is 308, concerning 168 of which the purpose of the compilers is to publish separate genealogies, the remainder being for the most part incidental to the chief object of research. The investigations which relate to New-England families number 185, or nearly two-thirds of the whole; 60 have regard to non-New-England families; and 63 are undesignated. This aggregate is greatly increased, if it be not doubled, by the fact that more than a dozen town, county, and State histories are in preparation, involving more or less complete genealogies: Wallingford, Conn., for example, reckons 37. Any one who has ever been led into enquiries of this nature, knows by experience the value of co-operation, and can appreciate the service rendered by the *Record* in preparing this list. Probably almost every one of the investigators whose labors are here noticed will find some one engaged on a line which comes in contact with his own, with whom he can at once open a correspondence.

—From a rough comparison we judge that four-fifths of the names in the above list occur in the Catalogue of Harvard University (Triennial of 1872), the Index to which is a very interesting study. One may take about equal pleasure in the names which occur with the greatest frequency and those which have been borne by a single graduate of the University. If the first show the depth and solidity of New England culture, generation after generation returning to the source from whence its fathers had drawn their nourishment, the latter—the *novi homines*—show how widely beneficent the college has been and still is, more than ever. This distinction, however, is relative and not absolute. In several instances we have noticed that the *novus homo* of a century ago, having been reinforced of late, has become the leader of a line that may stretch out indefinitely. The Bowditches offer one of the most remarkable examples of a full list monopolized by a single family of the name; but they were new men in 1822, while the Saltonstalls—a still more remarkable example—show a period of two hundred years between the oldest and the latest graduate (1642–1848). So, among the more numerous, we have the Russells (1645), Phillipses (1650), Parkers (1661), Winthrops (1668), Adamses (1671), Allens (1689), Perkinses (1695), Gardners (1696), Parsonses (1697), Quincys (1699), who were ancients in respect to their successors the Otises (1707), Appletons (1712), Putnams (1717), Lowells and Parkmans (1721), Cabots and Holmeses (1724), Warrens (1725), Bartletts (1747), Bigelows (1766), ancients in their turn to the Lymans (1806)—names which are all identified with the best blood of Massachusetts. An examination of the classes that have graduated from the Academic Department in the five years 1867-71 (varying in strength from 77 to 155), gives an average of almost exactly twenty per cent. of the graduates per annum with whom the editor of the Catalogue has to open an account, as it were; the class of 1870 showed 20·4 per cent. of names unknown to the (Academic) Catalogue, yet, if we are not misinformed, six of its members (or about five per cent.) were sons of former graduates who were all classmates of each other.

—Some elaborate investigations on the origin of the population of Bremen are given in a new journal, the *Zeitschrift für deutsche Kulturgeschichte*, by the distinguished geographer and traveller, Mr. J. G. Kohl, whom some readers of the *Nation* must have met in this country years ago. Bremen was not, like Lübeck and many other German towns to the eastward, a German colony on a foreign, that is to say, a Slavic or Scandinavian, soil. The original settlers were fishermen, traders, sailors, etc., from the immediate neighborhood. Charlemagne probably introduced priests, officials, and nobles from the western countries. To the court of the puissant Bremen archbishops—the "little Rome of the North"—the nobility and gentry were attracted from all parts of Lower Saxony, and their descendants became a permanent part of the population. Commerce throve apace under the privileges accorded to the city by archbishops, kings, and kesars; emigrants came in from far and near, so that, by the middle of the thirteenth century, Bremen was a pretty populous and substantial town, and some time after became a member of the Hanse. From this time regular archives were kept, in which emigrants were registered as "New Burghers." The oldest Bremen "Burgher Book" begins 1289 and runs to 1519; it contains the names of all persons—some 13,000 in number—who presented themselves in that period before the Council "with sword and pike," afterwards "with musket and side-arms," attended by a "fidejussor," and swore allegiance to the city of Bremen. The proper names in the "Burgher Book" are instructive, as showing the gradual introduction of family names. No family names are found in the thirteenth century; in the fourteenth they are still uncommon; more common in the fifteenth; in the sixteenth universal. In the first part of the "Burgher Book" only Christian names occur, as "Henrich," "Ludolf," etc. But to distinguish people of the same baptismal name, an epithet was added, as "Gottfried parvus" (Godfrey Little), "Wilhelm kloke" (William Wise); or the occupation was mentioned, as "Alexander schomaker" (Alexander Shoemaker), "Peter tegeler" (Peter Tyler), "Rudolph sartor" (Ralph Taylor). In a great many cases the birthplace of the "new burgher" is given by the Latin *de*, as "Rotger de Wildeshusen" (Roger of Wildeshausen), and it is principally from such hints that Mr. Kohl has drawn his deductions. We cannot undertake to give the details and statistics of Mr. Kohl's paper, only mentioning that the American colony in Bremen—Bremen has long prided herself on her connection with America—numbered 259

in 1864 and 333 in 1867. But his monograph shows in an ingenious and authentic way from just what quarters the ravages of war, pestilence, and other destructive forces constantly making havoc in city life have been compensated in the particular case of Bremen. The "Burgher Books" may obviously yet be a mine of information to the philologian and the student of manners and morals. The state of the arts and trades, and the time when any particular luxury was introduced, might often be learned from the proper names. And, beside that, peculiarities of diction and dialect, local proverbs, customs, and laws, in short much of what gives a place its distinctive character, might by the aid of these registers be traced back to the original sources. Mr. Kohl has the material and the ability to make a very instructive book on his native city of Bremen.

—"Is there," writes a correspondent, "a more conclusive proof that a true equivalent to our 'listener' is unknown to the French than is given in the story of Madame de Staël? Her conversation was so invariably a brilliant monologue, that to decide a wager a dumb man was introduced into her presence. When asked how she had liked the gentleman, she replied that he was one of the most agreeable persons she had ever met. It seems clear, then, that 'les écouteurs sont bien rares.'" To be just—in a discussion in which we have not meant to have a *parti pris*—we must state that we are told that Balzac (in "César Birotteau," for example) clearly uses *écouteur* for "listener," while Victor Cherbuliez has, in his "Prosper Randoce" (p. 120 of the Paris edition), the following sentence: "Notre liaison lui plaît; il en sent le prix: je suis son écouteur d'office." This last we take leave to translate (in the interest of *Blackwood*), "I listen because I must."

—There were books of reference, short-cuts to knowledge, long before the hurry of our modern life began; but they have multiplied greatly of late. In what may be called chronological biography, in which hardly any facts in a man's life are thought worth recording except birth, marriage, and death, we have works of all sizes—from the little handbooks of Hole and of Martin to the great *Moniteur* of Oettinger, "contenant un million de renseignements." In general chronology there is no such leviathan as Oettinger, and the works are of such parity of merit that it is difficult to choose among them. Munsell's "Every Day Book of History" (1858) we have found unreliable; Putnam's "World's Progress" (1851), supplemented by his "Ten Years of the World's Progress" (1861), needs another decennial supplement; so does Rosse's "Index of Dates" (in Bohn's Scientific Library, 1858–59), but for all history previous to the middle of this century, Rosse's is the most convenient manual we know; for a supplement one can use Ewald's "Last Century of Universal History" (1767–1867), or Irving's "Annals of Our Time" (1837–1871); but if one must have all in a single volume, Townsend's "Manual of Dates" (2d edition, 1867), contains a vast deal of matter and printed in very small type, and Haydn's "Dictionary of Dates" (13th edition, 1868, and short supplement which can be pasted in, 1871), has less matter, in larger type, and rather clumsily arranged. A new dictionary, calling itself an "Encyclopædia of Chronology," has just been published by B. B. Woodward, late Librarian of the Queen, and editor of the *Fine Arts Quarterly Review*, and W. L. R. Cates, already favorably known as the editor of a good "Dictionary of General Biography" (1867). Mr. Cates says that their encyclopædia is the result of twenty years' labor, and that it surpasses its competitors in accuracy as to dates, and in the judicious selection of articles. It certainly surpasses them in typographical appearance. The surviving editor, Mr. Cates, has adopted the practice first introduced by the Germans, and rapidly becoming common in grammars, dictionaries, catalogues, and other works intended not for continuous reading, but for hasty reference—of distinguishing the prominent words by heavy-faced type. The condensation, too, is satisfactory. One does not find, as in Allibone and in Thomas's Biographical Dictionary, sentence after sentence from which one longs to expunge words that would be well enough in an essay, but are utterly out of place in a work whose object is to furnish the utmost amount of information that can be packed in a manageable volume. Only by long use can one judge of the skill with which events have been selected for chronicling; from a short comparison we should think that the Encyclopædia excels its predecessors in this point also.

AN ENGLISH TOURIST AT THE SOUTH.*

PROBABLY there is no community in the world which presents social and political problems of such magnitude and difficulty as the reconstructed States of the South. The ruin and devastation of war they share with France; but France is a homogeneous nation, whose rapid and violent political changes have been in the form of the supreme government, hardly at all in the administrative institutions with which the citizens come immediately in contact. The immense body of emancipated slaves they share with Russia; but Russia has a strong central government, its freed people are of the same race as its nobles, its changes are purely social, and, serious as are the difficulties which attend the disposition of landed property and local administration, its embarrassments are at any rate confined to these. Like Germany, they have upon their hands the organization of a new government; like Austria, they are distracted by conflicts of race and nationality; their finances are more hopelessly confused than those of Italy; brigandage and violence are more rife than in Spain; not even England has more to apprehend, although in a different shape, from the antagonism of labor and capital. Add to all these misfortunes which they endure in common with other countries, these which are peculiarly their own: that they find themselves in unwilling union with a nation from which they strove to be severed; that even in the management of their own affairs they are deprived of the co-operation and counsel of that class of citizens which has been most closely identified with their interests; and that they are subjected to a government probably the most sordid and vulgar that has ever ruled on so large a scale. We do not say that the South has not brought all these evils upon itself, or that it has not deserved them all, but it is for us to recognize in them the problem of our politics on the whole most urgent.

A study of the situation by an impartial and intelligent foreigner is therefore heartily to be welcomed; and we can find little to criticise in the spirit of Mr. Somers' book, or the diligence and accuracy of his observations. It is perhaps fair to infer from one or two casual expressions that he was a "Southern sympathizer" during the war; but we have met with nothing with which any candid friend of the North need quarrel. His strictures upon "carpet-baggers" and their misgovernment are mild compared with our own; he is as ready to look hopefully upon the future of the negroes as that of the Southern whites. The few expressions which might seem directed against the North as such are nearly all in reality based upon the Protective Tariff; and there is no want of readiness to give credit to the North for whatever it is doing in the regeneration of the South. He takes care to give praise to the Northern Mayor of Wilmington, and to tell us that it was a Bostonian who established the model hotel he found at Atlanta; and, while laughing good-humoredly at the innumerable Yankee notions and useless patents, he adds (p. 102): "Let a want, or a semblance of a want, be felt throughout the circumference of the Union, and 'a young man from the North' will immediately appear and fix it all up to satisfaction." Nay, he even enters, on p. 282, upon an elaborate apology for the financial policy of the United States, which he does not profess to defend, but does not feel disposed to censure too harshly.

It may be that Mr. Somers is of a sanguine temperament, or it may be that he was ready to be pleased. However this may be, it is satisfactory to find that his report is on the whole encouraging. He does not appear to ignore the many unfavorable signs—the ignorance and viciousness of the blacks, the defects of the labor system, the corruptions of politics, the general disorganization of society—all these are discussed at length, but the signs of promise are dwelt on with greater satisfaction and emphasis. And what is significant is, that nearly all these appear to be in themselves the results of the war and the abolition of slavery. The free schools established in all parts of the country, the freedmen's banks, the introduction of Northern and English machinery, the impetus to every branch of industry in respect as well to methods as to activity of industry, the elevation in the morals of the community, especially in the increased respect shown to the marriage relation, not only among the blacks, but also among the poor whites—all these are the direct results of emancipation. Even the immense beds of marl, which he thinks are the great financial resource of the seaboard States, would never have been discovered or utilized under slavery. And on the other hand he shows how, in more than one instance, the better classes have, by a vigorous effort, shaken off the rule of the corruptionists, and established a sound and efficient government.

The "Southern Question," as it now rises before our statesmen, consists of three principal elements—government, education, and labor. Education is gradually finding its own solution through the ambition of the blacks, the good sense of the whites, and the liberality of the North, as exhibited in the Freedmen's Bureau, the education societies, and the Peabody Fund. The Government, too, it may be hoped—from "carpet-baggism" on the one hand to "Ku-kluxism" on the other—will come to some definite issue as soon as the election is over. But the labor question is mainly social, and depends much less than either of the others upon institutions and legislations. Time and general laws must do most of the work in this field. It is here, therefore, that the observations of our author are most accepta-

* "The Southern States since the War. 1870-1. By Robert Somers." With Map. London and New York: Macmillan & Co. 1871. 8vo, pp. 286.

ble and instructive, and we will repeat in a few words the substance of his testimony.

As to the efficiency of negro labor he appears to have no question, and frequently repeats the emphatic testimony of the planters; as, for instance, p. 76, on the sea-islands of Georgia, "planters have declared to me that they could not do without the 'darkies' in the field, so superior are they to any white laborer that has yet been tried." Much, however, depends upon the mode in which the labor is employed and paid, and he frequently discusses the relative advantages of the wage and share systems, with a more and more decided leaning toward the former. "One may understand," he says, "how an agricultural communism among a group of people on a farm might be carried out; but the project would require an economy and mutuality of arrangement betwixt the members of the group to which there is no resemblance in the existing conditions of a Southern cotton plantation," p. 280. On p. 128 we find described in detail the "share system" generally prevailing in the Southern States, and it is not hard to recognize its unfairness. For, besides his half the crop, his cottage, wood, pasturage, and other privileges, the negro has exemptions which are fairly equivalent to a considerable gross sum. "Though entitled to one-half the crop, yet he is not required to contribute any portion of the seed, nor is he called upon to pay any part of the taxes on the plantation." But what is of even more importance is the indifference of the laborer to anything but his own immediate profit. He enjoys all the advantages of ownership, with none of its burdens. "The negroes will do nothing but the work immediately about the crops in which they have a share. If cattle stray into the corn and cotton fields, the negro will often only drive them from his own part of the crop into that of the neighboring squad. As for fences in general, they are allowed without remorse to go to wreck," p. 146. He closes his discussion of the system with the remark that "its incompatibility with progress will be seen more and more clearly as the Southern farmers proceed to keep live stock, to introduce deep and steam ploughing, to diversify their crops, or to carry out any improvement on their lands," p. 281.

We are surprised, seeing the fulness with which the labor question is discussed, that we have very little information as to the change in the distribution of land since emancipation. One would hardly gather from these pages that there were any negro *proprietors* in the South; are we to conclude that these are so few as to escape notice? As to the wealth and abundance of land in the market, it is amply testified to. Further, we find gratifying witness to the advance made by "poor whites" in industry. To small farms, he thinks, rather than to large plantations, is due the recent increase in the cotton crop. "The hilly districts have long been inhabited by a poor white population, who have always produced more or less cotton. But the high value to which cotton was raised by the war, and the 'labor difficulty' of the larger plantations, have inspired them with new hope, life, and industry; and this class of growers have swelled considerably of late years the deliveries of cotton at the railway depots," p. 117.

So careful a writer ought not to be guilty of the inaccurate statement that "Columbia was completely burned down by Sherman in the war, the State House being almost the only building that was spared," both clauses being incorrect, and some "unrepentant" person—Sapphira, perhaps, though Ananias will do it too—having, we fear, relieved his spirit at the expense of exactness of statement. The description of "American" railroads, too, on p. 82, may be correct for the South; in the North it is not true that the conductor is, as a rule, called "Captain," or that "the habit of paying fares to the conductor has so grown that, even in the larger towns, nearly as many pass into the cars without tickets as with them." What are we to understand, moreover, by "There is seldom more than one newspaper editor 'on board'"? Does the "Greeley man" early kill the other? Or does he call the other a liar and get shot and thrown off?

The careful and often graphic descriptions are marred and deprived of their full effect by want of style and a very clumsy rhetoric, as shown in such expressions as the following: "By the war the South was peeled to the bone" (p. 40); "the negroes following up the childlike instinct of former days that Charleston was the El Dorado of the world" (p. 37); "a fatly protected class of Northern manufacturers" (p. 91); "criminals taken 'in' *flagrante delicto*" (p. 154). The following sentences will probably appear entirely without meaning, taken apart from the context; the author is speaking of the privileges of freedmen's labor, as compared with labor in the Old World: "The soul is often crushed out of labor by penury and oppression. Here a soul cannot begin to be infused into it through the sheer excess of privilege and license with which it is surrounded" (p. 129). The meaning at the best is to be got at only with difficulty.

Apart from the rhetoric, we have little but praise for the book; it will be found an interesting description of the state of society in the South, and a valuable collection of facts.

OURSELVES AS THE HEATHEN SEE US.*

OUR first obligation to Mr. Lanman is for the amount of information which his book contains concerning Japan—that sort of living Pompeii in its interest for us—although more definite particulars of the recent revolution by which feudalism was abolished and the country prepared for the rapid strides forward which it is now making would have added not a little to our indebtedness. Besides, we have from him a full account of the aims of the Japanese embassy, whose visit is certainly one of the most remarkable occurrences of the day; and, in addition, sundry essays written by different Japanese students in this country, which will measurably satisfy any curiosity we may entertain in regard to what other people think of us.

Every one will remember that common device of the last century of employing imaginary Persians and Chinese to scourge the follies of the day—a sort of literary masquerading that may be compared with the now fashionable whim of creating new and fantastic worlds. In those letters what was most foreign was the names they assumed; the eighteenth-century satirist was not hidden by his attempt at disguise. In these few essays, however, all of which were written by very young men, we find the judgments of foreigners, whose early education, whose cast of mind, whose prejudices are as different from ours as can well be imagined. Their work gives us very much the impression that we should get if we could dig up some ancient Roman—say Cicero, as an excellent specimen of an intelligent and cultivated man and a gentleman—should take him in a close carriage to "Oak Hall," or some other clothing "emporium," should there get him some modern raiment to replace the crowd-attracting toga, and then, in the new Pre-Raphaelite Latin, should explain to him, as best we might, the construction of the steam-engine, the *modus operandi* (as we should of course call it) of the telegraph, at the same time giving him a concise account of the history of America, the names of the Presidents, a discussion of the relative merits of Grant and Greeley, with a word or two about Europe, and should listen to his opinion of it all. The essays do not cover the whole ground, but not one of them is dull reading. The English is extremely good, and we shall quote below some specimens of the Japanese humor, of which the reader may also find some examples in Mr. Mitford's "Tales of Old Japan." The first essay, by Mr. E. R. Enouye, is entitled "The Practical Americans." Thus he lashes a not unknown class:

"Christianity teaches them that their souls live after their bodies, and therefore they must better the condition of their minds by the cultivation of virtues in this world. The money-loving Americans are doing just the opposite of this. . . . Without sympathy, without frankness and generosity of feeling, despising human nature, they have no more use for their riches than the Peruvians had for theirs before the Spaniards came to rob them. Some men find delight in the fine arts, in philosophy, in science, in the exercise of the benevolent and social affections; but they have no relish for these. They can no more detect beauties in them than a savage can appreciate all the intricate combinations of harmony in music. As to religion, they consent to pay their pew-tax and to be bored by an occasional sermon on Sunday for appearance' sake; but their real churches are their counting-houses, their real Bible their ledger, and, last of all, their real God is not Almighty God, but 'the almighty dollar.'"

In the introduction to this essay the writer says:

"Japan, before the late revolution, was undoubtedly the most aristocratic nation in the world. As is usually the case under such circumstances, the down-trodden mass of the people strikingly manifest that characteristic which is the subject of my present essay—namely, an acquaintance only with those ways of life which relate to the supply of the actual wants and necessities of mankind. . . . I, like any other thoughtless born aristocrat, despised this tendency of the commons. I acknowledge now that this was very unjust, but still something of this spirit will no doubt influence me in the decision of the great question now before us [Is it a disgrace to the Americans that they are a practical people?], and I request my kind readers to bear in mind this circumstance."

In no way could he better show his true aristocracy than by just this statement. Not all young men, even of civilized nations, are so ready to temper their denunciations. Shioji Takato favors the coeducation of the sexes, and supports his views by parables, as follows:

"Some say, the wives of officers have nothing to do in the offices, and the wives of merchants do not interfere in the business, consequently for women there is no need of such an education as that required for man. The opinion is worthy of the farmer in the old story, who, thinking that the trees and not the ground bore the fruits, scattered the fertilizers over the leaves and boughs of the trees, and left the ground unenriched and uncultivated. But ere his boast of the new economical invention spread to his neighbors, all his trees had died. If we are able to make the world fruitful by cultivating man only, leaving woman a desert, the trees of the farmer should have borne the fruit."

"When a tree is young it easily bends; a pin for a post and a thread for a rope are enough to twist it into any shape. A small rivulet can be stopped or led in any direction without difficulty, even by a single hoe in the hand

* "The Japanese in America. Edited by Charles Lanman, American Secretary of Japanese Legation in Washington." New York: University Publishing Company. 1872.

of a child. But after a tree has grown into a towering trunk, with its boughs mingling with clouds, or after a rivulet has become a mighty river with billows on its surface, and carrying millions of tuns of soil every year, nothing in the world can either stop the one or bend the other. . . . It seems, then, to me, very foolish that men should attempt to prevent the occurrence of injuries by keeping their children separated closely one sex from the other. Two country people once caught two young foxes, and brought them home to domesticate; A put his fox into a yard with domestic fowls, while B kept his closely hidden away from the sight of fowls, fearing that the fox would catch them. But to the surprise of B, A's fox did no harm to the fowls, but played with them and slept with them, though it grew big and strong. So B, following the example of A, let his fox loose and free among the fowls that had been kept away from its eyes. But again, to his surprise, his fox caught one of the fowls and fled away with it. If we coeducate the sexes from their youth, as A did his young fox and fowls, I am certain that they will agree and dwell in concord, and no trouble will occur, provided the rules in the school are perfect and carefully observed. But if we should follow the policy of B, I am afraid, or rather sure, that at the time when the sexes reach their full age and are set free, the picnic and the party will become a scene of wrong and a field of shame, as when B's fox ran at large among the fowls of the yard."

Under the title of "The Chinese Ambassador in France," Mr. Toyama roundly abuses M. Thiers for the loftiness of his tone in addressing the Chinese Ambassador, and tries not to defend, but to explain, the ill-treatment that foreigners so often receive in that country. The essay is very well worth reading. In his admirable book, Mr. Pumpelly maintains the same side of the question, and this additional evidence only strengthens his position. For example:

"Thiers might say that the French have a great deal of prejudice against the Prussians; so the Chinamen have many prejudices against those nominal Christians who might be called the Shylockian Pecksniffs. . . . The hatred of foreigners occurs in two cases: when the people have mere prejudice against them, and when they have real cause of hatred on account of their haughty or impudent conduct, their disrespect to the natives, their disregard of the laws of the land, and, most of all, their violation and ridicule of their most sacred customs, which drive sometimes even the more civilized people into madness. . . . The conduct of the foreigners, excepting some of the better class of the missionaries and a few laymen, is a very shame to the name of Christianity and civilization, and retards the progress of both. They do not pay the prices of things they buy, and even the boat-fares required of them; but no sooner do they observe a shadow of discontent in the face of the person who demands it than the heavy cane is over his head. . . . It is in vain that some really good Christians try to persuade the natives that Christianity is the true religion of God while they are beset on all sides by these splendid specimens of nominal Christians; and when they look back at their conduct they would not find any reason why they should feel particularly ashamed before Christians."

More we need not quote to show the intelligence of these young men, the interest of their views to us, and the excellent way in which they express what they have to say. The last of the essays contains some translations of Japanese poems, about forty in number, which alone would make the book worth having. They are all short, some in their form resembling Greek epigrams and others common proverbs. The following was written by one of the emperors in a time of famine:

"I climbed the mountain, and, looking down, I saw the smoke rising from unnumbered dwellings, and so I was glad to believe that my people were in comfort, for I love them as a mother loves her children."

There are others of various sorts:

"When the moon is shining, the receding waves of ocean collect its light, and picture it in its fulness upon their bosoms, but soon they dash it upon the rocky shore, shattering it into unnumbered fragments."

"I do not know when my heart first began to love, but I do know that it is now yearning towards one of whom I have heard, but have never seen."

"Mournful to my heart are the sounds of autumn, as I hear them at the twilight hour passing over the thatched roof of my house, and the rice-fields growing near."

"Long a wanderer from my early home, I returned only to find that my friends did not remember me; but I remembered with rare pleasure the fragrance of the spring flowers."

"I did not wish to hear about the troubles of life, and so I fled far away to the distant hills, but even there I heard the painful cry of the wounded deer."

Of the proverbial phrases we find, for example:

"Although the walk of a cow is slow, she can, by perseverance, reach the distance of a thousand miles."

All of these short poems are familiar to the Japanese, high and low. We hope before many years to see a completer translation than this or Mr. Dickens's, which appeared about six years ago. The last half of the book contains the English translation of an account of America, prepared by Mr. Mori, the *chargé d'affaires* from Japan, for the use of his fellow-countrymen. It is interesting, concise, and, generally, very accurate. It contains a surprising amount of information in very little space.

How the World was Peopled. Ethnological lectures by Rev. Edward Fontaine, Professor of Theology and Natural Science; Member of the New York Historical Society, and the Academies of Sciences of New Orleans, Baltimore, etc. (New York: Appleton & Co. 1872.)—"By a diligent and reverent study of theology," begins our author, "and careful researches in archæology, ancient and modern history, and every department of natural science, I was convinced that they (the races of men) were all descended from one original pair of parents." No one who has ever studied anything need be told that the man who could accomplish such a work must have the genius for omniscience of an Aristotle and the antiquity claimed for Old Parr. As might be expected, therefore, the writer shows himself profoundly ignorant on all the topics of which he treats. The absurdities of his book even reach the point where the whole thing becomes grotesque and amusing. He starts out to consider the objections to the "commonly-received theory that all mankind are the descendants of Adam and Eve," but says: "Among these objections I will not include the *theory of development, or the transmutation of species*, advocated by Lamarck, Darwin, and others." He thinks the absurdity of the matter has been sufficiently exposed by Lyell, Agassiz, Mivart, and other naturalists. His treatment of the little that is left of his subject after this all-including exception is made, is beneath criticism. The book might well be left silently to find its way back to the proper *nirvana* of such wretchedness—the paper-mill, were it not for a single consideration, viz., that it is not singular in its important characters; it is one of a class. It is a painful fact, but one that needs in the interests of the race to be frankly told, that whenever a clergyman writes a book on science the chances are immensely against our finding in it any trace of real scientific training, or even a conception of what constitutes scientific methods and work. He is likely enough to have read without discrimination few or many of the popular treatises by men of well-known names, but he is nearly sure to be as far away from the spirit and the important results of investigations as a Camaldoli monk. Whether this is something which our divinity schools might correct if they would, we cannot now stop to enquire; but if theologians feel that they must descend occasionally into the scientific arena, it is not too much to ask that they should prepare themselves. The reconciliation of science and religion in the clerical mind, before the attempt is made to bring it about in the lay understanding, is certainly the logical order of things.

The Picture Gallery. (London: Sampson Low & Co.; New York: Brentano.)—This work, of which six parts have thus far been issued, is a collection of photographs from engravings of the pictures, and in some cases of the pictures themselves, by English and American-English painters, which appear to the publisher the most likely to hit the taste of the so-called cultivated public. Each of the first three numbers contains four photographs—three from pictures and one from a statue; but the numbers for April, May, and June contain only three photographs each, and one of those in the April number is of a statue, so that, at the present rate, a good many numbers must be issued before the public that purchases the "Picture Gallery" will be able to form a reasonably thorough notion of contemporary and recent English art. We speak of this publication rather as thinking it a useful one in its intention, than as wishing to convey the notion that it is a conception well carried out; for English art, either of the present day or of the beginning of the century, is by no means the feeble, purposeless thing that it would appear to one who had nothing but this publication to judge it by. Nor would it have been ill advised to correct, as far as it is possible, the prevailing impression of the worthlessness of English sculpture, but such statues as "The Picture Gallery" gives us, F. M. Miller's "White Doe of Rylstone," Westmacott's "Elaine," can only serve to confirm it. The pictures in the "Picture Gallery" have been better selected than the statues, and with Landseer's "Shoeing the Bay Mare" and "Dignity and Impudence"; Maclise's "Preparing Moses for the Fair"; Mulready's "The Wolf and the Lamb"—a very clear and satisfactory photograph from the late J. H. Robinson's excellent engraving, and the same artist's "Choosing the Wedding Gown"; Leslie's "Uncle Toby and the Widow Wadman," with Sir Joshua's "Puck," and, perhaps, Lawrence's "Princess Charlotte," the purchasers of the "Picture Gallery" ought to be content. We should like, however, to have our own Stuart Newton better represented than by "The English Girl," a picture which is made to seem more insipid than it really is by having appended to it, by way of illustration, Wordsworth's lines, "She was a phantom of delight," etc. This is a very good example of what is known as the "Keepsake" style of beauty—a style once much in demand, but of which it is difficult for us in these days to understand how any one out of England, more especially if that any one were a Frenchman, and that Frenchman named Balzac, could ever have written, "La vue de son cousin fit sourdre en son cœur les émotions de fine volupté que causent à un jeune

homme les fantastiques figures de femmes dessinées par Westall dans les keepsakes Anglais, et gravées par les Finden d'un burin si habile, qu' on a peur, en soufflant sur le vélin, de faire envoler ces apparitions célestes." But "Eugénie Grandet," from which we quote these words, was written in 1833, when England and the English and English ways were the rage in Paris, for it was the era of good feeling.

Station Life in New Zealand. By Lady Barker. (New York: De Witt C. Lent & Co. 1872.)—We can recommend this book as being very lively and entertaining reading, which, without giving any statistics at all, succeeds not only in imparting a good deal of valuable information about New Zealand, but also in producing in the reader's mind a very clear impression of what life must be like there. It is in the form of letters written to friends at home by the wife of a New Zealand sheep-farmer. They are genuine letters, unlabored and informal, which, though they read pleasantly in print, need never have suggested to their original recipients that they were ultimately designed for that purpose. They record the various experiences of three years in the island, from 1865 to 1868, and give a very good idea of the climate and the scenery, of the risks run by the sheep-farmers, of the comforts and discomforts of domestic life, and are very well fitted to displease the reader with the commonplaces of ordinary civilization, and to make him long for the freedom and freshness of life under the less hackneyed form in which it is found in new countries. Not all colonists, however, have the gay cheerfulness which Lady Barker exhibits, nor her courageous determination to see everything on its bright side. With such "interior dispositions," it would be necessary for no one to leave home for pleasure nor old associations for freshness. Each of these letters is complete in itself, and presents a definite picture of domestic life, or of slightly hazardous adventure, in language so simple and precise that we should advise any one who has in hand the work of compiling new school-readers to include in his selections almost any half-dozen chapters of Lady Barker's volume.

Fine Arts.

THE STATUE OF SHAKESPEARE, BY J. Q. A. WARD.

MR. WARD'S idea in modelling his statue of Shakespeare for Central Park, New York, seems to have been to take the Stratford bust for a point of suspension, attach members to it in its own proportion and temperament, endow it with indications of brain, and repose in the result.

Mr. Ward is a man of originality and genius, and he has hardly faults enough for a sculptor to whom committeemen may give occasional commissions. His talent is very direct and manly, and when he has been allowed to follow the bent of it, or when his orders have fallen into the vein, he has produced those successes which are milestones in the history of our sculpture. His best work is the Simon Kenton model; with this one of his commissions, the Seventh Regiment soldier, affiliates; his Indian Hunter must, on the whole, be regarded as a success, though the pose is said to be borrowed, and the muscles are not savage muscles; the Bondsman has great merit, too, though it is a thing of squares and corners, and though it seems to be eternally saying, with a negro's importance, "Mr. Chairman, I rise to a point of order." Looking over this little list, we see a procession of attitudes and conceptions, all stamped with a kind of rugged novelty, and already a fine capital for any artist. It is observable that a kind of frieze-like order runs through them: each hero is a son of the soil, developed in the strength and ingenuity of the natural man, and engaged with circumstance in some kind of battle or self-assertion; the successive attitudes would do for a bas-relief around a gladiator's shield. Arguing from their merit, and recollecting that human power runs in channels, we should begin to doubt whether the artist would prove equally inspired in every kind of subject. We should have doubts of him in his conception of female beauty. Mr. Ward, in effect, after a lifelong hesitation in exhibiting a female figure, accepted from an insurance company here an order for a feminine subject, one of those beneficent angels or allegories of Average so familiar to the survivors of the insured. And he has produced a goddess of whom we will only remark that we always fancy his own Indian Hunter saying his prayers to it in a rapture, as savage tribes do to the figure-heads from shipwrecked vessels. Another kind of tentative before which Mr. Ward would have appeared to us as a problem would be the incarnation of contemplative intellect. In the presence of Shakespeare Mr. Ward is solved and Shakespeare—is not.

Mr. Ward's Shakespeare is a stout, large-headed, broad-shouldered man, in a simple doublet and hose, without a hat, yet draped in the short Elizabethan cloak, which depends from one shoulder, and passes under the other to be caught on the forearm. So far there is an agreeable show of placing before us a live, conceivable human being, in the proportions and habit of ordinary existence. The figure walks with a free and nimble motion for so heavy a man, bends its head forward on its chest, swings its mantle with a kind of romantic wave of its hips, and catches its gait with a break in both knees, often used on the theatrical stage to express meditation. And it is here, in the posture, the presence of the figure, that the disappointment occurs. The proportions are the unidealized ones of a class of heavy, ruminant men. It is conceivable enough that Shakespeare was one of that sort of men; but persons of such a build have a set of motions of their own, in which directness and brusquerie play an eternal part. It is only on the stage that actors who have in their day been lighter, teach themselves to advance from the wings with a graceful dawdle, and vacillate upon their hinges with self-repentant motions. In truth, the movement of the statue is that of an actor training himself to portray deep thought. The handsomely-modelled hands are disposed about the upper part of the person; one has the fingers plunged here and there in the leaves of a book, so as to mark several places at once; the other, less expressive, applies its knuckles to the crest of the iliac bone. The whole figure, very heavy in the torso, from the accumulation of so much drapery, and both the elbows, is poised upon the left heel, which seeks its proper place beneath the head; but the right leg is thrown so far out, to assist the artist's desired expression of a walking action, that the mass seems decidedly to lean over the base towards the left, creating an irresistible impression of tumbling. The flexed and actively-bending legs, on whose treatment so much depends, are not altogether just in movement; the calves are rather swelled than hardened by the effort, and have a blistery look; while, especially on the right side, the broken line of both limbs, uncorrected by any skilful evidence of muscular action, weakens the pose very considerably.

The whole statue (measured from the photograph, which would never magnify the proportions of the upper part) is six-and-a-half of its heads in height—a ratio that would have made an old Greek faint.

The large head is powerfully treated, and is nearly a grand work. The look of introversion in the eyes, and the spaciousness and modelling of the forehead, are successful. The bulbous look of the muscles of the brow is probably not directly a fault of the modelling, but an exaggeration of the high-lights on the glossy bronze; it was less apparent in the plaster state of the work. Concerning the nose, it is a creation of Mr. Ward's own, differing from all the portraits. He has the opinion, which he demonstrates very convincingly, that the sculptor of the Stratford head broke the tip of the nose by some accident, and then mended his job in the best way he could, shaping the wings very high up against the cheek, rounding the point, but leaving the insertion of the dividing cartilage on the lip in its first position, and a great deal lower than the wings. These signs may be seen on any of the plaster masks exported from Stratford. Mr. Ward has, perhaps, overcorrected the accident. The profile has a decidedly nutcracker appearance, and the peak of the nose prolongs and attenuates itself into the atmosphere in a way which is mysterious and threatening in a twilight view.

We have done this statue the justice to criticise it from a high standpoint. Among the hosts of bad Shakespeares contributed to art—Faed's Shakespeare pointing to its temples, Kaulbach's Shakespeare chewing its gums, the ordinary statuette folding its legs in a superior manner before a pedestal—the present work's eminence is very great. It is expressive, ardent, and romantic, and the technical touch is beautiful. We are only waiting for a Shakespeare to seize the chisel!

When the critic approaches the present statue with compasses, he cannot make it add up right. When he covers it with one of those deliberate, considerate, half-winks of the eye which are so simple and so irrefutable in criticism, he finds it a good Shakespeare, but somewhat poetic, somewhat *bourgeois*, somewhat in the spirit of a celebration ode or a dinner-table panegyric.

IMPORTANT PHILOLOGICAL WORK.

Imperial 8vo, Double Columns. Price, $8.

HANDSOMELY PRINTED IN A NEW, CLEAR, OLD-FACED TYPE,

A DICTIONARY

OF

ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD,

Late Fellow of Christ's College, Cambridge.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language.

[With the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect.]

With an INTRODUCTION on the FORMATION OF LANGUAGE.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. GEORGE P. MARSH, in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views.

Attention has also been given to the criticisms in the Etymological Dictionary of E. Müller (Köthen, 1865–7), and to the scattered suggestions on the derivations of words which occur in various periodicals.

Wherever the Etymology of the First Edition has been materially altered, the word is marked with an asterisk.

In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

The above may be obtained (by order) from all Booksellers in the United States, or copies may be had direct by sending the price, $8, to the Publishers,

MACMILLAN & CO.,

38 BLEECKER STREET, NEW YORK.

The Nation.

NEW YORK, THURSDAY, JULY 25, 1872.

The Week.

POLITICALLY, this has been a week of speeches, Mr. Voorhees, Mr. Dawes, Mr. Morton, Mr. Hendricks, Mr. Wilson, Governor Oglesby, Mr. Boutwell, Mr. Schurz, General Butler, Mr. Trumbull, Secretary Delano, Mr. Fenton, and many other politicians and statesmen, having addressed their constituents or the North Carolinians. In none of the speeches is there anything that is new or important, but on account of the previous position of the two men the utterances of Senator Schurz and Mr. Voorhees were awaited with expectancy and read with interest. Heard with interest we may suppose them all to have been, as the voters have not been giving to politics that attention which newspaper-men and active politicians have now for months been giving, and the old story is to the average elector a new one. The Tall Sycamore of the Wabash, as Mr. Voorhees is known to his friends, among whom he is very popular, came out for Greeley and Brown. Thirty days ago he used to say that fire and water might better be asked to mingle than he to support Horace Greeley as a Democratic candidate. But the National Convention decreed his candidacy, and now all its members must submit; such was the law and custom. Yet it was as absolutely certain thirty days ago that Greeley was to be put on the ticket at Baltimore as it is certain now that he is on it, and one would have supposed that Mr. Voorhees would perceive this, and save himself from his present queer position. It is not so surprising, however. Of an easy-going politician, and a Democratic politician, and a Democratic politician in Indiana, it would be exacting to expect much in the way of consistency or even of sense. Mr. Voorhees has been renominated in his district, a close one, and this will help to make the contest in Indiana a regular old-time Republican and Democratic contest. We should suppose it might help the Greeley ticket in the State.

Mr. Schurz's speech had for its principal new feature a charge against the President in reference to the San Domingo business. An interviewing reporter of the *Herald*—not, we should say, a personage whose tale-bearing any one need regard overmuch—the other day represented himself as having had a talk with the President at Long Branch. Indeed, he may have. Among other things confided to him by General Grant was that Senator Schurz was disgusted with the Administration simply because he could not have as much patronage as he wanted, and that if he had been satisfied in this respect he would not have turned reformer. This is the report which we presume the senator to have seen in print, and as to which he says that had not "a published report" been set afloat, he would have still withheld a charge which he thereupon proceeded to make. It was to the effect that two gentlemen, one of whom afterwards admitted that he acted with General Grant's consent, waited on him and offered him all the patronage he wished if he would support the annexation project. This is perfectly in key with General Grant's conduct in the San Domingo affair. There is no doubt that he was curiously and foolishly and obstinately desirous of that island, and used all the means and appliances at his command to get it. There is just precisely as little doubt, either, that this sort of truck and dicker of patronage, ineffectually attempted in Senator Schurz's case, has been done by every American President for the last thirty or forty years who lived long enough to deal in offices. Lincoln did it, Buchanan did it, Pierce did it, Fillmore did it, Tyler did it—they all did it; some for their own personal benefit, some for their party's. The speech, good, though not new, as an attack on the Administration, was of no great value, we should say, as persuading dissatisfied people to take Mr. Schurz's two candidates.

Whether or not Mr. Greeley would be without sin in patronage-trading we leave to the judgment of our readers. If the smell of fire is on his garments after his being active in our delightful New York politics ever since he was a youth, we may no doubt trust Mr. Ignatius Donnelly and Mr. James M. Ashley, Mr. Mattoon and Mr. Littlejohn, to warn us. All these gentlemen, we observe, are now impressed with the need of his election as a means of purifying our politics. Mr. Greeley's own letter to Mr. Schurz, which the senator read to his audience, is not a reassuring document, we should say. Mr. Schurz expected, at the close of the Fifth Avenue conference, that he would be able to get from the Cincinnati candidate a definite promise as regards reform. It was already then evident that "the bloody chasm" was to be the Greeleyite campaign cry, the white hat having called out so little genuine fire, and reformers were face to face with the question of how they could support such a candidate. This letter was the result of Mr. Schurz's effort, and we beg for it the attention of every believer in the guileless simplicity of the Cincinnati and Baltimore nominee. We think that an equally transparent case of whipping the devil round the stump we have seldom known attempted, and it will be curious to see how numerous the people are who will be gulled by it, and to watch the Greeleyites professing a belief in it. "It is said you have bad men around you, and will not be at all a reformer of the civil service or of anything else," Mr. Schurz says. "Is the charge true? Please tell us what you do think of civil-service reform?" "The charge about my friends," says our Honest Uncle, "is so vague that I do not care to answer it." One should lay bodily eyes on him in company with Nephew Cochrane and Nephew Fenton and Mr. Theodore Tilton and "Lord" Gordon and Honest Jay Gould and the statesman Kilpatrick, to appreciate this part of the correspondence. "As for the other matter," he goes on to say in substance, "if any Free Trade Congressman or Democratic Congressman thinks that, in case of my election, he is not going to get his fair share of patronage, he is mistaken: 'a President should fully realize and never forget that Congress, in its own sphere, is paramount and nowise amenable to his supervision, and that the heartiest good-will to his Administration is perfectly compatible with the most pointed dissent from his inculcations on the very gravest questions of finance and political economy.'" The rest is like this: "Grant pretends to be for civil-service reform, and is not." "A one-term President is sure to use his patronage for the purest purposes." But as for a plain answer to a plain question, not one word of it.

Mr. Boutwell, in his speech at Greensboro, N. C., yesterday week, selected for comparison between General Grant's administration of the finances and President Johnson's the year 1868, which he called the last fiscal year of Johnson's Administration, but which was not the "last" fiscal year, unless four months of the succeeding year—during which there was no essential change of policy or of minor officers—belong to the first fiscal year of General Grant's. But this year 1868 was the year in which the expenses of the Government were extraordinarily increased by the payment of extra bounties—a measure strenuously opposed by the Administration of Mr. Johnson as an inexpedient and unnecessary use of the public money, but which Mr. Wilson especially engineered and Mr. Boutwell voted for, and which both these gentlemen now indirectly treat as a matter financially discreditable. The amount thus disbursed during the year 1869 for these extra bounties was reported at $43,476,549. There was also disbursed during the year 1869 $3,905,396 on account of the Freedman's Bureau, an expenditure for which there is no longer any occasion. Mr. Boutwell was equally disingenuous—we think we might be justified in using a stronger term—when he made this statement to his North Carolina auditors:

The total revenue derived from distilled spirits during the last three

years of Mr. Johnson's Administration was $93,454,054, and for the first three years of General Grant's Administration $151,935,618, showing a gain of $58,481,564, equal to 64 per cent. increase, and this in view of the fact that the duty was $2 a gallon during a large part of the first period, and only about 75 cents during the second period."

Now Mr. Boutwell, if he knows anything about the subject, knows very well that the main reason why the attempt to collect revenue from distilled spirits previously to 1868–9 was a failure, was the imposition of a tax so high as to offer an almost irresistible temptation to fraud, coupled with a notoriously inefficient and imperfect law. He also knows—or if he does not the public does—that when Congress adopted, in 1868, a lower rate and a new law distributing the tax and providing for its collection by means of stamps, from the very day (August 1, 1868) when the law went into operation the revenue began to increase; and during that year (eight months Johnson and four months Grant, but practically all Johnson) went up from $18,655,630 to $45,071,000. During the next year the revenue from distilled spirits increased to $55,606,000, but Mr. Boutwell took very good care not to tell his auditors that for the year 1871, when every vestige of Johnsonism had been weeded out; when there was complete accord between Congress and the Executive; and when the population had increased by more than two millions, the revenue from distilled spirits fell off $9,323,000, or 17 per cent., a result, taking the increase of population into consideration, not so creditable as that attained during the last year of Mr. Johnson.

Again, the annual charge for interest on the public debt for the year 1868 was $140,424,000; but for the year 1872, in consequence of the reduction of the public debt, through the continuance of war-taxes (with the enactment of which the Administration of General Grant had no concern), the average annual interest has been reduced to the extent of at least $30,000,000. The aggregate of these several items is $77,481,000, which reduces Messrs. Boutwell and Wilson's balance of one hundred millions to $22,519,000. But for even this amount the existing Administration is in no fair sense entitled to any credit; for during the last year of Andrew Johnson's Administration (1869), the expenses of the navy, by reason of the general national policy adopted after the close of the war, were reduced $5,775,000; and those of the army, exclusive of the final payments for extra bounties, by at least $20,000,000 additional ($13,410,000 having been paid for bounties under Johnson during the first four months of the fiscal year 1869). If General Grant, therefore, immediately after his inauguration, had gone off to Alaska and taken Mr. Boutwell with him, or if both had gone to sleep, the one at his cottage by the sea, and the other on his farm at Groton, and had allowed the Government to be run by the heads of Bureaus, in pursuance of general laws, this saving in expenditures of one hundred millions and more in 1872, as compared with 1868, would have occurred all the same. The statement in question, therefore, of General Wilson and Mr. Boutwell, respecting the comparative decrease of the public expenditures, while technically true, is, in the sense in which it has been presented to the people, not true; and as the Secretary, unless he was merely crammed by some Treasury clerk, must have known all the circumstances, the act is, to say the least, discreditable. It might also have occurred to him, we should think, that on the same basis of comparison he might as well have gone back to the year 1866, in place of 1868, and claimed for General Grant's Administration in 1872 a saving of $235,000,000; or to 1865, and claimed $1,200,000,000; for the right to make such claims is as legitimate in the last-named years as it is in the one selected.

Trusting to our recollection of the facts, we said in last week's *Nation* that when, two or three years ago, a congratulatory dinner was given to Consul-General Butler, then newly appointed, Mr. Greeley was present and, as we thought, presided. We called attention to this fact because we knew that the Greeley organs would set down Butler's last disgraceful performance to the discredit of the Administration, as they ought; because we knew that they would assert directly or by implication that were Greeley only in the White House no such appointments would be made; and because we thought his "record," not only in general but in regard to this particular case of Butler's appointment, was not such as to warrant decent men in hoping for anything a bit better from Greeley than we have had from Grant. Upon this the *Tribune* observed that it did not like to say we had told "an unpardonable lie" for fear we should think it unmannerly, but it felt free to say that we had in this instance varied our usual "chatter of inuendoes" by "a plump falsehood"—which remarks, by the way, we do not think very mannerly either. However, manners are of less consequence in such matters than substantial accuracy, and the *Tribune*, if it values accuracy, will be compelled to revise its criticisms, as may be seen from the following paragraph which we take from the eighth page of the *Tribune* of Dec. 2, 1869. The italics are ours:

"DINNER TO GEORGE H. BUTLER, CONSUL-GENERAL TO INDIA.

"Last evening, a dinner of more than usual charm was given to Mr. George H. Butler, on his appointment as Consul-General to India, by his brother journalists and friends. The dinner was served in the style for which the Astor has both an American and a European fame. The critical condition of Mr. Richardson gave a certain subdued feeling to the delight of the occasion, as it prevented the presence of Mr. Greeley; and the announcement of the hope of Mr. Richardson's recovery conveyed during the evening by Mr. Stetson was received with the most enthusiastic joy by a gathering numbering representatives of every journal in New York. Mr. Greeley, *owing to the critical condition of Mr. Richardson, was unable to preside, and sent a note of apology, expressing his regret and his entire sympathy with the object.* Mr. John Swinton, formerly of the *Times*, one of the old editors (though by no means one of the old men) in the city, took his place, and Mr. William Stuart acted as Vice-Chairman. There were present, Chief-Justice Barnard and Judge McCunn of the Supreme Court, Recorder Hackett, the Hon. John Develin, Messrs. Hatch, Van Schoickt, Hugh Hastings, Howard, Cummings, Wm. Winter, E. H. House, Wheeler, Schuyler, and Kirwan, and representatives from every journal in New York. The evening was enlivened by many brilliant speeches, and crowned with many good wishes for the new Consul-General to Calcutta."

The Springfield *Republican* completed the true history of Mr. Greeley's behavior when, in its issue of Saturday last, it enquired as follows: "Did he not foolishly agree to preside, and back out because some of his friends objected to the scandal of his presiding at a dinner in favor of so base a notoriety, and because poor Richardson was at the very hour dying in the same hotel?" Our readers will now see just how far we misled them in telling them, as our recollection told us, that Mr. Greeley made one in this precious company of McCunns, Barnards, Proclamation Howards, Stuarts, and Butlers, and how far the *Tribune* is justified in its charge that we wilfully deceived them in making them think that Mr. Greeley would "endorse" such a person as Mr. Butler. We leave them with the *Tribune* of December 2, 1869, and we imagine that further remark from us is unnecessary. Everybody, we suppose, can see where, as between the *Nation* and the *Tribune*, the ugly names which the *Tribune* has brought forward are justly to be applied.

It was to such performances that we referred last week when we advised our readers not to believe firmly in all the statements made nowadays by the *Tribune*. From the beginning of the campaign till now it has exhibited an ingenuity, so to speak, in its treatment of the news and of the journals opposed to it which have been anything but creditable to it. Its treatment, the other day, of *Harper's Weekly*, for example, was such as to show as plainly as any recent event in journalism that even yet the conductors of our newspapers may do things in the exercise of their profession which, if done in private life, would very speedily remand the man who did them to his own society. The facts are these: *Harper's Weekly*, a fortnight or three weeks ago, declared that Mr. Greeley, in November, 1860, printed in the *Tribune* some very savage words about the South—words which, we dare say, multitudes of us subscribed to in the succeeding days of bitterness, but which, nevertheless, were barbarous and unrestrained, and the republication of which, both on account of their barbarity and their headlong unrestraint, is calculated to injure Mr. Greeley's chances of election. This the *Tribune* saw, and it saw, too, that the *Weekly* had made a mistake as to the date of the original publication. What does the

reader suppose that the *Tribune* did? Behave with candor and sense? It took courage when it saw the wrong date, said that it could endure a good deal, but that "forgery" was a little too much for it, talked of "this pretended extract," and then, without blushing, it roundly swore that the *Tribune* of such and such a date contained no such language as was quoted. No more it did; and the object of the writer was to make the public believe that the *Tribune* of no other date contained any such language. Yet word for word the passage can be pointed out in the columns of the *Tribune* for May 1, 1861, instead of November 26, 1860. So, too, the *Evening Post* has been treated with the same dishonesty—there is no other word for it. Ours is a great profession.

The Bar Association has much reason to be gratified at the sight which they see at Saratoga; and the profession in general, which has not been too ready to support the Association with evidence given in public, though it has been lavish of privately-spoken stories of all sorts of rascality on the part of the accused judges, owes a debt of gratitude to the prosecutors. They have well bestowed much hard labor and much valuable time, and we now have as a result, about a twelvemonth since their attack was begun, Cardozo off the bench and in social disgrace among those of his own faith; McCunn off the bench, and dead of anxiety and chagrin; and Barnard in the seventh day of his trial; and his recognized abilities, his many "friends," his money, his brazen impudence, and his evil courage, will, there is probability amounting to moral certainty, all be of no avail to save him from disgraceful retirement. It is a hundred years, Mr. Van Cott pointed out in his excellent address to the Court, since such a trial had occurred in this State, and New Yorkers who have had litigation during the past ten years in some of our courts know whether or not that is a statement which speaks our praise or our disgrace. The senators who constitute the greater part of the court are not all in attendance, but the judges of the Court of Appeals, who constitute the weightiest part of the court, may no doubt be relied upon to ruin this one of our late masters; and, indeed, there is little expectation that it will be worth the while of any, even of the senators who are known to be corrupt, to endeavor anything in Barnard's interest, ready as he is to pay.

The *Times* may fairly be said to have reduced the death-rate of the city within the past two weeks. The unprecedented heat of the month just gone forced upon everybody the thought of guarding against its effects, and by-and-by there was as much talk of the foul atmosphere and deadly nights of the tenement-house region as there is of charity-soup and coal in the hardest weather of our winters. This feeling the *Times* set itself to concentrate and crystallize into definite action, and its good thought has had a great success. Large and small sums at once began coming in, the latter in great part from the children of well-to-do people who have been made to take an interest in their unfortunate little contemporaries, and who gave freely, as indeed it is found that a good number of them constantly do, for the benefit of small waifs and strays in the permanent hospitals and homes near the city. At this present writing, about ten thousand dollars have been subscribed, several picnics have given some thousands of street children a day or two in the country, and some hundreds their first sight of it, and many cases of wretched destitution and distress have been relieved among our more than three hundred thousand tenement-house population. It is not unlikely that the movement may be continued next year, for no summer is healthful and invigorating by the time it gets into Cherry-Street cellars, and the public seldom needs much more than to be reminded of its duty in such respects, and set going in the performance of it, to perform it well and with alacrity.

Three weeks ago we laid before our readers "the main stipulations" of the new agreement between France and Germany as to the payment of the war indemnity by the former, and the evacuation of the French territory by the latter—as they were telegraphically "reported to be." Having now the text of the treaty before us, we find that the Cable report was very incomplete, some important points in favor of the French being omitted. It was correctly stated that France bound herself to pay one-half of the third milliard francs ($100,000,000) two months after the ratification; the second half of that milliard early in 1873 ("March 1," however, was a mistake for February 1); the fourth milliard March 1, 1874; and the fourth and last, with the interest accrued on the indemnity, March 1, 1875; and correctly, also, that the Germans obliged themselves to evacuate the Departments of Marne and Haute-Marne on the payment of the first half-milliard, Ardennes and Vosges on the payment of the fourth milliard, and all the rest of the occupied French territory on receiving the last instalment. But what was not reported is, that France is entitled to anticipate, at her will, the payments of Feb. 1, 1873, March 1, 1874, and March 1, 1875, and Germany bound to execute the corresponding evacuations of territory without regard to the dates fixed; and also that France, after paying the fourth milliard, has the right to give "financial guarantees," instead of cash, for the fifth milliard and the interest, which, if found satisfactory, are to relieve her of the further burden of "territorial guaranty"—that is, of all further occupation. Thus France gains immediate relief for two departments, and can deliver the others as speedily as she can pay or get satisfactory security. The advantage is now apparently all on her side, and M. Thiers and M. de Rémusat try to make the most of it before the Assembly and the nation; but, in fact, Bismarck too is a gainer to a great extent. He gets money faster than the treaty of Frankfort entitled him to, gets rid of troubles arising from garrisoning places remote from the German frontier, has the undiminished army of occupation concentrated, and conciliates France by a display of good disposition, as far as conciliation in this case is possible.

The Archbishop of Naples's circular directing the priests of that city to urge their parishioners to go to the polls and take part in the municipal elections, is an event of the first importance in Italian politics. For a dozen years the Catholic party has adhered inflexibly to its motto, "Nè elettori, nè eletti," and totally abstained from exercising the privileges and performing the duties of citizenship. The "new departure" is attributed to the personal decision of the Pope, against the wishes of Cardinal Antonelli, and against the protests of many clerical newspapers. These have even gone so far in their opposition as to suppress part of a speech made by the Pope to the priests of Rome, advising the same course as that recommended at Naples, but without interposing any delay. However, the Catholic voter, anywhere, who acts under instruction has no need of open circulars or the public prints to learn what is expected of him, and the Pope and the Archbishop together have sent a large flock of the faithful to register themselves on the electoral lists, with the undisguised encouragement of the priests. The Roman municipal elections take place next week, and what effect on them the clerical vote, if polled in its full strength, might produce, may be inferred from the fact that 20,000 pupils of both sexes are taught in schools directly controlled by spiritual directors. The movement is viewed with no little anxiety by the secular press and the politicians, but it is difficult to estimate its probable bearing on national politics. A violent dispute has raged in the clerical camp over the question not only whether to abstain or to vote, but whether the return to political activity should extend beyond municipal affairs and include participation in the election of deputies to Parliament. The Jesuits have found here a nice field for their casuistry, following the lead of the Archbishop of Naples, who undertook to show that the one act would not, while the other would, be a recognition of the legitimacy of the present Government. Success in local elections may do much to remove the scruples against a wider use of the suffrage, and in the interest of the country itself it is to be hoped they may be removed. The Liberals and the Radicals would then be compelled to unite against the common enemy, and we should have a beginning of something like genuine parties in Italy.

THE INDIRECT CLAIMS—IS OUR GOVERNMENT LIABLE?

IT becomes apparent that the course pursued by the American Government in regard to the "consequential damages" will occasion, in all probability, a sequel to the history of the Treaty in the form of claims upon itself for having first approved and then abandoned the demands of its citizens upon Great Britain. A correspondent, on another page, brings these claims to our notice, and it will be observed that he grounds the liability of our Government upon the conjoint folly of Congress in refusing to American shipowners a register of vessels that had been protected during the war by a transfer to British owners, and of the Administration in presenting claims in which it did not believe to the tribunal at Geneva. If the American Government did really believe in these claims, what legal right, the claimants ask, had it to abandon them in the interest of peace, except by itself assuming them? If it does not believe in them, does not its conduct appear too much like that of a sharp attorney who has brought an action which he knows can never be maintained, and, when it comes to a hearing, seeks to save his own reputation by winking to the court, and intimating that the proceedings are merely to amuse the client? If Congress, on the one hand, would not sanction the transfer of American ships to British owners, and, on the other hand, would not grant to the ships a sufficient convoy to keep them out of the clutches of Semmes, ought not Congress to be at the expense of the extra insurance, and, since it would have sentimental music, have the decency to pay the piper?

When the claims of a citizen against a foreign government are claims founded upon contract, his own government is not bound to press them. It can say to him, "This is merely the quarrel of two contractors who voluntarily dealt with each other, though one happens to be a government; you should have looked to your remedy before you made your bargain; we do not owe you protection here." But when the claims of the citizen were caused by the act of the foreign government, the rule is different. He cannot right his own wrongs. Society will not allow him to wage a private war, but will adjudge him an outlaw or a pirate if he attempts it. Society, therefore, as represented by Government, owes him protection; and when a government, as has often been the case, for public reasons, refuses to prosecute such claims, and relinquishes them to the foreign power, it is morally bound, if the claims be just and legal, to pay them itself. And it is this principle of constitutional and international law that our correspondent seeks to invoke.

However plausible this reasoning may seem, we are inclined to think that such claims can never be maintained, though they will doubtless be pressed and cause much loss to many in time and money and temper. In the first place, there is the same objection to them, as against our Government, that has been urged all along as against their presentation at Geneva—they are speculative and intangible, and cannot be reckoned in dollars and cents. It is true that the rebel cruisers of British build advanced the rate of insurance, that American shipowners paid the advanced rate and suffered loss; but these were not the only rebel cruisers. As a matter of fact there were the *Sumter* and the *Lady Davis* and the *Florida*, and there were war risks and war rates of insurance before any Confederate vessel had run out of an English port. *How much these rates were advanced* by the complicity or negligence of Great Britain, it is absolutely impossible to say. If the Confederates had failed to get vessels from British waters, it does not follow that they would have had none. They might have—it is morally certain that they would have—procured them elsewhere; and another system might have been even more effective. In fact, they did acquire other vessels by capture—the *Harriet Lane* and the *Morning Light*, the *Clifton* and the *Sachem*, among the number. They were never without the means of creating a maritime war risk, and of forcing on the American shipowner an advanced rate of insurance.

That American shipowners have suffered, and suffered severely, and that their losses have been aggravated by the folly of their own Government, we are not disposed to deny. But this is not enough. The whole American people are sufferers not only through the mistakes and blunders of Congress, but through its downright voluntary ignorance and its inexcusable, unjustifiable negligence and recklessness. Each of us can prove some positive unquestionable loss from which ordinary legislative intelligence and fidelity would have saved us. It is not enough that we are losers, but our losses must be injuries when weighed in the balances of the law. The damages complained of here are not only remote, conjectural, speculative, but they also are, in a legal sense, of the claimants' own making. He was not compelled to insure his vessel. He voluntarily preferred a certain, limited loss to the risk of greater loss by capture and the contingent risk of holding the offending Government liable. If his ship had been captured, the insurance company would have been the loser and not he. From the loss which would have brought him into contact and conflict with the Government, he chose to escape by paying a price, and it is merely that price which, under the name of enhanced insurance, he seeks to recover. He says in effect to the Government, "Repay me the money which I paid that I might be free of ever having a cause of action against you." It is true that prudent men resort to insurance, but the Government does not insure its own ships; it prefers to be its own insurer and take those risks which a merchant seeks to evade. The law in certain peculiar cases may hold the Government to be the insurer of its citizens' vessels, but it can never be that it will allow those citizens to carry the Government to any insurance company that they select, and make it pay the premium upon whatever policy they choose to take out. There is in this world loss and hardship and injustice that human law cannot reach. Thousands of men have gone into courts and proved their cases, and then have been met, to their astonishment, by *damnum absque injuria*. Thousands of men, too, have established their cases to the satisfaction of courts, and then learnt that the measure of damages was but a thousandth part of what they expected.

What can be harsher than the recent decision of the Supreme Court in the old and celebrated Meade case? The treaty with Spain in 1819 provided that it should be ratified within six months after signature by both governments or be at an end. The American Government ratified it; the Spanish Government refused to do so. Then Mr. Meade, who was one of a great number of American citizens having claims against Spain, with the knowledge and express assent of his own Government, proceeded to prosecute his own claims in Spain. Convinced of their justice, the Spanish Government submitted them to the arbitration of a royal junta or special legal tribunal, and Mr. Meade recovered a judgment amounting to nearly $400,000. Of this the American Government was notified, and it congratulated Mr. Meade on so fortunate a result. Subsequently negotiations about the treaty were resumed, and it was ratified by Spain and re-ratified by the Senate. By the terms of the treaty the one government ceded the Floridas and the other agreed to advance $4,000,000 to pay off all American claims against Spain. It was also provided by diplomatic correspondence that Spain should annul certain grants of lands in the Floridas made by it to its own citizens, and this annulment was withheld until the Cortes received from the American Minister at Madrid positive assurances that the judgment recovered by Mr. Meade would be paid by his government.

Now comes the tragical part of this story. First, before the Senate acted finally upon the treaty, Mr. Meade notified it of his judgment, and demanded that specific provision be made for payment of it, or that it be specifically excluded from the benefits of the treaty and he left to prosecute it against Spain. The Senate refused to accede to either part of the request. Next Mr. Meade applied to the Government for payment out of the fund of $4,000,000. But the Government still refused to pay, and sent Mr. Meade before a Commission to prove his claims anew and take his *pro rata* share of the fund with a hundred persons holding unliquidated claims that Spain had never acknowledged. When Mr. Meade

reached the Commission and presented his judgment, the Commissioners told him that they could not recognize it, and he must produce his original proofs and vouchers. These proofs and vouchers the Spanish tribunal had retained and ordered to be filed in the "Department of Finance." But there chanced to be a provision in the treaty to the effect that if any proofs of any claim were in the possession of the Spanish Government they should be furnished to the American Government when applied for. Under this provision Mr. Meade invoked the aid of his Government, and by it a demand was made on Spain for the required proofs. Spain promptly replied that the vouchers were merged in the judgment; that the judgment was final and conclusive, and the highest evidence of indebtedness; and that the vouchers were a necessary part of their own financial archives. Spain also said that the treaty had been ratified and the private grants annulled on the express assurance of the American Minister that Mr. Meade's judgment should be paid; and that it did not lie in the mouth of the American Government to question its validity or strive to reduce its amount. More diplomatic correspondence followed; but Spain did not give up the vouchers, nor did America attempt to force her to do so. While the two Governments were thus amusing themselves, the three years to which the Commission was limited expired. The Commissioners made their report distributing the entire fund among the claimants whom Spain had never acknowledged, and Mr. Meade, who alone had exercised superior diligence, was left without a dollar and without a remedy. Upon these facts the Supreme Court has decided (9 Wallace Reports, p. 691) that the Government is not liable for the loss of the claim; and Congress, notwithstanding that one of the beneficiaries would be a soldier to whom the country owes so much as it does to General Meade, has never had the grace to pay the claim. A powerful railway company could get from the present Congress a gratuity of land in the city of Washington worth as much as the amount of the Meade claim, but there is as little chance of the equities of an individual citizen being investigated and paid for merely because they are right and just, as there is of his catching larks by the good old remedy of getting the sky to fall. It will, therefore, we think, be best for the claimants whom our correspondent represents to understand that the legality of their claims is at best questionable, and that Congress never pays for its own obstinacy or for the blunders of the Government from any mere sense of justice, equity, or right.

"THE PEOPLE."

WE are sure it is the experience of every man who thinks upon politics, that nothing is more bewildering and unsatisfactory than the expression so common in the newspapers and on the lips of orators, "the people." We all know that "the people" exist. We know that this is "the people's" government, and that what they will to be must be. But when we are told that "the people" think this or that, or desire that this shall be done and that the other thing shall not be done, the mystification and bewilderment commence. "The people have taken charge of this campaign," says the Chicago *Tribune*, "and want Greeley"; we hear elsewhere that "the people" care nothing for civil-service reform. Now, plainly, some of "the people" want Greeley and some do not; some are interested in civil-service reform and others care nothing about it. We must know first, one would think, who are "the people" before we can discern their wishes and opinions. The meaning of the expression varies greatly. In one sense, and perhaps the commonest, it indicates pretty much all the inhabitants of the country. In this sense, we may be pretty sure that "the people" are the apothecary at the next corner, the dry-goods clerk, the grocer opposite, the truck farmer at the market. It will be tolerably safe to conclude that "the people" the country through are not unlike these citizens. But when we come to interrogate them on questions of the day, it really looks as if "the people" had no opinions at all. We may go first to the dry-goods clerk, and then to the apothecary, and then to the truck farmer, and, so long as we do not advocate arson or monarchy, we may announce any one of a half-dozen opinions upon any topic of the day with almost a certainty either of his assent or of his indifferent silence. The taciturn, greedy man opposite us at the restaurant, who looks morose enough to die for his principles, we find, upon politics at least, to be very nearly destitute of principles. Yet the theory of our government is that the apothecary and the dry-goods clerk and uncommunicative person with his feet up in the smoking-room of the hotel, are the rightful and actual authors of all that is done by Congress and the President. Manifestly, this is not the case.

There are questions, indeed, upon which these persons have opinions. Of course one would not think of approaching the average man of the people with advanced views on cumulative voting or compulsory education. In the matter of rotation in office, if one asserted either that "a man should hold his office so long as he fills it satisfactorily," or that "every dog should have his day," he would recognize a semblance of reason and fairness in either opinion, and would good-naturedly respond, "That's so." But if he were told that Jeff. Davis or Mrs. Cady Stanton should be sent to the Senate, he would be ready enough with his opposition and his ridicule. There are questions, then, in which all the people are interested. All are not interested in civil-service reform, though there are many who are greatly interested in it. A yet smaller number care, say, for cumulative voting and compulsory education. We think we may here venture a classification which, albeit rough, is yet real. There is, separated from the mass of the people by superior education, in part, possibly by the nature of their employment, but more certainly by individual intelligence and force of character, a small class who watch politics with an eagerness and interest which the rest do not possess. Upon questions of a technical and non-essential character the people relegate to these the final judgment. A large proportion of the people felt the necessity of having some guarantee for the protection of the negro when the rebel States were readmitted. Only a small portion, however, gave their active assent to the amendment limiting the basis of representation to the voters instead of the number of inhabitants. Perhaps not half "the people" knew what the amendment was; but the end was one which "the people" thought a right one, and they left the means to that minority among themselves who are given to thinking upon technical matters of politics. This intelligent minority, it should be remarked, is a very fluctuating one. It varies according to the popular nature of the question to be decided, and there is every variety of question with every degree of capacity for popular interest and comprehension.

Some qualifications should be made, however. The grocer, apothecary, and dry-goods clerk to whom we have referred are instances chosen from the city. Persons who live in cities and whose field of observation is limited to them are apt to underrate the interest of the average man in politics. It is undoubtedly true that the villager and the agriculturist are warmer politicians than the city tradesman and mechanic. They have more leisure and fewer objects with which to amuse and occupy it. Moreover, they are known and their "antecedents" are known; they are usually committed. Opinions with them are hereditary. On the other hand, the man who has just moved into the street or who does not know his next neighbor is under no such stress. He may change his opinions if he chooses, or, which is easier, he may cease to have any.

We are apt also to underrate the intensity of resistance in the people to a change to which they do not consent. There is an inertia in large bodies of men which is surprising when we examine its exceeding lightness in the minds of individuals. San Domingo is a case in point. Very few people held strongly the opinion that San Domingo should not be annexed. The whim of the country was to humor Grant, and for a time the people permitted themselves to toy with the idea. But consent was withheld. An ordinary observer would have thought that if they coquetted with and talked favorably of it to-day, they would approve to-morrow. But the approva

was delayed. That is precisely the condition of the woman suffrage question at the present time. The people simply do not consent, the politicians abandon it, and the agitators talk against the wind.

We were started upon this train of reflection by the remark of the Chicago *Tribune* that "the people" want Greeley. Now, manifestly, if they want him, they will have him. The whole people are interested in a Presidential election. The issues may be such as to enlist the attention only of the intelligent minority; but all vote. If opinion does not decide their preference, some other consideration will. As far as principles go, both the candidates profess to do the same thing, and each claims that he will do it better than the other. Custom in such a case will, we may be sure, go far to decide the action of the average vote. It will be more in accordance with a Republican's custom to vote for Grant than with a Democrat's to vote for Greeley. Between the two men and upon their comparative fitness for the place the average voter will perhaps go through no course of reasoning, but, as we have said, he has a way of talking of the latest political novelty in a complacent, good-natured manner, and then, when the time comes, of refusing to move because he does not understand it. Thus he may play for a while at supporting Greeley, but when the time comes we think it likely that he will do just what he has done with the San Domingo question and the woman suffrage question—simply withhold his consent.

Mr. Greeley received a nomination from two conventions, to both of which he was objectionable. At Cincinnati he was the aversion of many, the fourth, fifth, or sixth choice of most, and the afterthought of all. His nominators meet again in council and conclude that while he is personally objectionable to most of them, it is expedient to adhere to him. Another convention meets, candid members of which find him personally objectionable. All wish that some man whose experience was more in accordance with their own could be had. Now, politicians are compelled from ulterior views to do this and that and the other thing which they would rather not do; but "the people," having no ulterior views, have only to please themselves. If the candidate is personally objectionable to the mass of them, they need not vote for him. That anybody can tell before election whether he is or is not objectionable to them, we do not believe.

ON THE RATIO OF INCREASE IN OUR NATIONAL EXPENDITURES.

ON the 23d of January, 1872, General Garfield, Chairman of the House Committee on Appropriations, in introducing the "Civil Appropriation Bill," took occasion, in a financial speech of very great originality and ability, to call the attention of Congress to the circumstance that while the increase of the public expenditures in England (Great Britain!) "during the last fifteen years of peace had been only one and three-quarters per cent., compounded annually," those of the United States, under similar circumstances of peace, had increased in a much greater ratio; and that an opinion had been given him, by one who had investigated the subject, that this increase was equal to about *eight per cent.*, compounded annually. General Garfield did not give the name of his authority or the data which may have warranted the expression of such an opinion; and he furthermore expressed a modified dissent from it in the following language:—

"I can hardly believe it; yet I am sure that somewhere between that (eight per cent.) and the English rate (one and three-quarters per cent.) will be found our rate of increase in times of peace." And, again, after calling attention to the fact that the ordinary movement of our expenditures depends upon the action of two forces, the natural growth of population, and the extension of our territory (the latter now possibly at an end), he continues: "No doubt the expenditures will always increase from year to year; *but they ought not to increase by the same per cent. from year to year; the rate of increase ought gradually to grow less.*"

Now, whether General Garfield, in these expressions, meant to hint at a condition of things which had come to his knowledge as Chairman of the Committee on Appropriations, and of which, as a supporter of the Administration, he did not care to speak openly, I know not; but as every person in the country interested in the reduction of taxation, and in the consequent cost of production, must be also interested in knowing the exact truth in respect to our national expenditures, I propose to take up the figures of the most recent official statements, and, as a matter of public interest, simply enquire, What inferences are fairly deducible from their examination? And this more especially, because elaborate financial statements, prepared in the Treasury Department, have recently been put forth by Messrs. Dawes of the House and Logan of the Senate, which, whether so intended or not, have most unquestionably the effect of leading the public to believe that the national expenditures, instead of increasing, are rapidly diminishing, and that therefore all conclusions, like those before noticed as arrived at by the present Chairman of the Committee on Appropriations, must of necessity be erroneous.

And in entering upon this examination, I find, first, that the expenses of the National Government for the fiscal years 1869, 1870, 1871, exclusive of interest, premiums on the purchase of bonds, and payments on the principal of the public debt, were as follows:—

1869, Eight months Johnson and four months Grant,	$190,496,000
1870	161,421,000
1871	165,861,000 *

There is thus an apparent decrease in the national expenditures for the fiscal year 1871 of $25,075,000 as compared with the expenditures for like purposes for the fiscal year 1869. But on the 30th of June, 1870, the requirement for expenditure for interest on the public debt was $7,180,000 *less* than it was on the 30th of June, 1869; and on the 30th of June, 1871, this charge had been further reduced by the sum of $13,772,000. Assuming $10,661,000 to represent the average diminution of the interest charge for the entire fiscal year 1871 (the reduction having been progressive by months), this $25,075,000 reduction of the national expenditures would be reduced to $14,414,000. On the other hand, there must be carried to the credit of expenditures the sum of $5,967,000, the amount disbursed from pensions during the year 1871, in addition to the amount similarly disbursed during the year 1869; inasmuch as this payment, like the interest account, is one which may be regarded as not included within the list of ordinary or controllable expenditures. Making these allowances in the nature of credit and debit, the expenditures of the National Government for ordinary purposes were *apparently* $20,381,000 less for the fiscal year 1871 than they were for the fiscal year 1869.

We use the word apparently. For this there is a good and sufficient reason, as will appear evident when it is remembered that in order to demonstrate an actual *bona-fide* reduction of expenditures, the basis of comparison should, as far as possible, be made the same in both instances. Let us endeavor to establish such a basis, and then see what results are afforded.

The largest single items of the yearly national expenditures, excepting interest and payments on the principal of the public debt, have, since the close of the war, been those returned under the respective heads of the Army and Navy. What these have been since and including the last year of the war, 1865, is shown by the following table:

	ARMY.	NAVY.
1865	$1,030,690,400	$122,617,434
1866	283,154,676	43,285,662
1867	95,224,415	31,034,011
1868	123,246,648	25,775,502
1869	78,501,990	20,000,757
1870	57,655,675	21,780,229
1871	44,080,093	19,431,027

A glance at this table will show that during the Administration of Andrew Johnson, the reduction of the annual expenditures on account of the army was wonderfully rapid and continuous, and that the expenditure for the year 1869 under this head was $204,652,000 less than it was in the year 1866, the first fiscal year after the close of the war, and after the general disbanding and paying-off of the troops had taken place; the only exception to a continuous reduction in this period being due, in 1868, to extraordinary disbursements on account of bounties. From 1869 to 1871 inclusive, the reduction of this same class of expenditures, through the influence of the same causes, has also continued, but not to such an extent as to make them exceptional or worthy of being brought forward as matters of special credit or notice.

In the case of the expenditures on account of the navy, the table shows that almost the entire reduction effected since the war under this head took place within the period of Mr. Johnson's Administration; and that since the control of the national affairs by the Administration of Gen. Grant, there have been no material reductions of expenditure in this department of the Government.

Another point. It would also seem clear that, concurrent with a diminish-

* In this year the expenditures of the War Department are returned in their proper place at $35,799,000; but in a note to the report of the Secretary of the Treasury (p. v. 187!) the reader is informed that this return does not include the expenditure of $8,280,000 derived from the sale of arms, and that the true expenditures on account of the War Department were really $44,080,000.

ed necessity for the expenditure of money by reason of a transition of the military and naval departments of the Government from a war to a peace basis, the other expenses of the nation, exclusive of what may be involved in the payment of interest and the funded debt, should also be reduced in a corresponding ratio. Whether and to what extent this has been done will be shown by the following table:

TABLE SHOWING THE EXPENDITURES OF THE NATIONAL GOVERNMENT, EXCLUSIVE OF INTEREST, PREMIUMS, AND PAYMENTS ON THE PRINCIPAL OF THE PUBLIC DEBT, FROM 1867 TO 1871 INCLUSIVE.

Years.	Aggregate Expenditures, exclusive of interest, premiums, and principal of the debt.	Army and Navy Expenditures.	Pensions.	All other Expenditures.
1867	$202,946,000	$126,258,000	$20,936,000	$55,752,000
1868	221,912,000	149,021,000*	23,782,000	57,109,000
1869	190,494,000	98,502 000	28,476,000	63,516,000
1870	164.421,000	79,437 000	28,340.000	56.644,000
1871	165,861,000	63,511,000	34,443,000	67,907,000

By the above table, therefore, whose figures are a transcript of the official records (see Report Sec. of the Treasury, 1871, pp. 18, 19), it appears that what may be termed the miscellaneous or ordinary expenses of the Government, *i.e.*, the executive, legislative, judiciary, and Indian, or those which may be regarded as more especially within the control of an Administration, have increased annually during the last few years as follows:

From 1867 to 1868 (the last full year of the Johnson Administration), the increase was $1,357,000, or at the rate of 2.43 per cent. per annum.

For the fiscal year 1868-9 (eight months Johnson and four months Grant), an increase of $6,407,000, or at the rate of 11.2 per cent. per annum. The expenditure this year, however, includes $7,200,000 gold, on account of the purchase of Alaska.

For the fiscal year 1869-70, *a decrease* of $6,872,000, or at the rate of 10.8 per cent per annum.

For the fiscal year 1870-1, an increase of $11,263,000, or at the rate of 19.8 per cent. per annum.

The above table also demonstrates that the increase of the civil, miscellaneous, and Indian expenditures of the general Government for the year ending June 30, 1871 (the second full fiscal year of Gen. Grant's Administration), over the corresponding expenditures of the year ending June 30th, 1868 (the last full fiscal year of the Johnson Administration), has amounted to $10,798,000 or 18.9 per cent.—an average of 4.72 per cent. per annum as compared with an average increase of the peace expenditures of England of 1.75 per cent. The extent of the increase in this class of the national expenditures may be furthermore realized, by recalling to mind that while the entire expenditures of the Government in 1859-60 for the army, navy, Indians, pensions, miscellaneous, and civil service was but $60,054,000, the expenditures for miscellaneous and civil service alone for the fiscal year 1870-71 exceeded this amount by $427,000.

It would, however, be unjust to convey the impression that for this extraordinary increase of expenditures the existing Administration is solely or mainly accountable. On the contrary, the increase in question commenced during the last year of Mr. Lincoln's Administration—the year in which the war was brought to a termination, and when all other expenditures, except for pensions, began rapidly to diminish. Thus, previously to the war, the maximum amount ever expended in one year for civil service, miscellaneous, and Indians, was $32,919,000, namely, in 1857. From that date, these expenditures diminished to $27,287,000 in 1859; $23,711,000 in 1862; and $30,200,000 in 1864. The first fiscal year after peace, 1866, showed, however, a very large increase, namely, $43,900,000; and from that time, as shown by the following table, the increase has been singularly rapid, and, with the exception of a single year, continuous.

TABLE SHOWING THE INCREASE IN THE NATIONAL PEACE EXPENDITURES FOR CIVIL SERVICE, MISCELLANEOUS, AND INDIANS, FROM 1866 TO 1871 INCLUSIVE.

1866	$43,900,000
1867	55,752,000
1868	57,109,000
1869	63,516,000
1870	56,644,000
1871	67,907,000

Average annual increase 9.09 per cent.

If we assume, therefore, this class of expenditures as typifying more than any other the fiscal policy of the Government in time of peace—an assumption every way legitimate, inasmuch as these expenses more than almost any others are more under control and less subject to unlooked-for contingencies—then the intimation made by Gen. Garfield in his speech as chairman of the House Committee on Appropriations in January, 1872, that the current increase of our expenditures in time of peace was at the rate of *about 8 per cent. compounded annually*, was almost strictly in accordance with

* Bounty disbursements included.

the truth; and as it seems very unlikely that so important a matter should escape the attention of so keen an observer as Gen. Garfield, we are almost warranted in inferring that the reason why he hinted at the fact instead of speaking openly, was a natural apprehension lest the revelation made public through an official channel should result in serious detriment to the existing Administration.

It is very easy to say, as Senator Wilson, Mr. Dawes, and others have said, that all this increase of expenditure comes out of the war and is unavoidable; but do the facts warrant such assertions? Let us see.

Although there were probably much fewer Indians to take care of in 1871 than there were in 1866 (44,021 by census of 1860, and 25,731 by census of 1870); though the existence of railroads across the plains has diminished the cost of transportation, and the appreciation of the currency has increased the purchasing power of money; yet the expenses of the Indian Department have increased from $3,295,000 in 1866 to $7,426,000 in 1871; or in the ratio of 125 per cent. It is certainly difficult to see what the war, or rather its termination, has had to do with this result.

Again, for the fiscal year 1866, "the expenses *incident* to the assessment and collection" of an internal revenue of $310,906,000 were returned at $5,800,752. In 1871 "the expenses of assessing and collecting" a similar revenue of $144,011,000 were returned at $7,075,000. In 1866 the expenses of the officers and clerks of the Internal Revenue Bureau at Washington, superintending the assessment and collection of an annual revenue of $310,000,000, were returned at $277,672; in 1871 the expenses of the officers and clerks of the same bureau, superintending the assessment and collection of an annual revenue of $144,000,000, were returned at $380,922.

On the 1st of March, 1869, the number of gaugers in the Internal Revenue service is reported at 742; and on the 1st of December, 1871, at 986; but while the receipts from the taxation of distilled spirits for the fiscal year ending June 30th, 1870, amounted to $55,606,000, the receipts from the same sources for the succeeding year 1871, with the above-noted increase of officers, with the taxes and laws remaining in every particular the same, and with no noteworthy depression of business or increase in temperance, fell off $9,325,000, or to a total of $46,281,000. Now it may be that the war had really something to do with these results, but if so, it is certainly not easy to discover the connection.

The comparative expenditures and work of the mints and assay offices of the United States are also, under this head, matters of interest. Thus in 1858 the coinage operations were reported at 56,491,655 pieces, having a value of $61,357,088, and the expenditures at $613,487. In 1866 the account was 38,427,923 pieces; value, $39,672,647; expense, $664,504. In 1871, 16,758,458 pieces; value, $40,187,409; expenses, $954,043. In short, an impartial, unpartisan review of the Administration of General Grant in respect to the national expenditure shows that it has been of the most ordinary, average character, and that it has really made no successful effort to resist the constant tendency experienced since the war to increase the cost of the Government to the people; certainly not in all those departments over which the Executive and his officers have the greatest control and influence. It has reduced, it is true, the national debt, but not to so great an extent as was effected in an equal time under the Administration of Mr. Johnson; and in both cases the means of reduction were due to the retention by Congress of taxes imposed originally for war purposes, and in the enactment of which neither the Administration of Mr. Johnson nor of General Grant had the slightest participation.

With the reduction of the debt, which could not be avoided unless the surplus revenues derived from war taxes were misappropriated or stolen, has come also necessarily and without the special effort of any one a reduction of the annual interest.

Again, by reason of laws enacted after the close of the war, providing for the disbanding and reduction of the army, the expenses of the War Department have also been reduced under the Administration of Gen. Grant from $78,000,000 in 1869, to $44,000,000 in 1871; but in accordance with the provisions of these same laws, the expenses of the army were reduced under the Administration of Mr. Johnson from $283,000,000 in 1866 to $95,000,000 in 1867 and $78,000,000 in 1869. In like manner, the expenses of the navy, which have been reduced under the Administration of Gen. Grant from $20,000,757 in 1869 to $19,431,000 in 1871, were cut down under the Administration of Mr. Johnson from $43,000,000 in 1865 to $20,000,000 in 1869. On the other hand, the cost of the civil service, miscellaneous, and Indians, as already shown, has increased under the administration of Gen. Grant at an average of nearly *five* per cent. per annum.

It ought also to be borne in mind in instituting these comparisons of expenditures, that the purchasing power of the dollar made use of by the Government was always much less, as measured by gold, under the Johnson Administration, than it has been under that of Gen. Grant; the average

premium on gold for the year 1866, when the civil service and Indians cost $43,000,000, having been in the neighborhood of fifty, while the premium for the year 1870, when $67,000,000 were expended for like purposes, was not in excess of *fifteen*, per cent. Comparing like things with like, therefore, the accounts of the Johnson Administration as officially stated are really made to appear larger than they ought to be, while for similar reasons those of Gen. Grant's are made to appear smaller. How much this difference operates in the comparison to the disadvantage of the former, of course cannot be accurately stated; but that it constitutes a not inconsiderable item, as far as the purchase of army and navy supplies, Indian goods, building material, paper, and the like are concerned, cannot be doubted.

The attempt, therefore, to make out a claim for Gen. Grant's Administration that it has conducted the affairs of the Government with extraordinary and unparalleled economy is simply a piece of political chicanery and trickery, unworthy alike of those occupying high public station who prefer the claim, and of those who without investigation allow themselves to be deceived by it; and which cannot for one moment withstand the test of an impartial examination. To establish the converse of this proposition furthermore would be equivalent to imparting to the Administration of Andrew Johnson a character for great financial achievements and economy, beside which neither the Administration of Gen. Grant, nor hardly any which is likely to succeed it, could be mentioned in comparison.

DAVID A. WELLS.

THE PROTESTANT SCHISM.

PARIS, July 1, 1872.

WHAT I had foreseen has happened. The Synod, after a discussion of more than a week, which became warmer day after day, has adopted the confession of faith proposed by the Orthodox party, by a majority of 62 votes against 46. This confession proclaims "the sovereign authority of the Holy Scriptures on points of faith, and salvation by faith in Christ, the only Son of God, who died for our sins, and rose from the dead for our justification." The Reformed Church of France announces also in this confession of faith "that it will keep and maintain as the basis of its teaching, of its service, and of its discipline, the great Christian facts represented in its sacraments, celebrated in its religious ceremonies, and expressed in its liturgy, especially in the confession of sins in the symbol of the Apostles (the Apostles' Creed), and in the liturgy of the Holy Supper." Such is the formula which has been adopted, and it will be found very binding by all those who know the liturgy of the Reformed Church and the text of the Apostles' Creed and of the confession of sins. While the discussion on these points was going on in the Synod, I read in the paper published by M. Coquerel, the *Renaissance*, an article written by him, in which he called the Confession of Sins a Huguenot prayer, which it certainly is; but I wondered that this term could be employed disdainfully by a French reformer. M. Coquerel also said that the whole confession of faith was *baroque*, a word which is almost the equivalent of comical. He maintained also that the so-called "Apostles'" Creed was not the work of the Apostles.

In the Synod the greatest speech against the confession of faith was made by M. Colani, who was some time ago professor of theology at the Faculty of Strasbourg. He has edited for some years a theological review, and is considered one of the most learned exegetes of the time. He spoke with much moderation, and first attacked the scholastic character of the declaration of faith. In his opinion it was not religious enough. "Such a declaration could never come to the lips of a dying man; it is not made for the people; it is made by theologians against theologians." M. Colani did not acknowledge the right of the authors of the declaration to consider themselves the heirs of the Huguenots of La Rochelle. For, in fact, they have abandoned the great tradition of the school of La Rochelle in not mentioning the Trinity, nor the absolute divinity of Christ himself, and they have made this renunciation only in order to swell the majority. They have equally been unfaithful to the radical principles of Calvinism, as they recognize the freedom of the human will, and they limit the sovereign authority of the Holy Scriptures to matters of faith. The author of "Christian Meditations" would have been considered a heretic by the old Synods. M. Colani made a review of the "great Christian facts" (such are the words of the declaration) enjoined by the sacraments, the ecclesiastical ceremonies, the liturgy, and the Apostles' Creed. He discussed freely all the events of the life of Christ. Orthodoxy has a tendency to bring all the discussions concerning the life of Christ to this one point: What has become of the body of Christ? "You calumniate yourselves," said M. Colani, "in proclaiming before the world that on that point rests the foundation of your faith, for I believe you to be religious. Vote as you please; we will appeal from your glorified Christ, whom we do not know, whom we do not understand, to the historic and authentic Christ who told us, 'Come unto me, all ye that labor and are heavy laden, and I will give you rest.' We refuse him the pompous titles you give him, for the only title which we would give him, that of Good, he has refused: 'Why callest thou me good?' We believe in the forgiving of God, without believing in the expiation. We call ourselves Christians, without believing in a supernatural history of Christianity, for Christ himself attached no religious value to miracles. Your declaration could be signed by Catholics; the Protestant note is wanting in it. What spirit has come over you that you cannot mark the difference with your eternal enemy? You are the church, you say; but this Protestant people whom you represent, our old Huguenot populations, what will they say when they find nothing Protestant in your declaration? Our Protestant people will have no schism. We will remain in the church, as we remain in our own family. We will not be silent. You must keep us or turn us out. If the people itself, the Protestant people, turns us out, we will go with a depressed heart; but not before."

M. Guizot answered M. Colani. He began by saying that the Synod had no intention of turning anybody out of the Church; on the contrary, the Church would do all there was in its power to keep all its flock. But when it comes to the elders of the Church, to those who have functions in it—pastors, deacons, even electors—the Church must ask from them some token of their fidelity to its own doctrines. The Church ought to be neither tyrannical nor anarchical; she must, with all the moderation she is capable of, maintain a tradition. "The great evil in the Church is a certain expression of incredulity, of impiety, or gross materialism, and of learned and scientific materialism." He spoke of the German doctrines; they are nothing better than a renovation of paganism. He does not approve any more of pantheism than of the schools of historical criticism which have attacked all the Christian facts, one after the other, contained in the Holy Scriptures. The Church is patient and indulgent; but she cannot help seeing those who attack the miraculous birth and the resurrection of Christ. Science has enlarged the limits of human knowledge; but science cannot satisfy the religious appetite of human nature, taken individually or taken collectively. Is there a philosopher who has been the founder of a religion? Socrates? Plato? No; the impious word of Laplace, "I have no need of the hypothesis of God," is the best image of to-day's materialism. All those who are still Christian, and believers in a supernatural life, must become more united against the invasion of materialist doctrines.

The question is now settled. The Declaration of Faith has been adopted by the Synod. It will not have the binding character of the Thirty-nine Articles of the Church of England. Adherence to the principles of the declaration will not be proved by a solemn oath; the ministers themselves will not be called upon to give an explicit pledge on the subject.* It will be a point of honor for those who do not share the principles of the Declaration to leave the Church. It is to be expected that the majority of the members of the Church and of the ministers will remain in it: only a few probably will leave it without much noise. It will be difficult, for instance, for Coquerel, who calls Renan his dear friend, and shares almost entirely his views on the history and on the character of Christ, to remain in a church which has adopted a declaration of faith so contrary to his own principles. Time will show what will be the conduct of the most advanced liberals; the Synod is not yet ended, and many questions of detail concerning the organization of the future Synod, the election of the delegates, and so on, are discussed with much warmth. Passions run very high, and there have been some painful incidents during the last few days. Coquerel is said to have told M. Guizot, not aloud, but so as to be overheard by several people: "You killed my father." This unparliamentary and unsynodical attack produced such an effect on M. Guizot, that the next day he sent in his resignation to the Synod on the plea of old age and ill-health.

The net result of the Synod has been this: the Reformed Church of France has organized a synodical system, and will in future have not only general synods, but provincial synods. The separation of Church and State has been discussed, and the idea has been favorably received. The Protestants of France are not in a position to become persecutors; there has been no attempt to force the new declaration on anybody, and it must only be looked upon as an expression of the actual feelings of the majority of the Protestants. These feelings may change; the next Synod can add or subtract. The Church will have a permanent system of representation, and it is clear that this will help to give it more vitality and, I believe, in the long run, more influence on the community.

The general public has hardly taken a sufficient interest in the proceedings of the Synod. The political questions of the day are so heated, so engross-

* On the 6th of July the Synod voted, by the same majority as for the confession of faith, that every candidate for the ministry should hereafter, before being ordained, make a declaration of his adhesion to the faith of the church as established by the General Synod. There was a tacit understanding that ministers already settled should not be compelled to make a confession.—ED. NATION.

ing, that this is not much to be wondered at. The new negotiations with Germany for the liberation of our territory, the new taxes, the struggles between the President and the Assembly, are the theme of all conversations and the preoccupation of every mind. But nations have an inner life as well as an outer life, and I hope that the discussions of the Synod are the germ of a Protestant *renaissance* in France. The Commune has done much to disgust the public mind with anti-religious and materialist doctrines; the Catholic Church will, of course, benefit by this reaction, but it will not alone profit by it. There is in all classes, among the rich as well as among the poor, a sort of vast *residuum*, which is a ground well prepared for religious doctrines. Philosophy and Catholicism are, so to speak, extremes; between the two, the Reformed Church can find—ought at least to look for—converts. If it reduces itself to a mere sort of historical philosophy, it will find no more than if it becomes a branch of Catholicism. The country of Calvin will perhaps give us, some day, an active and energetic exponent of the moral and intellectual instincts of the masses, which are now either indifferent or stupid.

A EUROPEAN SUMMER.

II.—LICHFIELD AND WARWICK.

OXFORD, June 11.

TO write at Oxford of anything but Oxford requires, on the part of the sentimental tourist, no small power of mental abstraction. Yet I have it at heart to pay to three or four other scenes recently visited the debt of an enjoyment hardly less profound than my relish for this scholastic paradise. First among these is the cathedral city of Lichfield. I say the city, because Lichfield has a character of its own apart from its great ecclesiastical feature. In the centre of its little market-place—dullest and sleepiest of provincial market-places—rises a huge effigy of Dr. Johnson, the *genius loci*, who was constructed, humanly, with very nearly as large an architecture as the great abbey. The doctor's statue, which is of some plaster-like compound, painted a shiny brown, and of no great merit of design, fills out the vacant dulness of the little square in much the same way as his massive personality occupies—with just a margin for Garrick—the record of his native town. In one of the volumes of Croker's "Boswell" is a steel plate of the old Johnsonian birth-house, by the aid of a vague recollection of which I detected the dwelling beneath its modernized frontage. It bears no mural inscription, and, save for a hint of antiquity in the receding basement, with pillars supporting the floor above, seems in no especial harmony with Johnson's time or fame. Lichfield in general appeared to me, indeed, to have little to say about her great son, beyond the fact that the dreary provincial quality of the local atmosphere, in which it is so easy to fancy a great intellectual appetite turning sick with inanition, may help to explain the doctor's subsequent, almost ferocious, fondness for London. I walked about the silent streets, trying to repeople them with wigs and short clothes, and, while I lingered near the cathedral, endeavored to guess the message of its Gothic graces to Johnson's ponderous classicism. But I achieved but a colorless picture at the best, and the most vivid image in my mind's eye was that of the London Coach facing towards Temple Bar, with the young author of "Rasselas" scowling near-sightedly from the cheapest seat. With him goes the interest of Lichfield town. The place is stale, without being really antique. It is as if that prodigious temperament had absorbed and appropriated its original vitality.

If every dull provincial town, however, formed but a girdle of quietude to a cathedral as rich as that of Lichfield, one would thank it for its unimportunate vacancy. Lichfield Cathedral is great among churches, and bravely performs the prime duty of a cathedral—that of seeming for the time (to minds unsophisticated by architectural culture) the finest, on the whole, of all cathedrals. This one is rather oddly placed, on the slope of a hill, the particular spot having been chosen, I believe, because sanctified by the sufferings of certain primitive martyrs; but it is fine to see how its upper portions surmount any crookedness of posture, and its great towers overtake in mid-air the conditions of perfect symmetry.

The close is a singularly pleasant one. A long sheet of water expands behind it, and, besides leading the eye off into a sweet green landscape, renders the inestimable service of reflecting the three spires as they rise above the great trees which mask the Palace and the Deanery. These august abodes cope the northern side of the slope, and stand back behind huge gate-posts and close-wrought gates which seem to enclose a sort of Georgian atmosphere. Before them stretches a row of huge elms, which must have been old when Johnson was young; and between these and the long-buttressed wall of the cathedral, you may stroll to and fro among as pleasant a mixture of influences (I imagine) as any in England. You can stand back here, too, from the west front further than in many cases, and examine at your ease its lavish decoration. You are, perhaps, a trifle too much at your ease; for you soon discover what a more cursory glance might not betray, that the immense façade has been covered with stucco and paint, that an effigy of Charles II., in wig and plumes and trunk-hose, of almost Gothic grotesqueness, surmounts the middle window; that the various other statues of saints and kings have but recently climbed into their niches; and that the whole expanse, in short, is a *pastiche*. All this was done some fifty years ago, in the taste of that day as to restoration, and yet it but partially mitigates the impressiveness of the high façade, with its brace of spires, and the great embossed and image-fretted surface, to which the lowness of the portals (the too frequent reproach of English abbeys) seems to give a loftier reach. Passing beneath one of these low portals, however, I found myself gazing down as noble a church vista as any I remember. The Cathedral is of magnificent length, and the screen between nave and choir has been removed, so that from stem to stern, as we may say, of the great vessel of the church, it is all a mighty avenue of multitudinous slender columns, terminating in what seems a great screen of ruby and sapphire and topaz—one of the finest east windows in England. The Cathedral is narrow in proportion to its length; it is the long-drawn aisle of the poet in perfection, and there is something grandly elegant in the unity of effect produced by this undiverted perspective. The charm is increased by a singular architectural phantasy. Standing in the centre of the doorway, you perceive that the eastern wall does not directly face you, and that from the beginning of the choir the receding aisle deflects slightly to the left—in suggestion of the droop of the Saviour's head on the cross. Here, as elsewhere, Mr. Gilbert Scott has recently been at work—to excellent purpose, from what the sacristan related of the barbarous encroachments of the last century. This extraordinary period expended an incalculable amount of imagination in proving that it had none. Universal whitewash was the least of its offences. But this has been scraped away, and the solid stonework left to speak for itself—the delicate capitals and cornices disencrusted and discreetly rechiselled, and the whole temple æsthetically rededicated. Its most beautiful feature, happily, has needed no repair, for its perfect beauty has been its safeguard. The great choir window of Lichfield is the noblest glass-work I remember to have seen. I have met nowhere colors so chaste and grave, and yet so rich and true, nor a cluster of designs so piously decorative, and yet so pictorial. Such a window as this seems to me the most sacred ornament of a great church—to be, not like vault and screen and altar, the dim contingent promise of heaven, but the very assurance and presence of it. This Lichfield glass is not the less interesting for being visibly of foreign origin. Exceeding so obviously as it does the range of English genius in this line, it indicates at least the heavenly treasure stored up in continental churches. It dates from the early sixteenth century, and was transferred hither sixty years ago from the suppressed abbey of Heckenroode, in Belgium. This, however, is not all of Lichfield. You have not seen it till you have strolled and restrolled along the close on every side, and watched the three spires constantly change their relation as you move and pause. Nothing can well be finer than the combination of the two lesser ones soaring equally in front, and the third riding tremendously the magnificently enstained line of the roof. At a certain distance against the sky, this long ridge seems something infinite, and the great spire to sit astride of it like a giant mounted on a mastodon. Your sense of the huge mass of the building is deepened by the fact that though the central steeple is of double the elevation of the others, you see it, from some points, borne back in a perspective which drops it to half their stature, and lifts them into immensity. But it would take long to tell all that one sees and fancies and thinks in a lingering walk about so great a church as this. There are few deeper pleasures than such a contemplative stroll.

To walk in quest of any object that one has more or less tenderly dreamed of—to find your way—to steal upon it softly—to see at last, if it is church or castle, the tower-tops peeping above elms or beeches—to push forward with a rush, and emerge, and pause, and draw that first long breath which is the compromise between so many sensations—this is a pleasure left to the tourist even after the broad glare of photography has dissipated so many of the sweet mysteries of travel—even in a season when he is fatally apt to meet a dozen fellow-pilgrims returning from the shrine, each *gros Jean comme devant*, or to overtake a dozen more, telegraphing their impressions down the line as they arrive. Such a pleasure I lately enjoyed, quite in its perfection, in a walk to Haddon Hall, along a meadow-path by the Wye, in this interminable English twilight, which I am never weary of admiring, watch in hand. Haddon Hall lies among Derbyshire hills, in a region infested, I was about to write, by Americans. But I achieved my own sly pilgrimage in perfect solitude; and as I descried the gray walls among the rook-haunted elms, I felt not like a tourist, but like an adventurer. I have certainly had, as a tourist, few more charming moments than some—such as any one, I suppose, is free to have—that I passed on a little ruined gray bridge which spans, with its single narrow arch, a trickling stream at the base of the emi-

nence from which those walls and trees look down. The twilight deepened, the ragged battlements and the low, broad oriels glanced duskily from the foliage, the rooks wheeled and clamored in the glowing sky, and if there had been a ghost on the premises, I certainly ought to have seen it. In fact, I did see it, as we see ghosts nowadays. I felt the incommunicable spirit of the scene with almost painful intensity. The old life, the old manners, the old figures seemed present again. The great *coup de théâtre* of the young woman who shows you the Hall—it is rather languidly done on her part—is to point out a little dusky door opening from a turret to a back terrace as the aperture through which Dorothy Vernon eloped with Lord John Manners. I was ignorant of this episode, for I was not to enter the Hall till the morrow; and I am still unversed in the history of the actors. But as I stood in the luminous dusk weaving the romance of the spot, I divined Dorothy Vernon, and felt very much like a Lord John. It was, of course, on just such an evening that the delicious event came off, and, by listening with the proper credulity, I might surely hear on the flags of the castle-court the ghostly foot-fall of a daughter of the race. The only footfall I can conscientiously swear to, however, is the by no means ghostly tread of the damsel who led me through the mansion in the prosier light of the next morning. Haddon Hall, I believe, is one of the places in which it is the fashion to be "disappointed"; a fact explained in a great measure by the absence of a formal approach to the house, which shows its low, gray front to every trudger on the high-road. But the charm of the place is so much less that of grandeur than that of melancholy, that it is rather deepened than diminished by this attitude of obvious survival and decay. And for that matter, when you have entered the steep little outer court through the huge thickness of the low gateway, the present seems effectually walled out, and the past walled in—like a dead man in a sepulchre. It is very dead, of a fine June morning, the genius of Haddon Hall; and the silent courts and chambers, with their hues of ashen gray and faded brown, seem as time-bleached as the dry bones of any mouldering organism. The comparison is odd; but Haddon Hall reminded me perversely of some of the larger houses at Pompeii. The private life of the past is revealed in each case with very much the same distinctness and on a small enough scale not to stagger the imagination. This old dwelling, indeed, has so little of the mass and expanse of the classic feudal castle that it almost suggests one of those miniature models of great buildings which lurk in dusty corners of museums. But it is large enough to be deliciously complete and to contain an infinite store of the poetry of grass-grown courts looked into by long, low oriel casements, and climbed out of by crooked stone stairways, mounting against the walls to little high-placed doors. The "tone" of Haddon Hall, of all its walls and towers and stonework, is the gray of unpolished silver, and the reader who has been in England need hardly be reminded of the sweet accord—to eye and mind alike—existing between all stony surfaces covered with the real white rust of time and the deep living green of the strong ivy which seems to feed on their slow decay. Of this effect and of a hundred others—from those that belong to low-browed, stone-paved empty rooms, where countesses used to trail their cloth-of-gold over rushes, to those one may note where the dark tower stairway emerges at last, on a level with the highest beech-tops, against the cracked and sun-baked parapet, which flaunted the castle standard over the castle walls—of every form of sad desuetude and picturesque decay Haddon Hall contains some delightful examples. Its finish point is undoubtedly a certain court from which a stately flight of steps ascends to the terrace where that daughter of the Vernons whom I have mentioned proved that it was useless to have baptized her so primly. These steps, with the terrace, its balustrade topped with great ivy-muffled knobs of stone, and its vast background of lordly beeches, form the ideal *mise en scène* for portions of Shakespeare's comedies. "It's Elizabethan," said my companion. Here the Countess Olivia may have listened to the fantastic Malvolio, or Beatrix, superbest of flirts, have come to summon Benedick to dinner.

The glories of Chatsworth, which lies but a few miles from Haddon, serve as a fine *repoussoir* to its more delicate merits, just as they are supposed to gain, I believe, in the tourist's eyes, by contrast with its charming, its almost Italian shabbiness. But the glories of Chatsworth, incontestable as they are, were so effectually eclipsed to my mind, a couple of days later, that in future, when I think of an English mansion, I shall think only of Warwick, and when I think of an English park, only of Blenheim. Your run by train through the gentle Warwickshire landscape does much to prepare you for the great spectacle of the castle, which seems hardly more than a sort of massive symbol and synthesis of the broad prosperity and peace and leisure diffused over this great pastoral expanse. The Warwickshire meadows are to common English scenery what this is to that of the rest of the world. For mile upon mile you can see nothing but broad sloping pastures of velvet turf, overbrowsed by sheep of the most fantastic shagging, and ornamented with hedges out of the trailing luxury of whose verdure, great ivy-tangled oaks and elms arise with a kind of architectural regularity. The landscape, indeed, sins by excess of nutritive suggestion; it savors of the larder; it is too ovine, too bovine, too succulent, and if you were to believe what you see before you, this rugged globe would be a sort of boneless ball, neatly covered with some such plush-like integument as might be figured by the down on the cheek of a peach. But a great thought keeps you company as you go and gives character to the scenery. Warwickshire was Shakespeare's country. Those who think that a great genius is something supremely ripe and healthy, and human, may find comfort in the fact. It helps materially to complete my own vague conception of Shakespeare's temperament, with which I find it no great shock to be obliged to associate ideas of mutton and beef. There is something as final, as disillusioned of the romantic horrors of rock and forest, as deeply attuned to human needs, in the Warwickshire pastures, as there is in the underlying morality of the poet.

With human needs in general, Warwick Castle may be in no great accord, but few places are more gratifying to the sentimental tourist. It is the only great residence that I ever coveted as a home. The fire that we heard so much of last winter in America appears to have consumed but an inconsiderable and easily-spared portion of the house, and the great towers rise over the great trees and the town with the same grand air as before. Picturesquely, Warwick gains from not being sequestered, after the common fashion, in acres of park. The village-street winds about the garden walls, though its hum expires before it has had time to scale them. There can be no better example of the way in which stone-walls, if they do not of necessity make a prison, may on occasions make a palace, than the tremendous privacy maintained thus about a mansion whose windows and towers form the main feature of a bustling town. At Warwick the past joins hands so stoutly with the present that you can hardly say where one begins and the other ends, and you rather miss the various crannies and gaps of what I just now called the Italian shabbiness of Haddon. There is a Cæsar's tower and a Guy's tower and half a dozen more, but they are so well-conditioned in their ponderous antiquity that you are at loss whether to consider them parts of an old house revived or of a new house picturesquely superannuated. Such as they are, however, plunging into the grassed and gravelled courts from which their battlements look really feudal, and into gardens large enough for all delight and too small, as they should be, to be amazing; and with ranges between them of great apartments at whose hugely recessed windows you may turn from Vandyke and Rembrandt, to glance down the cliff-like pile into the Avon, washing the base like a lordly moat, with its bridge, and its trees, and its memories—they mark the very model of a great hereditary dwelling—one which amply satisfies the imagination without irritating the conscience. The pictures at Warwick reminded me afresh of an old conclusion on this matter, that the best fortune for good pictures is not to be crowded into public collections—not even into the relative privacy of *Salons carrés* and Tribunes, but to hang in largely-spaced half-dozens on the walls of fine houses. Here the historical atmosphere, as one may call it, is almost a compensation for the often imperfect light. If this is true of most pictures, it is especially so of the works of Vandyke, whom you think of, wherever you may find him, as having, with that immense good-breeding which is the stamp of his manner, taken account in his painting of the local conditions, and predestined his picture to just the spot where it hangs. This is, in fact, an illusion as regards the Vandykes at Warwick, for none of them represent members of the house. The very finest, perhaps, after the great melancholy picturesque, Charles I.—death, or at least the presentiment of death on the pale horse—is a portrait from the Brignole palace at Genoa, a beautiful noble matron in black, with her little son and heir. The last Vandykes I had seen were the noble company this lady had left behind her in the Genoese palace, and as I looked at her, I thought of her mighty change of circumstance. Here she sits in the mild light of Midmost England; there you could almost fancy her blinking in the great glare sent up from the Mediterranean. Picturesque for picturesque, I should hardly know which to choose.

Correspondence.

OUR GOVERNMENT'S LIABILITY FOR THE INDIRECT CLAIMS.

To the Editor of the Nation:

Sir: The United States Government has abandoned the Indirect Claims in the interest of peace, but not from conviction. Some of those claims, however, were advocated by the Government merely as representative of its citizens. Has it a right to abandon claims which it thinks well grounded, unless it assumes them as good against itself? I refer to the claims for extra insurance, and base their justice on the following grounds. We may assume

that a shipowner during the rebellion demanded protection for his ships from the following parties:

First, from the British Government, which, in neglecting to enforce its laws, disregarded his appeal. The merchant's first claim for indemnity is therefore upon the British Government, and this has been preferred by his natural representative, the Government at home, but abandoned in the interests of peace.

Secondly, he appealed to the United States Government for protection from the rebel cruisers let loose upon him through British negligence; but our naval force was employed on the blockade, and could not convoy seagoing ships.

Thirdly, the merchant sought security, and obtained it, by placing his ships under a foreign flag; but this has received the legislative condemnation in the refusal to re-register such ships.

Lastly, the shipowner could buy protection of the underwriters, but at a price which, combined with low freights consequent on the insecurity of American ships, annihilated the profits of shipowners. Now, by the decision at Geneva, the shipowner who shunned that loss and paid no war risk will recover the value of his destroyed ships, while he who in ten voyages (*e.g.*, from New York to San Francisco) lost the value of a first-class ship in extra insurance has no claim to the British indemnity.

Such claims appear to me equally just with those for ships destroyed, and if arbitrarily classed as indirect, should not therefore be denied. Has not the Government, by abandoning these claims at Geneva and condemning the transfers to foreign flags, tacitly allowed their validity against itself? When the national legislature is consulting how to restore prosperity to our mercantile marine, ought it not especially to approve the example of those few shipowners who saved that interest from total extinction, in a far greater degree even than he who incurred the risk of insolvency by sending his ships to sea uninsured?

Your obedient servant, R. S. Perkins.

Boston, July 18, 1872.

THE CHANGE IN THE CORPORATION AT YALE.

To the Editor of the Nation:

Sir: Judging by claims from time to time advanced, and by the credit accorded them, there is some confusion of ideas on the part of some persons respecting the late change in the membership of the corporation of Yale College. The history of the change is as follows:

Between six and eight years ago, President Woolsey, in an article in the *New Englander* upon a then recent change in the Governing Board of Harvard, suggested that it might be well for Yale to substitute six members of the corporation to be chosen from among the Alumni for the six members from the State Senate. The suggestion called forth no immediate action; but five years ago, at the decennial meeting of the class of '57, a committee was appointed to do what they might think wise to bring the proposed change to the notice of the Alumni. The report of the meeting named has been printed, and any one who desires to see the precise form of the action in question can obtain a copy of said report by application to the Class Secretary, Prof. D. C. Eaton, of New Haven.

The committee, as such, inaugurated no public action, but a resolution prepared by one of its members was adopted at the meeting of the Alumni, at the commencement of 1869. The resolution appointed a committee (Pres. then Prof. Porter, W. M. Evarts, C. J. Stillé of Philadelphia, Judge Taft of Cincinnati, and Prof. Fisk of Chicago) to consider the whole question of a change in the corporation, with the request that they would report at the next annual meeting of the Alumni. Two reports were then made, three of the committee opposing any change, and two favoring the one now accomplished. In the debate which followed the presentation of the reports, offence was given to many present by what was said in a speech contending for the change, and to all appearance the Alumni were not inclined to it. But its advocates, at least some of them, so believed that they were right that they proposed to continue their advocacy of it. While they were debating what to do, Governor Jewell, in his Message to the Legislature of 1871, so presented the subject that action on their part was made unnecessary, and the desired change was in a most happy way accomplished.

The above is believed to be an accurate statement of the change which promises to make the corporation of Yale more than it has hitherto been an organ of communication between the great body of the Alumni and their Alma Mater. If it were necessary, documentary evidence could be furnished of the correctness of the several parts of this statement. E. L. H.

Lenox, Mass., July 13, 1872.

Notes.

Hurd & Houghton announce "A Memorial of Alice and Phœbe Cary, with their Later Poems," by Mrs. Mary Clemmer Ames. The poems will be "a choice selection not included in any previous collection," and a steel portrait of each of the sisters is promised. The same house will publish "Boarding-School Days," by "Vieux Moustache," with illustrations by Nast and Darley.

—"Carl Benson" enquires: "Can any of your correspondents tell me when the singular neologism 'different to' originated, and with what writer? I believe it is entirely English, and has not been adopted here even by our loosest writers. The earliest example I know is in Thackeray's 'Rebecca and Rowena,' date 1850." Apropos of Cruikshank's pamphlet to establish his claim to the authorship of "Oliver Twist" and the "Tower of London," he calls attention to the fact that "Mr. Ainsworth appropriated the 'Tower of London,' not only in its general idea but literally in a number of scenes and characters from a very clever but most disagreeable book, 'La Danse Macabre,' by Paul Lacroix ('Le Bibliophile Jacob')."

—Professor Winlock, of the Harvard College Observatory, has recently begun the publication of a remarkable series of astronomical illustrations. The ten numbers already issued include admirable delineations of a number of celestial phenomena as they are seen in the great refractor of the observatory when looked for with well-trained eyes. First in importance come the three remarkable plates showing the various appearances of the solar prominences in their natural colors, a brilliant sight. Some of them have all the grace of well-contrived fireworks, though the scale tells us that they have a height of from fifty to one hundred miles. A plate showing six successive views of one spot on the sun is equally interesting; every important variation of those strange rents of the photosphere is well shown here. The gray, sloping funnel with deeply channelled sides, the black bottom, the tortuous white bridges spanning the chasm, the feathery streams of gas cloud whirling up from the abyss, are all marvellously well shown. There is a plate of Jupiter which gives in *print* for the first time something fitted to convey an adequate idea of that noble form. The drawing of the cloud bands and the tint of the equatorial copper-colored zone are wonderfully well done. There are three figures of lunar craters, or rather groups of craters. One has but to compare these exquisite drawings with work which has been done before on the same objects, to see how great the advance has been. The artist has caught not only the difficult detail of the surface, but also the peculiar features of expression dependent upon the airless condition of the moon. All the drawings are by L. Trouvelot, who has brought the rare combination of an artist's skill and an astronomer's eye to the work. Now that celestial physics has come to be a part of our elementary astronomy, such drawings have a high value as teaching agents, and deserve a place in every school in the land. As graphic representations of celestial phenomena they are as much in advance of similar work as were the great photographs of the moon by Rutherford at the time of their publication, and they will, along with those admirable representations, do much to enhance the reputation of our astronomers.

—With the help of announcements of forthcoming works, it is again possible to make a tolerable list of English publications of interest. The following have either already appeared or are in such a forward state of preparation that they may be safely ordered. Beginning with the class which combines entertainment and instruction in popular proportions, we note: "Knocking about in New Zealand," by Charles L. Money; "New Homes for the Old Country," personal experience in New Zealand and Australia, by Geo. S. Baden-Powell; "My Wife and I in Queensland," by Charles H. Eden; "The Discovery, Survey, and Settlement of Port Philip," by G. W. Rusden; "Ten Years North of the Orange River," by John Mackenzie; "Twelve Months at the South African Diamond-Fields"; "Life in India," by Edward Braddon; "Under the Sun," by Geo. Augustus Sala; "Travels in Hindo-China and in China," by Louis de Carne; "Wanderings in Scripture Lands," by Thomas Robinson; "Up in the North—London to Lapland," by Thomas Shairp; "Tent-Life with English Gypsies in Norway," by Hubert Smith; "Life in Normandy," by J. F. Campbell; "Other Countries," by Maj. Wm. Morrison Bell. In history must be mentioned: "The History of Modern Servia," by E. L. Mijatorics; "The History of Canada under the French Régime, 1535–1763," by H. H. Miles; "The Retention of India," by Alexander Halliday; "The Unity of History," by Edward A. Freeman; M. Quatrefages' absurd literary "revenge," "The Prussian Race"; and a translation of William Blumé's "Campaign of 1870–71." In connection with the last should be named Boguslawski's "Tactical Deductions from the War of 1870–71"; "The System of Field Manœuvres best adapted to

enable our Army to meet a Continental Army in the Field"—a practical appendix to the Dame Europa literature, by Lieut. T. Maurice; and "The Arms and Ammunition of the British Service," by Capt. V. D. Majendie.

—The great department of biography is illustrated by Sir Francis Head's too laudatory and undiscriminating "Sketch of the Life of Sir John Burgoyne," which one will do well to pass by while waiting for the fuller "Life, Letters, and Diaries" of the Field-Marshal, edited by Col. Wrottesley; "Memoir of the Early Life of Sir W. H. Maule," by his niece; "Memoir of Thomas Brassey," by Arthur Helps; "Life of Rousseau," by John Morley; "Correspondence and Conversations of Alexis de Tocqueville with Nassau William Senior"; "Last Days of Père Gratry"; "Women of the Last Days of Old France"; "Goethe and Mendelssohn," from the German of Dr. Karl Mendelssohn; and "Struggles and Experiences of a Neutral Volunteer," by John Furley. Add to the foregoing "The Miscellaneous Writings of Prof. John Conington"; and "Annals and Antiquities of the Counties and County Families of Wales," by Thomas Nicholas. The theological list embraces Döllinger's "Lectures on the Reunion of the Christian Churches"; "The Damnatory Clauses of the Athanasian Creed Rationally Explained," by the Rev. Malcolm MacColl; Father Gagarin's "Russian Clergy"; and "Welsh Calvinistic Methodism," an historical sketch by Rev. Wm. Williams. Scientific readers are provided for in Prof. Tyndall's "Contributions to Molecular Physics"; G. J. Symons's "Distribution of Rain over the British Isles during 1871"; John Evans's "Ancient Stone Implements, Weapons, and Ornaments of Great Britain"; "A Manual of Palæontology"; "The Smaller Birds of Great Britain," by H. G. Adams; and Dr. Wm. Harvey's "Corpulence in Relation to Disease," in which the over-stout may probably find something to their advantage. A number of titles we will group without classification: "Essays on Eastern Questions," by W. Gifford Palgrave; "Vignettes, Alpine and Eastern," by Elijah Walton and T. G. Bonney; "Traditions, Superstitions, and Folk-Lore," by Charles Hardwick; "The Duty of the Schoolmaster in relation to the Formation of Character," by Thomas Wyles; Sydney Colvin's "Children, in Italian and English Design"; and "Examples of Modern Etching"—twelve proofs.

—Aubrey De Vere's "Legends of St. Patrick"; and Tegner's "Tale of Frithiof," translated by Captain Spalding, are the only two books of poetry needing mention after Browning's "Fifine." In regard to the last, the diversity of criticism is well shown in the following extracts from two London trade-organs. The *Bookseller's* notice (July 3) we quote entire:

"A new poem by Robert Browning, in his best manner—a manner, that is to say, which will be understood and admired by all readers; and which is not transcendental."

The *Publisher's Circular* (July 1) takes a somewhat different view:

"We may safely say that not ten readers in a hundred could understand 'Fifine,' written as it is in an ungainly measure, and being a half-thought out wonderment as to why the ragged, disreputable life of an actress has especial charms for some persons. . . . Nearly two hundred pages of such lines will be enough even for the 'deepest' critic."

—A writer in the Bangor (Me.) *Commercial* compares the popular authors of the Mercantile Library of that city with those mentioned in our recent articles on the Public Library of X. The following is the result, so far as concerns the novelists who are common to both lists:

Bangor.	*X.*
1 Mrs. Holmes.	11 Mrs. Holmes.
3 Charles Reade.	4 Charles Reade.
4 Wilkie Collins.	10 Wilkie Collins.
6 Dickens.	5 Dickens.
8 Hawthorne.	19 Hawthorne.
9 Mrs. Whitney.	2 Mrs. Whitney.
11 A. S. Roe.	8 A. S. Roe.
15 Mrs. Muloch-Craik.	19 Mrs. Muloch-Craik.
22 Lever.	17 Lever.
23 Bulwer-Lytton.	20 Bulwer-Lytton.
25 Scott.	25 Scott.

Mrs. Southworth is second on the Bangor list, but her works have not been admitted to the library at X.; and as there are other discrepancies of this sort, it is clear that the comparison is not to be relied on for determining the relative culture of the two towns. Nevertheless, it is worth while to remark, as approximately indicative of the general estimation in which they are held, the nearly identical rank of Reade, Dickens, Lever, Bulwer, and Scott, with an identical order of succession in both the lists. And it is curious to observe the position of Hawthorne and Scott as derived from the demand for all their writings, and to learn that in the Bangor library "the four most popular books are 'The Scarlet Letter,' 'Ivanhoe,' 'The Vicar of Wakefield,' and 'The Wandering Jew.'" If this library has a paying membership, it should have, on the whole, a better class of readers than that of X., but we doubt if its books have been more judiciously selected.

—The *Gazette des Beaux-Arts* for June contains the concluding article of the series, "Les Musées, les Arts et les Artistes pendant la Commune," by M. Alfred Darcel. The most interesting portion of the article is that which relates to the destruction of the town-house of M. Thiers, by order of the Commune. The order was published in the *Journal Officiel* of the Commune of the 11th of May, 1871, the "21 *Floréal, an* 79" of these absurd masquers in the cast-off rags of a former generation. The motive for this act of ferocity towards Thiers was his attempt to notify the Parisians of the intentions of the Versailles Government with regard to them and their city—intentions whose benevolence the members of the Commune could not hope would be extended to themselves. Doubtless, they would have been glad to prevent the display of Thiers's posters on the walls of Paris; but, not having been able to prevent it, they determined to punish their author, and they made their intention known in a proclamation. This set forth in the stately form beloved of Frenchmen, whether Royalist, Imperialist, or Communist, that, "Whereas: the fellow Thiers, calling himself Chief of the French Republic, declares in his posters that his army will not bombard Paris, while every day women and children are the victims of the fratricidal guns of Versailles; and, whereas: this poster is an appeal to treason to help him to enter the city, seeing that he has learned the impossibility of vanquishing the heroic population of Paris by his guns; Therefore: the movable property of Thiers shall be seized by the Administration of Estates, and his house situated in the Place Georges shall be razed." When the proclamation had been duly issued, an invitation was given to the members of the Commune to be present at the demolition of the house, which spectacle was announced for four o'clock in the afternoon of the 12th May. This invitation having been read at the regular sitting of the Commune, there arose a discussion as to the disposition to be made of M. Thiers's collection of antiquities, reckoned by connoisseurs one of the most valuable in Europe. Citizen Courbet remarked: "This Thiers has a collection of antique bronzes; what am I to do with them?" The Citizen President: "Let Citizen Courbet give us his own opinion on the subject." Courbet: "The objects in this collection are worthy of a museum. Is it your pleasure that I should place them in the Louvre, or the Hôtel de Ville, or that I should have them sold at auction?" The Citizen Protot: "I have ordered the Commissary of Police of the ward to have the objects of art placed in the *garde-meuble*, and the papers to be sent to the *sûreté générale*. I have caused the destruction of the house to be begun at once. The papers are in our hands. As for the little bronzes you speak of, I hope they will reach us in good condition." Courbet: "I wish to inform you that those same little bronzes represent a value of 1,500,000 francs." Citizen Demay (this man was a bronze finisher): "As to the collection of objects of art belonging to Thiers, the executive commission to which Citizen Félix Pyat belongs had designated two specialists to have charge of them. These were the Citizen Courbet and myself. I request you to complete your committee. Do not forget that these little bronzes belong to the history of humanity, and we wish to preserve all that the intelligence of the past has created, in order to instruct the future. We are not barbarians." Citizen Protot: "I also am a lover of art; but I am of opinion that any of the pieces which represent any of the Orleans family ought to be sent to the mint. As to the other objects of art, it is plain that they ought not to be destroyed." Citizen Clémence: "The Thiers collection contains precious books, for whose preservation I demand a commission, and that I may be a member of it." Citizen Paschal Grousset: "There are also in Thiers's house documents that ought to be in the archives, pieces of the greatest curiosity; it would be well to have in the commission that we are about to appoint, historians, men of letters." Grousset was interrupted with cries of "Close the debate!" and the President appointed a commission composed of Courbet, Demay, Grousset, Clémence, and Pyat.

— M. Thiers had not left his most valuable possessions to be pocketed by the commissioners. Fortunately for the arts and for himself, at the very beginning of the French disasters he had packed up his beautiful collection of Florentine bronzes of the sixteenth century, together with everything else he owned of great rarity, and had sent them—according to some to England, according to others who seem better informed, to the cellars of the Institute. As for the rest of his movable property, the Commune ordered all the household linen to be sent to the hospitals and ambulances; the objects of art and books of value to be placed in the museums and libraries, and the furniture to be sold at auction after being duly exposed. A great number of articles—books, engravings, porcelains, etc., were placed in the *garde-meuble*, but the Versailles guns having reached this building, it was thought better to transport its contents to the Tuileries, to a gallery adjoining the Pavilion of Flora, and they finally perished in the flames that destroyed that building.

—Seventy letters addressed by Mazzini to one of his agents in Italy between March, 1863, and September, 1868, have just been published in Milan

by the recipient, who conceals his name ("Corrispondenza inedita di Giuseppe Mazzini con . . . "). Although designed to be a tribute of affection and loyalty to the great precursor of Italian unity, this publication will only confirm that view of his character which his later action inspired. His patriotism, self-abnegation, disinterestedness, are still visible in this correspondence; but also his inability to perceive when his work was finished, his hostility to the logical and natural results of his own endeavors, and his ill-considered scheming ending always in smoke. His ignorance of the real state of things in his native land, which would be pardonable in an exile who did not seek to intermeddle with home politics, but which with Mazzini was as much a part of his temperament as it was a consequence of banishment, and which was a principal cause of the ruin of his enterprises—this ignorance his correspondent even is obliged to point out and correct in foot-notes here and there throughout the volume. Two vain hopes and useless strivings are revealed as the occupation of Mazzini at this (for Italy) momentous epoch. In 1864 he conceived the idea of liberating Venice by means of a popular rising in the province, simultaneous with disturbances in Galicia, Hungary, and Transylvania, and assured of success by the intervention of the national army at the right moment. The Italian Government did not disdain to consider the project, which Mazzini expressly disassociated from his republican ideas because he knew that the people he sought to deliver was anti-republican; but the Prussian alliance proved to possess greater charms and much more certain guarantees. The temporary estrangement of Piedmont which followed upon the troubles in Turin, and which found a constitutional vent in the faction of the Permanente, was eagerly seized upon by Mazzini as a means of winning over to himself the whole of the noble province on which Italian unity rests and must for years depend. But again he was the victim of an illusion which was not long in manifesting itself. The editor of these letters, therefore, will not produce exactly the effect he contemplated on the convictions of the reader, while the suppression of names and dates, out of regard to the susceptibilities of the living, makes the correspondence much less attractive than it would otherwise be.

—Ninety years ago, July 1, John Henry Voss, the German poet and philologist, removed from Otterndorf to Eutin to better his fortune, with the reputation acquired for him, in addition to previous literary ventures, by his translation of the "Odyssey," which, as has been said, he first naturalized in his native land. The period of his career—the "Lehr- und Wander-jahre"—which terminated with this event, has been unfolded in the first volume of his Life by Dr. William Herbst, of Magdeburg (Leipzig: Teubner), author of a Life of Matthias Claudius, a kinsman of Voss, and otherwise familiar with the sources of the latter's biography. Voss's grandfather, John, the earliest ascertainable ancestor, was a cartwright living near Teterow; his father, John Henry, began life as a waiting-man, and afterwards became a farmer, with the privilege of brewing beer and distilling brandy. He lost his wife and four daughters, and was still unmarried when his son the poet was born at Sommersdorf, February 20, 1751, of an intimate friend of his late wife, and baptized the next day: according to the parish register, "Den 21. Februarii hat Catharine Dorothea Karstens einen *spurium* taufen lassen Namens Johann Heinrich." Wedlock followed, however, in the summer of that year, and the family removed to the little town of Penzlin, where Voss was first put to school, and distinguished himself alike at his studies and in boyish sports, pursued Latin with eagerness, and learned Greek in his spare time, carrying his grammar with him even when birdnesting. Through various removals and vicissitudes, he at last reached Göttingen, where he was matriculated student of theology in the spring of 1772, but a year later abandoned that study for languages and poetry, having Heyne for his principal instructor, with whom, however, he agreed not well, and was in turn an object of dislike, if not of jealousy. A few years later, at Otterndorf, he engaged in a bitter controversy with Heyne on the subject of the pronunciation of Greek. Meantime, as Dr. Herbst relates in detail, Voss earned a precarious livelihood with his pen, and, after numerous disappointments in seeking to obtain a situation as schoolmaster, was employed to edit the *Musenalmanach*, which made it safe for him at last to marry a pastor's daughter.

MAZZINI.*

THIS volume, consisting of passages from the writings of Mazzini in relation to his own part in the national movement of Italy for the last forty years, might properly be entitled "Mazzini illustrated by himself." It is a valuable contribution to contemporary history, revealing the aspirations and recounting the deeds of the great Agitator, and giving an authentic record of the first period of the Italian revolution, of which he was the recognized leader. Written with all the enthusiasm of the patriot and the earnestness of the reformer, this record is a defence of the policy which, from the beginning to the end of his career, he urged on his countrymen as the only one the adoption of which could give to their country her place among the nations. Italy, a republic one and independent, whose mission should be to impart new life to Europe—such was the ideal for which Mazzini lived and died. Through good and evil report, through defeat and disaster of all kinds, as a writer and a leader, he remained faithful to his principles, even when his country had achieved independence and unity by another course than that which he had marked out.

The first period of the contemporary history of Italy embraces the years from 1815 to 1848, when the country, broken up into petty states, suffered under domestic oppression and foreign domination. It was in that period that the agitation of Mazzini was both necessary and effectual. In the absence of a national hegemony, when all the Italian governments conspired with foreign powers to keep the people divided and oppressed, the individual action of patriots was alone possible, and they everywhere labored to overthrow the existing order of things, and to supplant it by new institutions more in accordance with the spirit of the time. Mazzini was early recognized as the head of this movement, and he united in himself in an eminent degree all the qualities necessary for such a mission. Endowed with rare intellect, indomitable will and self-control, with power to impart his own enthusiasm to all who approached him, he soon rallied around him the best and most daring patriots of the peninsula, and from his exile threw down the gauntlet to the oppressors of his country. For more than twenty years he was engaged in exciting popular insurrections everywhere in Italy, thus keeping alive the hopes of the people, and striking terror to the hearts of the enemies of liberty. In this long struggle he may have committed serious mistakes; he may have sacrificed lives in attempts which had no elements of success, and which brought needless suffering on his followers. But many of his schemes, though apparently futile and reckless, served their intended purpose at least indirectly; they were protests against the existing condition of things; they kept alive the spirit of resistance in the people, and made it manifest to Europe that as long as she was denied her rights, Italy would remain a centre of agitation and a perpetual menace to the public peace. The volume under examination contains the history of Mazzini's labors in that period of the Italian revolution.

In 1848 the national movement took a more practical direction under the leadership of Balbo, Azeglio, Gioberti, and Cavour. It was then that Piedmont, in defiance of Austria, placed herself at the head of the revolution, and by skilful diplomacy, alliances, war, and, above all, by the upholding of constitutional government, succeeded in expelling the foreign invader, in attracting the other states into her orbit, and finally in reconstructing the country on the basis of national unity. The action of Mazzini during that most important period revealed much obstinacy of character, and very little of that practical talent which constitutes genuine statesmanship. Fixed in the idea of a republic, he opposed the national party which had rallied around the House of Savoy, and denounced its leaders as mere utilitarians. His most influential followers—Manin, Garibaldi, Montanelli, Farini, Poerio, and a host of eminent patriots—soon abandoned him, and joined the new party; but he became more irreconcilable and more obstinate in his views. Indeed, all the hostility he had heretofore shown to the enemies of his country, he now turned against the party under whose auspices the national cause was about to triumph. He opposed all the steps which have led Italy to her present position; and because this was not accomplished through his own method, he mourned over the great achievements as if they were public calamities. In 1848 he had intrigued against the annexation of Lombardy to Piedmont, and had thus greatly contributed to the disasters which then befell the country. Later, in 1854, he denounced the alliance with France and England in the Crimean War, the first great master-stroke of Cavour; in 1859 he declaimed against the alliance with France which emancipated Lombardy from the Austrian yoke, and established the principle of non-intervention in the affairs of the peninsula; in 1866 he opposed the alliance with Prussia, which gave Venice to Italy, and rendered the occupation of Rome possible, as before he had opposed the annexation of Southern Italy, when it was delivered by Garibaldi, chiefly through the aid of the national party under the leadership of Cavour.

"A republic or nothing" seems to have been Mazzini's motto, and only through that form of government would he accept the independence and unity of his country. Thus his action, which in the first stage of the revolution had been a powerful aid to the national cause, became now a positive obstacle to the fulfilment of the aspirations of the people. Nor would the republic of his dreams, could it have been established, have been a great boon for Italy; for he everywhere declares that that form of government should not be founded, as in the United States, on the development of individuality, which, according to him, is another name for self-interest. His republic, he

* "Joseph Mazzini; His Life and Political Principles. With an Introduction by William Lloyd Garrison." New York: Hurd & Houghton. 1872.

asserts, is to be established on a spiritual authority, nay, on a new religion, which will be the source of the moral unity of the nation, and indeed of mankind. Thus Rome, which at two different periods has been the mistress of the world, will become again the centre of a new civilization founded not on material interests but on the principle of justice. Rejecting with scorn Cavour's formula, "A free Church in a free State," Mazzini would establish a national organization, which would be at once Church and State, and while rebelling with all his soul against the authority of the existing hierarchy, he would bring about the very condition of things for which that institution has for centuries labored in vain.

An idealist and a dreamer, Mazzini held in horror all compromises in public affairs, despised analysis in political science, and sought a remedy in empty formulas and shallow generalizations for the evils that beset mankind. He was doomed to live and die disappointed. A current of profound sadness runs through all his writings, and excites deep sympathy for the fate of one so gifted and so ill-fitted for the requirements of practical life. He lived to see the unity of Italy achieved, though not according to his plan; and it cannot be denied that his efforts in the first stage of the Italian revolution contributed not a little to the accomplishment of that end. If we fail to recognize in him the statesman, we cannot but admire the breadth of his sympathies, the purity of his patriotism, and the loftiness of his character. In this respect we echo the sentiments expressed by Mr. Garrison in his eulogistic introduction, and with him we acknowledge that "Mazzini was a man of single mind, indomitable resolve, lofty aspiration, and irreproachable life; that he neither sought wealth, nor fame, nor position, nor dignity, nor even power, as an individual man; that whatever he had of his own was consecrated to the cause he espoused, whatever he received from others was devoted to the same cause; that whatever he counselled was the suggestion of a noble, though peculiar mind, and whatever he did was the dictate of a perfectly unselfish will."

NORTH AMERICAN REVIEW FOR JULY.

AN audacious but apparently necessary proposal is made by a review writer in the July *North American*, who is in trouble of mind about the enormous mass of matter which "the future historian" of Massachusetts will have to perform if he is to read and digest all the material annually provided for him. The Commissioners of Internal Fisheries, says the writer, lead off, first of all, with a volume of 348 pages; next come the Railroad Commissioners, with 800 pages; next the Bureau of Labor Statistics, with 598; next the Board of State Charities, with 560; next the Board of Education, with 300; next the Board of Health, with 326. Here are all but 3,000 pages of printed matter relating to this year alone, which, whether or not the legislator reads through, our future historian must examine if he is the creature we have a right to expect. Now, as last year was not more important than this year, nor this more important than others, how is the historian to get through with his preliminary preparation before old age overtakes him and gives him to the tomb? The *North American* suggests that man is as susceptible of improvement by breeding as are oxen, horses, or other beasts of the field; and that by a proper attention to genealogies we might, in a few generations, produce certain men and women from eight to ten feet high, and with advantages as regards longevity and peculiar turn of intellect as pronounced as their advantages of stature. He would have the State, then, look for outstanding daughters left by Miss Hannah More, Miss Pardoe, Mrs. Markham, and other literary ladies, who should be married to the sons or other descendants of Lord Macaulay, Mr. Grote, the copious Guthrie, as Smollett says, the judicious O'Geoghegan, the learned and elegant Robertson, the ingenious, penetrating, and comprehensive Hume. The offspring of such unions, if ten feet high and capable of spending eighty of their hundred and twenty years in perusing Reports, might, he thinks, go with some hope to the task of turning out the history of the future; but if no such vigorous course is taken, there is, in his opinion, small hope that it will ever be written. We, for our part, imagine that the difficulty may disappear, not with the apparition of our author's anakim, but with the disappearance of the epical history, and its "dignity," its rounded proportions, its omniscience. However that may be, it is certain that if General Butler's attack on the Massachusetts Commissioners frightens them into being less voluminous, that distinguished officer will have done one good action in the course of his public career. A willingness to orate and to ventilate hobbies, is a frequent curse of the Commissioner and the Permanent Secretary, wherever found; and the long-windedness of authors for whom the State foots the printer's bill, and for whom a paying audience is not a primary necessity, as it is for other authors, is one more indubitable proof of the depravity inherent in the breast of man, and of the need there is of all possible checks and safeguards upon individual activity. Our *North American* critic makes some very profitable comments upon these and related points, and what he says on his other various topics is well worth hearing. His remarks upon the Massachusetts workingman as a capitalist we commend to the attention of the true workingmen of that State, as distinguished from the political workingmen imported so numerously from Europe into New England within the last twenty years, and now under the political guidance of leaders either ill-meaning or foolish. There is a chapter or two in Professor Bowen's treatise on "Political Economy" which would teach these men more in half an hour than speeches from Cummings, Chamberlain, and Phillips in half a century; and this writer in the *North American* is in substantial accord with Professor Bowen as to the relation of the Massachusetts mechanic to the savings-bank. It may very well be the case, for instance, as this writer and Professor Bowen make plain, that the machinist in Worcester or Springfield is thus far a co-operative laborer with the very man who hires him—that the money which his employer is using in the factory consists in part of the machinist's savings borrowed from the bank where he deposited them, and on which he is receiving interest, while at the same time handling it from week to week as wages. This is plainly a form of co-operation, and should be recollected when the assertion is made that, in New England, co-operation, which is a success as regards distribution, is a failure as regards production. It is co-operation with less gain perhaps, with less risk certainly; co-operation with a share in the profits only and no share in the losses should there be any.

Another critical notice of merit is that upon Mr. Professor Chadbourne's recent book about the office of instinct and its relation to the reasoning power of man, and in this case—as we have mentioned Professor Bowen's works—the two professors are at one rather than the critic and the professors, for Professor Chadbourne's work is not tenderly handled. Of one part of it the reviewer observes that "this would make a Patagonian smile." Why, is not stated. Why not a Visigoth? We should suppose—taking the thing seriously—that barbarous man, much beholden to the mental power of his four-footed companions, and a much keener observer of them than professional metaphysicians are apt to be, might very readily hold other views than theirs as to the relations between instinct and reason.

Of the long articles in the magazine, there are two which are admirable examples of the right way and the wrong way respectively of conducting a controversy upon a speculative question. Mr. Chauncey Wright, in his article, is all coolness; Mr. J. H. Stirling, in his, is in a fume of anger and contempt; Mr. Wright is clear and forcible in statement, Mr. Stirling's style is much the same as his temper; the one writes as if a difficult subject were to be made plain to the average understanding, the other as if the obscurities and intricacies of a confused subject were best explicated by a confused and obscure treatment of it. Each appears to have a case against his antagonist, and we suppose each with equal justice entertains equal respect for the opinion opposed to his own; but Mr. Stirling succeeds in making himself almost ridiculous and his essay repellent, while Mr. Wright's entire good temper under provocation, his postponement of his feelings in the interest of his subject and the cause of fair discussion, are very attractive indeed. Occasionally he seems to find a good man's satisfaction and comfort in some particularly sharp rap over Mr. Mivart's exposed knuckles; he is not all the time so severely impersonal as he thinks it desirable that all Darwinists and all Anti-Darwinists should always be, and as he regrets deeply that Mr. Mivart is not; but considering what a world this of ours is, and considering how man is apt to conduct himself when the question of who made it, and how and when, is under discussion, the essay is a wonder of courtesy and calmness. Mr. Darwin's own excellent example has seldom been better followed among his disciples and co-workers than in this essay by one of the ablest of them. Every age has the right, we suppose, to felicitate itself on its greatness and intelligence, and we submit that our ancestors would have been wiser than they were if they had said and believed and acted upon this following view of the proper method of discussing theological problems in physics. Great would have been the reduction in the number of atheists burnt and unburnt, which alone would have been a gain:

> "Advocacy, and especially the sort that is of essential value in courts of law, where two advocates are set against each other, each with the duty of presenting only what can be said for his own side, and where the same judge and jury are bound to hear both, is singularly out of place in a scientific discussion, unless in oral debate before the tribunal of a scientific society. Moreover, there are no burdens of proof in science. Such advocacy in a published work claiming scientific consideration is almost an offence against the proprieties of such discussions. To collect together in one place all that can be said for an hypothesis, and in another all that can be said against it, is at best a clumsy and inconvenient method of discussion, the natural results of which may best be seen in the present condition of theological and religious doctrines. These practical considerations are of the utmost importance for the attainment of the end of scientific pursuit; which is not to arrive at decisions and judgments that are probably true only on the whole and in the long run, but is the discovery of the real truths of nature, for which science can afford to wait, and for which suspended judgments are the soundest substitutes."

Doubtless we shall not put to death any more of our Socrateses, nor stone any more prophets, nor incarcerate Galileo again; but it is true, too, that Mr. Mivart seems not to share Mr. Wright's opinion in this matter of scientific investigation, and that easy as the lesson looks there are ten Mr. Mivarts for one Mr. Wright. To evade the main question and seek worthless triumphs on points of no importance, to sneer, to misstate your adversaries' position, to juggle with a word, to bolt conclusions that contradict your wilfully chosen premises—this is still the way to discuss religion or politics in the most enlightened nations of the earth—the simian way, it may be called, and a way simian enough to go some length in proving the Darwinist side of the controversy between Mr. Wright and Mr. Mivart to be the correct one. One need not go to Italy and the Vatican for daily exemplifications of it.

Mr. Stirling is a metaphysician better known to English than American audiences, but of generally recognized ability in a school which cannot be said to be on the road just at present to increased favor. He is naturally, and, as we think, very properly, displeased with the late Mr. Buckle for that writer's *de haut en bas* fashion of speaking about metaphysical thinkers whose works he had perhaps read but certainly had not mastered, and for whom, even if he had mastered all their philosophy instead of carrying off but a smattering of it, good taste and proper modesty would alone have demanded more civility than Mr. Buckle showed. Mr. Stirling makes pretty thorough work with him, and convicts him of haste, insufficient information, and failures in reasoning, but after a fashion which we should say is better adapted to a Scotch audience than to any other, the essay being contentious, acrid, abusive, contemptuous, and other agreeable things which we are accustomed to think characteristic of the true Scots polemic. At the end we feel a sort of want of the derisive whoop and the splash of dirty water from the top story. It begins by remarking, in substance, that it is a hard job to know what it was that Mr. Buckle wanted to say, and what his problem was. His book is an enormous mass of chaffy declamation, out of which we may here and there pick a grain of meaning and so find out little by little what the man would be at. Painfully articulating the scraps which we thus gather, we find that Buckle was born with a dream in him of literary glory; "something," as his introduction says, "it seemed desirable should be done, and on a scale far larger than has hitherto been attempted." There you have him. "Something" is to be done by Mr. Buckle, on a big scale; in short, vagueness, bombast, overweening conceit, and ambition make a great part of the man and his works. What should the "something" be? Mr. Stirling tells us; but he would probably dislike to make affidavit to his account of the workings of Buckle's mind while it was deciding this question. The end of the matter was thus:—

"Why, the spot the highest in the universe was still left vacant, virgin for the gigantic tread of Buckle! Here, both theoretically and practically,—here were consummation. *Finis*, at last! Bacon brought in nature, and Smith the manipulation of nature; but Buckle—Buckle it would be said—brought in mind, Buckle brought in the manipulation of mind, Buckle brought in and united all! The Wealth of Nations was much, but what were a Wisdom of Nations?"

We cannot follow Mr. Stirling through his acute and trenchant article, which readers with a taste for metaphysics will enjoy at the same time that they are amused by its aggressive spirit and hearty combativeness. What the general reader is likely to get in the way of amusement, this extract may show. It fairly illustrates the metaphysician's way of darkening counsel by clouding a simple matter with inexpressive words, upon which, by the bye, he in time comes to value himself:

"To repeat, Kant then says: 'How the *intellectual* I (that only knows intellectually or logically the bare fact *that* it is),—how this I is distinguished from, yet identical with, the *perceptive* I (perceptive as under inner affection and so knowing *how* it is), moreover, how then (as regards the latter question, my *perceivability*, my sensuous state, my *how* I am) I can know myself, not as I am to the understanding (to which I am only the I of the "I think"), but just like all other phenomena, simply as I appear to (inner) sense,—all this has no more and no less difficulty than how I can be to myself an object at all, an object that is of perception, of internal perception,' etc., etc."

The essay entitled "The Shadow of Dante" has for the occasion of its appearance Miss M. F. Rossetti's recent book, but the author speaks of it as one of the results of twenty years' careful study of the poet. It is evidently Mr. Lowell's, and contains some of his best work, though we dare say it will be found not so attractive as his best work usually is. From the same hand we have before had an essay on Dante, to which this may be taken as supplementary. The article in Appleton's Cyclopædia—one of the good articles in that uneven work—is, we believe, by Mr. Lowell, and it is full and satisfactory, though necessarily compressed, and totally without that discursiveness to which, if sometimes it is not pleasing in Mr. Lowell's essays, we owe so much delightful reading, as to the biography of the poet and the general scope of his poetry. Here, however, we have a sufficiency of treasure and pleasure for the lover of Dante. Long love of him and study of him cause the admiration of Dante's best students and lovers to be or to seem to others almost an idolatry; and Mr. Lowell's praises are very warm and high, and his admiration so great, that he leaves us doubtful whether he so much reverences any other poet. What to many is, for one and another reason, a fatal flaw in the work—the poet's peculiar religious and moral universe, the rigid completeness of his scheme, and his perfect satisfaction with it and confidence in it—all this is to Mr. Lowell acceptable, and, apparently, it is satisfying to the needs of his spiritual nature. To our mind it is here where perhaps lies the danger which threatens Dante's claim to so high a place as Mr. Lowell would award. Very great he doubtless must always be—so great that few will know his greatness aright. But the world, which is never to outgrow Priam at the feet of Achilles or Job among his counsellors, is it never to outgrow so much of this mediævalism and tenseness and definiteness as that the great Italian's place will be set lower than now? Mr. Lowell would say no to such a question. He thus ends his essay, premising that if Shakespeare's is the most comprehensive intellect amongst poets, Dante's is the purest spiritual nature:

"In the company of the epic poets there was a place left for whoever should embody the Christian idea of a triumphant life, outwardly all defeat, inwardly victorious, who should make us partakers of that cup of sorrow in which all are communicants with Christ. He who should do this would indeed achieve the perilous seat, for he must combine poesy with doctrine in such cunning wise that the one lose not its beauty nor the other its severity, and Dante has done it. As he takes possession of it we seem to hear the cry he himself heard when Virgil rejoined the company of great singers,

'All honor to the loftiest of poets!'"

Perhaps as good as any other one thing in the essay is the explanation of the relation in which Beatrice stood to Dante at different periods of his life. It is one which a greater number of people than might seem credible have contrived to miss.

The remaining contents of this July number are articles by Mr. Howells, Mr. Karl Hillebrand, and Mr. Frederic Sheldon. Herder is Mr. Hillebrand's subject; Giusti, the Italian satirist, Mr. Howells's; and Crabbe, the English poet, Mr. Sheldon's. Mr. Sheldon's article is rather curious as criticism, but will for a moment recall the verses of a forgotten worthy who went decently and composedly into oblivion at his earliest opportunity, and who beyond a doubt will contentedly stay there. Mr. Sheldon's old-fashioned taste leads him into some hearty objurgation against the more whining of modern poets, whom he charges with intellectual and moral feebleness. As for him, he believes that there is something wrong in a poet who can see a locomotive rush past him at the rate of forty miles an hour without "experiencing a sensation not altogether prosaic"; and we imagine he has more sense and poetry on his side than several thousands of the mystics and "artistic" unhappy poets whom he holds in such contempt. Still, a sound digestion and a fondness for Crabbe are not the whole of the matter either, Mr. Sheldon should consider. There are such things as "sighing and grief," as Sir John tells us, though they need not "blow us all up like a bladder," as they did that stricken old gentleman, if we are to take his own word for it.

Historical and Biographical Memoirs, Essays, Addresses, etc. Written at various times during the last fifty years, and now just published in the collected form. By George B. Wood, M.D., LL.D. (Philadelphia: J. B. Lippincott & Co. 1872. 8vo, pp. 576.)—Of the three classes of papers composing this volume, the first seems alone to contain matter of general and permanent interest. We refer especially to the chapters on the History of the University of Pennsylvania and of the Pennsylvania Hospital.

Less than two centuries ago, the only school known in Philadelphia was one kept by Enoch Flower (1683), who taught "reading, writing, and casting accounts for eight shillings and a quarter." Then came a public school, founded by the Quakers in 1749, and chartered by William Penn in 1711. The plan of an academy was drawn up in 1743 by the tireless Benjamin Franklin. Interrupted then by the French war, it was not made public until 1749, when he issued a pamphlet, entitled "Proposals relative to the Education of Youth in Pennsylvania." It was well received; but there was not money enough collected to build a school-house. Just at this time, the famous preacher Whitefield, excluded from the churches of Philadelphia, was addressing immense crowds in the open fields, and a proposition was made to erect an edifice which might serve the double purpose of a school and place of worship for Whitefield. This plan was carried out, and a portion of the *academy* so built still stands in South Street, near Mulberry. The institution gradually grew into "college, academy, and charity school," and on a list of its pupils in 1757 is found the name of Lindley Murray. Of all this came the university in 1759.

The Pennsylvania Hospital made a feeble beginning in 1750, and feeble it remained until the omnipresent Benjamin Franklin took it in hand. He

obtained from the legislature an act of incorporation and a grant of £2,000, to be paid when an equal amount should be subscribed by individuals. The inside history of this act and grant is curious. Franklin, referring to it in his memoirs, says that he remembers none of his political manœuvres which at the time gave him more pleasure, or in which, after thinking of it, he more easily excused himself for a little indirectness. In the legislature, the country members stood out against the grant. The city, said they, was to be benefited—let the city pay. Franklin represented that £2,000 would be raised in the city by voluntary contributions. This the opposition refused to believe, considering, no doubt, £2,000 a very large sum of money. Franklin replied—"Then make your grant conditional upon the city subscription." To this proposition they readily acceded, certain that the money could not be raised; and, willing to gain the credit of liberality without expense, voted for the bill. But Franklin had a double object in this move. He well knew that, once the citizens were assured of a legislative grant, they would rest content with it, and hold themselves excused from subscribing. Therefore his little service for the *conditional* grant; and under this stimulus, the subscription, which was dragging its slow length along, was immediately filled up.

Ars Oratoria. Selections from Cicero and Quintilian on Oratory. With Notes. By Martin Kellogg, Professor of Latin and Greek in the University of California. (New York: Ivison, Blakeman, Taylor & Co.)—In general we have no great admiration for Chrestomathies, Florilegia, Anthologies, Delectuses, and Elegant Extracts, except possibly for elementary purposes. Goethe thought well of them; but in his day books were scarcer and many authors difficult to get at any price. Such collections as the Teubner or the later Tauchnitz make it possible for the young scholar of to-day to buy a pretty solid little classical library for a moderate sum. One of the most thoughtful men of Germany, Von Nägelsbach, well says that, theoretically at least, the classical scholar is supposed to read ancient books as he would modern ones, *as wholes;* and though he may fall miserably short of this in practice, there is a vastly greater satisfaction in owning and handling "the authors," as old Dr. Popkin used to call them with affectionate emphasis, than in frisking along through any number of skilfully-culled excerpts. The apples of gold lose half their lustre when torn from the pictures of silver. Something of this general objection applies to Professor Kellogg's book. At the same time it must be said that any man is to be thanked who collects passages on any one subject; the ripest scholar may find some instruction and stimulus in comparing extracts. Professor Kellogg has dove-tailed the parts of his authors together with great ingenuity; but it is startling to the association of ideas, particularly in Quintilian, to find a passage from the Eighth Book, for example, followed immediately by one from the preface. As regards the text of Cicero, Baiter and Kayser would have been a better guide than Klotz; for Quintilian, Bonnell is taken as the basis. Bonnell is an industrious plodder, but a very dull man. The editor seems not to have heard of "the new departure" in Quintilian made by the revolutionizing and exhaustive text of Halm, without which Quintilian cannot be understood.

Eleonore. After the German of E. von Rothenfels. By Frances Elizabeth Bennett, translator of "Lowly Ways." (Philadelphia: J. B. Lippincott & Co. 1872.)—This is a very plotty German novel, which recounts in an autobiographical form the adventures of a simple-hearted young lady with an artful stepmother and an intriguing "companion." What arts these two false women used to entrap the heroine, first into a low marriage and afterwards into a high one in which her heart was not engaged; how her father was deluded by his beautiful wife; how the stepmother exerted herself to fascinate every man of her circle; and how they one and all deserted her colors for those of the ingenuous narrator of the tale, who is, however, steadily true throughout—or, at least, with only one short interval in which she became engaged to another man—to an upright and unsophisticated admirer, who lives in the country and appears rather awkward in the company of those who surround her in her father's house—all these fine things are told in a rather lively way, and are put into readable and easy English by the translator.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Atkinson (E.), Natural Philosophy	(D. Appleton & Co.)
Barker (Lady), Station Life in New Zealand	(De Witt C. Lent & Co.) $1 50
Brooks (J.), Seven Months' Run, Up, and Down, and Across the World	(D. Appleton & Co.)

used at YALE, HARVARD, and many other prominent American Institutions. Correspondence is invited from educators and students.

JUST ISSUED.

A NEW AND DELIGHTFUL NOVEL.

THROWN TOGETHER.

BY FLORENCE MONTGOMERY, Author of "Misunderstood." "A very Simple Story," etc.
12mo, Fine Cloth, $1 50.

This volume is regarded as the author's masterpiece. The London Athenæum says: "The author of 'Misunderstood' has given us another charming story of child-life. This, however, is not a book for children. Adult readers of Miss Montgomery's book will find much that will lead them to profitable reflection on childish character, and many graphically-touched terms of childish thought and expression which will come home to their own experience."

ALSO,

BY HIS OWN MIGHT.

From the German of Wilhelmine von Hillern, author of "Only a Girl." Second Edition.
12mo, Fine Cloth, $1 75.

"Vivacious, intricate, and well sustained. One of the best of the many excellent novels from the German issued by this house."—Philadelphia Evening Bulletin.

*** For Sale by Booksellers generally, or will be sent by mail, postage paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia, and
25 Bond Street, New York.

MACMILLAN & CO.'S

PUBLICATIONS.

Crown 8vo, $2.

GOETHE and MENDELSSOHN. 1821–1831.

From the German of Dr. Karl Mendelssohn, son of the Composer, by M. E. von Glehn. From the Private Diaries and Home-Letters of Mendelssohn; with Poems and Letters of Goethe never before printed. Also, with Two New and Original Portraits, Facsimiles, and Appendix of Twenty Letters hitherto unpublished.

"This delightful book opens up many facts in the life of the great musician, and shows the impulse which was given to his whole life by his meeting with the great poet. We heartily commend it to all who feel an interest in the early life and career of one of the greatest musical geniuses Germany has produced."—Birmingham Daily Gazette.

MICHAEL FARADAY. By J. H. Gladstone, Ph.D., F.R.S. Crown 8vo, $1 50.

Contents: The Story of his Life—Study of his Character—Fruits of his Experience—His Method of Working—The Value of his Discoveries.

"Dr. Gladstone writes a style of singular simplicity and flowingness, and this little book of his may take its place well as a light companion to earlier and more complete biographies of its illustrious subject. The book being within everybody's compass is of the stamp that should be in everybody's hands who cannot have the larger one."—Fortnightly Review.

This day, in crown 8vo, price $1 50.

MARJORY: a Novel. By Milly Deane.

MACMILLAN & CO.,
38 Bleecker Street, New York.

VAN NOSTRAND'S ECLECTIC ENGINEERING MAGAZINE. No. 2, Vol. 7, August, now ready. CONTENTS:—"Radiation at Different Temperatures" (illustrated)—"Narrow-Gauge Wooden Railways" (Original)—"On Armor-plated Ships"—"Explosive Agents Applied to Industrial Purposes"—Charcoal-using Blast Furnaces"—Galvanic Action on Iron Ships"—"A Plea for Gothic Architecture"—"The Effect of Torpedoes on Naval Construction"—"On a New Form for Iron-clads"—"Sectional Steam-Boilers"—"Masonry and Brick-work"—"On the Protection of Vessels Against Torpedoes"—"From Pig to Puddled Bar"—"Economical Marine Engines"—"Heavy Guns"—On the Use of the Magnetic Needle in Mineral Explorations on Lake Superior" (illustrated)—"The Pollution of Rivers by Chemical Manufactures"—"The Manufacture and Wear of Rails" (illustrated)—"The East River Bridge; Chief Engineer's Report"—"A New Theory of the Discharge of Gas and Steam from Orifices" (illustrated)—"On a New Mode of Dealing with Sewage Precipitates"—"The Influence of Gas and Water-pipes in Determining the Direction of a Discharge of Lightning."

Paragraphs: "Reports of Engineering Societies"—"Iron and Steel Notes"—"Railway Notes"—"Engineering Structures"—"Ordnance and Naval Notes"—"Book Notices"—"Miscellaneous."

Terms.—Issued in Monthly numbers of 112 pages each, illustrated, at $5 per annum; single numbers, 50 cents each. D. VAN NOSTRAND, Publisher, 23 Murray Street and 27 Warren Street, New York.

HAVERFORD COLLEGE, established in 1838 by members of the Society of Friends, nine miles west of Philadelphia, combines the advantages of a family and College (of the first-class) for young men, in its provision for a liberal, classical, or scientific education. The next Term opens Ninth Month (Sept.) 11th, 1872. For Terms, and other information, address SAMUEL J. GUMMERE, President, Haverford College P. O., Montgomery Co., Pa.

COTTAGE HILL SEMINARY, Poughkeepsie, N. Y. Home School for Ladies, Twelfth Year. Specialities, music, modern languages, and fine arts. Reopens September 18.

CHEGARAY INSTITUTE, Established in New York in 1814. English and French, for Young Ladies and Misses, Boarding and Day Pupils, 1527 and 1529 Spruce Street, Philadelphia, Pa. French is the Language of the Family, and is constantly spoken in the Institute.

MADAME D'HERVILLY, Principal.

The Nation.

NEW YORK, THURSDAY, AUGUST 1, 1872.

The Week.

TO-DAY, North Carolina elects eight Congressmen, together with a Governor and a full set of State officers; but the controlling question in the canvass, which has been extremely excited, has been whether the Democratic or the Republican national tickets should get the endorsement of a majority at the polls. Down to very late advices, the probabilities all have pointed to a reasonably good victory for the Administration. A small majority for Governor Caldwell has been indicated, and a fairly successful fight in the Congressional districts, which under the old apportionment were seven in number, and of which the Democrats have been holding five. The eight districts under the new apportionment were, however, so divided by the Democrats, who had the redistricting of the State, that the chances of the Republicans for carrying them were made appreciably less; they might get but one Congressman, while electing their candidate for Governor by a good majority. This redistricting or gerrymandering is a time-honored piece of rascality which both parties practise, and at which no honest politician who is "inside" has a right to grumble. Each party has been hopeful, but on the whole the Republicans have been more confident, and the Greeley and Brown side had begun to make hedging predictions—each side of course charging the other with the most shameful fraud and intimidation, and each, we have no doubt, telling more truth while making the charges than has been told when each was engaged in hurling them back and asseverating that it never thought of such wickedness. The fact is, the campaign is everywhere marked by the sharpest kind of management, the "rolling prairie fire" of the Democratic candidate needing about as many hands at the bellows as the unalterable will of the people to support Grant seems to need persuaders and trusses to keep it unalterable. As we, for our part, suppose, there has been any quantity of the best sort of "management" known to Mr. Ethan Allen and to Mr. William Chanler, and, with the blessing of Providence, there no doubt will continue to be. The very latest advices as we write consist of warning cries from the Administration men that there is much reason to fear that the State is to be lost; that a plan has been adopted by the Democrats, under the tuition of Northern electioneering agents, by which challengers shall challenge all day if necessary in all places where the colored vote is in a majority. The Greeley and Brown men correct this last expression by making it read, "all places where you have 'colonized' negro voters from Virginia and South Carolina." The result, then, appears to be in doubt, with the chances for the Republicans.

How fast the Prairie Fire is Rolling On there is yet no very definite means of telling, but the Greeley strength appears to have not a little of the curious property also possessed by the pot of gold which is to be found at the foot of the rainbow, and which is apt to be somewhere else when you get where you were sure to find it. Among men who talk of him one finds the candidate always the second choice, or the fifth, or the twenty-five-millionth, and it is among some other men that his enormous popularity always lies. The newspapers are of not much help. The fact is, that when a candidate has no organ, it is wonderful the amount of noise that is made about him, and how soon there are stampedes to him, and with what certainty and speed he walks the course in every electoral district of this Union, and how many clubs throw out banners bearing his name and have countless hundreds of members, where usually there are not countless hundreds of voters. During the week Mr. Groesbeck, of Cincinnati, has come out in a letter announcing that, while Grant's military career was a success, his civil career has been a failure, and that Mr. Greeley is preferable as a President. This is an accession of some importance, and the tenacious life of the Democratic party and the power of its discipline are made very evident when such a man as Mr. Groesbeck, in order to bring the Democracy into power, gives his assent to such a candidacy. A defection which will hardly balance the accession of Mr. Groesbeck is that of Ex-Judge Clerke, who has been a Tammany sachem since the overthrow of Tweed. He says in his letter that he, as a Jeffersonian Democrat, cannot have anything to do with Greeley, and, further, that while at first, after the downfall of the Ring, there seemed a hope of purifying the Democratic organization in this city, there is now no longer any such good prospect. He says furthermore that "the Sweeneys, Genets, Tweeds, Halls, Brennans, and Hoffmans" have at last succeeded in bringing Tammany once more into the slough of corruption. He therefore resigns his place on the Tammany General Committee, and distinctly charges that Greeley is in compact with these men. Judge Clerke is a thoroughly respectable man, one of the good judges whom Tammany had to push off the bench, and who therefore has that much of a personal grievance against the persons mentioned. But charges from such a source are worth listening to, whatever fun some of us, who are easily amused, may get out of the Binghamton *Republican* and its zealous affidavits. Senator Ferry and Judge Stanley Matthews are among the formerly doubtful and reported doubtful persons who have within the week declared for Grant as against Greeley. Evidently the Administration will need to work; it clearly has some excessively lukewarm friends when such gentlemen as these are counted as being on its side; and it has many hopeful enemies.

Mr. Greeley's letter, formally accepting the Baltimore nomination, is admirably skilful for the purpose which its author evidently had in mind—the influencing of the North Carolina election; its only defect in this regard being that it perhaps came too late for wide diffusion in that land of slow communications. It makes one point which shows controversial skill and ingenuity, when it says that North Carolina is comforted with false comfort when she is told that the passage of the Amnesty Bill left disfranchised only a few hundred elderly men no longer of much account; in reality, a majority of the voters are to-day disfranchised; they elected as the senator of their choice the Hon. Mr. Vance, and when he went to take his seat at Washington he was declared ineligible and sent back, and their wishes thwarted. This, said Mr. Greeley, was the disfranchisement of a State; and by New England. Greatly as he loved and honored his native New England, one thing she could not do wisely or well, and that was govern far off North Carolina—New England, it being worth while to note, being rather more obnoxious to the irreconcilable North Carolina Democrat, to whom Mr. Greeley is boiled crow, than she is absolute in both Houses of Congress. The letter begins by a sort of apology for its appearance: "some further and fuller response" than the speech at the Glenham House had, upon "more mature consideration," seemed to the candidate a fitter reply to the notifying committee. Very noteworthy, the candidate begins, is the fact that the Democratic party has taken as its candidate a man who for forty years has opposed it. Yet, on the other hand, that party took him as a Liberal Republican; he owed his nomination wholly to the fact that he was nominated at Cincinnati. "The Democratic party shows that it is dead," we suppose to be the meaning of this, "and Republicans need not be afraid that I am not still a Republican." Next, he remarks that the Baltimore Convention not only took its candidate from Cincinnati, but took its platform too, which is "incontestably Republican and

emphatically Democratic." So there is no longer any Democratic party. But there is no longer any Republican either. We are all united in the support of principles based on the teachings of "Jefferson and the Continental Congress of 1776."

Senator Conkling's elaborate reply to the attacks of the *Tribune* and the anti-Administration senators was delivered before a large audience, and was a success. That it will read like a success may be doubted, for it is defensive in tone, and a defensive speech is more apt to look like one-half of a whole story, especially when the details are multifarious, than an aggressive speech. And if the senator showed that there is plenty of malice, plenty of mercenary discontent and greedy self-seeking assailing the Administration, he showed also that defending it there is much that is low in motive and much partisan malice. In meeting the real objections to the Administration, the senator was least successful, but he was better in the attack on the Grecleyites in his defence of himself against Fenton and in his defence of General Grant from Mr. Sumner's charge of being "the quarreller of this age," and against the charges of pretentiousness and nepotism. But the defence itself showed how much there is to defend, and Mr. Conkling has largely himself to thank that such pitiful attacks are to be met. The performance of the Administration that should make this talk of nepotism and quarrelling ridiculous and harmless is not in existence to be pointed at, and the fault lies at the door of a senatorial cabal into whose hands President Grant suffered himself to fall, and of which our New York senator has been a leading member. That the Republican party's existence should to-day be threatened with death by Greeley and Fenton at the head of the Southern Democracy is a fine comment on Morton's, Cameron's, and Conkling's management of a party as well-meaning and patriotic as could have been desired.

Among the other matters in Mr. Conkling's voluminous oration was his account of the feud between himself and his colleague. It is plain, and has been always, that this was purely a matter of offices. Greeley would no doubt be to-day writing the regular "whereby" and "whereof" editorial against Hendricks, or Hancock, or some other Democratic candidate, in case Mr. Hiram Walbridge, Mr. Waldo Hutchins, and some fourscore more of Fenton gentlemen were down in the Custom-House instead of Mr. Thomas Murphy's next friend. Of Murphy Mr. Conkling entered into a long defence, showing how good a collector he was, and how good were the class of men who asked for his appointment. We rather wonder he did not tell, what we have been told is true, that Murphy's first acquaintance with Grant was not due to the natural "cussedness" and invincible lowness of that commander, but to Murphy's acquaintance with the late Mr. Lincoln. The story goes that Murphy wanted some bills collected in the Sangamon District in Illinois, and was recommended to secure the services of Lincoln as a good lawyer, and did so. He afterwards saw the future President at home, and, still later, Lincoln saw him here in New York. Thence contracts and an acquaintance with Grant. This is as likely as one or two other campaign tales that go about. Now, in all this defence and explanation there is a great deal which fair-minded people, however much disgusted with the condition of the civil service, may properly reflect upon, especially when they consider what the prospect is that the editor of the *Tribune* would as President do to abate the disgust which, by constant iteration, the *Tribune* has done so much to create ever since Fenton became what Conkling used to be called when Fenton was getting all the tide-waiters' places—"a figure 9 with the tail off."

Mr. Sumner has written a letter to a number of colored men who ask him whether it is Grant or Greeley whom they ought to support, and he replies to them that Greeley is the man. Grant early had patronage extended to him, and got into West Point Academy; Greeley was born in poverty, and bred in a printer's shop; Greeley became a Reformer and an Abolitionist, Grant voted for James Buchanan; Greeley always showed sympathy for the colored race, Grant never any, and never did anything for that race till the "terrible accident of war" gave him an opportunity; Grant did not wish colored citizens to vote, Greeley "championed impartial suffrage"; Greeley has "knowledge of history," abundant political knowledge, "the instinct and grasp of statesmanship," an amiable nature, a magnanimous soul, and untiring industry. Grant, Mr. Sumner continues, insulted the black Republic of Hayti. When the returned Commissioners to San Domingo were in Washington, Grant invited them to dinner, but he did not invite the eloquent colored orator, Frederick Douglass. "The capstone of political equality, the Civil Rights Bill," General Grant has never said he favored, though he could lobby for San Domingo; Grant is supported by office-holders, senatorial Rings, and military Rings; Greeley has behind him devoted and consistent Republicans; Greeley it is idle to call a Democratic candidate—he is not; he is a lifelong Abolitionist. On the whole, considering the quarter to which it is addressed, the letter is, we should say, well prepared, and likely to improve Mr. Greeley's prospects somewhat, as it will probably be useful with a greater number of the negroes than the number of Democrats who will be disgusted by it. What good it will do Mr. Sumner's reputation for fairness of mind and genuine self-respect is not so apparent; but it is a step towards getting vengeance.

The Inter-collegiate Regatta yesterday week was very successful as regards the number of contestants and the closeness of the race, and the interest exhibited inside and outside the colleges. Amid so many differences of style of rowing, make of boat, and so on, it is impossible to tell whether or not it was the best crew which won. We observe that it was the crew of greatest average age. It had in it one man of twenty-seven, one of twenty-five, two of twenty-three, one of twenty-two, and one of twenty-one—an average of twenty-three years and six months. Of the crew which, at the end of the race, was next to the winning crew from Amherst, there were two of nineteen years of age, two of twenty, one of twenty-two, and one, a late substitute, whose age is not given, and who, if set at the average age of his five companions, was twenty. We should suppose a great disadvantage to be thus imposed upon the younger crew, and one which the boating authorities of the various colleges would do well to consider carefully. It seems plain that, other things being equal, a young man is better fitted for the strain of a boat-race at twenty-four than at twenty; and now that the "fresh-water" and "hay-making" colleges, with their older sort of undergraduates, are coming into the field, this truth, if it be one, is likely to receive annual illustration in a way which will not please the salt-water rivals of Amherst and the Massachusetts Agricultural College. Especially may this turn out to be so now that the custom has grown up among these less habituated oarsmen of taking a professional waterman as a trainer, and getting in a few months an education in rowing fully as good as if the oarsman had pulled about the Charles River acquiring grace of finish while his bones were yet in gristle. It is, to be sure, rather a pity to see the old-time struggle for honor between rival crews of young fellows in college turned into a spectacle of careful and anxious calculation, which attracts professional trainers or professional boating men, of whom some are but poor associates for young men. But again, some are not bad associates for them, being honest enough men of honest callings, and it seems clear that training by professionals will be done. It may probably be said, too, that the system of practising without an authoritative critic outside the boat is in a fair way of being discarded, as reason everywhere, and experience in the natural home of boat-racing, have long been saying.

It looks as if the present season would be memorable in the history of the labor agitation in this country, for having demonstrated

the injuriousness and futility together of the measures to which trade-unionism has been resorting for several years past, with the approval of the so-called Labor Reformers. The *Evening Post* of Saturday gave a very intelligent résumé of the late formidable strikes in this city, which for a moment threatened seriously the public security, and whose temporary successes greatly elated the trade-unionists everywhere. Nobody now knows better than themselves that the artificial changes which they brought about in wages and hours of labor have almost universally fallen through, while in addition to the losses ensuing from their idleness while on strike, they have suffered, and must hereafter suffer still more, from a diminished amount of business, owing to the timidity of contractors and builders, and to the removal of the more important manufacturing interests beyond the reach of similar interference. The *Post* shows from official sources that less building by 2,300,000 dollars' worth was projected last month than in July, 1871, though this sum is not entirely, of course, to be charged to the strikers. The support which they received from other cities was not what had been counted on, and the effort to make New York a propagandist centre failed with the rest. The firmness of a few employers saved the panic which infected the rest from ending in a rout, and eventually retrieved what had been lost; while the good sense of the Brewster employees, though it came late, showed that the workingmen's mind is amenable to reason and frank dealing, and their return to duty also helped decide the fate of the strike.

A strike of the Crispins in Lynn, on account of the introduction of a labor-saving machine which involved necessarily a readjustment of prices, has revealed an unsatisfactory state of things of which it may very likely be the beginning of the end. It appears that this is the second year of an experiment of arbitration between the Crispin organization as a whole and five of the leading shoe-manufacturers, acting by committees, and fixing the rate of compensation for definite periods. This has proved mischievous for several reasons. On the one hand, the Crispins could not prevent their men from taking lower wages than those prescribed whenever so disposed, while, on the other, the manufacturers who declined to follow the example of the five in their agreement with the Crispins made no scruple of cutting under and thus injuring their business. In the next place, the Crispins have concentrated the work which used to be distributed throughout the year upon seven months of it, with the view of regulating the supply so that they may always be able to work for high wages. The consequence of this has been that the manufacture of shoes has been leaving Lynn for other places, notably the neighboring States of New Hampshire and Maine, where bounties are even offered for the introduction of this industry in the shape of exemption from taxes for a term of years. The Lynn manufacturers are therefore improving the leisure afforded them by the present strike to review the accounts of the past two years, and see how much longer they can endure treating with an organization which, like all trade-unions as now constituted, aims to confound proficiency and awkwardness, willingness to work and constitutional laziness, ambition to improve and shiftlessness and unthrift, and which, so long as they employ or do not condemn intimidation and violence as legitimate means of accomplishing their objects, will always be managed by, and for the interest of, the worst members of every mechanical or technical calling.

Barnard's trial goes on with reasonable rapidity, the prosecution confident, the prisoner, who has put in a personal appearance, impudent, and the public patient, expecting to see the man deprived of further power of mischief, though no one talks of inflicting any punishment upon him. Still, a good deal will have been gained when Barnard is no longer sitting in the City Hall Park, or at Delmonico's, or at the house of the Mansfield woman, ready to toss "writs of assistance" to his friends, to order any man's safe opened whose bank stock or railroad shares they may happen to need, or to lodge any one of us in jail at a moment's notice if the detention will give Mr. Fisk more time for a little dinner before he goes to Albany to "rescue" some of our own property from our own keeping. Barnard has signalized his presence in the court by giving an open and flat contradiction to a witness, but it was wonderfully civil; and as one more whiff of a once familiar odor almost faded away, we have the disappearance of some important evidence in the nature of the order-books of Barnard's court. They cannot be found; the lawful keeper of them, a reluctant witness against Barnard, swears that he has not seen them since the Committee of Investigation had them; and the Committee, of course, say that they left them with the witness. Barnard's cup, however, runs over, and his conviction is held to be beyond a peradventure.

Benito Juarez, President of the Mexican Republic, died a few days ago, of apoplexy, at the age of sixty-two. He may safely be said to have been the greatest full-blood Indian statesman whom the continent has produced since the time of its discovery by the Europeans. And history may possibly rank him among the foremost statesmen of his age and continent, of whatever race—such as Bolivar, Paez, and Lincoln. With the latter, Juarez shared the year of birth, and like him he was poor in his early life, self-reliant, self-taught, free from bigotry and intolerance, firm, and shrewd. Like him he first rose in his state (Oajaca), then in the republic, until he reached the highest dignity; and like him he died suddenly, at a moment when a protracted revolutionary struggle against his rule was about to expire. What the higher distinctive features of his character and long presidential career have been; whether, in his struggles with Miramon (1858–1860), against the French invasion and Maximilian (1861–1867), and finally with the supporters of Porfirio Diaz (1868–1872)—which involved more than one usurpation, the execution of the imperial pretender, and numerous acts of unmitigated rigor—he was always or chiefly led by purely patriotic motives, or more or less also by selfish, despotic, and cruel inclinations, it is probably too early to decide. His death is apparently a great blow to Mexico, which will hardly find in another man his energy, ability, and power of command—and Mexico needs a strong hand, whether pure or not. Momentarily, however, it may contribute to the purification of the country. The old rancors will be soothed, Porfirio Diaz and his fellow-refugees may return, and a general amnesty may bring about another cessation of civil hostilities—for a time.

The excitement grows in Italy over the alacrity with which the clericals are flocking to the polls, and every election, however trivial, is watched for a sign of their strength. From the latest advices, they appear to have been beaten handsomely in Venice, Verona, and other parts of the Venetian province, and to have suffered the same fate at Capua; at Nola, on the other hand, they were completely successful. It is almost safe to predict that their triumphs will be achieved outside the great cities. Rome should perhaps be excepted until the results are known of the election which was to have come off on Sunday, but which seemed likely to be postponed on account of the extra labor in registering voters. The two parties seem nearly matched, and each is doing its best to win—the one in order to confirm the plébiscite which made Rome the capital of Italy, the other to revoke or at least condemn it; so that the Government party would feel it a peculiar disgrace if the election went against them. At Florence, meantime, during the parliamentary recess, proportional representation has appeared among the topics of public discussion, and meetings have been held to debate the merits, theoretical and practical, of schemes like Mr. Hare's. The audiences, it is said, like most to whom this question has ever been presented, went away convinced of the justice of the principle and the difficulty of its application.

MR. GREELEY AND THE SOUTH.

THE prominence which the wants and woes of the South are taking in the Presidential canvass is exciting the surprise of a good many of those who remember that in the Liberal Republican movement, as first started, the Southern grievances occupied only a subordinate position. The Liberal Republicans put forward as the main, and indeed the sole, reason for their hostility to the Administration the abuses of the civil service perpetrated or sanctioned or connived at by General Grant, and they justified their secession from the Republican party by pointing out the opposition of the majority in Congress to such measures of reform as the modification of the tariff in the direction of greater lightness and simplicity, and their persistent refusal to abate or remove any of the restrictions which had delivered the South over to the government of a band of worthless adventurers supported by ignorant negroes. But the civil-service reform and revenue reform figured most prominently among the aims of the schismatics, and it was only for the former of these that they held General Grant responsible and opposed his re-election.

So far as we know, it entered into nobody's head to lay the Ku-klux legislation to his charge. We can say for ourselves that, although no journal in the country opposed this legislation more strenuously and persistently than we did, we were careful to lay it at the door of Congress, and over and over called attention to the fact that, monstrous as were the powers with which it had armed the President, he had in no way abused them. We never held out any expectation that General Grant's removal would put an end to the abuses of Southern politics. To do so would have been an attempt at imposture. Those abuses were partly the result of the upturning caused by the war, but mainly of Congressional legislation, and in so far as they were the result of Congressional legislation, Congress only could remove them; in so far as they were the sequelæ of a social revolution, nothing but time could remove them. It would, however, be the duty, and the imperative duty, of the new President, as it was of the old, to obey the law as he found it on the statute-book. To pretend that Adams, Trumbull, or Cox, or anybody else whom the Cincinnati Convention might, could, would, or should have nominated, could do anything *but* obey the law, would have been impudent and fraudulent; to pretend that Greeley could do anything but obey the law, or that his election would change or modify the law, would have been doubly impudent and fraudulent, because this gentleman himself has not only advocated vehemently all the measures of coercion put in force against the South, but expressed his great regret that some of the worst of them were not more stringent. In fact, he cannot recommend their removal, even, in his Presidential messages without a display of duplicity of which we trust he is not capable, and which we are sure would disgust all honest men.

How comes it, then, that we find Mr. Greeley put forward by his supporters as the champion of the South *par excellence*, and the great redresser of the long list of wrongs endured by that region which our upright, independent, and self-respecting citizen and statesman, Mr. Voorhees, of Indiana, produced the other day? How is it that we hear constantly of the condition of the South in Mr. Greeley's canvass, and not at all, or very rarely, of any of the other reforms which brought the Cincinnati Convention together? How are we to account for that most ludicrous incident of the canvass, Senator Schurz's writing to the "reform candidate," two months after his nomination, to ask whether it was really true that he was in favor of reform and that he was not surrounded by bad men?

The explanation may be found in part, at least, in an able and interesting letter which appeared in the Hartford *Post*, from the pen of its editor, a day or two after the "Fifth Avenue Conference," and which the *Tribune* of this city reproduced. The writer gave a sketch of the history of the Cincinnati movement, and an account of its composition, which was in the main correct, though we should dissent from many of his inferences. He described accurately the consternation which Greeley's nomination wrought amongst the foremost promoters of the movement, many of whom, let us add, did not even believe in the Sage's personal honesty, and then went on to say that if they had had the presence of mind within the first few days after the nomination to repudiate it, and put another candidate in the field, Greeley would probably have disappeared rapidly from the field. As matters stood, they did not know what to do. If they repudiated Greeley, they would have been guilty of something like self-stultification, inasmuch as, having called the Convention together, and taken a prominent part in the management of it, the nomination was, to all intents and purposes, the work of their hands. If, on the contrary, they supported him, on what ground were they, as reformers, to recommend him to the suffrages of a wondering and disgusted public? He was not identified in any way with any of their principal aims or sentiments, except dislike of Grant. They could not call him a revenue reformer, and still less could they call him a civil-service reformer, for there were few abuses of the civil service of which he had not, during the whole of his life, been an active promoter, in so far as they could be promoted by the treatment of offices as party "spoils" and the proper rewards of party services. What was to be done? The situation was a cruel one. The way out of it was opened by the South, as Mr. Bromley, the writer of the letter in question, points out. The South was from the first determined to support *anybody* the Convention nominated, and, as all the evidence shows, expected to support Adams. There was in that quarter none of the perplexities by which the minds of Northern Democrats were agitated. They were frankly and fairly in favor of anything that would beat Grant and break up the Republican party, the cause of all their woes. About "reforms" they cared no more than a starving man cares about the religious creed of a person who gives him a dinner. Accordingly, they began to "go for Greeley" frantically almost as soon as the Convention adjourned; indeed, we believe the Tennessee Democrats led the way in endorsing him within a week of the adjournment. This furnished "the keynote of the canvass," and presented "the bridging over of the bloody chasm" as Greeley's mission and the great end to be attained in electing him. The relegation of the other reforms to a position of obscurity followed as a matter of course, and we now hear nothing of them. In other words, nothing is said for Greeley on any of the matters on which he could exercise a useful discretion, while lavish promises are made for him with regard to matters over which he will, if elected, have no control whatever. It would hardly do to promise that the friend and patron of G. H. Butler would reform the civil service, but is it not just as absurd to hold out the hope that he will nullify the legislation which places the South at the mercy of adventurers?

The fact is that his canvass is and must remain a tissue of evasions, double-dealings, suppressions of the truth, and suggestions of untruth. With his antecedents, his position as the candidate either of Democrats or Reformers must be a false one. He saw this himself, and pointed it out as regards the Democratic nomination, in cooler moments, a year ago. We for our part trust that we may see the wretched intrigue in which he is involved not only suppressed in November next, but suppressed with such emphasis that no attempt to renew it will be made in our time. We hope this, we repeat, not so much in consideration of what we consider Mr. Greeley's obvious unfitness for the office to which he aspires, as in consideration of the disastrous influence on all reformatory effort of such an ending to a reform movement as his election would prove. Better that a thousand honest efforts to mend the world should honestly fail, than that one honest effort should be converted into an agent of fraud and tergiversation. There is no despair like the despair which comes from the distrust of one's fellows; and if President Greeley should prove the result of the Cincinnati movement, no man would for twenty years to come be able to ask another to go reforming with him without a broad grin.

WHETHER JONES IS PRESIDENT?

"IS Jones President, or are you President?" was the remonstrance that a true and honest friend of President Lincoln addressed to him when the President had laid before him a piece of work which one Jones proposed that he, the President, should do. The piece of work which called forth this very plain admonition was this: Jones, virtuously Republican in politics, was a member of Congress from a Western State. At the beginning of Mr. Lincoln's term, Jones had been instrumental in getting one Smith appointed postmaster in the largest town in his district. Smith was a good man and a good citizen, and the appointment was a proper and indeed a creditable one. Smith, moreover, had continued to be a good man and a good citizen, efficient in his office, faithful in political matters, earnest in the prosecution of the war. His fellow-townsmen liked him, the Postmaster-General approved him, even his political opponents said that he made a good postmaster. But with all these virtues, Smith had fallen into the vice of offending Jones. He had even gone so far as to say that he disapproved of one of Jones's speeches and two of his votes, and that, while he should do nothing against him, still he could not conscientiously work for him. When this heinous conduct was reported to Jones, Jones had gone promptly to the President of the United States and demanded that this postmaster be "turned out." "And I must turn him out," said Mr. Lincoln to his conscientious adviser. "I must turn him out. I don't want to, but I must; there is no help for it." To which his friend replied, "Are you President, or is Jones President?"

An ordinary man would have answered the question by proceeding to demonstrate that he was still President, but obliged to adopt the views and conclusions of Jones *pro hac vice*. But Mr. Lincoln's nature was not one which sought or enunciated a false conclusion. With the acuteness, simplicity, and honesty that were his characteristics, he answered promptly: "Jones is President."

It is due to Mr. Lincoln to say that he had reached and adopted this conclusion as a sacrifice of patriotism. He explained regretfully to his friend that all things must yield to the war—that he could not weaken the Administration in its great work by quarrelling with Congressmen; that office-holders, like soldiers, must be sacrificed in the great emergency; and that he must surrender for the time the attributes of his office, and appear in the eyes of his countrymen to be weak and unjust, rather than divert from the Government the smallest fraction of the support it sorely needed. The great emergency is now past, but the evil which Mr. Lincoln had the acuteness to see, and the sincerity to define, remains upon us: Jones is President.

If there were only one President Jones reigning over us, he might be reached and occasionally deposed. But unfortunately he is assisted and maintained in power by nearly three hundred others. We have one nominal President whom we abuse, and a swarm of little Presidents who abuse us. The American who, returning to the port of New York, with some experience of the courteous decency of European custom-houses, finds his clothing flung out on the dock, himself insulted, his trunk roundly taxed, while his room-mate's goes through free, doubtless curses President Grant in his heart. But if he had a tithe of the discernment of Mr. Lincoln, he would aim his anathemas at President Conkling. Should he chance to be a citizen of New York, he may on some future occasion add to the powder of abuse the bullet of a ballot; but if he votes elsewhere, President Conkling will smile at his abuse; and President Conkling's custom-house officers will laugh outright, and snap their official fingers in his face. The swarm of little Presidents, directly and indirectly, do much more of the work of government than the people of the United States have yet reckoned up. *Directly*, they appoint the cadets at West Point, and the midshipmen at Annapolis; they manage the national library, and grow flowers in the national hot-houses; and they even run the national printing machinery, and compel the executive and judicial departments of the Government to come to them and get their printing done at the legislative printer's. *Indirectly*, they appoint nearly all the postmasters, and revenue officers, and clerks, and consuls, and foreign ministers.

The present method by which the United States are divided and apportioned among their many rulers we believe to be substantially this: Those parts and districts which are represented in Congress by good Republicans—meaning thereby Congressmen who support the Administration so long as the Administration supports them—belong to them. Those districts which are represented by bad Republicans or Democrats belong to the Republican Senators of the State, if there be such. Those lost districts which have neither good Republican Senators nor Representatives are waifs which belong to the President and his Cabinet. Thus the more Republican Congressmen we elect, the more Presidents we have; and the only parts of the country that can lay claim to having President Grant and his Cabinet for their rulers are those parts which, like the State of Delaware, vote solidly against them.

This system not only achieves the remarkable end of securing to everybody a President for whom he never voted and whom he does not want, but it operates and reoperates in many ways never so much as suspected. Thus, at the beginning of the present Administration Mr. Dawes made several ferocious attacks upon the Administration in Congress, averring that it was then exceeding in extravagance the profligate Administration of one Andrew Johnson—a usurper for whom the people and politicians of America were in no wise responsible, but who was forced upon them exclusively by the pistol of one Wilkes Booth. The assailed Administration did not confess its faults and mend its ways, but stoutly denied Mr. Dawes's assertions, and kept on as it had begun. The President was not at all reserved in denouncing Mr. Dawes's statements as inexcusable, unscrupulous falsehoods. Ere the end of that Congress, Mr. Dawes, as Chairman of the Committee on Appropriations, the future historian will be surprised to find, reported one of the largest budgets for internal improvements ever presented, and justified his recommendation of various items by the simple statement that they were requested or approved by the Secretary of the Treasury. And now, at the end of the same Administration, Mr. Dawes is travelling about the country proving by figures, if not by facts, that this, which was the worst, is the most economical Administration ever known. Between the extremes of attack and defence, of want of confidence and perfect confidence, the Administration ceded to Mr. Dawes a portion of the territory of Massachusetts, together with its public offices, and the welfare, if not good-will, of its inhabitants. Mr. Dawes will deny, doubtless, if called upon, that his motives were improper, and that his change of heart was in any way affected by the cession of territory; the Administration will doubtless be equally willing to aver that it never bought Mr. Dawes for a mess of public pottage, nor that a whisper of bargaining ever passed between them, whereby Mr. Dawes's guns were turned away from its citadel and pointed at the common enemy. But with motives and change of heart we are not at present dealing.

Within the ceded territory was a thriving manufacturing village called Westfield, and in Westfield a piece of public property known as the United States Post-Office. The postmaster was a maimed soldier who had served in the army with gallantry, and, coming home at the end of the war disabled for life, had been rewarded by the previous Administration with a respectable livelihood in the form of this public office. He was also a well-known citizen of Westfield, greatly esteemed and beloved by his fellow-townsmen, the superintendent of one of the largest Sunday-schools, and, moreover, a Republican. Finally, the inhabitants of Westfield were thoroughly satisfied with their postmaster, regarding him as the best they had ever had. These good people doubtless reasoned among themselves that neither Kaiser William nor Czar Alexander would care to disoblige a portion of their faithful and loyal subjects by turning out an honest and capable postmaster without cause; and they argued that certainly Kaiser William would not, if the postmaster were one of his old soldiers who had left no small part of

himself on one of Prussia's hard-fought battle-fields. So they plucked up courage to petition the President of the United States, with wonderful unanimity, more than two-thirds of the business men of the place signing their names to it, that this old soldier of his be retained in office. But in this they made a great mistake, for they had then been ceded away along with the post-office, and were but vassals of a new potentate. The President of the United States had no power to grant their request, and was but the agent of the new ruler and bound to carry out his wishes. The territory had not been ceded for the sake of benefiting the inhabitants, to whom the high contracting parties had never given a thought, but in order that the conqueror, like other great conquerors, might wring all he could out of his capture. The idea of improving the civil service and of keeping a disabled soldier in a public office merely because it was right and all decent people wished it, was to him an idea Utopian, ridiculous, and aristocratical. Mr. Dawes listened with profound indifference to all that was said, and answered haughtily, as becomes a great conqueror, that he didn't care what the people wanted. In a few weeks the disabled soldier was thrust out of the post-office, and a political gentleman, whose merits consisted chiefly in having been faithful to the new ruler under divers temptations, walked in. Ostensibly, this change came about by the authority of President Grant through his constitutional adviser, the Postmaster-General; really, it was ordered by President Dawes, on the advice and demand of his political retainer.

It is also a peculiarity of the system that when Jones, who considers himself a smart fellow and fit for anything, turns his hand to being President, he becomes a very poor legislator. No American ever wandered into the gallery of the House of Representatives without looking down in shame and anger upon that representative body of his country. A dim chamber, broad and shallow, half office, half bar-room, in name only a legislative hall. A disorderly crowd, reading, writing, talking, laughing, indifferent to and ignorant of the business before them. A system so intricate, jangling, and involved that on the one hand it perplexes, confuses, and renders useless every new member, and on the other enables the smallest pattern of a country lawyer to climb into its most important places through mere familiarity with its juggling hindrances. The work which this system produces is of the most wretched description, for the most part founded on ignorance of the subject-matter; the remedy half-considered, the language so ill written and obscure that every new statute is followed by confusion in the departments and litigation in the courts. The members are paid by the year, but the most of their enactments are hurried through in the last weeks of each session. The pay that they receive we do not cavil at *per se;* but measured by what they have themselves allowed to other public servants it is exorbitant. The salary of the President has not been raised; that of the judiciary has been increased but little; many of the chief executive officers are paid now in paper no more than they were paid twenty years ago in gold; yet Congressmen within that time have rated up their own remuneration *three hundred per cent.!* In return for this they give us the most slovenly laws that were ever printed, and seize upon the public service of the country as their personal political plunder.

The remedy for this was thought four years ago to be in the President. That remedy has failed. General Grant, it was believed, would bring back to the office of President its constitutional attributes and responsibilities, but the evil is greater than before. No man will ever be called to the office, in all probability, so free to fight a battle with Congress; for, first, he gave up a better office, as most of his countrymen thought, for the Presidency; and, second, there were no debts of gratitude and old political alliances hanging about him; and, third, he was a soldier trained in the reality of war to recognize official merit and promote it. What other man will ever have such great advantages, or lose so great an opportunity?

With all the disadvantages of the present season for reform, it still offers peculiar advantages for beginning the reformation of Congress. A considerable number of districts will change from the Administration to the opposition. A much larger number must be considered doubtful. Wherever change is certain or possible, the voice of those who demand Congressional reform will be listened to with unusual respect. An unusual number of new members will also be returned in all likelihood; and while the country needs experienced legislators more than it ever did, it does not need that class of minds which have grown experienced in legislative trickery and unconstitutional usurpation. "Statesmen" and "advanced thinkers," who have been in Congress sixteen or eighteen years before they discover that the civil service needs reform, and then cannot propose a remedy, would probably be unable to find the right remedy were we to give them a lease of their seats for nine hundred and ninety-nine years, and wait patiently till the end of that Methusalistic term of office for them to begin.

ENGLAND.

LONDON, July 12, 1872.

THE political world has sunk into pretty complete quiet. It seems as if members of Parliament were already beginning to sniff the heather of the Scotch moors and dream of the grouse which have still a month's life secured to them. Our prevailing amusements savor of the open air. Though a London season prolongs itself into July, because a country life without the charm of killing something has not sufficient attractions to draw us from our dusty streets, yet we begin to feel certain stirrings of the sap and to babble a little of green fields. The whole fashionable world is to-day congregated at Lord's Ground to see the Eton or Harrow boys play their annual cricket-match. The conditions of the game do not allow the whole of London to be present, as at the University boat-race; but, on the other hand, the crowd which does gather together includes the very cream of the aristocracy. Then the miniature moor of Wimbledon is covered with the gallant volunteers, shooting innumerable matches, and competing for a strange variety of prizes. Ministers of war have of late been rather unpleasant to them; and general officers of the regular army have expressed very decided doubts as to our amateur soldiery being worth their salt. The conditions of attendance have, therefore, been rendered rather more severe, in spite of the grumbling of the persons affected. But, whatever may be the merit of the volunteers regarded as soldiers, they have certainly succeeded in producing a national taste for rifle-shooting, which may now be reckoned, alongside of rowing and cricket, as one of our most popular sports. In one way or other we are glad of any excuse to escape from this province of brick and mortar, and, to say the truth, there is little enough stirring to keep anybody here. The political campaign has been pretty well fought out. Ministers may, on the whole, congratulate themselves on the result. They are probably rather more popular than they were a few months ago, and have, at any rate, gained in prestige. Everybody, with the exception of a few bitter enemies, gives them credit for having persevered so as finally to make something of the Geneva arbitration. Considering the hopeless nature of the prospect, as it appeared for a long time, it must be admitted that they have shown both patience and skill; and the result has been to deprive the Conservatives of the most promising ground for an attack. Nothing, therefore, is left but a quiet dribble of business, some of it highly important, but all of it undeniably dull. There is, indeed, one chance of a very pretty personal quarrel. Mr. Gladstone is generally said to be defective in his judgment of men; and it is universally admitted that he has made one grievous blunder. There is probably no more generally unpopular man in official circles than Mr. Ayrton; and yet Mr. Ayrton has, for some mysterious motive, been placed in the position for which he is, of all others, the least fitted. One reason, indeed, seems to be that he made himself so intolerable in the Treasury that he had to be provided for elsewhere, and he is now making himself intolerable to all persons who have anything to do with public works. Amongst them is Dr. Hooker, the distinguished botanist, who, with extraordinary zeal and disinterestedness, has succeeded in making the gardens at Kew the very best of their kind in Europe. His merits are universally acknowledged, and he has served on a small salary, and has made large gifts out of his own private means to the public collections. Mr. Ayrton—as appears from a correspondence recently published—has been insulting Dr. Hooker in every possible way; not only has he treated him with systematic insolence in his correspondence, but he has made important alterations in the management of the gardens without consulting the responsible director, and treated his complaints with silent contempt. All the scientific world is in a state of furious indignation. Mr. Darwin, Mr. Huxley, Mr. Tyndall, and other eminent men have remonstrated in most energetic terms, but have only succeeded in eliciting from the Treasury formal acknowledgments that their remonstrance has been received.

The matter has, however, been mentioned in the House of Commons, and it is probable that one of those personal debates may ensue which generally give such lively satisfaction to our legislators. If it should result in the censure of Mr. Ayrton, it may safely be said that men of all parties will be gratified. That more such quarrels may explode is our only hope for parliamentary amusement.

The Ballot Bill has pretty well come to an end; the House of Lords has swallowed its pill with a tolerably good grace, and has only been gratified by the agreement that the measure shall be reconsidered at the end of eight years. If by that time we find that the country has been regenerated, we shall, of course, continue the experiment; if not, we shall probably agree that it makes very little difference whether the experiment is continued or not. Perhaps it would have been just as well not to make two bites at a cherry; but one is thankful that the discussion of two years may now come to an end. When this matter is settled, we have another of the same kind coming up for decision. The little knot of gentlemen who take a pride in calling themselves philosophical radicals, and who may be said to acknowledge Mr. Mill as their intellectual leader, are beginning to air Mr. Hare's scheme of personal representation. The special patron of this panacea for all the evils of parliamentary corruption and incapacity is Mr. Morrison, a very sound, steady, and intelligent member of the school, with a powerful appetite for statistics, blue-blooks, and useful information generally. He made an hour's speech to a rather limited audience on Wednesday last, and was supported by Mr. Thomas Hughes and Sir Charles Dilke. The reply made was substantially that we could not be bothered with the question at present; but, on the whole, I think that the adherents of the proposal might be very fairly satisfied with the result. My own belief in the efficacy of any such electoral devices is, I must confess, of the very slightest. It seems to me to be infinitely less important to make parliament a "mirror of the nation," as we are assured that this scheme will make it, than to make it the representative of the best elements of the nation; and I cannot see that the two objects would necessarily coincide. An accurate mirror of the nation would, in Mr. Carlyle's language, be a mirror of some thirty million people who are "mostly fools"; and in that respect I fear that the representative body is a sufficiently accurate reflection of its constituents. Be that as it may, this last new crotchet of our theorists is generally spoken of respectfully by the newspapers, much, I fancy, on the same principle as sporting correspondents generally speak respectfully of a horse from a well-known stable. It has been introduced to the public under the auspices of the party which has been generally getting its own way in politics, and therefore has a certain prestige derived from the recollection of the triumphs of free-trade, extension of the suffrage, the ballot, and other matters for which we are indebted to the Radicals.

This reminds me, by the way, that we have once more this morning the pleasure of reading a speech from Mr. Bright, conceived just in his old spirit, and once more putting the old contrast between the England of thirty years ago and the England of to-day—a contrast, I need hardly say, entirely to the advantage of the latter, and attributed, as may very fairly be done, to the exertions of Mr. Bright's own friends and allies. The occasion of the speech was the presentation of a testimonial which seems to have been a very wonderful work of art according to the description in the papers. I can quite understand, of course, why the muse of history should be represented as pointing to a scroll on which are inscribed the dates of Mr. Bright's speeches in the House of Commons. The poor lady has often enough occupations of a less agreeable character. But why Mr. Bright's portrait should be represented as suspended by two Cupids, and why, in another place, a maiden should be dividing her heart between another pair of Cupids, is, I must confess, rather a puzzle to me. Perhaps I am a little blind to the charm of allegory. Otherwise I should doubtless be more impressed by the gorgeous memorial to the Prince Consort which has lately been thrown open to the public in Hyde Park. The chief statue has not yet been finished; but there are ornaments enough to dazzle and confuse the public mind, and force us to admit that the monument must be exceedingly beautiful—if it is worth its cost. There are the four quarters of the globe, each sitting on a characteristic beast, and commerce, and manufacture, and agriculture, and engineering, and a whole series of distinguished persons of all ages in white marble, and a number of other people in bronze, and any number of angels in gilding; all interspersed with precious stones and metal-work and stuccoing, with a cross rising above them to a height of 180 feet, which is intended, possibly, to express the enthusiasm with which the memory of a very able and virtuous man is regarded after his death. The inscription informs us that the honor is bestowed "for a life devoted to the public good," to which it might more appropriately have been added that it was also devoted to the good of his family and himself; for, excellent as he was, Prince Albert had not the chance of sacrificing himself very seriously. The whole affair is exceedingly gorgeous, but somehow seems to strike most people as unimaginative and heavy. Just now it attracts a great many sightseers. Meanwhile, an object much more deserving of interest is to be found in the remote east. Sir R. Wallace, the inheritor of the vast accumulation of artistic treasures made by the late Lord Hertford, has lent them to the public for a year, and they are to be seen at a new museum—a branch of South Kensington—opened at Bethnal Green. The collection is said by artists to be one of the finest ever made by one person; and, as much of it has been practically inaccessible for many years past, the labor of a visit is well repaid. Besides which, the visitor will have an opportunity of seeing a part of London which is far less known to most Londoners than, I will not say Paris, but St. Petersburg or Madrid. It is not a very pleasant sight, it may be; but yet it is instructive in its way.

I have not much space left; but I have enough to say all that can be said on one other topic. Lord Shaftesbury has been getting up a movement to abolish the Athanasian Creed; or, at least, to bring about a compromise which will allow all those persons to use it who like it, and those who do not like it to let it alone. Some seven thousand signatures have been obtained, many of them from distinguished persons; and it is therefore not improbable that the clergy may begin to think a little more seriously than before, whether it would not be worth their while to submit with a tolerably good grace to allow some of their number to give up the practice of sentencing to eternal damnation everybody who does not believe an unintelligible proposition. It will naturally require some time to familiarize men's minds to so revolutionary a change; but there is a slight prospect that it may gradually come to be regarded as not out of the question.

THE CLERICAL MOVEMENT IN ITALY.

FLORENCE, July 14, 1872.

JUST a month ago, three priests belonging to the Roman province, with their bishop's permission, accepted seats in the municipal councils of their villages, to which they had been elected by popular suffrage. The still existing congregation of the adjourned council immediately condemned them to the suspension *a divinis*, without even so much as giving them notice beforehand of the punishment which they had incurred, still less affording them means to defend themselves. These three priests proceeded to Rome in order to justify their conduct, without, however, being able to obtain justice, and, as they continued to protest, were menaced with the *excommunicatio major*. A fortnight later, a circular was addressed by Cardinal Riario Sforza, Archbishop of Naples, and another by the Cardinal-Vicar in Rome, to the clergy of both provinces, exhorting them to take active part in the elections about to take place for the municipal councils in towns and villages, in order that as many adherents of the "good cause" as possible might enter into these assemblies; and everybody is now anxiously awaiting the electoral combat of the 28th of July, in which, for the first time since the kingdom of Italy has existed, the Catholic party has deigned to measure arms with the usurpers.

How are we to account for this contradictory attitude on the part of the *Curia Romana*? Is it mere inconsistency, or is it a sign that the system of warfare till now pursued by the clerical party has undergone a radical change? From all we know of the admirable skill, discipline, consistency, and energy of this party, we are inclined to adopt the second explanation, and consider this wheeling to the front as one of the most important strategic moves yet made in the war between church and state in Italy. Till late, the Curia, and the party which dominates within it, evidently did not consider the Italian kingdom as thoroughly consolidated, and, with the sanguine imagination peculiar to parties which keep aloof from their adversaries, still hoped, by the aid of French Legitimists, and that of the fallen Italian dynasties, to be able to overthrow the whole creation of 1859 and 1866 at the very first opportunity. By persisting in not recognizing the kingdom, by continuing to stigmatize officially the government of King Victor Emanuel as the Subalpine Government, by forbidding the faithful to acknowledge or countenance its existence by taking any part in the elections either as electors or elected, they held the dignified position of defenders of right and justice against conquest, revolution, and usurpation. Things, however, seem to have completely changed since the visit paid by the Crown Prince and Crown Princess of Italy to the court of Berlin at the end of last month, which has proved the existence of an understanding between Italy and the United German Empire, and shown that, in case of an attempt on the part of the eldest daughter of the church (France) to restore the Pope's temporal power, the former might reckon upon the latter as a powerful ally. Besides which, the decidedly friendly attitude of Count Andrássy, the head of the Austro-Hungarian Government, toward Italy, and the solemnly announced visit of Emperor Francis Joseph to Emperor William, destroyed every remnant o

hope for aid from that quarter. Moreover, the recent visit to King Victor Emanuel, in the very Quirinal, of an Austrian archduke, the son of the late dethroned Grand-Duke of Tuscany himself, proves that even the Italian pretenders now begin to *lasciare ogni speranza*, and to acknowledge the *fait accompli*. Last, but not least, the vote of the German Parliament against the Jesuits, and the resolute proceeding of Prince Bismarck's against the *rebellious* bishops, have left no possible doubt as to the earnestness with which new Germany has taken up the gauntlet thrown to her by the new dogma which claims submission on the part of one-third of the Empire to the orders of a foreign sovereign.

Even if we did not know positively in what fiery terms the Holy Father announced his resolution to take the offensive, on the 2d of July, to the fifty-two Roman curates who had come to render him homage, and how strongly he recommended them to run to the polls, because the period of action had arrived, and how violent were the words he used on that occasion against Germany, we might have concluded from what has since happened that the Curia have deemed the moment come to change their tactics, and to proceed from an attitude of careful observation to one of aggression, by carrying the war into the enemy's country. It is true that the official manifesto limits the participation strictly to the municipal elections, and that Cardinal Antonelli's organ, the *Osservatore Romano*, as well as Monsignor Nardi's *Voce della Verità*, having engaged in controversy on the point with Don Margotto of the *Unità Cattolica*, were obliged to retract what they had said about the opportunity for the party to engage in the political elections, whilst Don Margotto, the Italian Veuillot, was complimented by the Pope for having maintained the contrary. Nevertheless, there can be no doubt that, should the municipal elections turn out at all favorably, the same tactics will be subsequently adopted with regard to the election for parliament, Rome being far too prudent to venture such a move without first sounding the ground.

Now this was just the very thing the Italian Moderates have been impatiently expecting for the last thirteen years: they could not think themselves secure until the powerful and numerous clerical party should have entered the arena and accepted the battle so often offered them. Nevertheless, now that this long-hoped-for event has become a reality, the Liberal Italians seem alarmed lest they should be overcome in the struggle; for at bottom they greatly prefer their quiet possession of government and country to a warfare teeming with vicissitudes. The circular by which the President of the Council and Minister of the Home Office, Signor Lanza, calls all the Liberals to the rescue against the "enemies of liberty and civilization," and urges upon his prefects and mayors all possible zeal and care in registering the names of the Liberals in the election lists, sounds very much like an alarm trumpet. Let alone the undignified language of which he makes use in speaking of the adversaries of New Italy, which he might have left to their own organs, what an impression must be produced by such a *cri de détresse* at the mere sight of the enemy! Self-confidence, and consequently dignity, was unfortunately the one thing in which all Italian governments have failed since the death of Cavour. If the Liberals were to look the new emergency calmly in the face, they would easily perceive that, whatever the result, it can only be favorable, if not to their own party, at least to the new kingdom—and to say the truth, till now both terms have been tolerably identical. If their eyes are not sharp enough to discern their own advantage, let the wrath of their enemies teach them where it lies. The Legitimists, indeed, those of France especially, are furious to a man at the new attitude taken by the Curia. It becomes henceforward impossible for the Clerical party, on which Legitimism mainly relies, to contest the right of those institutions and laws which till now they have abused, but of which their vote is an implicit recognition. It may perhaps be too sanguine to expect from the Radical party that, rather than yield up the power to the Catholics, they should support the Moderates whom they have hitherto opposed, but it is certain that, if they do not do so, they will lose altogether the remnant of authority they still possess. The majority of Liberal electors have heretofore abstained from voting, because they felt certain that the zealous few who might be ready to sacrifice a Sunday to their civic duties would not fail to send in the candidate they themselves wished to see in the House. Now their activity will find a stimulus, stronger than Signor Lanza's desperate cry for help, in the fact that they are menaced in the possession of power and influence by the appearance of their numerous, though not overwhelming, enemy on the battle-field. The electoral law gives a decided preponderance to the small *bourgeoisie* of the towns over the peasants and workmen as well as the rich *signori*, and these small burghers are known to belong in Italy as elsewhere, *en masse*, to the Liberal party.

Finally, even in the event—in my own opinion the best for Italy's future—that the Clerical party should triumph in the elections, what would be the consequence? Most likely the same as in Belgium, where it has constantly been at the helm for the last two years without daring to abrogate one of the modern laws which have ruled the country ever since the September Revolution. The interests of the state are indeed so powerful, they are so incompatible with the pretensions of Rome, that the Clerical party itself, when it reaches the head of the state, sees itself obliged to defend these interests in sheer self-defence. I do not mean to say by this that a Catholic ministry in Italy would ever do what the Tory ministry did in England, viz., accomplish the reforms desired by the Liberals; but it would at any rate not attempt to restore the past and abolish the existing laws of the state, still less the state itself. One need only realize to one's self the situation. Would it be possible for any Catholic majority in the Italian Parliament, headed by a Catholic administration and premier, to decree, I will not say the retransferment of the capital to Turin and the restoration of the temporal power, but simply to restore to their former state of possession all those convents which have been secularized during the last thirteen years, and the *disjecta membra* of whose properties are scattered all over the kingdom in the shape of so many lilliputian estates purchased by thousands of laymen? Is it imaginable that an Italian government and parliament, however Catholic they might be, should think of restoring the Pontifical military, judicial, or school system, and, according to the precepts of the *Syllabus*, commit suicide by replacing the representative by a theocratical constitution? Belgium is justly considered in Europe as the hearth and centre of the church militant. The whole *plan de campagne* constantly followed up by that party ever since 1833, has been hatched in these headquarters; there are to be found the real chiefs of that staff the nominal heads of which have their seat in Rome, just as Louis XIV. resided at Versailles whilst Turenne and Condé fought his battles on the Rhine; there they for more than thirty years have formed a numerous as well as skilful, energetic, and passionate political party. Well, they *are* in power, they have the majority in the House, they constitute the ministry—and what has been the consequence after all? Nothing, absolutely nothing, with the exception of a change in the *personnel*. They have not dared to abolish the abhorred civil marriage; nay, they have not even mustered courage to introduce compulsory religious instruction. It was, moreover, the very government of M. d'Anethan, the chief of the Clerical party in Belgium, to whose lot it fell to appoint an ambassador at the Quirinal in Rome, and thereby solemnly recognize the government of the usurper who spoliated the head of the church and now thrones in that palace which was once the residence of the Holy Father.

Now, things are much less dangerous in Italy than in Belgium, France, or Germany. First, because the Catholic party is far less fanatical than on the other side of the Alps; and, secondly, because the universality of the national movement, the rapid sale of the church properties, the number of the "accomplices," and, above all, the really enormous rise in commerce, industry, and public wealth in general, have given every Italian, to whatever party he may belong, a personal interest in the new state of things. Ask any Clerical officer of the Italian army whether he would again become a member of the Parmesan or Modenese contingent; ask any tradesman, however pious, whether he would like to see the old barriers and custom-houses re-established; ask any superstitious, bigoted peasant whether he would sell again at the price he bought it the small parcel of land he may have purchased at the sale of the neighboring convent's property; ask the priests themselves, and especially the militant priests, such as the contributors to or editors of the *Armonia*, the *Civiltà*, the *Osservatore*, the *Unità Cattolica*, whether they would rather prefer writing under the old repressive laws to enjoying the present liberty of the press, which has become so powerful an instrument in their hands.

Besides, it cannot be sufficiently repeated that the struggle in Italy has never had the fierce character it assumes in the North. Politically enemies, the Liberal Italians continued socially living on the most friendly terms with the churchmen, meeting them in the coffee-houses and libraries, having them to dinner at their houses, appointing them as librarians and archivists, sending their children to their schools, going regularly to mass and confession, fasting on Fridays, going through the marriage rites in the church after having been married at the mayor's, etc. The priests here are not fanatical, and support the ardent Jesuits who direct the party not from a passionate conviction, but from worldly interest or timidity. As soon as they are reassured on both these points, they will give in. The laymen are almost all indifferent or lukewarm. To fight against the church like the Lutherans of the sixteenth century, you must have the faith of a Luther. Now, the Liberal Italians have in fact no faith at all. They practise the observances of Catholicism because they are brought up in it and do not think it worth while to create a sensation by quitting the church solemnly. They have modern, liberal ideas, because modern society reposes upon liberal conceptions. Moreover, the whole business is inconvenient to them. They wonder at the Germans taking the affair so much to heart. For their own part, they only wish to live from day to day, to carry on their business, politics, etc., and

are willing to remember religion on Sundays and on their death-beds, provided it do not interfere with their everyday life. Such priests and such liberals as these are scarcely likely to raise a religious war.

Correspondence.

OUR INDIANS AND MR. WELLS.

To the Editor of the Nation:

Sir: A singular error occurs in Mr. Wells's article on "The Increase of Our National Expenditures," found in the *Nation* of July 25. Mr. Wells writes: "Although there were probably much fewer Indians to take care of in 1871 than there were in 1866" [44,021 by census of 1860, and 25,731 by census of 1870], "though the existence of railroads across the Plains has diminished the cost of transportation, and the appreciation of the currency has increased the purchasing power of money, yet the expenses of the Indian Department have increased from $3,205,000 in 1866 to $7,426,000 in 1871."

I am surprised that Mr. Wells should have found it possible to make a mistake of such magnitude. The number of Indians of whom Mr. Wells says the Government had to take care in 1870 is merely the number of those of whom the Government did *not* take care, or assume to take care. The number—25,731—which he cites, is the number attributed by the census to those Indians who have broken away from their tribal relations, and have entered the body of citizens. Indians in this condition are found in every state of the Union, save one. Some score of such are found in Mr. Wells's own county of New London, a dozen or two in his own town of Norwich; and he ought to know how little the Government "takes care" of them, and how little they are accustomed to participate in the benefits of Congressional appropriations, unless they be appropriations in the River and Harbor Bill for dredging the Thames channel.

The number of Indians who remain in their tribal relations, and are under the care of the Government more or less completely, according as the civil and military agencies of the Government will allow, is in the neighborhood of 275,000. It is for these Indians that the appropriations were made to which Mr. Wells refers. The Constitution excludes them from the basis of representation, and they therefore do not appear in those tables of the census by which the apportionment of representation is to be determined, but they find their proper mention and enumeration in another place.

I have no right to inflict upon you a disquisition on the Indian policy of the Administration; but pray allow me to say that one reason which Mr. Wells adduces why the expenditures of 1871 should not be so great as those of 1866, is precisely the reason why they are greater, and should be greater. I refer to the extension of railroads across the Plains. These railroads are cutting off the range of the buffalo, and threaten the speedy extinction of game. An hundred thousand Indians who in 1866 knew nothing of the white man and cared nothing for him, who never came near our settlements, but found on the great central plains a supply of food and clothing apparently inexhaustible, are now brought not only face to face with the whites, but face to face with the great food question that sometimes so infuriates classes and races of men having much less excuse for violence and rapine than the Indians of this country. These Indians are not blind. They see this thing going on before their very eyes. They understand perfectly well that the completion of transcontinental railroads means the extinction of game; and possessing no other resource, and having very strongly developed that instinct which incites wild animals to get food for their young by any means, however bloody, is it to be wondered at that these tribes, having received no particular kindness from the whites to embarrass their course in the premises, should turn at bay and stand upon their rights?

It would be too long a story to tell here how the Government, actuated at once by motives of Christian charity and by considerations of true economy, has set itself to win this people to industry, to instruct them in the arts of life, and meanwhile to help them over the long and painful transition from barbarous to civilized methods of subsistence by generous contributions out of the nation's abundance. Those who believe that, when the industrial progress of a civilized race requires, as in this case it does, that the sole subsistence of a less fortunate and favored race be cut away from them, not by slow processes, but at a blow, the higher owes it to the lower, in simple human justice, to find some equivalent for what it has destroyed; those, too, who believe that power can never be divorced from responsibility, and that the blood of this miserable race will rest upon us as a nation if we fail to give them one good square chance, with patience, forbearance, and active kindness on our part, to become reconciled to civilization, to follow a better way of life, to unlearn the sentiments of savage honor and savage revenge, and learn that truth which has made us to differ from them; and, lastly, those who know that Indian wars, shameful in their origin, shameful in their incidents, and usually not creditable even to our arms in their results, have cost the Government hundreds of millions of dollars, and settled nothing, leaving the Indians yet to be conquered, either by force or by kindness—all these classes of citizens, I venture to believe, must approve and support the Indian policy of the present Administration.

Francis A. Walker.

Washington, July 27.

MR. STILLMAN AND THE METROPOLITAN MUSEUM OF ART.

To the Editor of the Nation:

Sir: On receiving the *Nation* with the note of Mr. Putnam, Secretary of the Metropolitan Museum, disclaiming the purchases made at Gillott's sale in the name of that institution, I at once went to Messrs. Christie, Manson & Woods's to make enquiries into the matter, and find the facts to be these: The purchases made in this sense were by a Belgian, who distinctly declared the purchases to be for the New York Museum, and wished them to be so reported. Messrs. C., M. & W. had no previous knowledge of him which could induce them to suspect imposture, and, as he paid for the pictures he bid in, there was no circumstance to make any one suspect a false pretence. The high character of the firm, as well as Mr. Woods's assurance, makes it certain to my own mind that they did not suspect, as they had no reason to suspect, anything hidden in this transaction. The sales, as reported in the *Times* and other London papers, give the purchasers' names as furnished them, and all reported the Museum as buyer of the three pictures in question.

Yet it becomes now clear that there was a trick in the thing, though what its motive or benefit to any one it is hard to conceive. Trustworthy information which I have received assures me that the pictures were really purchased for, or at least are now in the collection of, one of the Rothschilds. The affair beyond this is a mystery to me, but of course I regret having done my part in the spread of a misrepresentation which was the basis of reflections on the discretion of the Trustees of the Museum.

Yours truly, W. J. Stillman.

London, July 13, 1872.

LATIN AND NORTHERN TONGUES.

To the Editor of the Nation:

Sir: The allegation in *Blackwood* of "the total absence in French of any word equivalent to 'listen'" has called forth communications from several of your correspondents, but none of them seems to have perceived that the writer of the article in which it appears has himself, unwittingly, supplied the reason of that absence. "The French say," he tells us, "*un cheval noir*, we say a black horse. . . . If the Frenchman stops after having said '*cheval*,' his phrase is absolutely complete so far as its object is concerned; his *audience* can make no mistake as to what he means; but if we suspend our voice after saying 'black,' our *listeners* are left to guess what black thing we had in view." The words I have italicized in the last two sentences will suggest to the reader that, if the "Norman or Gascon peasant," in reply to the question of the "inquisitive traveller," why he puts the substantive first, should ask, "with a copious laugh, as if the fun of such a notion were enormous, 'How can you know what I am talking about if I don't tell you?'" the "English laborer," not to speak of "those smart school children," instead of "being rather bothered if the inverse question were submitted to him," to wit, why he put the substantive last, might answer with a sober gravity, as if there were no fun at all in the notion, "Listen, and you'll find out." It seems to me that the "immense advantage," as between "the Latin tongues" and "the Northern languages," is altogether on the side of the latter. Give me a language that compels attention rather than one "that will not trouble you to think."

While I am about it, let me add that the writer is too sweeping in endowing "all Europe" with "that adorable *tutoiement*." The Lowland Dutch hasn't even the word that would make it possible. Its only pronoun of the second person, for both numbers, is *u*, pronounced *oo*. The English-speaking child's "I love oo" can give *us* an inkling of "what *tutoiement* means" *without* our having "to live for years abroad"; but the Lowland Dutchman's *u*, being plural as well as singular, has no relish of it.

There are other points in the article—what it says about "our *shabby* system of auxiliary verbs," for instance—open to criticism had I the time or you the space for it.

E. J. Stearns.

Denton, Md., July 22, 1872.

[Mr. Herbert Spencer, in his essay "On Style," in "Essays Social, Political, and Æsthetic," has some remarks on this topic which are very well worth reading. They are not exhaustive of the question, "Why is it more philosophical to say 'a black horse' (ad-

jective first), as the Englishman does, than to say 'un cheval noir' (substantive first), as the Frenchman does?" That is not a question to be so easily answered, nor one in which agreement between French minds and English may speedily be expected; but what Mr. Spencer has to say is useful. The whole essay, indeed, would be admirable reading for people who wish to learn to write.—ED. NATION.]

Notes.

D. LATHROP & CO., Boston, announce several books of travel or adventure: "In the Eastern Seas," "Among the Islands of the Pacific," "In the Wilds of Africa," "On the Banks of the Amazon"; also, as illustrated gift-books, "The Treasury of Literature and Art," "The Garland of Poetry and Prose," and "The Circle of the Year"; and "A Concise Dictionary of the Bible," with a preface by Rev. G. T. Day, D.D., and a supplement by Rev. Heman Lincoln, D.D.

—The meeting of the American Philological Association, held at Providence last week, was one respecting which not much is to be said, save that it was a very enjoyable one, in a social as well as a scholarly way, and has strengthened, or established, the Association's chances of prolonged life. There seems to be forming a permanent nucleus of men of ability and learning, as well as public spirit, who will not give up the pleasure and advantage of meeting and exchanging views once a year, and around whom will always gather enough off-and-on men to make a respectable convention. In the absence this year of the elected president, Professor Goodwin, Harvard was represented by Professor Holmes of the Law School—himself the school which believes that Bacon was Shakespeare. The valuable papers were fewer than last year; but the discussions were throughout lively and in the best spirit, and generally of a creditably scholarly tone. Professor Hadley showed from an Anglo-Saxon document that the pronunciation of Modern Greek is very different from that of the Greek even of the tenth century. Mr. Bristed railed at the errors and exaggerations of comparative philologists. Professor Evans continued his valuable contributions to Ancient Welsh philology. Mr. L. H. Morgan gave an essay (anthropological rather than philological) on the peculiar tribal usages, as regards marriage, of a certain Australian community; they appeared to him more absolutely primitive than any he had elsewhere met with. Mr. Trumbull presented two interesting papers of Indian etymologies, of which perhaps the most interesting is that of *caucus*, which every one knows as a word of greatly disputed derivation, and which many of us have used with a degree of unwillingness or mortification, because of its supposed unworthy origin. We are correspondingly relieved at finding that it is an aboriginal word of respectable connection, coming from an Algonkin root which signifies "speak, encourage, instigate." The least corrupted form of the word is *kaw-kaw-wus*, plural, *kaw-kaw-wus-sough*, "counsellors, council," anglicized into *caucussers*. The Virginians made out of the same word *cockarouse*, as the name of a leading man in a tribe, a petty chieftain. The inclination of the settlers to give native appellations to their political gatherings is well known, and, taken along with the circumstances in which *caucus* first appears, fairly makes a satisfactory etymology and settles the question. The thing and the name are of equally honest American origin, contributions from this side of the water to the catalogue of English institutions and to the English vocabulary. The second volume of the Transactions was distributed to the members, and was fully worthy of its predecessor. It contains some learned studies in Cymric Philology by Prof. Evans of Cornell University; articles on Greek and Latin Grammar by Prof. Allen of East Tennessee University, and Mr. Greenough of Harvard; and a convincing argument by Prof. Whitney in reply to Schleicher's views upon the origin of language. Three articles—by Prof. Hadley, Prof. March of Lafayette College, and Mr. Bristed—treat of Early English Pronunciation; and an article by Mr. Trumbull, "On Algonkin Names for Man," illustrates the statement that the Indians scrupulously avoided general terms, and that "*homo* is untranslatable into Indian." Certainly these papers are a credit to our scholarship; and it is a sufficient justification of the formation of the Association that it gives us the promise of a yearly volume as valuable as this. Of that ambitious spirit which wants the Association, instead of attacking single points, and discussing and comparing opinions upon them, to grapple with great truths of a general public interest and settle them out of hand, there was not much show at the meeting, although some of it got from the "reportorial" table into the newspapers. The Association meets next year at Easton, in Pennsylvania, Professor March's home.

—Dr. Livingstone's letters, printed in the *Herald* of Friday and Saturday, bear the unmistakable impress of their author, and complete the opening-up of communication between him and the outer world. The geographical details are still somewhat scanty, but they fix a little more definitely the position of the rivers and lakes whose names were first reported by Stanley. Map-making, however, in accordance with them is not yet wholly safe, and the *Herald's* map is hardly so great a triumph of American journalism as its correspondent's expedition has proved to be. The draughtsman has made a praiseworthy effort to lengthen out Tanganyika, and shape its southern end after the pattern of the Italian peninsula; but he has overlooked Stanley's assertion that Lake Bangweolo is equal in superficial area to Tanganyika—*i.e.*, belongs in the first rank with Nyassa and the two Nyanzas. Dr. Livingstone seems less anxious to connect the "lacustrine river" course of the Chambezi and its several lakes with the Albert Nyanza than to visit, in the western part of the watershed which he has been exploring, certain famous fountains, four in number, which send two rivers northward into Egypt, and two southward into inner Ethiopia. The burden of his second letter is the slave-trade in Eastern Africa, and he favorably contrasts the natives of the interior, or highlands, though cannibals, with those of the coast, debased by the unhealthy climate, by domestic servitude, and by contact with the worst classes of whites. Of the great chief Msama, who lives west of the south end of Tanganyika, Livingstone says that "he was exactly like the ancient Assyrians sculptured on the Nineveh marbles." The Manyema men, several hundred miles to the north, were "tall, strapping fellows, with but little of what we think distinctive of the negro about them. . . . . If a comparison were instituted, and Manyema, taken at random, placed opposite (say) the members of the Anthropological Society of London, clad in kilts or grass cloth, I should like," says the Doctor, with the impunity which comes of being at Ujiji, "to take my place alongside the Manyema, on the principle of preferring the company of my betters." We shall now await with interest Livingstone's report of his doings to the Royal Geographical Society, and the conclusions derived from it by Messrs. Keith Johnston and Charles Beke in regard to the origin of the Congo as well as of the Nile.

—Not a bad specimen of the breed of men which the German emigration has been bringing into Texas, was Mr. Ferdinand Flake, the founder of *Flake's Bulletin*, who recently died in New London, Conn., while on a visit to the North. Mr. Flake, a Hanoverian by birth, took it into his head when about eighteen years of age to emigrate. In 1840, he landed at Galveston, and, in company with a Texan who needed help, betook himself, without delay, into the country, and set about planting and "merchandising," as they say in the South. He thus occupied a period of some years, at the end of which, having raised a crop of tobacco, for which there was no market in his own neighborhood, he shipped it and himself to Galveston, and there for some time pursued the business of manufacturing cigars. He seems to have gone to some exent into politics, at first municipal, afterwards State and national, his participation in national politics being first noteworthy in 1860. In 1856 he had purchased a share in a newspaper called *Die Union*, which, as its name indicates, was devoted to the perpetuation of the Union of the States, and in general to political principles which were not very popular in Texas. In 1859, for instance, when Mr. Flake was a delegate to the Democratic State Convention, and a resolution was introduced favoring the renewal of the African Slave Trade, Mr. Flake denounced it with ardor, and, on its passage, rose in his place and then and there renounced his allegiance to the Democratic party. He never afterwards acted with it. When in 1860 South Carolina seceded, Mr. Flake's paper was so bitter in opposition that the fire-eaters of Galveston rallied a mob which gutted the office of the *Union*, but failed to frighten Mr. Flake, who was, indeed, supported in his course by the better class of citizens, and whose paper continued to be issued till 1862, when, "with all the others in Galveston, it was temporarily suspended." Why, we do not know. "Extras" continued to be occasionally issued upon the receipt of important telegrams, and these it became the fashion to call banteringly "Flake's bulletins," and when by-and-by the publication of newspapers was resumed, *Flake's Bulletin* was adopted as the name of the paper, and under that name it became the best known of Texan journals, and, if we do not mistake, the most influential. Mr. Flake's political enemies—and Texan politics in these last fifteen years made political enmity bitter—praise his tenacity, firmness of conviction, clear perception, and courageous freedom of speech and action in times which "tried the material men were made of," and, so far as we have known his course by the conduct of his paper, he deserved their good word for these qualities—and for other things, among which one is that their political enemy he indeed was. Unlike many of them, he helped to make Texas the free State she is to-day, and to give her the hopeful future which lies before her. He died at the comparatively early age of fifty-two.

—Mr. Richard Davis Webb, of Dublin, Ireland, who died July 14, at the age of sixty-seven, will long be held in grateful remembrance by those

Americans who knew how well he loved their country, and how large a part of his life had been freely spent in its service. His attachment to it, indeed, cost him his life; for, on his first and only visit to America a few years since, he met with an accident on the Upper Lakes which permanently injured his spine, and slowly exhausted his vitality. From the year 1840, the date of the World's Anti-Slavery Convention in London, at which, we believe, Mr. Webb was a delegate, till the close of the rebellion, he labored incessantly, and with a knowledge of our institutions, politics, and current history such as few foreigners have ever acquired, to bring about the abolition of slavery. He was in full sympathy and the most intimate relations with the Abolitionists of the *Liberator* and the *Anti-Slavery Standard*, and was for many years the Dublin correspondent of the latter paper while editing, in his own printing-office, from which it was issued, the *Anti-Slavery Advocate*, organ of such of the British Abolitionists as were affiliated with the American Anti-Slavery Society. With the assistance of Miss Estlin, of Bristol, whose father, Mr. John B. Estlin, was another most efficient coadjutor of that society, he edited a "Life of John Brown," which may be said to be the only sober and respectable biography of which Captain Brown has been made the subject. In his literary labors, Mr. Webb was greatly assisted by his wife, a person of unusual intelligence, whose death preceded his. His private correspondence, which was very voluminous, was remarkable for its vivacity and humor, and for the warmth of affection which ever characterized the writer. In English politics, Mr. Webb was a progressive Liberal.

—Among recent additions to the British Museum is an undraped statue of a youth, which was discovered in the theatre of Vaison, the ancient Vasio, in France. The school of Sicyon was renowned for this class of subjects, representations of ephebi, the muscular beauties of the palæstra and gymnasium, in a variety of tryingly-graceful attitudes. The significant posture of the young athlete, who is just binding a fillet on his brow, makes it highly probable that this work is a copy of one of the masterpieces of the Sicyon school, Polyclitus's celebrated "Youth with the Fillet," the counterpiece to his "Boy with the Spear," mentioned by Pliny in such appreciative terms. Polyclitus, according to all accounts, must have had marvellous skill in catching the graces of the transition period between boyhood and manhood —so beautiful when it *is* beautiful; he made the "Youth with the Fillet" *molliter juvenem*, a man with all the lovely tenderness of a boy; the "Doryphorus" *viriliter puerum*, a boy with the thews and solidity of a man. The Youth with the Fillet" was sold for a hundred talents. The "Boy with the Spear" passed with later artists as "the canon," or rule of proportion for the human form. From the princely price paid for the "Youth with the Fillet," considerably over $100,000, it has been conjectured—rather loosely, it must be confessed—by some commentators on Pliny, that Attalus of Pergamus, who paid exactly the same price for a single picture of Aristides, the Theban artist, may have bought the original, in which case it probably went Eastward. The Vaison copy, if it is a copy, is said to be noble in design, but not of corresponding execution. We regret extremely that the very meagre notice we have seen of it—merely a line or two—gives us no hint whether the statue has the marked characteristics of Polyclitus's style. From the nature of the subject, we are perhaps justified in guessing that the centre of gravity can hardly be thrown so very decidedly on one foot as was the case with most of the works of this artist. But if the figure has that certain squareness of stature, that *corpus quadratum*, which, according to Varro, was Polyclitus's ideal of manly beauty, as it was Celsus's ideal of robust health, it would go far to prove that the new statue is a copy of the famous Diadumenus. Perhaps some friend of the *Nation* in England, who has an opportunity to inspect for himself, will enlighten us on these points.

—The Bois de Boulogne is no more a wood. First embellished by Louis XIV., greatly improved by Napoleon I., devastated in 1814–15, again restored and made one of the most beautiful public parks in the world by Napoleon III., it fell with him. In October, 1870, all the trees except the great oaks of Auteuil and a few others on the Route de Boulogne were cut down to afford play for the cannon and timber for the barricades. Fortunately, before this destruction a record had been prepared which will preserve the memory of its beauty and the method and cost of its construction and maintenance, even to the minutest details ("Les Promenades de Paris," by A. Alphand). Do the Commissioners of the Central Park wish to compare the cost at New York and at Paris of setting out a tree, a bush even, of watering a square yard of grass, of buildings, of artesian wells, of greenhouses—here are the figures, subject of course to the usual dubiousness of French finance. Here too are profiles of brooks, carriage-ways, cascades, etc., and woodcuts of all the machines used in the maintenance of the Bois. Besides these there are numerous views of landscapes, not very good, and of architecture, cut as only French engravers can cut them, with the most perfect clearness of outline and distinct treatment of material; and there are colored plates of flowers and shrubs. The maps are equally well done. The engravings are accompanied by a careful descriptive and historical sketch. The Bois de Vincennes, the other parks, and the Boulevards are treated in the same way. For so handsome a book the price is certainly not high—500 francs. With this and the excellent work of Maxime Ducamp, "Paris, ses organes, sa vie," of which the third volume, written in 1869, has just appeared, one can get a very good idea of the administrative side of the Paris of the Empire, a Paris likely to be very soon restored, with only the omission of eagles and the N's, and possibly without that omission.

—One cannot easily form an idea of the importance of the religious question which now agitates Germany without a knowledge of some of the facts contained in Professor von Schulte's work on "The Newer Catholic Orders and Congregations, especially in Germany," recently published in Berlin. He calls those the older orders which, instituted before the time of Innocent III., knew nothing of a centralizing, international organization, as each monastic establishment was governed independently by its own abbot, and there was no common head for them all. The church and not Rome was the object of service, which was consequently neither unpatriotic nor anti-national. The Dominican Order (1216) and the Franciscan (1223) were first organized on the model of the church, with their *magister generalis*, provincials, and superiors. Much further developed was the discipline of the Society of Jesus (sixteenth century), which has been copied with modifications in our day by nearly all other orders and congregations. These have multiplied incredibly in Germany since 1848, as the following statistics will show: the diocese of Cologne has 10 different kinds of male and 31 of female orders; Treves, 6 and 12, respectively; Paderborn, 3 and 13; Münster, 4 and 14; Breslau, 3 and 12; Würzburg, 5 and 7; Munich, 4 and 11; Ratisbon, 7 and 11; and Mayence, 3 and 8. The ratio of female orders is noteworthy; but what is most to be remarked is, that the majority of all the orders are governed by absolute heads who reside in countries foreign and hostile to Germany. For example, the Trappists and a large number of female orders have their superiors in France; the Dominicans, Jesuits, etc., are subject to Italian heads. Still more significant are these figures: There is, says Prof. Schulte, one priest or member of a religious fraternity in Prussia for every 584 Catholics; in Bavaria, one for every 300; and in all Germany, one for every 481. Paderborn, Münster, and Cologne furnish most of the Prussian regular clergy and nuns. In Cologne, every 313th Catholic (counting both children and adults) is a clergyman; in Aix-la-Chapelle there is one ecclesiastic to every 110 Catholics; in Münster, one to 61; in Treves, one to 56; and in Paderborn, one to 33. Or, excluding children and minors, almost every tenth adult in Paderborn, and every twentieth in Münster, is a clergyman.

RECENT TEXT-BOOKS OF HISTORY.*

MISS THALHEIMER'S "Manual of Ancient History" will be found the most serviceable work of its class within the reach of our schools. It has indeed no rival worth mentioning, for Rawlinson's Manual, with which it would naturally be compared, has a totally different aim, being a bare and compendious statement of facts, with no attempt at agreeableness of narration. The book before us, on the other hand, makes no pretence at giving the scholarly details which make Rawlinson's work so valuable; it is simply a carefully-prepared and well-written history of the ancient world. We should say that it was much too large for a school text-book, in the way such books are generally used; but, holding as we do that historical events should be learned by reading a full and interesting narration, rather than by a jejune abstract, we have no fault to find with its size, and hope teachers will profit by it to improve their style of teaching. The authoress professes to present the result of the latest investigations of great historians, "which have never, so far as we know, been embraced in any American school-book." This criticism on earlier books is certainly near enough to the truth, and the execution of the book before us on the whole justifies the author's boast. We have really here a history of the East made up from the discoveries of the present century; we have a recognition of some of the truths of comparative mythology; and we find evidence that Roman antiquities have been studied with some care. If we criticise some points, it need not affect our appreciation of the merits of the book as a whole, and of the faithful industry of which it bears marks.

* "A Manual of Ancient History. By M. E. Thalheimer, formerly Teacher of History and Composition in the Packer Collegiate Institute, Brooklyn, N. Y." Wilson, Hinkle & Co., Cincinnati. 8vo, pp. 376.

"Three Centuries of Modern History. By Chas. Duke Yonge, Regius Professor of Modern History and English Literature in Queen's College, Belfast." New York: D. Appleton & Co. 1872.

"A School History of the United States. By W. H. Venable, of the Chickering Classical and Scientific Institute." Cincinnati and New York: Wilson, Hinkle & Co. 12mo, pp. xxx., 247.

"The United States Reader, embracing Selections from Eminent American Historians, Orators, Statesmen, and Poets, with Explanatory Observations, Notes, etc. By John J. Anderson, A.M." New York: Clark & Maynard. 1872. 12mo, pp. 414.

In regard to early chronology the author follows the English authorities, Rawlinson, Smith, etc., rather than the Continental scholars, who put the earliest Egyptian dynasties several centuries earlier. This is a perfectly consistent practice; it is hardly fair, however, to refer in the preface to no Egyptologist but Bunsen—who goes before all his fellows in the antiquity of his dates. Neither is it exactly fair to assume the parallelism of dynasties as an undisputed fact, considering that it is called in question by so good authority as Lenormant and Chevallier. Again, although Mommsen is referred to in the preface, and we can see clear traces of his influence in the body of the work, Roman history is far from being treated in accordance with his views. One constantly comes upon the relics of exploded theories. It is well enough to assume the Etruscan origin of the Tarquins, but it is certain that the Capitoline Triad was not essentially Etruscan (p. 253). The purely patrician character of the *Sex Suffragia*, on the same page, is completely disproved by Mommsen. On the next page, one would certainly infer that the Servian tribes were, so to speak, complementary to the three patrician tribes, instead of being, as they were, a new organization of the community on a wholly new basis. Again, it is not from Mommsen that the statement is taken that the twenty-six country tribes were established by Servius Tullius. What is of more importance is that we have here the old sentimental account of Servius Tullius, that his institutions were primarily political, instead of military and administrative; that he organized the *comitia conturiata* as a legislative body; and that he designed to abdicate and establish a republic, but was thwarted by the nobles and the usurper Tarquin.

We notice some defects of arrangement and proportion. For example, it cannot be called judicious, even if it follows from a generally correct arrangement, to bring in the Retreat of the Ten Thousand under Persian history, before Greece has been studied at all. Again, the earlier periods are relatively much fuller than the later, and especially the later Roman republic is treated very meagrely. Thus, less space is given to Tiberius Gracchus than to the story of Virginia; and Cicero's banishment is not even mentioned. Much space is uselessly filled with lists of kings of Lydia, Tyre, and Damascus, with all the judges and kings of Israel; and this when there are no genealogical tables at all—a most essential thing to the understanding, for instance, of the reign of Augustus. But the most serious criticism we have to make upon this book from a general point of view is that it undertakes to be a complete history, giving all facts of real importance. Now it is impossible to bring in all important facts even into a work of this rather large size, without often sacrificing ease and interest of narration to a bare catalogue of names and dates. We hold that the true method is to select only the events of first importance, relate these with graphic fulness, and let the others go entirely or give them only in the form of lists. What the reader wants is vividness of impression rather than a multitude of facts. Our author has been very successful in combining this vividness with a great amount of detail; but it would have been a better book if the same space had been devoted to half as many facts.

The geography is particularly well done; perhaps we might call it the best single feature of the book. The maps also are excellent—much better than is usual in American school-histories; even if we have a range of mountains between Tegea and Mantinea, and the omission of so important a town as Luceria. A serviceable list of books is given at the end, among which we notice "Ware's 'Zenobia,' 'Aurelian,' and 'Probus'"; the fact being, if we are not mistaken, that the book published in New York under the name "Probus" was reprinted in England with its name changed to "Aurelian," which name was then adopted by the American publishers, as being at once better and more attractive.

Professor Yonge's "Three Centuries of Modern History" has the merit which we just now found lacking in Miss Thalheimer. "It is not designed," he says, "to present a complete history of any one country, nor even of any one period in the history of any country. . . . It is here endeavored, by presenting, in a connected series, a set of sketches of some of the transactions of most conspicuous interest or importance in the annals of the different nations of modern Europe, to show how real the connection often—it may perhaps be said, generally—is between the events of one age or century and those of another" (p. 1). In following out this plan, not only is the history of England omitted altogether, but the north and east of Europe are mentioned only very cursorily until the time of Peter the Great and Charles XII. If we are not mistaken, there is no mention whatever of Gustavus Vasa, of the succession of the House of Vasa to the throne of Poland, the claims of the last kings of that House to the throne of Sweden, the consequent wars, and the important treaty of Oliva. It required great skill to omit all this and still make the career of the Great Elector, the war between Peter and Charles XII., and the last days of Poland, intelligible; but this has been done. A book written in this way needs, however, copious lists of sovereigns, tables of synchronistic events, and genealogical tables; and of these, we are sorry to say, the work before us is absolutely devoid. One can guess how clear the causes of the War of the Spanish Succession, for example, can be made without a genealogical table; and the same difficulty will be found in regard to synchronistic events. For the book is, with good judgment, composed by topics. Each chapter covers, not a chronological epoch, but a connected group or series of events. Of course these are arranged generally in chronological order, but there will necessarily be some overlapping of periods, which must, we should think, cause considerable confusion to young readers. To take one case, perhaps the worst. The first twelve chapters bring the general history down to the reign of Louis XIV.; but the thirteenth is devoted to the wars with the Turks, going back to the commencement of the sixteenth century, so that we find the battle of Mohács described four chapters after its results, in the succession of Ferdinand I. to the thrones of Hungary and Bohemia, and the battle of Lepanto eight chapters after that which tells the subsequent career of Don John of Austria. We find no fault with this; only there ought to be chronological tables which should help the student to find his way in the labyrinth.

With this drawback, the book may be pronounced more than commonly good. It does not profess originality of research—indeed, it does not profess any acquaintance with a very important class of authorities. At the end of each chapter are given the authorities *used* (not *recommended* to the reader), and these are invariably the "standard historians," English and French. No mention of contemporary authorities, no mention of Ranke, Droysen, Häusser, Von Sybel, even in German matters. It is a book for general readers, not for scholars; and aims merely to give a graphic account of the best authenticated facts in the history of modern Europe. This it succeeds in doing, and we can recommend it unequivocally as the best source from which a young person can get a general knowledge of modern history as a foundation of future study. The style, as we have intimated, is graphic; the story is told remarkably well. In the less animated pages there is occasionally some heaviness and involution, as in that we have quoted; but whenever the story begins, the style becomes simple and animated. There is an occasional queer use of the subjunctive, as that Louis XIII. was persuaded (p. 218) "that he would never be his own master till she [his mother] *were* removed from the court"; and (p. 319) "if Leopold's renunciation [of the Spanish crown] *were* invalid, the Electoral Prince of Bavaria had manifestly the preferable claim." Even worse than the absence of tables and lists is the want of an index. We trust these defects will be remedied in succeeding editions.

School histories of the United States have multiplied of late years beyond all reckoning, partly for the reason that none of those already in use have given entire satisfaction, partly because the demand is so enormous and so varied that there is still room for new enterprises. In general they may be divided into two classes, according as they are intended for high schools or grammar schools, and again according as they aim at an easy and discursive narrative, or a compact and compendious statement of facts, to be learned by heart. Thus there is room for a very considerable range on the part of the compiler, and a book is to be pronounced good only in consideration of the use for which it is designed. Venable's History is moderate in its compass, and narrative in its character. We are inclined to pronounce it, on the whole, the best of its class and size, although Barnes's, which we noticed a few weeks ago, has some points of superiority. The most striking excellence of the work before us is its maps and illustrations. The maps are far the best which we remember seeing in any American book of this class; and the numerous portraits are large enough to be real likenesses, and most of them very good ones. "Made-up" illustrations, such as deface most of our school histories, are confined to a few small and appropriate vignettes. The smaller maps and plans are of the right sort, but not quite so full as might be desired. There is no use in giving plans of battles or fortifications—such as Lossing abounds in—unless the battle or siege is described in detail, and this can hardly ever be the case in a school history. On the other hand, campaigns are always described, and need to be fully illustrated. Mr. Venable has very judiciously given only strategic plans, and we suppose it is the cost of the work that prevented him from making these larger and fuller. But surely he might have indicated lines of march even on maps of this size. The map of Central New Jersey, for instance (p. 104), ought to mark Washington's retreat, and also his subsequent advance. The book itself is very well arranged and written. It will be found, we think, attractive to pupils, and well adapted to school use. We notice two habits of style which, although by no means objectionable in moderation, must yet interfere somewhat with the directness and clearness required in a school-book. These are the absolute use of the participle and the appositive be-

ginning a sentence. For example: "Their animosity once aroused, the Indians were implacable" (p. 43). "A young and promising minister, he was for a time settled over the Salem church" (p. 41). A valuable feature is the habitual reference, in foot-notes, to the best special works upon the subjects successively treated. Here the student will find enumerated all the best biographies and special treatises in American history. There is a general spirit of fairness in the treatment of controverted points, and literary history is quite well given; but when (p. 161) Dr Channing is called the "exponent and champion" of "the Liberal sect," "Unitarian" would have been more correct, and certainly more intelligible.

Mr. Anderson is the well-known author of a series of school-histories, distinguished for clearness and compendiousness of statement rather than grace and interest of narrative. His new work, like his "Historical Reader," published a year or two ago, is of a wholly different character. It aims at presenting a tolerably continuous view of American history, in the form of extracts from standard histories, thus being at once a History and a Reader. This plan is carried out with a good deal of judgment. The extracts range from authors of the rank of Prescott, Irving, and Motley to the useful compilations of Parton and Headley. They appear to be, on the whole, as good selections as could have been made, and the book is further adapted to use as a school reader by passages of eloquence and poetry illustrative of the historical events. Among the extracts of this character are found the famous Newburgh Addresses, Franklin's speech in moving for prayers in the Convention, Webster's Address to La Fayette, Jackson's Proclamation to South Carolina, Miss Baillie's First Voyage of Columbus, Longfellow's Launching of the Ship, and Whittier's Barbara Frietchie. We should say that the best use of a book like this would be in supplementing the author's own rather jejune history, and that it would have been better to let the book be merely a collection of extracts. The author has, however, preferred—and he may be right in this—to insert between the several extracts not merely a sufficient explanation of the circumstances of each event, but a brief history of the intervening period. This work is done very well, and will no doubt be found useful. Notwithstanding the general excellence of the selections, it would certainly not have been hard to find better pieces of poetry commemorative of the late war than most of those here given. The maps, too, are coarse and inadequate by the side of Venable's. For example, in the map of Indian Nations, the Tuscaroras are put down, in their Southern residence, as an independent nation, with no intimation of any ethnical connection with the Iroquois; while Mr. Venable, in his smaller map, gives them simply as Iroquois, omitting the tribal name. Neither course is quite satisfactory; but it would have been easy for Mr. Anderson to have stated both facts. We would state that there are at least two names that we have failed to find in the "Biographical Index of Authors."

THE MAGAZINES FOR AUGUST.

"CONCERNING BŒOTIAS" is the title of some pleasant remarks in the August number of *Lippincott's Magazine*. The writer comments upon the universal habit among all communities, ancient and modern, of picking out some neighboring community and using its name as a synonym for stupidity, and he makes the assertion that we Americans are particularly addicted to this habit—an assertion to which most of us would probably give assent. One hardly finds anywhere even a small township which does not contain some neighborhood or village which is the regular object of gibes and jests more or less witless, and stands in the same relation to the other parts of the town as that in which New Jersey, for instance, stands to the rest of the Middle States. The New Yorkers scoff at the City of Churches; the Bostonians call Charlestown Pigtown, and have a proverb, "as dead as Chelsea"; the Cambridge man refuses to believe that Old Cambridge can ever be connected with Boston by subterranean railroad, because nothing "can be lower than 'the Port,'" which refusal puts the citizen of the Port beside himself with rage; the Cincinnati man styles the Chicago man a Chicagoat, and says the town of Chicago has now become so bad and so small that the ten commandments could only be got into it by breaking them to pieces; the Chicago man thinks St. Louis may amount to something after it has had one hundred first-class funerals, such is the apathy in business of the most energetic citizens of that burgh; North Carolina is to a South Carolinian what "the State of Camden and Amboy" is to a *Daily News* reporter or a City Hall joker; the West of all sorts of fun-poking stories has in our time been in the Hoosier State, then in "Egypt" of Illinois, then in Michigan, always in Pennsylvania, where the Democracy lives that continues to vote for General Jackson at each Presidential election. A disposition towards rough jocoseness and humorous chaffing is a part of the reason for the invention of these American Bœotias; but there appears to be requisite also a comparative slowness of intellect on the part of the community derided, or rather a want of that *urbanitas* which the derider possesses, and which consists partly in urbane culture and partly in citified impertinence and conceit. Some true culture and merit, for example, but some pert "cockiness" and provincial arrogance and narrowness, must have gone to the invention of such a term as the "Hub of the Universe"; and, in general, there need be little doubt that the spirit which names our Bœotias is not more desirable or reputable than that which makes them. The Charleston fire-eater and extremist was a quicker-minded man than the conservative, easy-going "Tar-heel" of "Nawth Keliny" whom he laughed at; but, on the whole, he was not more respectable, intellectually considered, than the yeomen whom he ridiculed, nor Graham or Pearson a citizen less useful than Calhoun or Barnwell.

We are always glad of an opportunity to speak in praise of Mr. William Black's "Strange Story of a Phaeton," which *Lippincott's* is reprinting in tantalizing short instalments, that, put together, are certain to make a popular book. One would say, too, that by this time next year, or the end of September would perhaps be better, it might set a good many pleasant little vacation parties upon wheels, and emulating the drives and chance dinners of Queen Tita and her friends. "A Switchback Excursion" is some account of a vacation party by rail, and is well illustrated and interesting. So, too, is the article on the picture-galleries of Mr. Adolph Borie and Mr. J. Gillingham Fell, written as it is from a mind well stored with knowledge and guided by fine taste. Miss Kate Hillard criticises Heine with discernment and feeling; Lady Blanche Murphy, an English lady now resident in this country, describes some eccentric Englishmen whom she has had opportunities of knowing at home and abroad; Mr. Cooper Howells tells about camp-meetings fifty years ago; and there are some good critical notices, and some "Monthly Gossip" which, as literary chit-chat, is better than is common. Smokers, literate and illiterate, will feel a proper contempt for the laureate when they learn from the Monthly Gossiper his inadmissible way—not to call it a preposterous and incredible way—of taking his daily allowance of tobacco. Cigars he will not touch; and here he is not without good company, though not the best, the most catholic smoker being the most orthodox, no doubt; but for his pipe he chooses of all others the common clay, if this report is to be credited, and, as if that were not enough, each of these common clays he smokes but once: "At his feet is a box full of white clay pipes; filling one of these, he smokes until it is empty, breaks it in twain, and throws the fragments into another box prepared for their reception. Then he pulls another pipe from its straw or wood enclosure, fills it, lights it, and destroys it as before. He will not smoke a pipe a second time." This is smoking which might commend itself to Mr. Trask, the anti-tobacco apostle, sin and penalty being simultaneous. Even the wild Irishman shrinks from the "breaking-in" of the dudheen, though we have known him to praise the first smoke after the purification of an old pipe by heating it red-hot in the coals.

The ruffians who infest the selvage of our civilization have latterly had a great deal of attention from literary men, but not often have they been set before us with more reality and apparent truthfulness than by Mr. W. E. Webb in the *Kansas Magazine* for August. "Neb, the Devil's Own," is the title of the sketch, and something of what they may find in it our readers will see by this passage following. The scene is the town of Sheridan, "a barren spot near the Colorado line, surrounded by cañons, buttes, and Indians":

"At the foot of this butte lay a deep pool of water, called in grim humor Lake Como. I bathed there once, and touched my bare feet upon a cold face which slid aside in the mud. Contact with the dead under water is a sensation which lasts during life. Cold arrows are shot through you from heel to crown until the feet press dry land again. On this occasion we fished with a hooked stick for the sunken mystery, and brought up a decayed ruffian, whose pockets were loaded with rocks, and a bag of them tied to his neck. On the palm of one hand was pinned the knave of hearts, the wooden splinter which fastened it being still fast in the flesh. And we found, on enquiry, that the murderer had been a ghastly joker. The victim was a Sheridan gambler, slain by the jealous husband of his washerwoman. And the slayer had laid the dead man in his grave, and attempted a burlesque at the close of the tragedy by giving him a pocket full of rocks and a card of introduction to Pluto as a knave of hearts."

"Neb" got his first name from the frequency with which, after his little difficulties, he "took" to the prairies, thus reminding his fellow-citizens of the Assyrian monarch Nebuchadnezzar, when in the days of his trouble he ate grass. "The Devil's Own" was a *sobriquet* which Neb acquired by his action in regard to an Irish street in the town, occupied by laborers employed on the Pacific Railroad. "Look out, you there in Rat Row," he unexpectedly called out one afternoon, at the same time seizing the lever of a Henry rifle, and grinding out shots at the rate of one a second, which he distributed with impartiality into the various cabins of the Row, much to the irritation of the Irish gentlemen. "The baste! look at me breeches, will ye!" Mr. Webb heard one of them saying to another, the fusillade being then just over, and Neb

having riddled the speaker's garments. "The Devil's Own!" the other said. "Faith, an' the balls was thick as puddin' thim times." "The Devil's Own" had made his first appearance in Sheridan as a lawyer and physician:

"He was an innocent-looking, fat-faced fellow, resembling more a well-settled priest than a Plains tiger. Sheridan had just been laid out and named in honor of Little Phil, who was stationed at Fort Hays, just below, when a short and fat man trotted up to the first shanty. In two days this fat little man had a shanty of his own, with the top of a cracker-box tacked by the door bearing the legend, 'Law and Physics.' He commenced practising at once, and the range of his talents included obstetrics, divorces, inquests, anything. Two years ago a bill was up, I believe, before the Kansas Legislature to legalize sundry papers on which this much-gifted practitioner had affixed his stamp as notary."

His practice was not successful:

"Before one week's residence in Sheridan he divorced the wife of an absent buffalo-hunter, and married her again to an emigrant *en route* for Mexico. The consequence was that when the bereaved husband returned, the cutter of nuptial knots 'took' to the prairie. From exile he was called back, however, to marry the mourning bison-slayer to a woman who had come by rail in pursuit of her eloping husband, the immigrant aforesaid. And the new bride remarked, 'Dot drat him! let him go; there'll be one woman sorry I didn't catch up.' In the course of a couple of months, however, Sheridan society became settled, and a migratory drug-clerk, eclipsing the first physician in his knowledge of medicines, took his practice, while a calaboose shyster from Leavenworth, armed with the terrors of half a statute-book, drove his predecessor from the field."

Hereupon Neb gave up the attempt to move in the upper walks of society, and sank to the lowest by successive stages, becoming first a holder of four acres and a plunderer of the Philistines, then a murderer, and at last two robberies, upon which followed general outlawry, and very frequent exile to the prairie. For a criminal desirous of evading the pursuit of law, the prairie, with its immense plains, its numerous cañons and ravines, was better than a tangled forest, and for a term of years "The Devil's Own" gambled and robbed with impunity, living for the most part in a "dug-out," or cabin, a short distance from the town. But by-and-by a Government detective tracing counterfeiters found the trail led him into Sheridan, where it grew very "hot," and Neb's capture was decided upon. The dug-out was surrounded, and the capture effected, but no case was made against its occupants, who turned out to be a hag of an old woman, Neb himself, and a young girl of fifteen, his daughter. "Father didn't mean to kill her; let him go," was the daughter's appeal to the captors; and this indication of murder, together with the fact that they had him at last, appears to have settled the case adversely to Neb, albeit the detective would make no arrest:

"Next morning, as the early train bearing us out of town drew near the Jack Ketch trestle, we stood on the rear platform to get a good view. Over twenty persons had been hung from the timbers which we could hear straining under the iron foot of the locomotive as it pressed forward. An instant later, and the murder-tainted chasm yawned under our feet. The Judge, taking hold of a brake, leaned outward to get a better view, and recoiled almost into the open door. Another car's length, and we all saw it. It was Neb's body, swinging back and forth at ropes' ends like a pendulum. The hangman's knot had slipped in front and supported the chin, thus turning the hideous face directly up at us. It seemed odd that 'The Devil's Own,' in whom death had only throttled bloated and drunken vice, should ever have been loved by woman. And yet this was plainly written in the girl face which looked imploringly up from where a shrinking form crouched by a block. And the child, the one link in an unknown history which might speak of happiness and a sweet mother-face in the long ago? From the next station, our Judge telegraphed back to have the girl sent at once to Topeka, and he would assume all expenses, and her bringing up. But she never came. Six months after, I saw her upon the streets of Kit Carson, and felt that better would it have been for Mary, child of sorrow, had she died that morning with her father."

It will be seen that this writer, though not a literary artist, has some skill, and that his material has plenty of interest for any great American novelist.

In the *Atlantic*, Mr. J. A. Bolles finishes his statement of the reason why Semmes of the *Alabama* was not tried; and while he takes occasion to correct some of the assertions made by Semmes's victims and enemies as to the cruelties of the Confederate Admiral, he convicts Semmes of boastful falsification, and of conduct disgraceful to his military and naval commissions. Had it been worth while, says Mr. Bolles, Semmes could have been tried and, with manifest justice, convicted of perfidious and dishonorable conduct. He surrendered his ship and offered himself up as a prisoner of war, and then, before he had effected the transfer, made off in the *Deerhound*. When that vessel picked him up, his bounden duty was plain: whatever the owner of the *Deerhound* might propose to do, or be able to do, Semmes's duty as an officer and a gentleman was to insist on being delivered to his captor, Winslow. He was, then, in no sense "an escaped prisoner of war" when he returned to this country and received a commission in the Confederate army, and his act of perfidy, Mr. Bolles tells him, was punishable by death, and would have been so punished but for the facts that his military achievements were of no importance in prolonging the war, and that many greater persons had been allowed to escape. As an incidental effect of this excellent paper, we have one more indubitable picture of that sort of Southerner whose words allowed no one to forget how "chivalrous" a being he was, but whose actions were another affair altogether. There are still plenty such.

Other particularly readable things in this *Atlantic* are Mr. Parton's article, Mr. Aldrich's, Mrs. J. L. Hallowell's, and those of the several critical departments, while there are also the end of "Septimius Felton," and sufficiently readable articles by "K. T. T." Dr. Holmes, Mr. De Mille, Mr. J. T. Trowbridge, Mr. Hiram Rich, Mrs. Celia Thaxter, Mr. John Hay, and one or two others. Of these, most give us poems; but we believe none has met with great success. From Dr. Holmes's towered astronomer we still may learn how Unitarian a profound person gets to be; but after a time it is not interesting any more to note the illiberality of Samuel toward Agag, or to reflect upon the federal headship of Adam. Nor will it long be necessary, as the Doctor even now can ask, with just and safe triumph:

> "Where is the Moloch of your father's creed,
> Whose fires of torment burned for span-long babes?

Et responsum est ab omnibus, 'Non est inventus.'" Mrs. Thaxter's verses have the disadvantage of being preceded by a motto which gives with impressiveness equal to theirs the whole idea of the poem.

Mr. Aldrich's "Rivermouth Romance" is very amusing and very true to the life, Mr. O'Rouke (O'Rourke?) being a gentleman of a sort known to many households and better liked than better men. Mr. Parton's "Jefferson" seems to us as good as anything he has written. We can only hope that no one will come forward with documentary proofs and play Puck with the facts, as has before now happened in his case, and that he will be as sparing of inferences as he can bring himself to be. Jefferson as the Governor of Virginia in the Revolution is his theme this time, and he sets it forth very attractively. We should have little repugnance to putting the work into any boy's hands, as a fair biography of a very distinguished American whose life it behooves the oncoming generation to study. Mrs. Hallowell talks of Quaker men and women, young and old, imputing to both women and men a share of grace and goodness which speaks well for the family into which she was born and that into which she married. Not that she is altogether indiscriminating either; she thinks that the women among the Friends are more superior to those of the world's people than the men to the worldly males of like ages—and perhaps this is so. At all events, when it shall have become so, the men will find that Friend Hallowell, if that is her right designation, has provided them with a sound and sufficient reason why so it should be. It seems, she says, as if the young-man Friend, being cut off from much of the richness and variety of active life, throws himself too devotedly into business and moneymaking, and becomes too much of a materialist, and this, modified by various causes, he is too likely to continue to be when he has grown on to age and become the elderly Friend. With the women the case is different. The larger liberty allowed them gives them but little advantage over their sisters outside the fold while both are young; but in the mature woman, free to preach, free as a sister of charity to undertake missionary work in all sorts of places, taken into council by the Society, "Quakerism seems to blossom and attain its bright consummate flower"—a parlous metaphor, we should say, for our grave-habited contributor. We do not know how correct this view may be. Fond of the Society as we are, have we not (conscience whispers to us) as one efficient cause of our liking a certain skilfulness with which the bright consummate flowers of Quakerism purvey the dainties, light and solid, for the nourishment of those of their households? In that excellently ambitious housewifely walk, we have sometimes thought they more perfectly succeeded than in Mrs. Mott's more transcendental path. But we have only slight acquaintance with the sphere of the inner light, and dare say we have been misled by seeing but half of these better halves. Then to account for it (whether or not it exists), there is the above-mentioned tendency on the part of the men towards more earthy thoughts and considerations than affect their spouses and mothers. However, it is a company that will justly bear more praise than Mrs. Hallowell in her fondness is likely to give, and the readers are few who will not heartily go along with her in all that she says.

The general magazine reader may be interested in several of the *Catholic World's* articles. Mrs. Craven's story of "Fleurange" goes on, and will doubtless repay perusal; "The Symbolism of the Church" will teach him something of the significant emblems employed in Christian art and worship; "On the Misty Mountain" is a narrative of journeying over the Western plains some years ago, and has an unusual flavor of not having been done by a magazine writer who made the trip that he might write about it; "The Last Days before the Siege" is about Paris, and has some of the merit just mentioned; "A Summer in the Tyrol" is slight but readable. For the denominational reader there is an essay on "Protestant Missions in India,"

which would seem to require attention. Its tone might be more civil—not to say decently courteous; but its statements of facts call for answer from the Board of Foreign Missions. We notice an odd mutilation of the passage from Chaucer's "Prologue," which pads p. 674.

The August *Scribner's*, like the rest of the magazines for August, is a fairly good number, but not remarkable. It has, however, one thing which deserves commendation, and that is, the impartial and sensible review of Col. Ward H. Lamon's recent biography of Mr. Lincoln. We believe we have nowhere seen so good a review of this work, which, to speak within bounds, indirectly tells us more about the character of Mr. Lamon and Mr. Herndon than it directly tells us about Mr. Lincoln's true character. As Mr. Jeremiah Black grotesquely said of a gentleman "who shall be nameless," as Mr. Sumner says, and who had attempted something in the biographical way, neither of these gentlemen ever rose high enough to get a horizontal view of their subject after Mr. Lincoln had undergone the Presidency and had become a very different sort of person from the friend of Mr. Hanks and Mr. Herndon.

"The Canoe, and How to Build It," by Mr. W. A. Alden, explains a new sport which is trying to get itself born in this country, and to which we may properly beg the attention of young men who have some leisure and a healthy taste for adventure. Mr. Charles Dudley Warner talks, more pleasantly than exhaustively or thoroughly, about the relations of cultured men to the menacing laborer, who, we assure Mr. Warner, is not going to destroy any colleges now in existence in this country. "Hebe's Jumbles" is a love-story of which we can say that it has a very great plenty of natural feeling, and that we rejoice heartily with the heroine, and believe everything that is good of her married life with the minister. We, however, advise all young ladies who are teaching classes in the Sunday-schools to look up the figures as to the average salary of clergymen in this country, and to go no further than jumbles without patient consideration of all the facts.

For the rest, *Scribner's* has a good article by Mr. Amasa Walker on "Labor and Capital in Manufactures," and once more points out that the Labor Reformers' true quarrel is with society enacting foolish legislation that oppresses us all alike, and that the capitalist is not his natural enemy. Professor Comfort reargues the question whether or not the learning of a modern language should precede that of Latin and Greek, and decides in the affirmative; Mr. W. F. G. Shanks talks, not very well, about yachting and there are various other articles from indifferent to good.

The editor of *Scribner's* (and the editors of the *Catholic World*, too) should look up Mr. John S. Barry, who seems to have more fixed views as to the morality of the Roman Catholic priesthood in Ireland than as to his own. His article purporting to describe the Irish priest of to-day is stolen bodily, with but slight alterations, from William Carleton's sketch of "The Station." It is very impudent as a theft, and very injurious as a description.

TEACHERS AND SCHOOL-OFFICERS

SHOULD EXAMINE THE FOLLOWING

NEW TEXT-BOOKS

Before deciding what books to use in the schools under their charge.

MONROE'S

SERIES OF SCHOOL READERS.

First Reader,	In preparation,	- -	$0 30
Second Reader,	"	- -	0 50
Third Reader,	"	- -	0 75
Fourth Reader,	Just published,	- -	1 00
Fifth Reader,	"	- -	1 25
Sixth Reader,	"	- -	1 50

The publishers have the pleasure of announcing that they have nearly completed a Series of School Readers, by Prof. Lewis B. Monroe, Professor of Vocal Culture and Elocution in the Massachusetts Institute of Technology.

The thorough and enthusiastic study which the Author has given to this subject, and his long and successful experience as a Practical Instructor of Schools, Teachers, Clergymen, Public Speakers, and Readers, have eminently qualified him for the task he has undertaken. These Books are profusely illustrated by the best artists, and in mechanical execution are superior to any school-books now published.

The Series is so arranged that the First, Second, Third, and Fifth Readers form an abridged course, peculiarly adapted to the wants of ungraded schools in the smaller towns.

MONROE'S VOCAL GYMNASTICS.

A new work on Physical and Vocal Training for the use of Schools and for Private Instruction. No teacher, pupil, or Public Speaker can afford to be without this little manual. Retail price, $1.

HAGAR'S ARITHMETICS.

1. Primary Lessons in Numbers,	-	-	$0 30
2. Elementary Arithmetic,	-	-	0 50
3. Common School Arithmetic,	-	-	1 00

THE MOST ATTRACTIVE,
THE MOST PRACTICAL,
THE MOST ECONOMICAL.

Mental and Written Exercises are combined in each Book of the Series, and their arrangement is such that the Primary Lessons and the Elementary Arithmetic form an Abridged Course. The Primary Lessons and the Common School Arithmetic form a Full Course. Each Course complete in Two Books.

No other Series is so economical of the time of the student, or so practical and thorough in its teaching. Methods and Processes, such as are now used by Business Men, are presented instead of those hitherto known only in the School-Room; the Problems are numerous and varied; the books are profusely illustrated with the finest woodcuts; and they are admitted to be the Handsomest Books of their Class ever published.

ALL TEACHERS

Who wish to keep up with the improved methods of instruction, will find it greatly to their advantage to give these books a careful examination.

Copies for examination, or for first introduction in exchange for other books in use, will be supplied at Half Retail Prices.

SPRINGFIELD, MASS.

SPECIAL NOTICES.

THE LEHIGH UNIVERSITY, South Bethlehem, Pa.—Founded by Hon. Asa Packer. Tuition Free. The first term will open on Monday, Sept. 2. Students will be examined to enter the classes, the technical schools, or the preparatory class, on the 30th and 31st of August. Apply to HENRY COPPEE, LL.D., *President.*

DE VEAUX COLLEGE, Suspension Bridge, N. Y.—Boys are prepared by Grammar School courses of study for the Colleges, the Universities, West Point, the U. S. Naval Academy, or for Business. Cadet organization. For Registers and other information, address the REV. GEO. HERBERT PATTERSON, *Acting President. The Rt. Rev. A. C. Cox, D.D., President of the Board of Trustees.*

THE ADAMS ACADEMY in Quincy, Mass., will open September 4, under the charge of William R. Dimmock, LL.D., late Professor of Greek in Williams College. Its specific work is to fit boys to meet the utmost requirements of our best colleges. For full particulars, address the Master.

ST. MARY'S HALL.—The Rt. Rev. W. H. Odenheimer, President. The Rev. E. K. Smith, A.M., Principal. The Thirty-sixth Year will begin on Tuesday, October 1, 1872. Board and Tuition, per half year (in advance), $2 25. No extras. Address THE PRINCIPAL *at Burlington, N. J.*

S. AGNES' SCHOOL.—The third year will begin, God willing, October 2. The School will move into the new building November 1. Terms, $300 per annum. Application for admission should be made at once to MISS CHASE, *S. Agnes' School, Albany.*

GERMANY.—Educational advantages, combined with the comforts of an American home, are offered to a limited number of Young Ladies (not exceeding six) in the family of Rev. Samuel S. Mitchell, Leipzig, Saxony, Germany. Travelling will occupy a part of the year, and the studies will be such as to render a stay in Europe most profitable. The German language and literature will receive especial attention. Private instruction will also be given in the other modern languages and Music. For circulars containing references and full particulars, address MATTHEW MITCHELL, ESQ., *Morristown, N J.*

TRINITY COLLEGE.—The Commencement will be on Thursday, July 11, Examination for admission, on Tuesday, July 9—a Second Examination for admission, September 11. The next academic year will begin September 12, 1872. Students, whose means are limited, can have their tuition ($90 a year) remitted. There are also numerous Scholarships, in aid of such students. It is the aim of the College to give the most thorough liberal education, in union with careful religious training and culture. University Students are allowed to pursue especial courses—especially, of Science and Modern Languages. The College will remain on its present site for the next five years, until its new building shall be completed and its new grounds put in order. Address THE PRESIDENT *of Trinity College, Hartford, Conn.*

ST. LOUIS LAW SCHOOL, Law Department Washington University, St. Louis, Mo. Faculty: Henry Hitchcock, Provost of the Law Department. Hon. Samuel Treat (U. S. Dist. Judge, E. Dist. of Mo.), President Law Faculty. Hon. Albert Todd. Hon. Samuel Reber, late Judge St. Louis Circuit Court. Hon. John M. Krum, late Judge St. Louis Circuit Court. Alexander Martin, Hon. George A. Madill, Judge St. Louis Circuit Court. Hon. Roderick E. Rombauer, late Judge St. Louis Circuit Court. John W. Noble, late U. S. Dist. Attorney. George M. Stewart, Dean of Law Faculty.

The sixth annual term of this Law School will commence on Wednesday, October 9, 1872, to continue for six months; exclusive of two weeks' recess for the Christmas holidays. All the members of the Faculty have long been and are now engaged on the Bench or at the Bar. Instruction is given by daily examinations and discussions upon assigned portions of standard treatises as well as by lectures upon practical topics. Moot Courts are held every week, by the Professors successively, on cases previously assigned, and each student is required in turn to present oral arguments and written briefs. During nine months in the year, besides the ordinary Municipal and Inferior Courts, are in almost uninterrupted session, the Circuit and District Courts of the United States, taking cognizance of questions in Admiralty, Revenue and Bankrupt Law, also the State Circuit and Criminal Courts, and the Supreme (or highest appellate) Court of Missouri; in which are illustrated every department of American jurisprudence. The Law Library has been largely increased, and now contains the principal reports and treatises, besides nearly two hundred extra copies of the text-books in use. The Library is for the exclusive occupation of the students, and is open every day and evening, except Sunday. Applicants for the Junior class must be at least nineteen years of age, of good moral character, and must have received a good English education. Applicants for the Senior class must pass a satisfactory examination in the studies of the Junior year. The Tuition fee for the first year's attendance in either class will be $80; and for the second year $60, payable in advance. No extra charge. For Catalogues and information, address GEORGE M. STEWART, *Dean of Law Faculty, 208 North Third Street, St. Louis, Mo.*

The Nation.

NEW YORK, THURSDAY, AUGUST 8, 1872.

The Week.

THE North Carolina election, which some Republicans had been expecting to carry by from five to ten thousand majority, the Republicans have probably carried, though an official count of the vote may very likely be necessary before the size of the majority, be it Republican or Democratic, can be ascertained. The Northerner who has not travelled through the State cannot conceive of its primitiveness, the sparseness of population, the solitude, the want of telegraphs, railroads, and roads. As we say, the closeness of the vote has not been generally expected among Republicans, the Administration managers having felt a degree of confidence not shared by outside observers who have been watching the course of our politics since January last. That it is a Republican check is, we think, not to be denied—if for no other reason, for this, that the number of people is this year unusually large who will let their political action be decided by their fellow-citizens of other States; and this class of voters must be held for Grant and Wilson by the spectacle of State after State pronouncing for them in preference to Greeley. A defeat in Maine, for example, would take thousands of the pusillanimous sort of Republicans, not to mention the greedy and unprincipled, straight into the Democratic ranks. There is a natural flabbiness and cowardice in the average man which prompts voters to get themselves on the winning side, and in the present campaign this feeling has the support of feelings more respectable, and of a condition of affairs well fitted to perplex the intellect of voters not very discerning. But the stupid cunning of the Greeleyites has done something to counteract the effect of the partial Democratic success. Taking election returns from their hopes, and pretending to have information which by no possibility they could have, the Greeley managers played once more, and more conspicuously than before, their favorite trick, which is to falsify the facts of the canvass in the expectation of deceiving the unwary. The Chinese game of beating the enemy by making all the hullabaloo possible they believe in fully; so, with a sharpness which looks like being too sharp by half, they impetuously fired a hundred guns and issued a spirit-stirring "man and brother" proclamation which subsequent returns have made rather ridiculous. West Virginia is the next State to hold an election, and the contest on the 22d will be close. The Democrats have latterly been having their own way there.

North Carolina in 1870 gave a Democratic majority of nearly five thousand, and it is this vote which should be borne in mind when the present political condition of the State is studied. The vote of 1871 was not a true trial of strength, because the question at issue was whether or not the State constitution should be torn to pieces and a new one made by the Democrats. This all Republicans opposed for obvious reasons, and they were joined in their opposition by some Democrats, because cautious Democrats were frightened not only at the proposal itself, but at the threat of Federal interference and at some of the specific changes proposed. These considerations made the majority against a constitutional convention more than ten thousand larger than it otherwise would have been, as the State was then Democratic. It has become more Democratic since, because of the return to politics of men so disgusted at the downfall of the Confederacy that they would not so much as cast a vote, and because of the recent removal of disabilities from many men powerful in politics. The Administration thus had to carry a Democratic State against the Democracy allied with a certain number of Liberal Republicans, though these, we imagine, are excessively scarce in any State where Republicans are awake to the fact that the Southern Democracy's coming into power concerns them personally and very intimately, indeed. Latest advices make it probable that in this effort the Administration Republicans have succeeded, though by the skin of their teeth. But then if they moved heaven and earth to carry the State, so did their adversaries, and the result is not to be called promising for Mr. Greeley, while it undoubtedly will stimulate the Republican leaders to work. The Presidency is not a prize which falls into anybody's lap; the fight is by no means over for either side. It never is, indeed, till the last gun is fired, and that, we may be sure, will not be till November. "The country must be saved," not only in general but in every Congressional district where there are two patriots of diverse views who want to go to Congress. Everybody may confidently expect to be kept busy through the autumn, even although the September and October States should show the little game of Greeley and the Democracy to be just a trifle too much for the stomach of the American people. We fancy that when the first returns were coming in from North Carolina, and decent people were brought face to face with the fact that the candidacy of Greeley is not a huge joke to grin over, but a very serious matter, it set them to thinking. We hope they will keep on, and we have little fear as to the conclusion they will reach.

Next to the very warmly contested election in North Carolina, the principal political incident of the week has been Mr. Sumner's open declaration of his adhesion to Greeley, in a letter addressed to twenty-four colored men, who wrote to him in the beginning of July asking his advice as to the course which the colored voters had better take in the pending contest. He took three weeks to consider, and then replied, giving his opinion as to "the antecedents" and "present position" of the two candidates. The antecedents of Grant are, he says, that he started with a military commission, and was trained as a soldier, and voted for Buchanan, and never did anything for the colored race "except as a soldier summoned by the terrible accident of war," and "was on the other side," whatever that may mean, when Greeley was "ably championing impartial suffrage." This is all he has to say of Grant's "antecedents," although in the opening paragraph of the letter he declares that he will "not allow any prejudice of any kind to interfere with his advice"; "the occasion is too solemn," he says. The occasion was, however, apparently not solemn enough, inasmuch as this is put forth as a fair account to colored people of the antecedents of a man to whose victorious sword they owe their emancipation, and Mr. Sumner actually owes it that he has a seat in the Senate, and that Mr. Greeley and Mr. Sumner are not now living in obscurity in Montreal or London, with the reputation of a pair of hare-brained agitators whose gaseous speculations had brought ruin on a great nation.

Of Greeley's antecedents, Mr. Sumner says that he began life "with industry and a character," has constantly waged war against slavery, "ably championed impartial suffrage," has "a large heart, and large understanding, trained to the support of human rights"; that "he is a man of untiring industry which leaves no moment without its fruits, abundant political knowledge, and acquaintance with history, has the instinct and grasp of statesmanship, an amiable nature, a magnanimous soul, and above all, an honesty which no suspicion has touched." This Mr. Sumner calls "a brief portraiture." Considered as a statement of the comparative merits of the two men, it is perhaps as dishonest as anything we have had in the way of campaign literature, or would be dishonest if Mr. Sumner had an adequate sense of the force of language. He ought to have added that under Mr. Greeley's shirt would be found on examination a pair of wings which would do credit to a cherub of the largest size, but which the Sage, with the same modesty which has caused him to conceal carefully his "acquaintance with history," has led him to keep from the knowledge of his friends; but that

at the earnest request of that pure patriot, General Cochrane, he will now produce them, and take one fly a week in front of the Liberal "headquarters," for the benefit of colored citizens exclusively. This is sad stuff, the reader will say, and not in the least funny; to which we reply that it is about as funny and fully as serious and sensible as Mr. Sumner's "brief potraiture."

With regard to the "present position" of the two candidates, Mr. Sumner maintains that, while Greeley was nominated by a convention "of able and acknowledged Republicans," Grant was nominated by "delegates chosen largely under the influence of office-holders"; and that the Cincinnati platform was more Republican than the other. As regards the supporters of the two candidates, Mr. Sumner declares that Greeley "has among his immediate supporters in all parts of the country devoted and consistent Republicans, always earnest for reform and purity in government, and on whose lives there is no shadow of suspicion," while Grant has only "the Military Ring, the Senatorial Ring, and the Custom-house Ring." As regards the popular support behind, General Grant has only "a diversified army of office-holders, drilled to obey the word of command," and "the speeches praising him are by office-holders and members of rings." Horace Greeley, on the other hand, has at his back "large numbers of Republicans unwilling to continue the existing abuses, with them as others, a regenerated (Democratic) party." As regards the Democratic alliance, the combination is no worse, he says, than that by which he himself and Mr. Chase were elected to the Senate. After this judicial-minded and accurate account of the situation, he declares Grant deserving of impeachment, says that Greeley's nomination answers to a popular longing, and that his election will put an end to all antagonism between North and South, and whites and colored people.

Other letters have appeared from Speaker Blaine, Mr. Banks, Mr. Garrison, General Dix, and Dr. Lieber. Speaker Blaine's and Mr. Garrison's are both vehement expostulations addressed to Mr. Sumner, accusing him of perfidy towards the colored race. Mr. Blaine's is very trenchant, and shows by dates and circumstances that the Democrats in Congress with whom Mr. Sumner now proposes to act and advises the negroes to act, have solidly opposed, down to last session, every measure, great or small, which Mr. Sumner himself has introduced or declared to be necessary for the protection of colored voters' personal and political rights; and he shows that Mr. Greeley is *now* opposed to all legislation in support of Mr. Sumner's theory of the nature of the national government. Nearly every paragraph is one of the knock-down blows of which Mr. Greeley has received so many, which, in ordinary times, send honest men home to bed, but only make our "reformers" laugh. The *Tribune* wonders how so small a man as Blaine could have the effrontery to write to so great a man as Sumner. Mr. Garrison's letter is a more impassioned document, and handles Mr. Sumner's letter more in detail from the point of view of an old abolitionist. It will probably produce a deep impression on the colored voters all over the country, but especially at the North.

General Dix writes in reply to a Greeleyite manager who had the indiscretion to request him to recommend a stump speaker for the service of the movement. He expresses in very energetic language his abhorrence and contempt for the "beneficent revolution" for five reasons: (1) because Mr. Greeley is "unstable as water"; (2) because he has for twenty-five years been usually found among the most extreme ultraists on all questions of political and social duty; (3) because he has been a bitter protectionist; (4) because he is associated in relations more or less intimate with the principal political scoundrels of this city; (5) because "in the darkest hour of the country's history he counselled non-resistance." He makes some comments, also, on the perversion of the Cincinnati Convention; acknowledges that Grant has made mistakes, but says if they were fourfold more numerous he would not set him aside for an "erratic politician, untried in any important public trust." To this the *Tribune* replies that General Dix was never under fire during the war; that he "whitewashed" Tom Murphy; that he entered public life as a supporter of Adams and Clay, but, when they were beaten, went over to the Jackson party, and "clung to it" till Buchanan's time; and that he never leaves a party as long as it has control of the Treasury. One of the peculiarities of this canvass is that it is impossible to get the champions of either candidate to answer any charges against him. None of the specific objections to Greeley are ever met except by abuse of the person making them and Grant's advocates would sooner go to jail than tell why the President keeps Casey in office.

Mr. Banks's letter is a model in its way, and will repay the careful study of young politicians. It resembles as nearly as may the letter of a pastor resigning his charge for another of more labor and less pay. What causes Mr. Banks to go over to Greeley, he says, is his belief "that the perpetuation of the present policy of the Government is not for the advantage of the country, and that it will not tend to restore its former peace and prosperity, nor to promote the interest of any class of citizens." Everybody will be sorry to hear that he makes this declaration "against his inclination and his personal interest.' In other words, Banks is the protomartyr of the Greeley cause. Others have gone over because they hated Grant, or liked Greeley, or expected something from him, or for the fun of the thing; but Banks goes over from a lofty sense of duty to his country, and with loss to himself. We hope there will not be many other such cases. No Greeley, however great and good, is worth such devotion.

A sad scandal has made its appearance in the Liberal Republican ranks. It is alleged—and, as far as we can learn, with truth—that Mr. Gratz Brown, when attending Commencement at Yale College, in July, after making a foolish and ignorant speech at the Alumni dinner, had the indiscretion to get very drunk and behave in a very disorderly manner at the hotel in the evening. Whereupon the Springfield *Republican*, which is an ardent friend of the Greeley movement, indignantly and honestly demands that Mr. Brown withdraw from the ticket. Mr. Brown, however, shows no sign of doing anything of the kind, and we see no good reason, from the Liberal Republican point of view, why he should. It is true that on the surface his behavior seems odd for a "reform candidate" for the Vice-Presidency, but if he withdrew it would greatly impede the course of the "beneficent revolution," because it would be an acknowledgment that he had done wrong in getting drunk, whereas, on the theory on which this great movement has been started, the oftener he gets drunk, the fitter he is for the place to which he aspires. If Greeley be just the man to represent the views of those who seek revenue reform and civil-service reform and who are opposed to the coercive government of the South, as we are assured he is, the man to represent the views of temperance men, and of that large class of persons who desire to see decency and sobriety in high functionaries, and who were shocked by Andrew Johnson's being fuddled on Inauguration Day, is, of course, a confirmed and noisy drunkard.

The editor of the *New York Times* has at last been arrested for libel, on a criminal charge, and will be tried at the next term of the General Sessions, in case the Grand Jury find a bill against him. The prosecutor in this case is General Kilpatrick, whom the *Times* accuses of scandalous behavior while American minister at Chili, as other papers had accused him long before, but who is now one of "those devoted Republicans" "on whose lives no shadow of suspicion rests," who, according to Mr. Sumner, have joined the Greeley movement; and he has, we believe, been up in Maine lately with Theodore Tilton stumping heroically for the "beneficent revolution." One of its correspondents having advised the *Times* apropos of this to libel away, as its enemies could not get a verdict, even if the libels were untrue, the *Tribune* is moved to say that the editors of that paper "fear nothing but the cudgel

or the constable." It will thus be seen that the champions on both sides are warming to their work, and yet we are still three months from the election. The week before the Pennsylvania election, we fear ladies and children will have to be removed from the city.

The campaign work is a shower of mud to a far greater extent than that of any other campaign within our remembrance. Everybody is a liar, or a traitor, or a drunkard, or a thief, or a cotton thief, or a Tammany thief, or a common thief, or obscene in hotel offices, or a defaulter, or a fool, or a "prudent general"—that is to say, a coward, which is what our friends of the *Tribune* call General Dix—or a libeller, or a swindler, or an unconverted Know-Nothing, or a gift-taker, or a "nepotist," or personally filthy, or "a dishonor to our profession"—"we" being usually the inventors of these candid and courteous terms—or a corrupter of morals, or a butcher, or a rebel, or a Tammany Republican, or a political bummer, or "evidently a friend of Butler's who used our columns," or "the scoundrel who wrote our article," or a blaspheming atheist, or some other nice thing. But there is an occasional bit of relief for the newspaper reader, an indication now and then that we are not all in such desperate earnest as might be supposed. Here is what Doctor Livingstone says to Mr. Stanley when Mr. Stanley has told him all the news of the last five years—Austrian war, French war, Maximilian's death, and all, and finally that Greeley is a Democratic candidate:

"Hold on. You have told me stupendous things, and with a confiding simplicity I was swallowing them peacefully down; but there is a limit to all things. I am a simple, guileless, Christian man, and unacquainted with intemperate language; but when you tell me that Horace Greeley is become a Democratic candidate, I cast the traditions of my education to the winds, and say, I'll be —— to all eternity if I believe it.—(After a pause.) My trunk is packed to go home, but I shall remain in Africa—for these things *may* be true, after all; if they are, I desire to stay here and unlearn my civilization."

Nothing could well be worse than the men who stand between the landsmen and the seamen, and whose business it is to supply captains with crews from crimping houses, and sailors with drunken women and drugged rum, and themselves with about as dirty money as is earned by Christian, Turk, or heathen. "Bethels," tract societies, seamen's aid societies, sailors' homes, have for years labored to abate the horrible evils of this condition of things, and they have each and all done good; but how little, comparatively, no one knows better than those who have worked the hardest and done the most. Do what you would, a sailor coming on shore after a long voyage would spend some of his money in riotous living despite the call of religion or the offer of a quiet boarding-house, with good reading and plain meals; that course once entered upon, he was inevitably certain to end it after so many days by being dropped, dead drunk and penniless, into some vessel's forecastle by the man who had robbed him of his money, and it was the dollars of inland congregations, and not of Poor Jack, which chiefly supported the stated preaching that was done for him. The last Congress, whatever else it did, passed one law for which it should have our gratitude, and which will, no doubt, be of very great benefit to our commerce in general when the Congressman permits us to have some commerce in American vessels. By this law a commissioner is provided for each port of entry, without whose consent no sailor can be shipped and no apprentice indentured, and without the presence of whom no sailor can be paid off and discharged. One of the duties of a commissioner is to enquire of each member of a crew that is in process of being paid off whether he does not wish to lay by some portion of his pay, and each of his duties and powers make in the same general direction. The fees for the shipping of a sailor are set at $2, of which the man pays one-fourth, and the ship the rest—a cheap escape for both from the boarding-house keeper. All laws are more or less evaded, and this will not be an exception; but it cannot fail to do great good to a very much misused and unfortunate class of men. It may ultimately raise the whole character of the seafaring class, and, at any rate, that sort of men are good enough as they stand to be saved from the utterly infamous land-pirates who prey upon them. It is an example of "centralization" to which Mr. Alexander Stephens himself will hardly object.

Mr. Stanley, the correspondent of the *Herald*, who came back from the interior of Africa with the story that he had seen Dr. Livingstone, was for some weeks in danger of much the same treatment at the hands of the geographers as was given Mr. Paul du Chaillu when he brought home the news about the gorillas. The papers had begun to swarm with scientific proofs of his mendacity, when the Foreign Office published an acknowledgment of Livingstone's letters, and Livingstone's son an acknowledgment of the receipt of his father's Journal.

The foreign news of the week has been mainly made up of gossip about the proceedings of the tribunal at Geneva, which the newspapers declare on alternate days to be inviolably secret, and then report extensively. The fact seems to be that they are secret, and that they are likely to remain so, and that all published accounts of what has been done thus far are inventions. The only piece of information which has reached us about the affair is one which is now of but little value, but which we believe to be trustworthy—namely, that it was Mr. Caleb Cushing, and not Mr. Bancroft Davis, who put in the indirect claims, and that he did it to gratify Mr. Sumner.

The most prominent topic of discussion in England is still the tremendous rise in the price of coal. It has risen fifty per cent. within twelve months, and appears to be still rising, and, of course, to say nothing of the direct effects on the supply of fuel, must raise the price of nearly all commodities through its effect on iron, the great instrument of production and transportation. The cause of the rise is puzzling everybody, but its suddenness prevents any anxiety as to a decrease in the product of the mines, either through exhaustion or increased difficulty of working. The *Economist* ascribes it to the tremendous growth of every branch of industry at home and abroad within the last five years. Railroads, steamboats, and factories have all multiplied beyond example, and are all working to their utmost capacity, and the strain in the mines has at last become greater than they can bear—so the price has run up. The result will probably be, as far as regards manufactures, a great diminution of profits for a year or two, as producers will not dare at once to raise their prices to the full extent the advance in coal calls for. By that time, however, the rush of labor and capital into the mining business will probably bring the price down, if not to its old level, considerably lower than at present; but in the meantime there is much suffering in store for the large body of persons who in England live on small fixed incomes. The laborers are covered by the rise in wages, which has been very great, and the producers, even in the long run, take care of their profits, but for the annuitant there is no help. The demand for a heating agent less cumbersome and cheaper than coal grows very fierce and pressing, and must surely before long produce something.

The new loan, which is to enable the Government to clear the soil of the foreign invaders, has been such a success in France that thanks have been offered up in all the churches in Paris. The loan is over $600,000,000, and is issued at about 84½ per cent., and has to be taken up by subscribers, 15 per cent. down, and the remainder in monthly instalments extending over two years. The eagerness to get it is no proof, under these circumstances, of the abundance of capital still in the hands of the French people, but it is a proof of their wonderful confidence in the good faith of the nation towards its creditors. This is one thing which no revolutions ever seem to shake; governments come and go, but none doubt that the public obligations will be met. The public debt of France has now been increased since the establishment of the Second Empire by the enormous sum of $1,850,000,000, and there is absolutely nothing to show for it, neither internal improvements, foreign conquests, nor extended influence, and, as our correspondent points out, she is now loading herself as heavily as ever with soldiers, fortresses, and arsenals.

"FALLING INTO LINE."

THE Greeley canvass, if it serves no other good purpose, at all events supplies a very rich stock of what may be called studies in "practical politics." It is particularly useful in bringing out into sharp relief the peculiar morality of the class of men who make politics the principal business of their lives, or, in other words, govern the United States. Indeed, the revelations it is making in this field are perhaps the most startling we have ever had, and they promise to furnish food for reflection to moralists and social philosophers, long after the canvass is over, so startling that we think the moralists and social philosophers cannot begin their reflections a minute too soon. It is easy to see how an honest and intelligent man could, on a calm review of the circumstances, persuade himself that it was his duty to vote for Greeley rather than Grant. Thousands of such men will undoubtedly vote for Greeley all over the country. The case is one of those perplexing ones in which there is really no principle involved, and in which the work of choosing between the persons is surrounded with all sorts of difficulties, so that it reflects no discredit on any ordinary citizen's moral condition, however much it may bring on his mental condition, that, having four months ago determined to support Grant, he should now, either in consequence of the action of the Baltimore Convention or a deeper study of the Sage's character, determine to support Greeley—and when we say ordinary citizen, we mean a member of that vast and silent mass which, in all political canvasses, goes on spinning and weaving, sowing and reaping, thinking, listening, and reading, while others talk and write. A voter may lawfully change his mind about his vote, as he may change it about anything else, without injury to his moral constitution or the loss of his self-respect.

It is in the process known to politicians as "falling into line" that they treat us to the wonderful display of contempt for decency, and for things far more important than decency, which we are now witnessing, and it is one of the deplorable peculiarities of Greeley's canvass that the "falling into line" has revealed, and is constantly revealing, this contempt on the part of large numbers of persons who are not politicians in the ordinary and bad sense of the word, and who were actually very recently engaged in an attempt to "elevate politics to a higher plane." "Falling into line" does not mean simply voting for a candidate; it means "working" for him—that is, publicly advocating his election by voice or pen. Ordinarily, a Presidential candidate is either a man of whom nothing was known till his nomination, or a man who has long been identified in aims and ideas with the party nominating him. In either case, "falling into line" is attended with no serious moral or mental difficulties. We often have to support for office men of whom we do not altogether approve; because civil government has somehow or other to be carried on, and cannot stand still until the recurrence of such a conjunction of circumstances as will bring about the election of a genuine saint.

In Greeley's canvass, however, the candidate is not only well known, but he has been nominated by two sets of persons with whose aims and ideas he has not and never has had a particle of sympathy, and there has been between his nomination by the one and his nomination by the other an interval sufficiently long to ensure a thorough discussion of his claims and character, and to draw forth an open expression of opinion about him from nearly every leading man in the country. During this interval, as well as before it, while his success in obtaining the second nomination was still doubtful, large numbers of these leading men did express, either in public or private, opinions strongly hostile to him. Some declared their belief that he was personally dishonest; others that he was politically a cheat and impostor, an enemy of the principles he was called on to represent, and, moreover, so deficient in sagacity, firmness, executive ability, and other great qualities, that his administration of the government would be a shocking farce, and a calamity to be warded off by every attainable means. Some, of whom Mr. Voorhees of Indiana is a fair specimen, openly declared, and with all the accents, gestures, and phrases which men usually employ to convince their fellow-men that they are speaking the solemn convictions of their heart, that Greeley was one of the most objectionable of public men, and that under no circumstances would they support Greeley.

Now, since Greeley's chances of election have improved, these men have not only decided to vote for him, but they have in large numbers "fallen into line," that is, begun to compose and preach views of Greeley's character and history which they themselves do not really hold; to circulate stories to his credit of which they do not believe one word; to pretend to attach great weight to considerations affecting him which they have been long familiar with and to which they really attach no weight whatever; to profess to have got new light on his opinions, although they have known all about his opinions and have studied them day by day for ten, twenty, or thirty years, and have a thousand times expressed their hearty belief that they were absurd and detestable; to affect confidence in his personal honesty, after having for years steadily defamed him as a liar and cheat; and to put on an air of great expectation as to his wisdom and capacity, after having long used him as a standing illustration of folly, imbecility, and successful imposture. We could mention names in support of all these assertions; we do not do so because it would swell the volume of vituperation already called forth by a most degrading contest; but Mr. Voorhees of Indiana has made such a public display of his shame that there is neither danger nor indelicacy in using him as an example.

It will thus be seen that "falling into line" in the Greeley canvass means, in the case of a large number of persons, neither more nor less than deliberate entrance on a course of falsehood and evasion in their very worst form—we mean that form in which they are unattended with even the appearance of shame. Ordinarily, liars and deceivers expect, with more or less confidence, that they will not be found out; but Greeley enjoys the rare distinction of being served by a band who do not care whether they are found out or not, provided they can elect their man, and who have been drawn not from the gambling-houses, taverns, and ward meetings, but in many cases from the ranks of men ostensibly engaged in an earnest effort to make politics a pursuit in which people can engage with clean hands. Best of all, these men have been groaning much over the accursed "tyranny of party," with the clank of Voorhees's chains ringing in their ears, and the poor devil himself sweeping up offal and garbage under the lash before their eyes. Now, the question we would propound to persons interested in the future of American society is, What do you think will be the effect of this performance, and, above all, of its successful performance on the minds of the rising generation? What do you think will be its effect on the national love of truth, and respect for honesty and single-mindedness, and on the purification of politics? Do you think the spectacle of a large body of what are ordinarily considered honest and respectable men, lying about Greeley, tergiversating and equivocating about Greeley, will in any material degree differ in its influence on public morals from the spectacle of their lying, equivocating, and tergiversating about pork, or cotton, or sugar? Finally, what do you think will be the condition of this community when a man's solemn declarations on Monday morning will afford no guarantee to his fellows as to his conduct on the Saturday following, and when, on being accused of perfidy and falsehood, he will laugh and tell them that they are behind the age, and that he is engaged in a "beneficent revolution"?

THE CONVERTS.

THE conversion of Mr. N. P. Banks to the Greeley cause is one of those incidents which add to the humor of a campaign already in the highest degree comic. Mr. Banks belongs to a class of politicians—and it is a tolerably large class—who, if the members married each other's daughters, would very soon produce a new type of man. They are by no means without passions—some of them are very sensual, and not a few love whiskey dearly; but they are totally devoid of hates or prejudices. One of the very first steps in their

training is the complete putting away of all personal likes or dislikes. They have no enemies except the members of the opposite party, or citizens of foreign states. They never quarrel with anybody. They occasionally, in moments of excitement, use harsh language about each other, but it is always in a Pickwickian sense. They hardly understand the phrase "bearing a grudge." You might pursue one of them almost to death, but if you forbore your pursuit before the fatal blow was struck he would embrace you warmly, and converse with you on indifferent topics. Indignation on any subject or against any person —we mean, of course, personal, not "patriotic," indignation—is to them a curious form of folly. In short, a snake or fish is not more cold-blooded; and this cold-bloodedness is, let us add, an essential condition of their success.

But their mental condition is even more curious and interesting than their moral condition. They are, perhaps, the only civilized men of the same amount of education who succeed in avoiding the formation of all opinions of their own on public questions. An ordinary man, let him take ever so little interest in politics, from the mere habit of using his mind to frame inductions in his profession or calling, cannot prevent himself from forming conclusions of one sort or other about the men or measures on which his eye falls in the political field. In other words, he *reasons* on them, whether well or ill, through mere force of habit. But the very business of the politician's life is to refrain from reasoning, and to avoid the creation of all convictions. He is occupied solely in finding out what other people are thinking, and though this, like all other investigations, involves a certain amount of inferring, nevertheless it is hardly greater than that performed by the savage in tracking an enemy or a wild animal. There are certain "signs" of change with which he is familiar—and by which he shapes his course, but they are of the simplest kind, the articles in local papers or the talk of local leaders—which he puts through no process of weighing or analysis. The consequence is that he frequently makes horrible mistakes, as Butler and Morton did about the greenbacks, and takes the stump frantically for something which he fancies the people demand, but which he finds out, after making a few speeches, the people do not demand at all. The discovery of this fact would almost kill ordinary men with shame or chagrin; but to the politician it is simply one of the natural errors of his profession, like a grocer's mistake in adding up an account. On finding it out, instead of going into retirement, he calmly takes the stump on the other side, and announces that any man who believes what he said he believed a month previously is a traitor and an imbecile.

His own mind, or what serves him as a mind, he meanwhile is careful to keep as blank as a sheet of white paper. He lets no theories of morals, religion, or government leave the slightest trace on it. On all subjects in which "the party" is not interested, he is either mute as the Sphinx, or else talks in the most delightfully vague and discursive manner. On the labor question, the woman question, the liquor question, and the tariff, and all other subjects of human interest on which it is not necessary that he should "take ground," he "expresses himself" very much like the Philadelphia platform—that is, he makes a loud noise, composed in the main of articulate sounds. On well-recognized party questions, however, his trumpet gives forth no uncertain sound. To hear him discourse on them, one would take him for a ferocious fanatic, who would go to the stake for a point of interpretation, and nothing he delights in more than a large, comprehensive "party question," about which there can be no mistake, and in which there are no pitfalls in the shape of allowances, or distinctions, or doubts. For this reason, he revelled in the slavery question and in the war after they had fairly become party questions. There was no fear of his getting out of his depth in either of them, so he danced and tumbled about in them in every direction, and shouted to all his fellow-citizens to fear nothing and to follow him.

Since these questions have been disposed of, and "the greatest criminal of the age" has retired into private life, and other questions of a more dubious and complex kind have come up, his situation has been one of great perplexity. He enjoyed the *Alabama* affair immensely as long as it consisted simply in the denunciation of England for hostility and bad faith; as soon as it became a question of law and interpretation he lost all interest in it, and gazed at it in disgusted wonder. He has listened to the discussions about the tariff and taxation much as he would listen to the debates of the Philological Convention; but, nevertheless, none of these things called for any positive course of action. The Cincinnati Convention and the growth of the Greeley movement have, however, destroyed his peace for the first time in ten years. The Republican party is apparently breaking up, and he has to choose with which section he will go. We suppose it would be impossible to overestimate the intensity of the anxiety through which Mr. Banks and his kind have been passing during the last four months. The "signs" on which they rely as to the drift of popular sentiment have all failed them, just as the Indian's "signs" would fail him on a frequented thoroughfare. There is no broad principle at stake about which the course of honest and influential men could be watched. The two antagonists are both equally to be dreaded in their way. Grant has the patronage, but Greeley has a newspaper, and which will get the better of the other the wisest man up to this moment cannot tell. Mr. Banks has waited and suffered as long as it was safe. He would doubtless have waited longer if he had not been called on to stump for Grant. Finding himself thus driven to the wall, he has declared "on which horse he stands to win," as the betting men say, and has cast in his fortunes with "Honest Horace." There are thousands like him, though of less prominence, all over the country, who are plunged in similar perplexity, and whose bread and the continuance of whose wretched trade is dependent on their not making a mistake at this juncture. We bespeak for them the magnanimity and forbearance of both candidates. They all mean to support the man most likely to win, and if they are unable to say which this is, it is because they are human.

There is a higher class of politicians than the Banks tribe, who are joining Greeley under the influence of somewhat loftier considerations, who, however, are running risks of a similar nature. They are men who have opinions, and who would like to have them embodied in legislation, but who think there is at least as good a chance of bringing this about under Greeley as Grant, and who feel satisfied that their own chances of personal recognition will be better. That is, they are disappointed with Grant, or have given up all hope of office at his hands, or have been badly treated by him, or see no chance of entering on public life favorably, as long as he and his friends remain in power, and they therefore long, as all politicians out of office long, for a "new deal"; indeed, they would support Greeley if it was only for a "new deal."

There are one or two points connected with the Greeley movement which these gentlemen have perhaps not considered, and for which we would bespeak their earnest attention. Greeley is not founding, and is not likely to found, a new party. He brings into the arena no new principle or idea. He defends no cause. He simply proclaims the personal superiority of Horace to Ulysses. The "Greeley movement," therefore, begins, and must end, with Greeley's election. His Administration, if he is elected, will, and must under the most favorable circumstances, be a period of complete political confusion. Greeley himself will be wholly occupied, not with public questions, but with the distribution of offices among the largest band of claimants by which any President has ever been assailed. He will have to satisfy the prominent Southerners, prominent Democrats, and prominent Liberal Republicans; or, in other words, he will have more "prominent supporters" to satisfy than any of his predecessors. How he will succeed may be inferred from the fact that while he will have no more offices to bestow than any one who has gone before him, he has probably less tact, a worse temper, less firmness, and less skill in dealing with men. His last and most important appearance in official position—his service in the late Constitutional Convention—was not only a failure; it was a ludicrous fail-

ure. What kind of a figure he will cut in the second year of his Presidential term, anybody can guess. We think it not at all unlikely that he might in the first gush of enthusiasm, after his election, and before "the politicians" had time to collect in Washington and make up their "slates," appoint a good cabinet, as Grant did; but there is hardly a doubt that it would be broken up by "outside pressure" far sooner than Grant's was, for Grant had a reputation to help him in resisting pressure to which Greeley can make no claim. There is probably not a single man among Greeley's Democratic and Southern supporters who does not secretly despise and laugh at him.

His Administration would, therefore, almost to a certainty be a period of disorder, if not worse, which would leave politics in much the same condition in which they are now. That is, the parties of the future would still have to be formed, and the ideas on which they will be based would still have to be produced and defined; and one runs no risk in predicting that the "reformers," and men professing devotion to principles, who now throw them aside to follow into the White House an eccentric old man who has been all his life the foe of all that they profess to hold dearest, would find considerable difficulty in persuading the honest men, of whom the main body of all new parties must after all be composed, that they are again to be trusted.

A SUMMER IN EUROPE.

III.—NORTH DEVON.

FOR those fanciful observers to whom broad England means chiefly the perfection of the rural picturesque, Devonshire means the perfection of England. I, at least, had so complacently taken it for granted that all the characteristic graces of English scenery are here to be found in especial exuberance that before we fairly crossed the borders I had begun to look impatiently from the carriage window for the veritable landscape in water-colors. Devonshire meets you promptly in all its purity. In the course of ten minutes you have been able to glance down the green vista of a dozen Devonshire lanes. On huge embankments of moss and turf, smothered in wild-flowers and embroidered with the finest lace-work of trailing groundivy, rise solid walls of flowering thorn and glistening holly and golden broom, and more strong, homely shrubs than I can name, and toss their blooming tangle to a sky which seems to look down between them in places from but a dozen inches of blue. They are overstrewn with lovely little flowers with names as delicate as their petals of gold and silver and azure—bird's-eye and ring's-finger and wandering-sailor—and their soil, a superb dark red, turns in spots so nearly to crimson that you almost fancy it some fantastic compound purchased at the chemist's and scattered there for ornament. The mingled reflection of this rich-hued earth and the dim green light which filters through the hedge, forms an effect to challenge the skill of the most accomplished water-colorist. A Devonshire cottage is no less striking a local "institution." Crushed beneath its burden of thatch, coated with a rough white stucco, of a tone to delight a painter, nestling in deep foliage, and garnished at doorstep and wayside with various forms of chubby infancy, it seems to have been stationed there for no more obvious purpose than to keep a promise to your fancy, though it covers, I suppose, not a little of the sordid misery which the fancy loves to forget. I rolled past lanes and cottages to Exeter, where I found a cathedral. When one has fairly tasted of the pleasure of cathedral-hunting, the approach to each new shrine gives a peculiarly agreeable zest to one's curiosity. You are making a collection of great impressions, and I think the process is in no case so delightful as applied to cathedrals. Going from one fine picture to another is certainly good, but the fine pictures of the world are terribly numerous, and they have a troublesome way of crowding and jostling each other in the memory. The number of cathedrals is small, and the mass and presence of each specimen is great, so that, as they rise in the mind in individual majesty, they dwarf all common impressions. They form, indeed, but a gallery of vaster pictures; for, when time has dulled the recollection of details, you retain a single broad image of the vast gray edifice, with its towers, its tone of color, and its still, green precinct. All this is especially true, perhaps, of one's memory of English cathedrals, which are almost alone in possessing, as pictures, the setting of a spacious and harmonious Close. The Cathedral stands supreme, but the Close makes the *scene*. Exeter is not one of the grandest, but, in common with great and small, it has certain points on which local learning expatiates with peculiar pride. Exeter, indeed, does itself injustice by a low, dark front, which not only diminishes the apparent altitude of the nave, but conceals, as you look eastward, two noble Norman towers. The front, however, which has a gloomy picturesqueness, is redeemed by two fine features: a magnificent rose-window, whose vast stone ribs (enclosing some very pallid last-century glass) are disposed with the most charming intricacy; and a long sculptured screen—a sort of stony band of images—which traverses the façade from side to side. The little broken-visaged effigies of saints and kings and bishops niched in tiers along this hoary wall are prodigiously black and quaint and primitive in expression, and as you look at them with whatever contemplative tenderness your trade of hard-working tourist may have left at your disposal, you fancy that somehow they are consciously historical—sensitive victims of time; that they feel the loss of their noses, their toes, and their crowns; and that, when the long June twilight turns at last to a deeper gray, and the quiet of the Close to a deeper stillness, they begin to peer sidewise out of their narrow recesses, and to converse in some strange form of early English, as rigid, yet as candid, as their features and postures, moaning, like a company of ancient paupers round a hospital fire, over their aches and infirmities and losses, and the sadness of being so terribly old. The vast square transeptal towers of the church seem to me to have the same sort of *personal* melancholy. Nothing in all architecture expresses better, to my imagination, the sadness of survival, the resignation of dogged material continuance, than a broad expanse of Norman stonework, roughly adorned with its low relief of short columns, and round arches, and almost barbarous hatchet-work, and lifted high into that mild English light which accords so well with its dull-gray surface. The especial secret of the impressiveness of such a Norman tower I cannot pretend to have discovered; it lies largely in the look of having been proudly and sturdily built—as if the masons had been urged by a trumpet-blast, and the stones squared by a battle-axe—contrasted with this mere idleness of antiquity and passive lapse into quaintness. A Greek temple preserves a kind of fresh immortality in its concentrated refinement, and a Gothic cathedral in its adventurous exuberance; but a Norman tower stands up like some simple strong man in his might, bending a melancholy brow upon an age which demands that strength shall be cunning.

The North Devon coast, whither it was my design on coming to Exeter to proceed, has the primary merit of being, as yet, virgin soil as to railways. I went accordingly from Barnstaple to Ilfracombe on the top of a coach, in the fashion of elder days; and, thanks to my position, I managed to enjoy the landscape in spite of the two worthy Englishmen before me who were reading aloud together, with a natural glee which might have passed for fiendish malice, the *Daily Telegraph's* painfully vivid account of the defeat of the *Atalanta* crew. It seemed to me, I remember, a sort of pledge and token of the invincibility of English muscle that a newspaper record of its prowess should have power to divert my companions' eyes from the bosky flanks of Devonshire combes. The little watering-place of Ilfracombe is seated at the lower verge of one of the seaward-plunging valleys, between a couple of magnificent headlands which hold it in a hollow slope and offer it securely to the caress of the Bristol Channel. It is a very finished little specimen of its genus, and I think that during my short stay there, I expended as much attention on its manners and customs and its social physiognomy as on its cliffs and beach and great coast-view. My chief conclusion, perhaps, from all these things, was that the terrible summer question which works annual anguish in so many American households would be vastly simplified if we had a few Ilfracombes scattered along our Atlantic coast; and furthermore, that the English are masters of the art of uniting the picturesque with the comfortable—in such proportions, at least, as may claim the applause of a race whose success has as yet been confined to an ingenious combination of their opposites. It is just possible that at Ilfracombe the comfortable weighs down the scale; so very substantial is it, so very officious and business-like. On the left of the town (to give an example), one of the great cliffs I have mentioned rises in a couple of massive peaks, and presents to the sea an almost vertical face, all veiled in tufts of golden brown and mighty fern. You have not walked fifty yards away from the hotel before you encounter half a dozen little sign-boards, directing your steps to a path up the cliff. You follow their indications, and you arrive at a little gate-house, with photographs and various local gimcracks exposed for sale. A most respectable person appears, demands a penny, and, on receiving it, admits you with great civility to commune with nature. You detect, however, various little influences hostile to perfect communion. You are greeted by another signboard threatening legal pursuit if you attempt to evade the payment of the sacramental penny. The path, winding in a hundred ramifications over the cliff, is fastidiously solid and neat, and furnished at intervals of a dozen yards with excellent benches, inscribed by knife and pencil with the names of such visitors as do not happen to have been the elderly maiden ladies who now chiefly occupy them. All this is prosaic, and you have to subtract it in a lump from the total impressions before the sense of pure nature

becomes distinct. Your subtraction made, a great deal assuredly remains; quite enough, I found, to give me an ample day's entertainment, for English scenery, like everything else that England produces, is of a quality that wears well. The cliffs are superb, the play of light and shade upon them a perpetual study, and the air a delicious mixture of the mountain-breeze and the sea-breeze. I was very glad at the end of my climb to have a good bench to sit upon—as one must think twice in England before measuring one's length on the grassy earth; and to be able, thanks to the smooth foot-path, to get back to the hotel in a quarter of an hour. But it occurred to me that if I were an Englishman of the period, and, after ten months of a busy London life, my fancy were turning to a holiday, to rest, and change, and oblivion of the ponderous social burden, it might find rather less inspiration than needful in a vision of the little paths of Ilfracombe, of the sign-boards and the penny-fee and the solitude tempered by old ladies and sheep. I wondered whether change perfect enough to be salutary does not imply something more pathless, more idle, more unreclaimed from that deep-bosomed Nature to which the overwrought mind reverts with passionate longing; something in short which is attainable at a moderate distance from New York and Boston. I must add that I cannot find in my heart to object, even on grounds the most æsthetic, to the very beautiful and excellent hotel at Ilfracombe, where such of my readers as are perchance actually wrestling with the summer-question may be interested to learn that one may live *en pension*, very well indeed, at a cost of ten shillings a day. I have paid very much more at some of our more modest summer resorts for very much less. I made the acquaintance at this establishment of that somewhat anomalous institution, the British *table d'hôte*, but I confess that, faithful to the duty of a sentimental tourist, I have retained a more vivid impression of the talk and the faces than of our *entrées* and *relevés*. I noticed here what I have often noticed before (the fact perhaps has never been duly recognized), that no people profit so eagerly as the English by the suspension of a common social law. A *table d'hôte*, being something abnormal and experimental, as it were, it produced, apparently, a complete reversal of the national characteristics. Conversation was universal—uproarious, almost; and I have met no vivacious Latin more confidential than a certain neighbor of mine; no speculative Yankee more inquisitive.

These are meagre memories, however, compared with those which cluster about that enchanting spot which is known in vulgar prose as Lynton. I am afraid I should seem an even more sentimental tourist than I pretend to be if I were to declare how vulgar all prose appears to me applied to Lynton with descriptive intent. The little village is perched on the side of one of the great mountain cliffs with which this whole coast is adorned, and on the edge of a lovely gorge through which a broad hill-torrent foams and tumbles from the great moors whose heather-crested waves rise purple along the inland sky. Below it, close beside the beach, where the little torrent meets the sea, is the sister village of Lynmouth. Here—as I stood on the bridge that spans the stream and looked at the strong backs and foundations and overclambering garden verdure of certain little gray old houses which plunge their feet into it, and then up at the tender green of scrub-oak and ferns and the flaming yellow of golden broom climbing the sides of the hills, and leaving them bare-crowned to the sun, like miniature mountains—I could have fancied the British Channel as blue as the Mediterranean and the village about me one of the hundred hamlets of the Riviera. The little *Castle* hotel at Lynton is a spot so consecrated to delicious repose—to sitting with a book in the terrace garden among blooming plants of aristocratic magnitude and rarity, and watching the finest piece of color in all nature—the glowing red and green of the great cliffs beyond the little harbor-mouth, as they shift and change and melt the livelong day, from shade to shade and ineffable tone to tone—that I feel as if in helping it to publicity I were doing it rather a disfavor than a service. It is in fact a very charming little abiding-place, and I have never known one where purchased hospitality wore a more disinterested smile. Lynton is of course a capital centre for excursions, but two or three of which I had time to make. None is more beautiful than a simple walk along the running face of the cliffs to a singular rocky eminence where curious abutments and pinnacles of stone have caused it to be named the "Castle." It has a fantastic resemblance to some hoary feudal ruin, with crumbling towers and gaping chambers, tenanted by wild sea-birds. The late afternoon light had a way, while I was at Lynton, of lingering on until within a couple of hours of midnight, and I remember among the charmed moments of English travel none of a more vividly poetical tinge than a couple of evenings spent on the summit of this all but legendary pile, in company with the slow-coming darkness, and the short, sharp cry of the sea-mews. There are places whose very aspect is a story. This jagged and pinnacled crust-wall, with the rock-strewn valley behind it, into the shadow of one of whose boulders, in the foreground, the glance wandered in search of the lurking signature of Gustave Doré, belonged certainly, if not to history, to legend. As I sat watching the sullen calmness of the unbroken tide at the dreadful base of the cliffs (where they divide into low sea-caves, making pillars and pedestals for the fantastic imagery of their summits), I kept for ever repeating, as if they contained a spell, half a dozen words from Tennyson's "Idylls of the King":

"On wild Tintagil, by the Cornish Sea."

False as they were to the scene geographically, they seemed somehow to express its essence; and, at any rate, I leave it to any one who has lingered there with the lingering twilight to say whether you can respond to the almost mystical picturesqueness of the place better than by spouting some sonorous line from an English poet.

The last stage in my visit to North Devon was the long drive along the beautiful remnant of coast and through the rich pastoral scenery of Somerset. The whole broad spectacle that one dreams of viewing in a foreign land, to the homely music of a post-boy's whip, I saw on this admirable drive—breezy highlands clad in the warm blue-brown of heather-tufts, as if in mantles of rusty velvet, little bays and coves curving gently to the doors of clustered fishing-huts, deep pastures and broad forests, villages thatched and trellised as if to take a prize for local color, manor-tops peeping over rook-haunted avenues. I ought to make especial note of an hour I spent at mid-day at the little village of Porlock, in Somerset. Here the thatch seemed steeper and heavier, the yellow roses on the cottage walls more cunningly mated with the crumbling stucco, the dark interiors within the open doors more quaintly pictorial, than elsewhere; and as I loitered, while the horses rested, in the little cool old timber-steepled, yew-shaded church, betwixt the grim-seated manorial pew and the battered tomb of a crusading knight and his lady, and listened to the simple prattle of a blue-eyed old sexton, who showed me where, as a boy, in scantier corduroys, he had scratched his name on the recumbent lady's breast, it seemed to me that this at last was old England indeed, and that in a moment more I should see Sir Roger de Coverley marching up the aisle; for certainly, to give a proper account of it all, I should need nothing less than the pen of Mr. Addison.

THE FINANCIAL POLICY OF THIERS.

PARIS, July 19, 1872.

THE session of the French Chamber is coming to an end, and it will not be inopportune to sum up its results, in a diplomatic, in a military, in a financial, and in a political sense. A final convention has been signed with Germany, and it can hardly be called satisfactory. The Treaty of Frankfort assured the complete liberation of the French soil on the 1st of May, 1874, on the payment of a ransom of five milliards. Two milliards have been paid, and in a few days a new loan will be issued for three milliards. This loan will undoubtedly be covered, as the credit of France is still good, and its resources have shown an extraordinary amount of elasticity. But the conversion of three milliards in paper-money into gold, and the payment of this vast sum of gold at Berlin, are operations which require time; the monetary markets of the whole world would suffer too great a perturbation if such an enormous sum in specie were suddenly withdrawn from one place to another. The Government of France, instructed by the experience of the last year, has been obliged to ask for a delay of one year. It has reserved its privilege of anticipating its payments; but I have good reason to think that it will not be able to make use of this liberty; practically, the French territory will be occupied one year more than was stipulated in the Treaty of Frankfort; and Germany, in return for the delay which she has conceded to us, has exacted some new conditions, such as the neutralization of all the departments successively liberated, and the permission to keep an army of occupation of 50,000 men till the very last day, maintained, of course, by France. I am therefore obliged to consider the new treaty as an aggravation of the Treaty of Frankfort. After eighteen months, the diplomatic position of France does not seem to be as good as in the days of the Commune. Germany will keep Belfort, which is the key of Alsace, a year longer than we then hoped. The French have unfortunately a sort of Chinese wall around their minds, and will never be brought to examine what foreigners think of their affairs. But on this occasion it was hardly possible to be blind to the fact that Germany felt now more stringent, more inimical than on the day after the war, and that Europe had not tried to make an appeal to the generosity of our conquerors.

What can be the reason for this? Is it simply because the world applauds the strong and has no compasssion for the weak? Is it because the European monarchies cannot see with much satisfaction that France is still a republic, at least in name? I think not. The true reason of the coldness of Europe and of the severity of Germany must be looked for in our financial and military policy. If M. Thiers

had simply kept a nucleus of an army, let us say, 100,000 men; if the regiments, the cadres formed by Gambetta, had been broken to pieces; if the President had shown a serious desire to adopt a pacific policy, the circumstances would be different. The Chamber, during its laborious session, has voted a new military law; it was its object to adopt the Prussian system, founded on a short term of service, so as to have a small army in peace, a large army in war. M. Thiers, who is very hostile to the Prussian system, wished to have an army of old soldiers, and to have it as large as possible. The system adopted is a sort of bastard plan; the population will be divided into five-years soldiers and six-months soldiers. This is not the place to discuss its merits from a military point of view. I will only say here that it will give to the Government an army of 400,000 men on the peace footing, which involves an enormous expense. In the budget of 1872, I find that M. Thiers's army will cost the country 100,000,000 francs more than the army of Napoleon III., with its expensive Imperial Guard. Germany and Europe had no right to interfere in this work of reorganization of the French army; but, surely, M. de Moltke knows better than anybody that M. Thiers has now 150 regiments of infantry, 30 regiments of artillery, and 80 regiments of cavalry; and that his intention, often expressed in the Chamber, is never to have in his infantry regiments less than 2,000 men. For a peace establishment, this is assuredly the most gigantic that can be imagined.

As it involves great expense, and as the war and the ransom to Germany add new burdens to the country, M. Thiers had to shape his financial policy not in the direction of retrenchment and economy, but in the direction of extravagance. After the war *à outrance*, we have had taxation *à outrance*. At first, M. Thiers promised 120,000,000 of economies and asked for 420,000,000 of new taxes. This last number was swollen in several successive speeches to 500,000,000, 600,000,000, and it has now attained 700,000,000. M. Thiers has always been a protectionist, and the tax he most cherished was a tax on all raw materials, that is, on all the elements of industry. The Chamber, more imbued with sound principles of political economy, voted in January against this tax, and on this occasion M. Thiers threatened to retire. Since then, every possible tax has been tried and discussed; means have been found to put the budget of 1871 and the budget of 1872 in equilibrium, but still M. Thiers wants more money, He attacked bitterly (and it is always easy to attack a tax) all the taxes proposed by the Commission of the Budget. Now, at this late period of the session, he says he must have not only an equilibrium, but a surplus; he contests the calculations of the Commission, and he again asks the Chamber to vote the tax on raw materials. Since January last, the position of parties has been reversed; the Left is now Ministerial. As M. Thiers has gone further and further from the "pact of Bordeaux," and shown more and more determination to favor the republican solution of our political crisis, the Republicans have rallied more and more round him. They all voted in January against the tax on raw materials; now it is very probable that they will vote for it. They sacrifice their principles to a higher object; in order to save the republican form of government, they are ready to make every sacrifice to M. Thiers.

But this financial question, besides its domestic importance, has an importance abroad. The protective policy has induced M. Thiers to give notice of terminating our commercial treaty with England; and it is certain now that we shall do the same by all our commercial treaties one after the other. M. Thiers intends to reconquer what he calls the fiscal liberty of France. But will not this policy isolate France more completely in Europe? England, Belgium, Switzerland, will lose much by the adoption of a protective policy in France. Germany will do its best to draw within the sphere of its own attraction these small powers, Belgium and Switzerland, who were becoming under a free-trade policy more and more tied to our interests. The United States adopted a high protective policy at the end of a glorious war, in order to pay the interest on the national debt and to make a sinking fund. But your Republic is the undisputed master of a continent. It has enormous resources, mineral and others, to develop, and it has nothing to fear from any neighbor. And, notwithstanding these exceptional advantages, America will certainly by degrees lower its tariff, and return to a free-trade policy. The case of France is different. France is vanquished; France must consider her neighbors; France cannot afford to remain insensible to the feelings and interests of England, Belgium, Holland, Switzerland, and Italy. M. Thiers has, in my opinion, committed a fault of the first magnitude in going back to a protective policy, especially as he cannot plead the excuse of an immediate necessity, and as the commercial and industrial classes were ready to bear all the burdens which could be placed on them. To sum up my opinion, the military system of M. Thiers on one side, and his commercial policy on the other, have isolated France in Europe, and have rendered her position even more difficult than it was some time ago.

But, will you say, why did not the Chamber, which was imbued in its majority with sounder ideas, force them on the President? I will answer in one word: because we have not, under the name of a republic, a real republic. There is no constitution, therefore there is no higher law, which defines the powers of the executive and of the legislative power, no buffer between these two forces. M. Thiers is the chosen delegate of a sovereign house; but he does not live apart, like a constitutional king or a president. He has no responsible cabinet, and he is alone responsible. There is no real sanction to his responsibility, like the re-election and the various checks offered by the American Constitution to the excesses of the executive. His tenure of office has no limit, except the self-dissolution of the Chamber. The sovereign or pseudo-sovereign Assembly can only get rid of him by killing itself, and it dares not dissolve, because the state of the country is not sufficiently reassuring. What are the consequences of this anomalous state of things? M. Thiers comes to the Chamber, and talks and struggles. Day after day he mounts the tribune. I have heard him make three speeches in one sitting. What sort of resistance can be made to him? If there is an adverse vote, he immediately threatens to resign. He did resign once or twice, and the Chamber had to ask him humbly to remain. But, it may be asked, is M. Thiers a necessary man? I am afraid to say yes; not because he is necessary, but because he is thought necessary. He has treated with Germany, he has conquered the Commune; but this might be forgotten. His chief utility is this: so long as he is where he is, the question of monarchy *versus* republic remains in suspense. If a man is learning to swim, he will only feel comfortable where he knows that the water is not too deep; one foot further he knows he may be drowned. M. Thiers keeps monarchy and republic both above water, and though he abuses often and ill-treats every party, he never brings them where some of them are sure to be drowned. It is a curious phenomenon in history. Here is a man who, at the age of seventy-five years, is the only possible ruler of a great country which calls itself a republic. We are living from day to day. Everybody knows that when he disappears there will be something more than a parliamentary dispute.

It is very strange for those who have studied the true character of republican institutions that during this feverish agitation nobody seems to care to know what the French people want. Everybody talks of Thiers, and MacMahon, and the Duc d'Aumale. But where is the French people—the people who will pay these enormous taxes, who will give their sons for this new tremendous army? The people have no voice. The press is the instrument of personal ambitions; it does not look, like the great papers of England and of America, for public opinion. There are millions of honest men in France who are only waiting for the establishment of a definitive government to give it their allegiance. But they are unable to make this government themselves, and their representatives have confided the exercise of their own authority to an old statesman who has no monarchical or republican principles, and who only believes in himself.

THE HUGUENOTS IN GERMANY.

BERLIN, July 16.

I WITNESSED the other day a celebration, which passed off nearly unnoticed by the public of this city, but which in more than one respect deserves the attention not only of the whole Prussian people, but also of your nation. On the 10th of June it was, two hundred years since and under the auspices of the great Elector, Frederick William, that Count Louis Beauvau d'Espenses succeeded in celebrating at Berlin the first French Protestant service, for the benefit of the Huguenots who by the cruel measures of Louis XIV. were driven from their country. The second centenary return of this remarkable day was celebrated with solemn rites by the French Protestant congregation of this city. In the course of years, especially after the Revocation of the Edict of Nantes (April, 1685), which the great Elector answered with the Edict of Potsdam (October, 1685), inviting all Huguenots to his dominions, and securing to them protection of person as well as liberty of conscience, these first French emigrants were followed by thousands and hundreds of thousands of their brethren. Large numbers of them fled to the Netherlands or to England, and thence, or directly, to your country; but the greater part went to Germany, and about 300,000 of these settled in Brandenburg—*i.e.*, in Prussia. Here Berlin soon became their central place of residence. The electors, and later the kings, found it for their interest to attract and protect this French immigration in every possible way. They endowed it with the most liberal rights and privileges. The French colonists, as they were called, had their separate jurisdiction, their separate schools and churches. The property given to them by the government in Berlin alone, is now worth more than a million of thalers. The descendants of the Huguenots have still their college (gymnasium), where, up to the present day, the instruction in all its branches in French is obligatory; and I may say in passing that a poor enough French it is, as the teachers now are all good Berliners or Northern Germans. Of the churches of Berlin, one of

the finest, the northern one on the Gensdarmen-Markt, belongs to them. Here the sermons are not any longer delivered in the obligatory French, for the sole reason that the language has not been practised enough by the present generation.

This far-sighted policy of the Prussian rulers has been amply rewarded by the French immigrants. The new element entered into the body of the Prussian people, which had been exhausted and impoverished by long and cruel wars, like an infusion of new blood. Wherever it came, it created new life out of ruin and destruction, revived manufactures, trade, and commerce, and brought higher ideas and nobler aspirations into the intellectual life of the Germans. For these Huguenots were not only richer and more expert than their German contemporaries, but—applying a much misused term of our day—they marched at the head of civilization. To convey to you an idea of their ready means and wealth, I give you an instance, which I found in the English Parliamentary Debates. In London the French Huguenots had deposited one million of pounds sterling in the Bank of England. In order to keep the money in the country, and to attract even more capital, the English Parliament, in 1709, passed an act for the naturalization of foreigners, who, by the charter of the Bank, had thus far been prohibited from making deposits in the same. The preamble of this bill states the above fact.*

The intellectual and moral power of these immigrants, however, was of even more consequence. On the Rhine, in Magdeburg, and in the Mark Brandenburg, their skilful weavers laid the foundation of the present greatness of our silk, velvet, and cloth manufactories. The superior skill of their tanners and paper-makers gave a new impulse to improvement in these trades. Their artisans, with a developed and cultivated taste, created a superior workmanship, and that artistic fineness for which Berlin especially is justly renowned. Their high moral tone—not to speak of their more refined manners and habits—and their elevation of mind, formed and matured in their sufferings for an idea, exercised an ennobling influence on the comparatively ruder minds of the Germans, who, just emerging from poverty and prostration, were striving for higher ideas and a more civilized enjoyment of life.

The Prussian army, then just being created, gained some of its best superior officers from the French Huguenots. In consequence of the Revocation of the Edict of Nantes, six hundred French officers resigned at once, a great number of whom applied for and obtained admission in Brandenburg. Their cultured manners, their high sense of honor, and their practical experience in war, made them a very valuable and beneficial acquisition. Names like those of Marshal Forcade de Biaix, Generals de la Motte Fouquet, Du Trossel, De Hautcharmoix, De Béville, Des Granges, De Chaumontet, and De l'Estocq, shine on the brightest pages of Prussian military history. Louis XIV., who pillaged and sacked the finest parts of Southwestern Germany, and who, to satisfy the lust of his priests and mistresses, made a desert of the rich and lovely Palatinate, involuntarily atoned for his sins by driving the best and most industrious part of his people into foreign exile, thus developing the resources and the slumbering abilities of his most bitter foes.

These reminiscences came to me while contemplating the insignificant and even stupid countenances of the clergy who had been invited to take part in the celebration of the day. I will not tire you by giving the details of the proceedings, which were of a rather commonplace character. Instead of following the dull sermon of the preacher, let me point out here those incidents in the history of the Huguenot emigration which have a similarity to the character and relations of European immigration into the United States. While other sciences have been furthered by a comparative study in their bearing upon each other and upon the human intellect, the history of emigration has been most sadly neglected in this respect.

I can only wonder why the thought never occurred to some young American historian to study ancient emigration, and that of the Middle Ages, and to compare it with the emigration to his own country, thereby setting the vast influence which it has exerted, and is still exerting, on the development of the American national character and history, in its proper light.

The history of the Huguenot emigration is very instructive to the American reader, as it develops the particular phases which also characterize the present European immigration into the United States. There are three periods in the history of the former. In the first of them (1685–1715) the religious interests gradually draw back, making room for the national differences; in the second (1715–1760) France loses her intellectual hold on the emigrants, as she had lost it bodily long before; while in the third (1760–1815) the Huguenots amalgamate themselves with their new country, and become Germans in heart and sentiment.

In the beginning the Huguenots believed that their stay in Germany would only be temporary. Homeward they looked for their friends and relatives, for the more genial climate and kinder associations, for all which a German who knows the political and social condition of his country at that time will be the last to blame them. In Berlin they did not build a church for fear of being retained by it when the hour of return should be at hand. In October, 1696, a commission was formed for going back to France—but in vain. Louis XIV., in the Ryswick peace, refused to grant his "disobedient" subjects the permission to return home, though the Protestant powers—England, Holland, Sweden, and Brandenburg—had joined them in the request. But, nevertheless, they did not give up the hope of a favorable change. They now waited for the death of their cruel oppressor, and continued to live in the faith of their fathers, separate from their German fellow-citizens, considering these their inferiors in every respect. Louis, however, did not die before 1715. The good French patriots, in the meantime, grew tired of waiting, settled in business or married, and finally gave up all hope and wish of return.

They now became very active and useful members of the German communities in which they lived. Forming a separate organization, and retaining their language and customs, their religious interests no longer stood in the foreground, as they could worship just as they pleased. They intermarried with Germans, entered the military and civil service of Prussia, and made themselves useful in all branches of industry, science, and art. The German who married into the "colony" derived a great many advantages from his connection with it; he became, so to say, a shareholder in its property, and obtained through his wife substantial benefits for the education of his children. For this, if for no other reason, the French girls were much courted and sought after.

During this second period, the Germanization of French names increased. Thus Le Clerc was changed into Klerike, Hennequin into Hennike, La Croix into Kreuz, Poirier into Birnbaum, Dupré into Wiese, D'Ange into Engels, Laforge into Schmidt, Hareng into Häring ("Willibald Alexis," the well-known novelist, whose real name was Häring, belonged to this family), Boutemont into Buttmann (the celebrated philologist's family), Belier into Widder. In a smaller proportion we find German names Gallicized, evidently by the Huguenots, who spelt them according to their pronunciation; thus Chenin for Schöning, Stosse for Stosch, Chendalar for Schönthaler. Of all the French colonists in Frankfort-on-the-Oder, from 1685 to 1725, out of a hundred only two or three names have a German form; from 1725 to 1730, already twenty; and from 1750 to 1800, not less than thirty. Of the one hundred and eighty-four Huguenot names which, between 1686 and 1700, are mentioned in the records of the French church of that town, only twenty-five remained between 1725 and 1730, ten between 1750 and 1800, and only three in 1853—so entirely were they gradually converted into German.

These translations are more sensible and more correct than those which are daily made by the Germans of the United States. Not to speak of the many young Jewish clerks who make out of their common German family name of Löwenstein an aristocratic American *Livingston*, or out of an ordinary Schönberger a more dignified *Belmont*, I will give you a ridiculous example, which I found, if I am not mistaken, in Mr. Friedrich Kapp's "History of German Immigration into the United States." A German farmer by the name of Feuerstein arrived in the last century in Pennsylvania. When settled, his American neighbors told him that his name was too German, and that he ought to translate it into good English, whereupon he called himself Flint. A few years later, Flint moved westward, and settled among Germans, who, in their innocence of the English language, took the English word Flint for the German word Flinte, and thereupon advised him to change it into its supposed corresponding English meaning. Flint, learning that Flinte was synonymous with fowling-piece, musket, gun, now adopted Musket as his family name. Feuerstein-Flint-Flinte-Musket, in the course of years, emigrated into another county, where his neighbors, struck with his extraordinary name, prevailed upon him to alter it into *Gun*. Although having gone through a fourfold metamorphosis, Gun's son did not stop here. Not liking the last name of his father, and taking it for a corrupted John, he transformed it into Johnson. This man is said to have been the father of Andy Johnson. Whether this genealogy of the Ex-President is a correct one must, of course, be left to the higher criticism of the American historians.

To resume the subject, it took the French immigrants more than a century to become Germans fully. The fault lay less in them than with the Germans, who but too often treated their new fellow-citizens with narrow-mindedness, jealousy, and envy. They only unwillingly acknowledged the superiority of the French in arts, manufacture, and commerce. In Prussia the emigrants were much better off than in other parts of Germany. The so-called free imperial cities, which ought to have done everything in their power to attract

* This short-lived act naturalized all foreign Protestants who chose to reside in England. It was repealed in 1711 in consequence of the clamor of the Londoners.—Ed. Nation.

the thrifty emigrants and to strengthen themselves by the accession, met them with the utmost rigor and even meanness. In Hamburg they obtained only in 1761 and in Frankfort-on-Main only in 1788 the free government of their church. In the latter city especially, a Know-Nothingism manifested itself which had its origin in the lowest possible greed, grudging them their livelihood. The Frankfort burghers apprehended that they would be outdone by the Huguenots in the pursuit of their trade, and concealed their shabby economical fears behind those religious scruples which were prevalent at that time among the followers of Luther and Calvin.

It must be said, to the great praise of the Huguenots, that their descendants in the wars against the French and Napoleon were the most enthusiastic German patriots, and that without a single exception, in 1813 and 1815, they took up arms to drive out the French invaders. Since 1815, they are Prussians heart and soul, and only here and there are we reminded by a public institution, or a French name or a celebration like the present one, that we once had a large French "colony" amongst us. It is the old law which has taken place in this instance too, a comparatively small number, the *disjecta membra* of a great nation, must dissolve and amalgamate themselves with the other great nation in which they settle. Thus the German, English, and Irish immigrants into the United States will, as the Huguenots gradually grew good Germans, also in the course of one generation or two lose their national individualities and become each a homogeneous part of the American people. All plans of establishing a German, Irish, or English State within the territory of the Union, or of retaining another language than the English, must fail; they are beforehand doomed to defeat; and those who now entertain such ideas will in a few years be the best and most earnest citizens of the Great Republic. RUECKWANDERER.

Correspondence.

THE BUTLER DINNER.

TO THE EDITOR OF THE NATION:

SIR: I suppose that you, as well as the rest of mankind, are quite unconcerned as to who presided at that "Butler dinner," so long as it was not Horace Greeley. But, as my name has been given in the *Nation* and elsewhere as the president of an "occasion" which has again been made the subject of some newspaper gabble, will you allow me, while not proposing to apologize to anybody, or feeling the slightest twinge of conscience about the matter, to say a few words?

An invitation was received to attend the dinner to Mr. Butler, who, it appeared, was about to leave the country as Consul-General to Egypt, by Grant's appointment. The invitation came from a gentleman who is, I believe, generally recognized as virtuous and respectable, who was never, so far as I know, accused of breaking any of the commandments or laws, and whom I had known as a learned and lively writer. With Butler himself I was entirely unacquainted, never having seen him, and knowing nothing of him except that he had received an important official appointment.

On reaching the place at the appointed time, I found a company of what are called "distinguished individuals"—representatives of the bench and bar, Wall-Street men and bankers, editors and writers from nearly all the newspaper offices in the city.* You have quoted from the *Tribune* the names of a few of them; but, besides these, there were many who, I believe, pass for decent and solid men. Presently "the master of ceremonies" told me that Mr. Greeley, who had been asked to preside, could not attend, and that I must take his place.

Now, these being the circumstances, was the present editor who took part in the affair guilty of anything? Undoubtedly there are circumstances in which one should be held responsible for the character, conduct, and antecedents of those with whom he sits at table, as host or guest. Look, then, at a few experiences.

A short time before the Butler dinner I attended a public banquet at Delmonico's to Charles Dickens, at which Horace Greeley presided, and at which I found the editor of the *Nation* and many other of my editorial *confrères*. Did we, by our presence, endorse the personal or marital virtue of Dickens, or the morality or elevating influence of his works?

About the same time I attended a public dinner to a Democratic senator, from whom I differed in political views. Did I, or did Mr. Bryant and the other Republicans there, endorse by our presence Senator Casserly's politics? Certainly not in the after-dinner speeches.

About the same time I attended a public dinner to a military general for whose genius and career I had not the most exalted admiration. Did I compromise myself?

* As for two of the respectable men among these gentlemen, those connected with the *World*, they have since stated that they were not present.—ED. NATION.

In short, may not an editor or other person be often called on to take part in affairs at which he will meet all sorts of people? Could not one attend a dinner to Pericles without justifying his private life, or to Dante without accepting his religious ideas, or to Jean Paul without admiring his style, or to Captain Nolan without approving the cavalry charge into the mouth of hell which Tennyson once supposed he had made? Couldn't you accept an invitation from the Pope without being a Catholic or send one to Metternich without being an absolutist? I would not attend a fête in honor of Caligula, because I believe he was a bad man; nor in honor of George Francis Train, because I consider him a quack.

I wish I could make this note shorter; but, in closing, I must relieve the *Times* from an imputation of the *Tribune*. Before the affair in question, my editorial connection with the *Times* had been dissolved, so that it was in nowise responsible for my presence in the place previously assigned to Mr. Greeley. JOHN SWINTON.

NEW YORK, July 29, 1872.

[As a general rule, it is no concern of ours where or with whom Mr. Swinton, Mr. Greeley, or anybody else dines. But we maintain that if any person takes part in a dinner given to celebrate the entrance of a notorious rascal into the civil service, or promises or agrees to take part in it, and is only prevented from doing so by circumstances in no way relating to the rascal's character, and if he makes, or causes, or permits to be made, in his newspaper, public proclamation of his regret at not having been present, and of his admiration of the rascal and kindly feeling towards him, that person is, *ipso facto*, estopped from abusing the President for making the appointment, and likewise for failing to cancel it. Moreover, if any gentleman offers himself as a Reform candidate for the Presidency, and asks people to take his word for it that he will put none but honest men in office, and will purify the Administration of the Government, and resist the bad influences to which all Presidents for thirty years have had to succumb, we hold that the company this gentleman keeps, the kind of persons he helps to fête and recommends for office, form a legitimate subject of enquiry, as lending aid in forming a judgment as to the value of his promises. Mr. Swinton not having done any of these things to our knowledge, and having received no nomination for either the first or second place on the Presidential ticket in any of the recent distributions of this honor, we have nothing to say as to the ethics of his appearance at the Butler dinner, or any other. But we must be permitted to observe that there is an obvious defect in all the illustrations he cites. For instance, if Dickens were only known, or best known, as a man who had had serious differences with his wife, the public dinner to him would have been a very ridiculous affair; if it had, under such circumstances, been given to celebrate his appointment as a judge of the Matrimonial Causes and Divorce Court, it would have been worse than ridiculous. To celebrate by a dinner Butler's appointment to be the representative of the American people, and the guardian of their interests in a foreign country, was certainly an offence against the whole community, however harmless it might have been to give a dinner to Butler as a simple writer for the press. —ED. NATION.]

Notes.

AS a supplement to our recent article noticing President Chadbourne's work on "Instinct in Animals," we wish to say a word about a curiosity which may be seen in the Museum of Brown University at Providence, R. I. There, among other objects of interest, are several thousand specimens of birds, together with a good showing of nests, and among the latter is the curiosity of which we speak. It appears to reveal an act of intelligence and knowledge entirely above the plane of instinct so called, and to be clearly referable to reason. A bird had built her nest in a tree, hanging from a slender branch, not much larger than a pipe-stem, which grew out of a small limb about half an inch in diameter. Passing over the use of strings wound around the branch, the ends of which were incorporated in the nest, to assist in holding it suspended, and which is no new expedient in nest-building, we wish to call attention to a remarkable device of this bird to meet an unexpected emergency. After the nestlings were hatched, and had grown well towards maturity, their increasing weight revealed the weakness of the

branch, and the mother-bird seems to have become alarmed for the safety of her brood. What should she do? The case might well have seemed remediless to a creature necessitated, as we are told, to work ignorantly and blindly in a prescribed routine, over which she had no control. She had found her mistake in selecting so slender a branch to support her house and cradle, and must have been appalled by the threatened consequences. But "instinct," or else good sense, came to her assistance. She had some knowledge of the functions of a string, of its strength, of its pliability, and of the mode of attaching it to a twig by winding it round and round, and, perchance, of tucking under the end to prevent uncoiling—a convenient substitute for a knot. But it was necessary to advance a long step beyond this; and after tying one end of the string to the branch which supported the nest, to carry up the other to the main branch and tie that also, as well as stretch it tight. Could a tiny bird effect this process of reasoning? If she could, was the act itself within the compass of her physical powers, with but a beak and talons in the place of hands? This is the precise remedy the bird got at and carried into execution. The nest itself attests and records the fact. All we know of it we take from this witness. To save her little family, she sought and found a piece of twine several inches in length, wound it several times around the branch outside of her nest, and, having made it secure, then carried up the string to the main branch, over which she drew it as tight as she was able, and wound it around several times until it held firmly. Thus, as a guy, it supported the slender branch with its own strength, and prevented it from breaking under the weight of the nest and its occupants. The professor in charge of the Museum himself took the nest from a tree on or near his own premises. He should have it photographed, and send the picture to the *Naturalist*, with a precise and minute description; and this should attend particularly to the probable objection that some kind person did the mother-bird the service of making a safe nest safer.

—A Brooklyn correspondent, noticing the imposition practised upon the editors of *Scribner's Monthly* by a writer who palmed off upon them as his own one of William Carleton's sketches, speaks of a similar cheat, of which Messrs. Harper & Brothers were the victims. Any editor is liable to be so imposed upon, and it is always desirable that exposure should be thorough and punishment merciless. Our correspondent writes as follows: "In your paper of the 1st inst., p. 79, you speak of an article in *Scribner's Magazine* which 'is stolen bodily, with but slight alterations," etc. 'It is very impudent as a theft. . . . . .' This reminds me of a similar theft in the number of *Harper's Monthly* for October, 1870 (pp. 698–709), in which a piece called 'The Detective' is stolen bodily, with slight alterations, from the *Dublin University Magazine*, Vol. XXX., November, 1847, pp. 526–545, where it is called 'The Watcher.' As revamped for *Harper's*, the title, place, and names are changed, and there is a little condensing done, but the theft is unmistakable by any one who will take the trouble to glance at the two stories. I do not recollect seeing any exposure of this theft. It is not a reproduction from memory, for many parts are copied with only the necessary changes of words. 'The Watcher,' by the way, is a very strongly written story, and will well repay reading. If it is not true, it is remarkably well constructed."

—The letter of our correspondent M. N., setting forth his determination to keep his house cool hereafter, and a method of his devising by which the end desired could be attained, has called out many responses, and among others one from a Philadelphian, who says that a perfect method has already been discovered by a fellow-townsman of his, and has been successfully applied in practice. "By this plan," he says, "a cargo of fresh beef was brought from Texas to Philadelphia last August—a distance of 2,500 miles, costing but a pound of ice for each pound of beef so carried. And a line of steamships especially devoted to this trade is now being built to bring beef from that remote point regularly to this and the New York market." Again he says: "Philadelphia has in use in one of her largest hotels an apartment of considerable size especially devoted to a keeping of its entire larder in a condition not surpassed in freshness by that recently culled from the gardens or brought from the market stalls. During the Republican Convention held here in June last, this wholesale refrigerator supplied all the guests of the house with provisions of all sorts, from tenderloin steaks to luscious strawberries. And, although thousands were daily fed at the table during this period, there was no occasion to go to market for extra supplies. Beef, poultry, and game, fish, butter, foreign and domestic fruits, eggs, milk, and vegetables of the most delicate nature, kept alike pure, sweet, and fresh within its walls." In a part of the city at some distance from the hotel above spoken of there is, it is stated, "an immense warehouse, capable of holding a ship's cargo if necessary, and in whose preserving rooms through all the torrid heats of July a temperature of forty degrees has been maintained." "Butter in there is solid and firm," says the correspondent of the *Bulletin*; "cucumbers are as crisp as those pulled from the vines in October," and he goes on through a list of eatable things which, as he enthusiastically declares, are "delightfully preserved and improved" by this cooling process. It is cheap, too, he asserts; nothing prevents a family even of limited means from having every room in the house, no matter how hot it is outside, at a temperature of fifty degrees if they choose, and sleeping under a blanket every night of the year. The process is, in fact, "nothing more than making an artificial winter by driving a current of air, by means of a fan, through a column or chest of ice"; and the very channels now in use in modern houses can be employed to cool them in summer as they are to heat them in winter. The order can be reversed by this mode to suit the change of season. "Place the ice chest on the upper floor, insulate it and protect it from outside radiation. Put up in its vicinity 'a clockwork arrangement' to drive the fan. Cold air, like shot, falls; and in falling, convey it by pipes to the stories below. Regulate the openings in each chamber by a series of registers, as you would heat. Keep the doors and windows closed as in winter time to exclude the outside air, and an ordinary dwelling-house can be kept at from forty-five to fifty degrees Fahrenheit as readily and at far less cost than keeping the same amount of space comfortable in winter by a heater in the cellar." A house supplied with this refrigerator would need only the next preceding "Yankee invention" to be an Earthly Paradise. Our readers have probably heard of the patent sheet-iron cat to be affixed to the roofs of houses desirous of possessing all the modern improvements. It is made of heavy sheet-iron, has an adjustable elastic tail, claws some inches in length firmly attached to legs movable by clockwork, and some internal machinery which enables it to make extremely provoking and irritating cries, which, while they insult, entice. All the natural cats in the neighborhood who happen to be at large are, upon hearing these yowls, in a manner compelled to the roof of the patent cat, and when assembled there to the number of one hundred they are destroyed in successive single combats and heard of no more. The writer in the *Bulletin* suggests that his method be tried in theatres and hospitals, and says, "Think of what a blessing such a temperature would be to the sick patient tossing with fever in midsummer," and he adds, "Besides, the air in passing through the body of ice is not only chilled but disinfected, and to take it into the lungs is like quaffing a draught of champagne or inhaling the frosty atmosphere from a mountain top in October."

—The London *Economist* (June 29) has been studying the question of the world's gold coinage during the past twenty-four years as the best measure of the total production of gold in that period, and with a view to ascertaining how far this production has caused, or if continued is likely to cause, a depreciation in the value of gold and a consequent rise in prices. In 1848, it says, the current estimate of the gold in the world was £560,000,000; since then the mints of France, England, Sydney, and the United States have coined £600,000,000 (France alone coining £260,000,000), of which at most one-third may be set down to recoinage. But along with this enormous production, due to the great gold discoveries in California and Australia, there has been "a great diminution in the rate of coinage since 1857–59, when the climax of activity, which began in 1851, was obtained"—a fact which by itself would indicate that there had been a check to production. Again, France has coined more than twice as much as England, which has a far greater trade, and virtually coins for Brazil, Portugal, and other countries. Consequently, it has absorbed a large part of the new gold, the disposition of the people to hoard having been stimulated by the disorders of 1848–52. Other circumstances that tend to neutralize the increased supply of gold are the increase of population and the increase of wealth in the countries making use of a gold coinage since 1848. Omitting France, which substitutes gold for silver, the coinage since 1848 has been £338,000,000, or an increase of 60 per cent. on the previously existing stock. Meantime, the United Kingdom has added 14.3 per cent. to its inhabitants, the United States 77.3, and the Australian colonies enough to make the average increase about 44.5 per cent. Further, in the United Kingdom the property assessed to income tax has increased 70 per cent., its exports of staple articles 100 to 300 per cent., its coal and iron products 60 and 53 per cent., its imports of cotton and wool for home consumption 72 and 167 per cent. Per contra, the spread of banking in England, and the introduction of inconvertible currencies into France and the United States, should tend to aggravate the result of an increased supply of gold. On the whole, it appears that the checks and balances are sufficient to avert the threatened disaster, or at least to prevent financiers from predicting it with any certainty; the growing intimacy and complexity of international relations almost defy their attempts to assign causes to effects or to trace exactly the effects of causes. There is no need, therefore, of being alarmed just yet about the over-production of gold, though the subject is worth all the study that can be given to it.

—Mr. Edward Whymper contributes to *Nature* (July 11) a very interesting paper on Alpine maps, which he introduces with the statement: "The

Alps are not likely to be thoroughly explored for several generations yet to come; and I doubt not that it will be possible for men half a century hence to spend their ten or twelve seasons in the Alps, and still to find at the end of their time valleys which have not been described or even visited." He praises in the highest terms the Government map of Switzerland, on a scale of $\frac{1}{100000}$ of nature, in 25 sheets, commonly called the "Carte Dufour," in honor of Gen. Guillaume Henri Dufour, under whose immediate direction all the drawings and plates, and a great part of the survey, were made. Speaking of "its almost faultless expression of every variety of mountain form," Mr. Whymper remarks: "It would be a poor compliment to it to say only that one can distinguish upon it slopes from precipices, jagged ridges from rugged ground, and the 'ice-falls' of the glaciers from the gentle undulating snowy slopes of the upper regions. . . . The mountaineer sees the Alps before him with all their marvellous diversity of architecture; nay, more, he can fix his line of assault, and will say, 'Here, if anywhere, the summit may be gained.'" Since 1860 the Swiss have undertaken a still greater map, to be complete in 546 sheets—the portion comprising the plains and the Jura on the scale of $\frac{1}{25000}$, the Alpine portion on a scale of $\frac{1}{50000}$. Finally, a reduction of the Carte Dufour is being made at Berne, on a scale of $\frac{1}{250000}$, in four sheets. It is a copperplate map, and will be sold at the low price of 10 francs, the price of the original Dufour being forty francs, and that of the monster map of 546 sheets one franc for each sheet. The French are very backward in the cartography of their own Alps, and "the greater part of the Department of Hautes-Alpes, and the whole of the Departments of the Basses-Alpes and of the Var (to say nothing of Nice) remain unmapped." The work that has been done is very inferior to the Swiss, and by no means trustworthy in the topographical details. Even Capt. Mieulet (of the Etat-Major), who surveyed the range of Mont Blanc, was anticipated if not surpassed by an English amateur, Mr. Reilly, whose map was published in June, 1865, at the expense of the Alpine Club. The Club has also published for Mr. Reilly an important map of the Central Pennines, and is now superintending a new map of the Central Alps on a scale of $\frac{1}{250000}$, extending not so far to the north, but embracing more on the south than the Swiss map of the same scale.

—The intellectual activity of Prussia is beginning to tell beyond her borders. In Austria there are calls for university reform. The universities are said to need a thorough regeneration to put them on a footing with the rest of Germany. To this end, it is urged, the old system which gives preference to Austrian-born candidates should be abandoned, and the best men from all Germany should be called to professorial chairs. "We admit," says the *Deutsche Zeitung*, a Vienna journal, with some bitterness, "that the best men cost the most. Yet one would think that a state which squanders its hundreds of thousands for strong lungs and nimble legs, and for new theatres and barracks its millions, might put by a little sum for the universities." It is further demanded that sectarian barriers should be broken down; and it is insisted on as a matter of primary importance that the rector of the university must be chosen by the professors. These demands from Austria sound a little strange in America, where professors are so jealously excluded from all share in academic elections, where calls from one university to another are infrequent, and where a man's fitness for a professorship may be decided not so much by his scholarship or science, as by his views on predestination, the Trinity, or infant baptism.

—The Vatican Library being utterly unfurnished with modern books, and very difficult of access, it has been proposed to establish in Rome a public library devoted to the collection of works on the history of that city. The foundation of special libraries has been common of late. There is a Shakespeare library, for example, at Stratford, a Dante library at Dresden, and a Russo-historical library of 30,000 volumes at St. Petersburg. There is no lack of printed books on the history of modern Rome, and if funds are forthcoming a large Roman library can speedily be formed, which would soon begin to attract to itself historical, biographical, and genealogical manuscripts, of which there is an abundant store in the archives of Italian families. A society for the publication of such materials will soon be organized. In former times Italy could point with pride to the great works of Muratori, Tiraboschi, Savioli. The present generation has done little; and with regard to Rome, Rossi's "Inscriptiones Christianæ" is almost the only late work of importance by an Italian; by foreigners we have Burns's "Rome and the Campagna," Hare's "Walks in Rome," and Wey's handsome "Souvenirs et Descriptions." It is to be hoped that native diligence and learning will rival these.

—We were in error, the other day, when we said that Ainsworth, the novelist, took his "Tower of London" from "La Danse Macabre." It was his "Old Saint Paul's" which he got from that source.

THE FRANCO-AMERICAN ALLIANCE.*

MR. BALCH has applied himself to filling a gap in our Revolutionary annals for which it is not difficult to account, but which it is a little remarkable should not earlier have engaged the serious attention of a competent historiographer, either French or American. "Not only," says our author, "do we not possess a precise and circumstantial account of the French intervention in America during the War of Independence, but even the materials for it are wanting or scattered. To this day, for example, have never been published the names of the French regiments, with their list of officers, nor the composition of the squadrons, nor the exact march of the troops, nor the true order of battles, nor of the losses sustained" (p. 5). Mr. Balch has been particularly fortunate in acquiring inedited manuscripts and rare and original documents, which he catalogues in the proper place; and, to the first-rate qualification for his task of being a Philadelphian, has added long residence in France, with access to the military and naval archives of that country. The present volume is only the first part of the entire work. It treats of the causes of the Revolution, gives a summary view of events down to the year 1781, and a complete narrative of the expedition of the French corps under the command of Rochambeau (1780–83). The second part (which, to judge by the amplitude of material, might easily make two volumes) will possess a still higher interest, inasmuch as it will embrace historic notices of the French regiments which came to America, biographical notices of the French volunteers and regular officers, and "several episodes and interesting details, among which will be found an *aperçu* of American society of the epoch, as it appeared to the French officers who speak in their manuscripts and letters of the domestic life of a great number of American families of distinction." Something of this glimpse of the manners of the people, material progress of the principal towns, and the scenery of the country, we get in the volume before us—as where, for instance, we are told of the Bostonians of 1781 what we are apt to consider a traditional Philadelphian characteristic, that "the chief part of their time they devote to the table." But these touches are not more numerous than are needed to enliven the narrative, and can only be taken as samples of the good things in reserve.

Had Mr. Balch written directly for his countrymen, he would perhaps have modified his plan in some particulars. We have especial reference to Sections III., IV., and V., in which he goes back to the early settlement of America, and even to the "principles of government established by the Roman Empire, and adopted by the Romish Church," to arrive at the conclusion that, more than the greedy exploitation of the colonies by Imperial restrictions on their freedom of trade and industry, religious differences were the potent cause of their desire and struggle for a separation. The speculations on this head seem to us the least valuable portions of the work, and we seem to perceive the influence of the author's *milieu* when he indulges in such philosophizing as he treats us to in Section IV. "It may be remarked," he says (p. 25), "that the government of every people is generally the consequence of the religion which it professes"; and (p. 26) that "all forms of government may be practically reduced to three: monarchy, the immediate and necessary result of the belief in monotheism; oligarchy or aristocracy, which results from pantheism; and democracy or republic, the consequence of polytheism or of the belief in a Supreme Being fulfilling a multitude of functions." It would be curious to apply these generalizations to the map of Europe at any given period in modern history since Christianity gave us a "polytheistic" notion of the Supreme Being. They appear to us as vain as the thesis which we suspect to be implied in the titles of two pamphlets by the Rev. Thomas Smith, cited with approval by Mr. Balch (p. 27), namely: "Presbyterianism and the Revolution," and "The Real Origin of the Declaration of Independence." Published in English instead of in French, and for American readers, we doubt if Mr. Balch's judgment would have retained these passages, which now serve principally to increase the bulk of his work.

In his rapid sketch of the pioneers of French colonization in this country, he has fallen into inaccuracies which all the more disfigure a product of the French press. Those which we shall point out are found on pp. 43, 44. Father Marquette appears as "le P. jésuite Marquet," and the jolly but unscrupulous Friar Hennepin as "le père Hennequin," while the latter's companion, Du Gay, is transformed into the "sieur Dacan." Hennepin's ascent of the Mississippi is assigned to 1679 and 1680, whereas it was wholly within the second of these two years. In the next paragraph, describing La Salle's descent of the great river, it is stated that he set out from Quebec in 1682; but when that year opened he had already reached the present site of Chicago, and on the sixth of February his canoes were floating on the Mississippi. "He first betook himself," the narrative continues, "to the Illinois,

* "Les Français en Amérique pendant la Guerre de l'Indépendance des Etats-Unis 1777-1783. Par Thomas Balch." Paris: A. Sauton; Philadelphia: J. B. Lippincott & Co. 1872.

where, with the consent of the Indians, he built a fort." But Fort Crèvecœur had been previously built, in 1680, while Fort St. Louis was not constructed till *after* his return from the Gulf in 1682. The sentence which succeeds describes what never took place: "Pendant qu'une partie de ses hommes remontaient le Mississipi en suivant la route du P. Hennequin, il descendit lui-même ce fleuve jusqu'au golfe du Mexique." The third paragraph states that in the *following* year (*i.e.*, 1683) La Salle undertook to return by way of the mouth of the Mississippi. The true date is 1684. "The smiling and fertile country in which he established himself received the name of Louisiana." La Salle had so called it two years before, though the reader might not infer this from the context. Grammatical carelessness in the passage which we here give in the original (p. 44) has made it perfectly unintelligible: "Le territoire sur lequel on établissait ces forts avait été découvert par La Salle, comme nous l'avons vu. Suivant le droit des gens de cette époque, *il* envoya un officier français, Céleron, pour en prendre officiellement possession." Here the pronoun which we have italicized has no antecedent except La Salle, while a foot-note explicitly says: "The date is Aug. 16, 1749."

All these mistakes (except the last) might have been avoided if the author had consulted Mr. Parkman's "Discovery of the Great West," which appeared in 1869—in ample time, we should judge, to have reached Paris before the city was overtaken by the catastrophe of the war, though Mr. Balch may have proceeded too far with his publication to avail himself of this authority. Certainly appeared too late for him French's "Historical Collections of Louisiana and Florida" (New Series, 1870), with its translation of Penicaut's "Annals of Louisiana," referred to in the note on page 43 as a "manuscrit inédit," containing "de curieux renseignements non imprimés." The foot-note on page 59 shows that another source, also relating to his subject, was beyond the reach of our author. "The Memoirs of La Fayette," it runs, "from which we borrow this information, mentions among others the Baron de Kalb" as one of the officers who came over with La Fayette on his first voyage. Dr. Friedrich Kapp's "Life of John Kalb" (privately printed in 1870) would have rendered this fact anything but conjectural for Mr. Balch, and would probably have prevented his putting it in a foot-note as something incidental to his subject, whereas it has the closest connection with it. As he does not allude to De Kalb again, except to record his being killed at the battle of Camden, either among the volunteers who accompanied La Fayette, preceded him, or shortly followed him (p. 72), or among the "étrangers" Pulaski, Kosciusko, and Steuben, to each of whom he says he has given particular notice in his second part, we fear Kalb may not be included among the "grand nombre d'autres moins connus" whose biographies he also means to give. Dr. Kapp, indeed, has taken Kalb out of that category by the flood of light which he has thrown on his origin and career, and Mr. Balch should know that this Bavarian soldier of fortune crossed the ocean as a French officer, and as the confidant of certain ambitious designs on the part of the Comte de Broglie, and that he had previously visited America in 1767 as an emissary of Choiseul's, to inspect the state of feeling of the colonies towards the mother-country—which he did with great discretion and success. In fact, if proper account is to be made of the selfish motives which were much more the cause of the French alliance than Presbyterianism was the cause of the American Revolution, De Kalb can by no means be overlooked. Choiseul indulged no sentimentality in seeking to widen the breach between Great Britain and her dissatisfied colonies; and however much sentimentality Louis XVI. and his advisers were capable of, it did not, to say the least, blind them to the fact that in helping the revolt of the colonies they were aiming at the vitals of their natural enemy. Kalb's personal adventure, by which he hoped to win rank that would save the delay of promotion at home, was not a whit more selfish than his Government's. Mr. Balch gives quite enough credit to France for her disinterestedness.

When we come, after p. 85, to that part of Mr. Balch's work which is his own by right of discovery and hard labor, we have no longer any criticism to make. In less than 150 pages the history of the French in America during the period covered by Rochambeau's arrival and stay is unfolded in a sufficiently full chronicle, which, if it lacks vivacity and the charms of a realistic imagination, is never dull, and gives everywhere evidence of intelligent and conscientious painstaking. The great characters to whom every school-boy will acknowledge his patriotic indebtedness—La Fayette, Rochambeau, Comte d'Estaing, Comte de Grasse—are brought upon the scene, together with the less known though not in every case less great Lauzun, Choisy, Ternay, Bougainville, Deux-Ponts, and St. Simon. When they reappear in the second part, doubtless we shall become still more familiar with them, and own to them a still larger share of gratitude. On the ingeniously arranged map which accompanies the volume are traced the routes by which they sailed or marched to the relief of the feeble Continental armies. Two etched portraits of Rochambeau, a view of the Governor Nelson house at Yorktown, and facsimiles of the devices of the paper-money of the Revolution, complete the illustrations. With the unimportant reserves already made, we heartily recommend the first part of "Les Français en Amérique," and await with interest the second.

The Sixth Reader. By Lewis B. Monroe. (Philadelphia: Cowperthwait & Co. 1872.)—Many attempts have been made to prepare books for classes in reading which not only should practise the pupils in elocution, but also should be useful in conveying information. Thus there have been reading-books devoted to teaching history, "popular science," and other subjects, and we remember one "Instructive Reader," so-called, which endeavored to give easy lessons in anatomy, and taught the boys and girls about their livers and chilblains. We think Mr. Monroe's view of the function of a reading-book is better than that entertained by the disseminators of useful knowledge, and, indeed, the view to be preferred to all others. Most of the work done in the school-room is more or less distasteful to a majority of the scholars; it is, in fact, work, and task-work, and is done under compulsion; the arithmetic, the grammar, the algebra, the geography, which are learned are learned by labor, and labor is no more agreeable to the boy or girl than it is to the adult political economist, who knows that such men and women as work, do it for the means to be idle, and not because toil is delightful. Now the reading-book affords to the pupil a relief from severe labor, and an opportunity for indulging other parts of his nature besides his mere understanding. As Mr. Monroe puts it, "the reading-book does for the student what no other school-book can do in so great a degree. It teaches him the art of written and oral expression," and does so without his being consciously employed in learning. "It furnishes him with models of style; it gives him gems of thought and sentiment as they have crystallized in the most gifted minds; it holds up for his admiration and imitation examples of virtue, moral heroism, and self-sacrifice; it instils a love for the good, the pure, and the beautiful, in the natural and moral worlds." It is, in short, or it should be, an induction into literature—and good literature. Very properly, too, it may teach elementary elocution, though usually it does this with a pedantry and an aim at theatrical effects which make it the grief of the judicious and the fruitful parent, so far as its injunctions are heeded, of an unnatural and absurd delivery. The late Edward Everett would have been quite as useful for instruction in genuine oratory as are most reading-book introductions and prefaces for instruction in the right way of reading a poem or a narrative. As regards this portion of the work undertaken by Mr. Monroe, his book seems to us praiseworthy. We should think a teacher might well find it helpful, for we believe a class of scholars old enough to be using a Sixth Reader would find it reasonable and be disposed to follow its suggestions rather than to scoff at them as mostly unintelligible, and when intelligible rather ridiculous. But considering the book as, an induction into literature, and good literature, we cannot give it so much commendation, our taste, we find, being at variance with the compiler's. Had we to put together a book of four hundred pages which should make boys of fifteen or sixteen acquainted with the English-speaking authors of the last five hundred years, it would not have occurred to us to go to Mr. Joaquin Miller, nor to Mr. Theodore Tilton, nor to Mr. T. B. Aldrich, nor to Mr. Tennyson for his love-making "Lady Clare," nor to the late George Arnold, "widely known as the author of the 'McArone Papers.'" These are good writers if you like; but there are writers whom it is more important to introduce to our boys and girls at the age when character is forming and is tremulously susceptible to outside influences. Their love stories, and *True Flags*, and *Waverley Magazines* will give them enough and too much of nonsense of all kinds and of contemporary thought and feeling. These—to use Wordsworth's figure, as one abusing it—are scattered at their feet like flowers; the young people cannot miss them; but the authors who "shine aloft like stars," and to whom they should be pointed, they may only too easily miss, and we regret to say that Mr. Monroe is not of so much help to them in this respect as a professor in the Massachusetts Technological School ought to be. A better book than his, to our mind at least, is a Boston book, Mr. Epes Sargent's. It might profitably be revised; some of its pieces, admitted like some of Mr. Monroe's in the interest of writers who were of local or temporary reputation, might with advantage be omitted, and their places supplied by others either later or better, or both; but it is a good book as it stands, and worthy of high praise. Mr. Monroe's we think worthy of some praise, but not of very high praise.

Botany for Young People: How Plants Behave. By Asa Gray. (New York: Ivison, Blakeman & Taylor. 1872.)—It is so easy to say that plants only *grow*, while animals grow, *move*, and *feel*, that the very title of this little work is rather startling. But unless we conclude that our author has

set down things "evolved from his own consciousness," we must qualify the aphorism, and admit that some indubitable plants not only live and grow, but manifest their life and direct their growth in ways which seem to indicate their possession of the faculties of sensation and voluntary motion quite as much as do the dull perceptions and sluggish movements of many organisms which are regarded as animals upon structural features alone. However, the young people, for whom this work is specially intended, care much more for one fact than a dozen theories, while for older folks we have not only the authority of the author as the leading American botanist, but also his assurance in the preface that he "expects to treat this subject in a different way, and probably with somewhat of scientific and historical fulness, in a new edition of a work intended for advanced students."

The book opens with an account of the motions of leaves, as those of the sensitive plant, and other more striking instances of the movements which "many ordinary plants may perform with less rapidity, though none the less really." Then comes the climbing of plants, whether by roots, stems, leaves, or tendrils; and the curious fact is noted that, while the hop and honeysuckle twine with the sun—that is from right to left, many others, as the bean and morning-glory, twine in the reverse direction. Certainly these are among the distinctions among organisms most difficult to explain upon purely teleological grounds. But the most extraordinary evidence of plant perception and movement is afforded by the revolving tendrils of the passion flower. These stretch themselves out horizontally, and slowly revolve in search of support. Of course the object most easily reached is their own stem above or below; but "when a tendril comes round so that its base nears the stem rising above it, it stops short, rises stiffly upright, moves on in this position until it passes by the stem, then rapidly comes down again to the horizontal position, and moves on," one is almost ready to grant the power of vision to such organs.

In the second chapter is shown the mysterious connection between the fertilization of plants and the visits of insects. For with many flowers the "various contrivances for hindering the pollen from reaching the stigma are excelled only by those for having it done in a roundabout way." The great purpose of arrangement seems to be to secure "cross fertilization," since in many cases, even with perfect flowers, the pollen is precluded from reaching the stigma of the same flower.

The concluding chapter tells us how plants capture insects, and, in some cases, actually digest and absorb them; so that the "Venus' fly-trap," for instance, "is really carnivorous." But let us hope that this and other statements may appear sufficiently incredible to induce Mr. Gray's readers to examine for themselves into the phenomena so clearly described and elegantly illustrated in this little work.

A First Latin Book, introductory to Cæsar's Commentaries on the Gallic War. By Dániel G. Thompson. (Chicago: S. C. Griggs & Co. 1872.)—This text-book, while it exhibits no special novelties, is sensibly and judiciously made. The author begins with the verb, in order that the learner may be introduced to sentences as speedily as possible; he is in favor of learning only so much of the grammar at first as will give the general form of the language, leaving the particulars to be afterwards filled in. On both these points we entirely agree with him. It would be well if Quintilian's golden words could be hung on the wall of every school-house in the land: "Nomina declinare et verba in primis pueri sciant: neque enim aliter pervenire ad intellectum sequentium possunt, quod etiam monere supervacuum erat, nisi ambitiosa festinatione plerique a posterioribus inciperent, et dum ostentare discipulos circa speciosiora malunt, compendio morarentur."

THE CLASS-ROOM TAINE.

EXTRACTS FROM

TAINE'S ENGLISH LITERATURE.

BY JOHN FISKE,

Lecturer and Assistant Librarian in Harvard University.

Taine's English Literature is already the text-book in several colleges. While neither its length nor its free treatment of all departments of our literature is any objection to its use in the higher institutions, both have rendered it unsuitable for places where the instruction is more limited, and for schools where ladies are taught. Yet most of the features which have given the book its unprecedented position can be made available for instruction. These passages have been selected by a student entirely in sympathy with M. Taine's principles, welded into a continuous work, and supplemented by a chronological table and full index. The publishers entertian the hope that the volume will supply the long-felt need of an English literature not only reliable as far as it goes, but unclogged with useless names and dates, and interesting enough to inspire the enthusiasm of the learner.

The volume will be ready early in the Fall. It will be about one-third of the size of the original work. Specimen copies will be furnished to Teachers, post-paid, on receipt of $1 25.

BAIN'S ENGLISH GRAMMAR.

A Brief English Grammar, on a Logical Method. By Alexander Bain, LL.D., Professor in the University of Aberdeen (author of "The Emotions and the Will," "The Senses and the Intellect," Treatises on Psychology, Logic, Rhetoric, etc.) 16mo, boards, 50 cts. Specimens to Teachers, post-paid, 25 cents.

In this work Prof. Bain has written a logical English Grammar, showing that expression and reasoning are both governed by the same laws, and that, therefore, Grammar should be studied in connection with Logic. The book offers materials for such a course of study.

HOLT & WILLIAMS, Publishers,

25 Bond Street, New York.

SOULE'S DICTIONARY OF SYNONYMES.

A DICTIONARY OF

ENGLISH SYNONYMES,

AND

SYNONYMOUS OR PARALLEL EXPRESSIONS,

Designed as a Practical Guide to Aptness and Variety of Phraseology.

By RICHARD SOULE.

Crown 8vo, cloth, $2; 8vo, cloth, $2 50. Sent by mail, post-paid, on receipt of the price.

The main design of this Dictionary is to provide a ready means of assistance when one is at a loss for a word or an expression that best suits a particular turn of thought or mood of the mind, or that may obviate an ungraceful repetition. Even practised and skilful writers are sometimes embarrassed in the endeavor to make a sentence more clear, simple, terse, or rhythmical, by the substitution of one form of diction for another. It is presumed that they, as well as novices in composition, will find the present work useful in overcoming difficulties of this sort.

As to the method of using it: Whenever a doubt arises in regard to the fitness of any word, and a better one is not readily suggested, let the writer turn to this word in its alphabetical place. Under it will be found the words and phrases, or some clue to the words and phrases, which, in any connection, have the same meaning as itself, or a meaning very nearly the same. That one of them which comes nearest to expressing the exact shade of thought in the writer's mind, will be likely to arrest the attention and determine the choice.—Extract from the Preface.

"This work must prove useful in avoiding the garbing of ideas in high-sounding, hackneyed, or vulgar words, by allowing the selection of others more elegant, simpler, and clearer."—New York Herald.

"A handy volume for every writer's table. It differs from Roget's 'Thesaurus' in that all the words are set down in alphabetical order. . . . Heretofore Roget's work has been the most convenient hand-book, but the necessary trouble of consulting its index before a word could be found is a constant annoyance which the possessor of Soule's will escape. For ready reference this book will speedily supplant all the rest."—Boston Advertiser.

"It shows careful study and sound scholarship, and may be commended as a valuable aid to accurate composition."—New York Tribune.

LITTLE, BROWN & COMPANY,

PUBLISHERS,

110 Washington Street, Boston.

ALL having Children to Educate, or School Taxes to pay, will find profit in the American Educational Monthly. Price 20 cts., or $2 per annum.

14 Bond St., New York.

READY IN SEPTEMBER.

HOW TO EDUCATE YOURSELF. A complete Guide for Students, showing how to study, what to study, and how and what to read. It is, in short, a "Pocket Schoolmaster." By Geo. Cary Eggleston, Editor Hearth and Home. 16mo, cloth, 75 cents.

SOCIAL ECONOMY. By Prof. E. Thorold Rogers (Tooke Professor of Economic Science, Oxford, England), Editor of "Smith's Wealth of Nations." Revised for American Readers.

This little volume gives in the compass of 150 pages concise yet comprehensive answers to the most important questions of Social Economy. The relations of men to each other, the nature of property, the meaning of capital, the position of the laborer, the definition of money, the work of government, the character of business, are all set forth with clearness and scientific thoroughness. The book, from its simplicity and the excellence of its instruction, is especially adapted for use in schools, while the information it contains is of value and interest to all classes of readers.

16mo, cloth, 75 cents.

☞ The latest changes in the map of Europe are fully and accurately exhibited.

BROOKS'S GREEK AND LATIN CLASSICS.

This Series of Greek and Latin Classics is on an improved plan, with especial reference to the wants of the American student. The notes are sufficiently copious to direct and assist the learner without superseding the necessity of his own effort, and are intended to promote sound principles of Criticism, History, Morals, and Religion. Besides illustrations and parallelisms from the Classics, the notes draw upon the treasures of modern literature, and elucidate Grecian and Roman history by the events and institutions of our own time, while apposite and parallel passages from the Bible sanctify the pages of heathen poetry and theology. The impress of Republicanism and Christianity in early youth is thus stamped upon the minds of our children.

THE ÆNEID OF PUBLIUS VIRGILIUS MARO. Elucidated by English Notes, Critical, Historical, and Mythological. With a Metrical Index and Map, and Illustrated by Antique Statues, Gems, Coins, and Medals. To which is added a Copious Dictionary, giving the meaning of all the words with critical exactness. By Nathan Covington Brooks, LL.D. Demy 8vo, half arabesque, $1 75.

THE FOUR BOOKS OF THE METAMORPHOSES OF PUBLIUS OVIDIUS NASO. Elucidated by an Analysis and Explanation of the Fables; together with English Notes, Historical, Mythological, and Critical; and illustrated by Pictorial Embellishments. With a Dictionary, giving the meaning of all the words with critical exactness. By Nathan Covington Brooks, LL.D. 1 vol. 8vo, $1 75.

First Latin Lessons, 75 cents.
Historia Sacra, with Lessons, etc., 75 cents.
First Lessons in Greek, 75 cents.
Harmonia Evangelica, with Lessons, 75 cents.
Ross's Latin Grammar, $1.
Viri Illustres Americæ. Illustrated. $1 50.
Cæsar. Illustrated, Notes, Maps, and Lexicon, $1 50.

COPPEE'S ENGLISH LITERATURE. English Literature Considered as the Interpreter of English History. Designed as a Manual of Instruction. By Henry Coppée, LL.D., President of Lehigh University. 12mo, half arabesque, $2 25.

CROOKS'S AND SCHEM'S LATIN-ENGLISH DICTIONARY. A New Latin-English Dictionary, on the basis of the School Dictionary of Ingersley, with Additions from the Lexicons of Koch and Klotz. By George R. Crooks, A.M., and Alexander J. Schem. 8vo, half roan, $3 50.

TRAUTWINE'S CIVIL ENGINEER'S POCKET-BOOK of Mensuration, Trigonometry, Surveying, Hydraulics, Hydrostatics, Instruments, and their adjustments, Strength of Materials, Masonry, Principles of Wooden and Iron Roof and Bridge Trusses, Stone Bridges and Culverts, Trestles, Pillars, Suspension Bridges, Dams, Railroads, Turnouts, Turning Platforms, Water Stations, Cost of Earthwork, Foundations, Retaining Walls, etc., etc., etc. In addition to which the elucidation of certain important Principles of Construction is made in a more simple manner than heretofore. By John C. Trautwine, Civil Engineer. 12mo, 648 pages, morocco, tucks, gilt edges. Second edition, revised, $5.

WHITE'S ELEMENTS OF THEORETICAL AND DESCRIPTIVE ASTRONOMY. For the use of Colleges and Academies. By Charles J. White, A.M., Assistant Professor of Mathematics in Harvard College. With numerous illustrations. 1 vol. demy 8vo. Second edition, revised, $2.

☞ Trustees, School Directors, or Teachers supplied for introduction at reduced rates. Single copies for examination, with a view to introduction, sent by mail, prepaid, on receipt of half the retail price. Address the Publishers,

TEACHERS AND SCHOOL-OFFICERS

SHOULD EXAMINE THE FOLLOWING

NEW TEXT-BOOKS

Before deciding what books to use in the schools under their charge.

MONROE'S

SERIES OF SCHOOL READERS.

First Reader,	In preparation,	- -	$0 30
Second Reader,	"	- -	0 50
Third Reader,	"	- -	0 75
Fourth Reader,	Just published,	- -	1 00
Fifth Reader,	"	- -	1 25
Sixth Reader,	"	- -	1 50

The publishers have the pleasure of announcing that they have nearly completed a Series of School Readers, by Prof. Lewis B. Monroe, Professor of Vocal Culture and Elocution in the Massachusetts Institute of Technology.

The thorough and enthusiastic study which the Author has given to this subject, and his long and successful experience as a Practical Instructor of Schools, Teachers, Clergymen, Public Speakers, and Readers, have eminently qualified him for the task he has undertaken. These Books are profusely illustrated by the best artists, and in mechanical execution are superior to any school-books now published.

The Series is so arranged that the First, Second, Third, and Fifth Readers form an abridged course, peculiarly adapted to the wants of ungraded schools in the smaller towns.

MONROE'S VOCAL GYMNASTICS.

A new work on Physical and Vocal Training for the use of Schools and for Private Instruction. No teacher, pupil, or Public Speaker can afford to be without this little manual. Retail price, $1.

HAGAR'S ARITHMETICS.

1. Primary Lessons in Numbers,	-	-	$0 30
2. Elementary Arithmetic,	-	-	0 50
3. Common School Arithmetic,	-	-	1 00

THE MOST ATTRACTIVE,
THE MOST PRACTICAL,
THE MOST ECONOMICAL.

Mental and Written Exercises are combined in each Book of the Series, and their arrangement is such that the Primary Lessons and the Elementary Arithmetic form an Abridged Course. The Primary Lessons and the Common School Arithmetic form a Full Course. Each Course complete in Two Books.

No other Series is so economical of the time of the student, or so practical and thorough in its teaching. Methods and Processes, such as are now used by Business Men, are presented instead of those hitherto known only in the School-Room; the Problems are numerous and varied; the books are profusely illustrated with the finest woodcuts; and they are admitted to be the Handsomest Books of their Class ever published.

ALL TEACHERS

Who wish to keep up with the improved methods of instruction, will find it greatly to their advantage to give these books a careful examination.

Copies for examination, or for first introduction in exchange for other books in use, will be supplied at Half Retail Prices.

A. DENHAM & CO., PUBLISHERS AND IMPORTERS,

17 Murray Street, near Broadway, New York,

HAVE RECENTLY PUBLISHED

THE MINOR POEMS OF HOMER: The Battle of the Frogs and Mice, Hymns and Epigrams. Translated by Parnell, Chapman, Shelley, Congreve, and Hole, with Introductions by Henry Nelson Coleridge, and a Translation of the Life of Homer, attributed to Herodotus. 12mo, handsomely printed on toned paper, cloth extra, bevelled edges, price $1 50. Sent free by mail on receipt of price.

"It was what Mr Burnand would call a 'happy thought' to gather the scattered translations of Homer's Minor Poems into one volume. . . . 'The Battle of the Frogs and Mice' is a mock-heroic poem, which seems to be a parody on the Iliad. The whole poem is full of wit, and Minerva's speech is deliciously funny. The translation by Parnell is admirable. Some of the hymns, despite their name, are very humorous—that to Mercury especially, in which the baby-god's theft of Apollo's oxen is amusingly described. . . . Every admirer of Homer, and indeed of Greek literature, will welcome this collection of ancient verse, which, whether justly attributed to Homer or not, possesses great intrinsic interest and value. The volume is beautifully printed and bound."—Literary World.

"A volume which gives us a better view of these minor works alleged to be by the great Greek epic poet than was before attainable in any compendious form."—Baltimore Gazette.

"All these are very remarkable productions, to the general reader as to the special student, and the publication of them in these fitting translations is an enterprise worthy of all praise. . . . This volume is in thoroughly excellent shape."—New York Mail.

"Messrs. Denham & Co. deserve much credit for having published in so attractive and tasteful a manner this welcome little volume, which consists of an hitherto uncollected edition of the Minor Poems of Homer, translated into English verse. The names of the translators will indicate sufficiently the character of the work. It is beautifully printed on tinted paper, and neatly bound in cloth."—Trinity Tablet.

The Nation.

NEW YORK, THURSDAY, AUGUST 15, 1872.

The Week.

THE North Carolina vote—returns of which came in with more rapidity than usual, so far as our recollection extends—turns out to have been the heaviest ever cast in the State, and among the white men of the western counties the Republicans made much of their gain. These western mountaineers are compatriots of the Governor-elect, Caldwell, and are not unlike their neighbors of East Tennessee, being leavened with a strong leaven of Unionism and Republicanism. There was some intimidation apparently, and apparently some fraud; but the voting was sharply watched, and we have no doubt that the six or seven thousand increase in the Republican vote was for the most part legitimate enough. Caldwell's majority will, it is thought, be 1,500, and there is one more Republican Congressman than before, and decided gains of Assemblymen; but the next senator will be Democratic. In the other Southern States there is great political activity. In Louisiana the confusion is complete, the Liberal Republicans having nominated a new gubernatorial candidate—the fourth or fifth now in the field. So far as we can make out, the Custom-house Republicans are as likely as any of the factions to get the vote of the State by some coalition, and give it to Grant and Wilson. In Georgia, the local Greeley Republicans have received a very severe snub, the Democracy practically telling them that it would have nothing to do with them. There are also numerous Straight-out Democrats in Georgia, who will hold a good-sized convention on the 20th, and the opposition to Grant is very inharmonious—A. H. Stephens and the Bourbons being bitter, and ready to go to Kentucky to the Blanton-Duncan Convention in considerable strength.

We suspect there is more Bourbonism in Kentucky than has yet been said. For what reason we do not know, but the *Courier-Journal*, which is rather inclined to be trustful and soft-hearted, and perhaps is not the best expositor of the true Southern Democratic feeling about Greeley, is earnest in expostulation with the political leaders of that State, and calls on them "in God's name" to make no wry faces, but to sit down to the Liberal feast, and "take it as it is," and to "bless God" that they have the chance. Again, it urges the young members of the Democracy to show activity and energy, and tells them, with a jocularity traditional in the office of that newspaper, and sometimes funny and sometimes the reverse, that it knows they are all under the Greeley white hat, for it sees "their legs wiggling" beneath it and feels sure they are there, however unvigorous may be their campaign action. The *Courier-Journal* was incautious enough to announce the local election in Louisville the other day as a test election, declaring that the "Liberals" could never afford to have their ticket beaten and the one supported by the Republicans succeed. That, however, is what happened, and the *Courier-Journal* now says that "every man elected will vote for Greeley and Brown." We dare say; all were Democrats, though nominated on a Citizens' ticket, and we believe the regular ticket was defeated because of the suspected or known dishonesty of some of the candidates; but the reputation of the *Courier-Journal* for perspicacity is of course made somewhat dubious by slips of this kind, and perhaps its statements, often reiterated, that the Kentucky Democrats are yearning lambs who wish nothing so much as white-handed peace and the embrace of fraternity, may be taken with some grains of allowance.

On the 3d of September, the Straight-outs are to meet at Louisville, in Kentucky, Mr. Blanton Duncan having come out with a call marked by a good degree of ferocity, charging the Liberal Republican Greeleyites with being the men who have done most to harry the South both by war and by carpet-bagging. There is Warmoth, he says, for instance, who "has increased the debt of Louisiana $45,000,000 in three years." "Blair," says Duncan, "came into the party to ruin it, and nobly has he fulfilled his mission." "For Grant" is the heading given this call by the Southern papers who "go in to win," and of course want no other tickets but the Grant Republican on the one side, and on the other side—the "Conservative" ticket if in Virginia, the "Democratic" ticket in North Carolina, the "Liberal" in Illinois, the "Opposition" in Indiana, the "Liberal Republican" in New England, the "Liberal Republican Democratic" and various other things in various other places. Begun in fraud, the campaign is full of inherent trickery and subterfuge.

The two most important—indeed the only important—open accessions to the Greeley forces during the week have been Mr. Jeremiah Black, Buchanan's Attorney-General, an able, bellicose person, of thoroughly Democratic antecedents, and Mr. Galusha Grow, of Pennsylvania, a Republican, and sometime Speaker of the House of Representatives. Black's reasons for coming over are the usual Democratic ones, while Grow's are personal admiration of Greeley and a desire "to bridge over the bloody chasm." Banks still enjoys the proud distinction of being the only man who is a loser by joining Greeley, though he has not yet revealed what it is he has lost. On a day to be fixed upon he is to address the merchants and business men in this city from the steps of the Exchange, on the probable effect of Greeley's election on trade and finance. His appearance in the capacity of an adviser of the commercial world on this subject will certainly be one of the most amusing features of the canvass. The *World*, while acknowledging mournfully that it never did think much of Greeley as an economist, begs Banks to draw attention to the fact that he has always been a fast friend of the capitalist—a suggestion which, coming from the *World*, is, if not satirical, tantamount to a request that Banks, while acknowledging that Greeley was a robber, would point out that he had always robbed the poor only. It is remarkable how few Republican politicians of national reputation who took no part in originating the Cincinnati movement, have since given in their adhesion. Sumner and Banks are the only ones of any note, and though Banks is very cute, we believe that as long as Butler holds firm the step he has taken will cause his friends serious anxiety. If Greeley fails, his position will be one of the most melancholy recorded either in the annals of philanthropy or of humbug.

One of those incidents known in the newspapers as "a question of veracity" has arisen between Mr. Sumner and Mr. Andrew D. White. Mr. Sumner, by way of illustrating Grant's hatred of the colored race, mentioned in his recent letter that not only did he try to annex San Domingo to the United States, but he failed to invite Frederick Douglass, who accompanied the Commission, to dine with him in Washington when he invited the Commissioners. To which Mr. White replied that the reason was that Mr. Douglass was not in Washington when the dinner took place, but, with General Sigel, had returned to his home. Following Mr. White comes Mr. Douglass, and says that, of all the Presidents and public men with whom he has had to do for thirty years in Washington, General Grant has been to him, except Mr. Lincoln, the kindest, politest, and most accessible, and the freest "to all appearance" from the color prejudice; and that he was not invited to the dinner because it was an informal affair, and he was not with the Commissioners (not being

a member of the Commission) when they called on the President and were invited by him; and that, in short, there was no slight whatever put upon him (Douglas). Hereupon, however, comes the remorseless Sumner, and shows, (1) by the testimony of one colored man, that Douglass *was* in Washington when the dinner was given, and (2), by the testimony of a white man, that Douglass felt hurt at not being asked, and said so, and will have it, Douglass to the contrary notwithstanding, that Douglass was offended, and had a right to be, and that the object of the President in offending him was to show his hatred to the entire negro race.

We fear that, after going carefully over the matter, millions will madly vote for Greeley. We doubt if there be, even in *Il Nepotismo di Roma*, another such case of Satanic malignity, and Douglass's willingness to be slighted shows how deep the imperial poison has penetrated. The man is actually afraid to say that he thought the despot ought to have given him a dinner, and well he may. The whole matter ought to be investigated when Congress meets; it is certainly a very much graver question than the question, "What Judge Field said at Jerry Black's dinner party," on which a Committee of the House sat for three weeks in 1867, and never solved, owing, we believe, to the corrupt disappearance of one of the waiters, who was changing Field's plate at the time the alleged language was used.

The *World* disputes our assertion that General Grant is not responsible for the Ku-klux legislation, inasmuch as he recommended it in a short message last year while the Ku-klux law was under debate. If controversies between a daily and weekly paper were not apt to be very unprofitable, we should have much to say by way of rejoinder touching the proper political sense of the term "responsibility." But we will admit that Grant urged the Ku-klux legislation with all his might, if the conductors of the *World* will answer a few plain questions in a pleasant, cheerful, and straightforward manner: 1. When Grant was advocating the coercion of the South by unconstitutional laws, what was Greeley doing? 2. If Greeley was doing the same thing, not in one short message, but in yards of frantic "editorial," what is your opinion of the propriety of presenting Greeley to the American people *in opposition to Grant* as a healer of wounds and soother of strife? 3. Knowing the history of Greeley's relations to the leading questions of the day as you know it, do you not consider the Greeley movement as on the whole a remarkable mixture of imposture and credulity? 4. Have you in your reading come across anything in the records of human delusion to which it can be fitly compared except the Anabaptist movement, the South Sea bubble, or the Mississippi scheme? 5. When you think over it all privately, does it not fill you with patriotic melancholy, broken and soothed by fits of uncontrollable laughter? 6. Do you not think that there is a peculiar appropriateness in having, as one of the chief orators and managers of the movement, a gentleman who believes, and has solemnly proclaimed his belief, that Demosthenes, the Greek orator, frequently passes the night uptown, dressed in Greek clothes of the fourth century before Christ, "talking politics" to Mrs. Victoria C. Woodhull? As regards ourselves, we can assure the *World* that nothing will induce us to jump out of the frying-pan into the fire. We acknowledge Grant to be the pan, but we are satisfied that we can make it at least tolerable till 1876, while the fire would finish us at once; and no declamation about the beauty of fire, or its value on cold nights to the widow and orphan, or its usefulness to the hardy blacksmith, or the service it renders in producing popcorn and roasting chestnuts, will tempt us to try it. The alternative is a wretched one, but choice to us is easy.

The troubles in Pope County, Arkansas, have been and are likely to continue a somewhat mysterious subject, and have been made more so by the appearance in the State of the Greeley movement and the opening of the Presidential canvass. At first there were only two parties trying to color the facts, but now there are three. But it was well settled before the troubles began that the friends of the Administration in the State, or, in other words, the carpet-bag interest, were a very sorry set. The disturbances now pending have arisen in this wise: Hadley, the Governor, who is an Administration man, desires, or is accused of desiring, martial law; so the Sheriff of Pope County says he has been shot at one night when going home; the Greeley men say he fired the shots himself. He thereupon accused several Democrats of doing it or conniving at it, and arrested them without warrant, carrying them along in search of a magistrate. He and his posse were waylaid, he says, by Ku-klux, after nightfall, and he thereupon turned round, and began shooting his prisoners, killing two. The survivors who made their escape maintain, on the other hand, that the attack was made by a party of his own men, detached for the purpose; that their shots were fired in the air; and that it was a deliberate plan to furnish an excuse for the slaughter of the prisoners; and appearances are certainly in favor of this view. The sheriff and his posse were thereupon arrested, and they in turn swore informations against other Democrats for having made the ambuscade, who were arrested also; but on coming in with twenty-three witnesses to prove an alibi, and finding no testimony against them, they were discharged. In the meantime, the friends of the sheriff have taken away considerable numbers of the friends of his victim, and the Governor threatens if they do not disband to declare martial law and call out the militia.

The contributions to Mr. Greeley's civil-service record during the week have not been of a kind to make one feel hopeful about his administration on this point. It appears that he warmly recommended for office Joshua F. Bailey, the defaulting revenue collector of this city, whom the *Tribune* has since been denouncing as one of the rascals for whom the Administration is responsible. It also appears that, having lent $15,000 to a son of Commodore Vanderbilt's, a shiftless and irresponsible young man, and having in vain applied to the father for payment, Mr. Greeley deliberately proceeded to recommend his debtor to Mr. Stewart (that horribly illegal Secretary) for employment as an assessor of internal revenue—young Vanderbilt's salary, got from the public treasury, being his only means of paying his confiding patron. In ordinary times, such facts as these would damn a "reform candidate" at once, but when you mention them to a Greeleyite, he smiles and begins to talk of the weather, or denounces "the tyranny of party," or wants to "clasp hands."

In addition to the rise in the price of coal in England, which is slowly but surely sending everything else up, the English are suffering severely from the high price of meat, which has at last reached a point at which it has produced indignation meetings, and led to the formation of some of those ridiculous non-consumption associations in which weak-minded people every now and then in all countries try to provide punishment for "extortionate dealers." It is true the price of prime cuts in the London market, twenty-four to twenty-six cents per pound, does not seem high to us; but, compared to the prices of other commodities in England, it is very nearly what fifty cents a pound would be to us. Strange to say, too, mutton costs rather more than beef. The cause of the trouble is said to be simple enough. The English eat great quantities of meat, about, it is said, 100 lbs. annually per head of population, which, owing to droughts and the ravages of disease during the last ten years, is more than English farms are able to supply in the required condition as to weight and fibre. The deficiency might be made up by importations of live stock from Ireland, Germany, Holland, and Denmark; but there has been so much disease of late among the cattle in these countries, and the dense packing of the animals in the transit over stormy seas does so much to develop it, and the

Government precautions against the landing of cattle supposed to be infected are so rigid, that it seems this resource too is wanting. There seems to be nothing for it but to cut down the consumption of beef and mutton, and turn again to the unfortunate hog, who may come to hold once more the proud position as food which he held in the Middle Ages. A more artistic treatment of pork, such as the French *charcutiers* are famous for, would do much to make the change less bitter.

The fears about Plantamour's comet, which were in fact a libel on Plantamour, have hardly been set at rest, when danger shows itself in a new quarter of the heavens. The London *Spectator*, which publishes articles from time to time discussing, with great interest and ability, the condition and prospects of the sun, brings out the fact, apropos of the recent tremendous heat in England and America, that the Italian astronomer Tacchini, who devotes himself to spectroscopic observations, reports phenomena in the solar envelope absolutely unprecedented in his experience. They consist in the evolution of enormous masses of vapor of magnesium, which produced on him the impression "that he could see the surface of our great source of light renewing itself." From this the writer in the *Spectator* deduces the conclusion that the sun may be using himself up, as other stars have done, and may suddenly fall off in heat and brilliancy, or may in the process of renewing the supply of heat and light suddenly increase the power of his rays to a degree that would make the earth uninhabitable. In fact, it seems as if a new and most horrible source of anxiety was about to be introduced into life. With a Greeley Administration, framed on the model of the Greeley wing of the New York Republicans, and with the sun behaving in a fitful and uncertain manner, life, in this country at least, would be to many people a very doubtful good.

Parliament has been prorogued in England, after a somewhat eventful session, of which the Ballot Act is the leading result, and leaving Mr. Gladstone stronger than anybody expected even three months ago. The extraordinary commercial prosperity has helped the ministry greatly, and so has the escape of the Treaty of Washington, through the happy interference of the arbitrators, the latter perhaps being its greatest piece of good fortune. The last debate, that on Judge Keogh's conduct in the Galway election case, which came to nothing, revealed the one standing and apparently irremediable difficulty of English politics—the ecclesiastical question in Ireland. Judge Keogh has made a great mistake, inasmuch as he has unnecessarily roused the hostility and suspicion of the Catholic population against the judiciary, and the debate in the House of Commons revealed almost frantic contempt for the priests on the part of the majority; and yet the priests are, and promise to remain, the one body of men whom the peasantry love and trust, and without whose co-operation the country can hardly be governed constitutionally.

The "news" sent by the correspondents from Geneva about the proceedings of the Conference continue to be very entertaining. Sometimes they are reduced so low as to be obliged to relate the conversations of the servants of the Commissioners, whom they evidently watch with great interest; but they more frequently fill their letters with refutations of rumors which nobody ever heard of, and which it is not uncharitable to say that they themselves invented. They assure us that there is no truth in "the story" that Mr. Adams and Chief-Justice Cockburn had high words in the anteroom, and were prevented from coming to blows by the porter; that, on the contrary, their relations have throughout been most amicable, as proof of which, he (the correspondent) may mention an incident which "transpired" under his own eyes. Both happening to come out of the Conference in a shower of rain, and Mr. Adams's carriage not being on the spot, Cockburn offered, in the politest way, to leave him at his hotel, *and insisted on Adams getting in first.* Or, he is enabled to say, on the best authority, that the Commissioners have no thoughts of adjourning for a month in order to enable Caleb Cushing to visit the Suez Canal; Mr. Cushing has too much good sense and patriotism to make any such request, and even if he had not, the Commissioners are too deeply impressed with the importance of their task to lay it aside even for one day for any such purpose. The news by Cable on Monday morning, however, on the whole surpassed in fatuity anything we have had yet. The despatch announced that the "Tribunal had required argument" on three points: the question of due diligence; the character (status) of the Confederate cruisers after receiving their commissions; and the question how far their coaling in English ports made England responsible for their acts. In other words, the unfortunate man who composed this sends as news that the Tribunal is hearing counsel on the leading points in the controversy between the two nations, and he tries to give it an air of minuteness and interest by mentioning that the counsel are Roundell Palmer on one side, Cushing, Evarts, and Waite on the other, and that "the fact that the Tribunal analyzes the cases as seen in these points, is a strongly favorable indication." What this last assertion means probably no human being knows or ever will know.

The result of the subscription to the French loan has been announced in detail in the French Chamber, and it is certainly surprising. The Government asked for $600,000,000; they have received subscriptions for more than twelve times as much. The Departments subscribed $12,000,000 on the loan of last year; they have subscribed to the present loan $492,000,000 (we give the amounts in round numbers), a striking proof of the rapid growth of confidence in the country districts. But it must be added that inasmuch as only 15 per cent. of the amount has to be paid down now, and that for this even securities may be deposited, and that two years is allowed for the payment of the remaining instalments, large numbers of persons have subscribed for very much larger amounts than they intend to take or hold, hoping to sell their rights at an advanced price as soon as the loan is closed.

There is certainly nothing so remarkable in the crisis through which France has been passing during the last two years as the small effect it has had in creating financial disturbance. In fact, it appears to be well established that the French have actually become so hardened to revolutions as to accept them as ordinary incidents in their history, in no way diminishing general security—a phenomenon perhaps without parallel, though it is true we do not know what was the effect on real estate and credit of the various convulsions at Rome from the Social War down. It is now ascertained that the events of 1871 have been followed in France by few or no failures; the price of real estate has not fallen either in Paris or in the departments; not only have wages risen, but the price of pictures and other articles of luxury has advanced. The receipts of the five great trunk lines of railway were considerably larger for 1871 than for 1869, though this is of course partly to be ascribed to the arrears of traffic caused by the siege and the military operations. Moreover, the exchange on London, in spite of the enormous sums paid to the Prussians, and largely in London bills, only rose very slightly during the past year. The imports and exports together for the year 1871 amounted to $1,251,600,000; those of 1869 only amounted to $1,244,500,000, and the gain continues in the present year. More wonderful still, throughout the whole war the salaries of all employees of the Government were punctually paid, and the operations not only of the Bank of France, but all the private banks of the country, went on with unfaltering regularity. In short, capital no longer runs away or hides itself in France on the approach of a political convulsion. It has seen so many of them that it keeps at its work and lets them blow over, and enables France "to astonish the world" by her financial integrity when she is no longer able to do it by the exploits of her armies.

THE GREELEY MOVEMENT AND THE CIVIL SERVICE.

WE now witness nearly every day an attempt to give Grant's failures as a civil administrator a kind of retrospective action, so as to deprive him of all fame as a general. This precious device was, we believe, originally hit on by the *Sun*, which, after praising him to the skies as one of the greatest of soldiers, suddenly became dissatisfied with his civil appointments, denied that he was any soldier at all, and gave all the credit of his victories to General Rawlins. Within a few days, Mr. Charles Sumner has fallen into the same insensate mode of carrying on the canvass; and, while professing to give negroes, in a very "solemn" manner, a full and true account of Grant's "antecedents" before his election, he described these so as to leave the impression that all that was known of Grant before 1868 was that he got his education at the public expense, then voted for James Buchanan with the view of confirming the Dred Scott decision, and finally sought to prevent negro suffrage, while Horace Greeley was "nobly championing it." Read nine-tenths of the articles in Greeley papers, and you come upon the same melancholy and yet comic indifference, not to truth only, but to the dignity of human nature. Week after week we are told, either by assertion or insinuation, that a President who likes Tom Murphy, or "takes gifts," or spends the summer at Long Branch, cannot have won Vicksburg or Chattanooga, or, in other words, that, when we were all bowed down with gratitude to him in 1864–5, we were the victims of a tremendous delusion. It may have been so; but a community which confessed to a delusion of that sort would deserve to be ruled by an impostor, and could not get anybody but an impostor to rule it.

That General Grant's Administration has in our eyes been a failure all our readers know. We have changed no opinion we have ever expressed about it in these columns; but it has failed, not in that it has made things worse than it found them, but in that it has not improved them. Grant's dealings with the civil service, over which he had a large discretion, have been no worse than those of Pierce, Buchanan, Lincoln, or Johnson. His recommendations to Congress have been just as wise as those of any of these, except Lincoln, and even wiser. He has been about as careful of the public money, allowance being made for the greater amount of the public money which he has had to handle. But he was expected to deal with problems of a very different class from those with which his predecessors had to deal, and he has not dealt with them; he was expected to abate evils which in their day were not recognized as evils, or were not the main objects of attention, and he has not abated them. It was expected that he would surround himself with better men than surrounded them; and, after a feeble and vain attempt, he has thrown himself into the arms of as bad men as ever surrounded them. All this was very disappointing to those who hoped that he would prove a reforming President, and that the Republican party under his lead would become a reforming party. But, bad as it was, it did not produce the deep disgust which led to the Cincinnati movement, and now makes Greeley—even Greeley—a dangerous competitor, until the country saw the way in which remonstrances and attempts at reform were met last winter. A little patience and good sense, a little show of comprehension of the dissatisfaction of honest men with the state of affairs, a little candor in admitting mistakes, a little show of zeal in remedying them, would even as late as the fall of last year have made the Missouri movement harmless to General Grant's prospects. Instead of this, the smallest enquiry or complaint was met in the Senate with insolent resistance, or flat denials and gross abuse, by the brazen band whom he allowed to call themselves his "friends." Nor was this all. It might have been difficult or indiscreet in him publicly to repudiate his defenders, however unwelcome they may have been; but there was no excuse for his allowing his organ in this city to assail Senator Schurz and other leading members of the opposition with vituperation suited only to the rat-pit and the prize-ring, simply because they had chosen to exercise a constitutional right in an unhandsome way. That disgraceful episode not only plunged the New York press down into a sink of slander, personality, and filth, such as has not been witnessed since the palmy days of the *Herald*, but infused into the opposition a bitterness which, and which only, has made Greeley's success a possibility. It gave to the cry of "anything to beat Grant" a potency it could not otherwise have had, and is now actually every day driving into the Greeley ranks respectable men to whom Greeley is abhorrent, but who, struggle as they may, cannot make up their minds to help, either by vote or abstention, to leave in power such men as Grant's champions and such a man as would countenance them or keep them in his pay. In other words, such show of success as this most preposterous nomination possesses, it owes almost wholly to the folly and impudence of the President's adherents.

We feel all this as deeply as anybody. We are as sensible of Grant's shortcomings as anybody. It will certainly not be pleasant to see Morton, and Cameron, and Conkling, and their like, set up once more as the power behind the throne, and see all the abuses that we have complained of so often passed over without the rebuke of an adverse popular vote. But then politics is a practical matter, and, in dealing with its problems, one has to study, not revenge, but the public interest, and to endeavor to behave like a rational human being instead of either a lunatic, a drunkard, or an infuriated enemy.

But in choosing between Grant and Greeley there is no occasion to refuse justice to either of them. We should be sorry, indeed, to see one of the exploits which won Grant his popularity explained away or made little of. They are part of the national glory; every man who lives in the country is interested in the preservation of his fame. In like manner, we should be sorry to see it made clear that Horace Greeley had been of no use to the community. In demonstrating his unfitness for the Presidency, it is not necessary to show that his New York *Tribune* has not, on the whole, exerted an excellent influence, and has been a highly civilizing agent over a very wide portion of American soil. But when he is offered to us as a substitute for Grant, and as an improvement on Grant, by men calling themselves reformers, we can hardly help considering it one of those fits of dementia to which even whole communities are sometimes liable. That the Democrats and most of the white Southerners should desire his election is comprehensible enough; that men who are sincerely opposed to Grant because he does not reform the civil service and obey the law should desire it, is not explicable on respectable grounds. Although the opposition to Grant has largely drawn its ammunition from the record of his shortcomings with regard to the civil service, civil-service reform is hardly mentioned in the Greeley canvass—a significant fact, to which the Cincinnati *Commercial*, which supports him, has at last drawn attention. The reason is that the sole contribution which Greeley means to make, or can make, to civil-service reform, is not to be a candidate for re-election. In other words, he contributes to it "the one-term principle." But that during this one term he will have to make room in all branches of the civil service for the largest horde of hungry applicants, without other qualification than their support of him, by which any President was ever assailed, we all know. The melancholy feature of the situation is that many of his prominent supporters, who really are reformers at heart, know it as well as anybody. His appointments, too, will be made under the dictation of probably the worst set of politicians in the United States, who will laugh at the very mention of even such steps towards a change for the better as Grant has made, and he himself will be plunged into a whirlpool of intrigue, greed, selfishness, and ambition, with probably less perspicacity and less skill in dealing with men than any President who has ever gone before him. In short, there is hardly one of his intelligent supporters, who care for reform, who is not supporting him on grounds which would seem to him ridiculous in any other branch of affairs. If any of them, we venture to assert, were asked to trust a lawyer, a doctor, a broker, arbitrator, agent, or other employee, on the grounds on which Greeley is recommended for the Presidency, they would laugh heartily.

We cannot get the nation out of the mire of corruption in a day, nor in ten years. The vices of the time are too deep-seated, and its bad tendencies too strong, to allow us to hope for anything like a sudden or speedy reformation. The most we can hope is to effect now and then a step upward, and in no case to recede. Grant is pledged to civil-service reform, is somewhat ashamed of having done so little for it, and has done something for it—not much, we admit, but something. We did hope to see him succeeded next year by a man of more knowledge of affairs, of greater political experience, of more skill in dealing with politicians, and with greater horror of abuses and a more energetic determination to get rid of them. Being disappointed in this, all we ask now is that during the next four years we shall not go downhill; that the machinery of the new organization of the civil service —even if it does not work as we think it ought to work—shall not be thrown contemptuously aside; that the employees now in office, even if they are not all they ought to be, shall not be kicked out to make way for others still worse and less experienced. All this and more would in our opinion happen in case of Greeley's election, and other and worse things still in other departments; and if the persistence with which we have urged this great reform has made any impression on any of our readers, we trust they will now bear it in mind, both in the exercise of their influence and in the casting of their vote. The disregard or forgetfulness of the reforms which the Cincinnati movement was intended to bring about is perhaps pardonable, or at all events comprehensible, on the part of the regular politicians, who, having broken with Grant and the Republicans, are now swallowing Greeley as he stands, because a politician must have a party organization of some kind at his back; without it he is a voice and nothing more. Having long relied on it as his great source of strength, and long obeyed it as the only fountain of authority, apart from it he feels helpless, desolate, and hopeless. But the honest, sober citizens who make up the party organizations labor under no such necessity, and are rent by no such fears. The voter at any rate can think his honest thought, and say it out, without any detriment to mind, body, or estate, and through him reforms must be carried through all drawbacks, failures, and betrayals. Punish this Greeleyite fraud as it deserves, and the next reform convention which meets will nominate a reform candidate, and the chiefs will find better employment than putting a good face on what they know in their hearts to be a mockery, a delusion, and a snare.

THE SCHOOL QUESTION IN ENGLAND.

THE working of the new School Law in England continues to furnish curious and instructive illustrations of the difficulties of having children taught in a country in which there is not only a defective appreciation of the importance of popular education, but a decided preference on the part of a considerable portion of the religious world for ignorance over knowledge, unless the knowledge is accompanied with certain religious beliefs. The law leaves it optional with the inhabitants of each district whether they will avail themselves of its provisions, and set the educational machinery in motion or not; and accordingly we find that, out of 14,000 country parishes, only 114 had, when the last returns were made during the past winter, elected school boards, and out of the 200 boroughs only 96; but, then, it must be admitted that half a dozen of the great towns, which at once availed themselves of the act, contain a third of the population of the whole kingdom. In the country parishes the poor man who has children to educate finds himself involved in a confusing struggle. If the Episcopal clergyman of the parish can command a majority of the votes of the ratepayers, as in a large number of cases he can, and the parish elects a school board, the schools and schoolmasters are certain to be in the hands of the dominant party, and the school boards are by no means unimportant bodies. They not only appoint the teachers, but they fix the amount of the school tax, and have power to borrow money, and buy and hold real estate, and can, if they please, confine the teaching to secular subjects wholly, or order religious instruction to be administered, under the conditions prescribed by the act—that is, the time at which it is to be given must be posted up, so that children who do not want it may be able to absent themselves. If the religious instruction be ordered and be administered by teachers appointed by the clergy, the Dissenters and "Secularists" fight the school board with all their might, on the ground that they are taxed either to pay for the teaching of doctrines of which they do not approve, or for religious teaching administered by persons whom they have had no hand in choosing. As a matter of fact, it is this, or something like this, which has come to pass in nearly all the country parishes in which the law is working. The school boards have fallen into the hands of the parson and his friends, and he has his own way nearly as fully as in the olden time. But as the clergy have almost everywhere the possession of the old school, they not unnaturally oppose altogether the election of boards under the new law.

In the large cities, on the other hand, where the Dissenters and Secularists are in a large majority, and counted positively on having the control, something else has happened, and something which nobody expected. The cumulative variety of proportional representation was inserted in the new law with the view of giving minorities a fair representation in the school boards. In Manchester and Birmingham, however, the minority being dexterous, and well organized and united, actually succeeded, by skilfully concentrating their votes, in securing a majority on the boards; and thus will, for three years to come, control the educational system of the district, or, in other words, will do all the things which make the system odious to the majority, and do as few as possible of those which make it desirable.

The fight over the "compulsory clause" is nearly as deadly as that over the "conscience clause," as the provision with regard to religious instruction is called. Parliament refused to make attendance at the schools compulsory, as the Radicals would have desired, but gave the school boards power to do so if they pleased. Now, one of the belligerent parties is opposed to the exercise of this power by the boards. Those who demand religious instruction at the district schools are opposed to having children compelled to attend schools in which no such instruction is given, because it deprives them of all chance of going to any other. On the other hand, the great body of the workingmen, and indeed nearly the whole of the secular-teaching party, insist upon it that without the existence and exercise of the power of compelling attendance, the schools, in the worst districts especially, will be well-nigh useless. The more ignorant parents are, the less disposed will they be to sacrifice their children's earnings in order to let them attend, and the less importance will they attach to their attendance; and besides this, whatever hostility to the schools exists in any district, on the part of the clergy or others, will find expression more frequently in dissuading parents from sending their children than in any other way. On these two points mainly, but chiefly on the question of religious instruction, the two opposing parties are making preparations, under the lead respectively of two organizations—one called the National Educational Union, the other the National Educational League—for what promises to be one of the most exciting contests in English history, because both sides feel that its results, whatever they may be, will seriously affect other things than popular education.

Should the friends of secular instruction solely succeed in carrying their points — that is, should they succeed in having the communication of religious instruction by the teacher in school hours completely prohibited and attendance made compulsory — it would either completely release the schools from the control or influence of the clergy, or deprive the clergy of all interest in them, and make the maintenance of church schools a matter of great and increasing difficulty. No matter what might be the effect of this on the faith of either children or parents, it would unquestionably take away from the country parsons one great source of their influence with the country population, and one of the strongest reasons for the connection of the church with the state.

The English clergyman would have to change greatly in many ways to make him take any part in working an organization which set aside his own teaching as of secondary importance, and the school boards would therefore pass gradually but steadily under the control either of Dissenters or sceptics; either of which results would be a serious blow to the security of the church establishment, already greatly weakened by the destruction of the sister organization in Ireland. When this is looked at, too, in connection with the rapid spread of the movement in favor of higher wages and greater personal independence among the agricultural laborers—a movement which has already assumed formidable proportions, and which, though originated by a clergyman, Canon Girdlestone, has thus far met with neither sympathy nor encouragement from the clergy in general, who feel themselves to be the natural allies of the farmers and landlords—it will be seen that the school question is but part of a very large social question.

It is, however, part of a religious question as well. There is no disguising the fact that behind the hostility to religious teaching in the schools there is a very considerable amount of hostility to *all* religious teaching, and that in the movement against it there is engaged a body of men, such as Huxley, and Tyndall, and Harrison, to whom in influence and ability we have no corresponding class here. They are as vehemently opposed to the "Bible in the schools" as the Catholics are here, but for a very different reason. They do not seek to substitute for such religious teaching as the Protestant clergy would give other religious teaching of their own; they seek a reorganization of society on a scientific basis purely, and would deny to religion all recognition in laws or institutions, leaving as its sole function the gratification of individual tastes, like poetry or music. For the creation and diffusion of scientific habits of thought there is, of course, no way so sure as the presentation of life and its problems to the young in a scientific aspect purely; and the control of the schools is therefore to them one of the most important objects of their mission, and in this mission a very large number of them begin to display an earnestness, one might almost say fanaticism, which has long been extinct among most religious sects. How it is that their attempt to exclude religious instruction from the schools excites so much more alarm in the religious world in England than it excites, or would excite, here, is explained by the fact that the state in England having for a thousand years undertaken to teach religion itself, the exclusion of its functionaries from all share in the work of education, and the relegation of the doctrines of which it has so long guaranteed the truth to the category of things indifferent, naturally assumes the proportions of a revolution. In this country, long familiarity with the spectacle of the state acting merely as the agent of the community in a small number of purely mundane affairs, has made its exclusion from the work of religious instruction a familiar and harmless arrangement, without special significance.

RAILROAD INVESTMENTS.

RAILROAD securities now constitute probably the most popular form of investment of a personal nature open to the people of the United States. A sort of mania as regards them may be said to exist. This is very clearly shown in the rapid development of our railroad system, which is now progressing with an almost incredible rapidity. As recently as the last Presidential election in 1868, the greatest amount of railroad construction in any one year had been in 1856, the year preceding the memorable panic. It then amounted to 3,643 miles, costing probably $140,000,000. It would at this time be interesting to enquire how far so great a withdrawal of the active wealth of the country from immediate circulation, and its permanent investment in a form temporarily both unprofitable and inaccessible, contributed to the crisis of 1857. In a greater or less degree, however, it was unquestionably one of the immediate causes of that catastrophe, which was at once followed by a rapid falling-off in railroad construction, until in 1861 it had almost ceased, being reduced for that year to 621 miles. From that period it gradually but slowly began to revive, until in 1869 it reached 5,000 miles, and 7,453 in 1871. The permanent investment of the last year in railroad development, and the consequent withdrawal of wealth from active circulation, can hardly be estimated at less than $275,000,000, though it must be admitted that a considerable portion of this is foreign capital.

With the columns of the newspapers crowded with advertisements of bonds pressed upon the market at rates of interest varying between 7 and 12 per cent., most people, even those tolerably well informed, would be somewhat surprised at being told that railroad securities in America are not more profitable on the whole, while decidedly less secure, than the bonds of the United States. Yet such is indisputably the fact. United States 5 per cents. (gold) are now selling in the neighborhood of par (gold). The cost of the railroad system of the country has been at least three thousand millions of money, actually expended in construction. The gross annual earnings of this system are about $455,000,000, of which not more than 33 per cent. can be set down to net profit, or a total of $150,000,000—being exactly 5 per cent. on the cost. The system is, in fact, a thorough lottery, and hence probably one great cause of its attractiveness to investors. What with dividends in money and dividends in scrip and rapid fluctuations in value; what with the noise made over a few great successes and the silence preserved as regards numerous failures, the general public is thoroughly dazed and bejuggled. Yet the figures, few and poor as they are, are inexorable. In his recent "Manual," Mr. H. V. Poor has given a table, very incomplete and far from correct, but yet sufficient for present purposes, of 364 railroads. Of these 104 only, or less than one out of three, pay any dividends on stock at all; of the 104 dividend paying enterprises, 4 pay dividends of over 10 per cent.; 30 pay 10 per cent.; 39 pay between 7 and 10; and 30 pay less than 7. The remaining 360 pay no dividends at all. Dividends on capital stock represent, however, but a small portion of the net earnings of the system, the great bulk of which is necessarily devoted to the payment of interest and to development. As regards the proportion which their reported net earnings, whether devoted to dividends or however applied, bear to the entire cost of their construction, the roads of Massachusetts appear to be the most prosperous in the country, their percentage rising as high as 8.41; Pennsylvania comes next with 8.3; Connecticut reports 7.16; New York, 7.5; while Ohio, the only other State which furnishes reliable returns, falls as low as 4.9 per cent.

It is in the extreme West, however, that the railroad development is most rapid, and that the greatest inducements are held out to investors. How far the railroad mania has there gone, and what a surprising lottery it has become, is, in the almost total absence of reliable statistics, not easily estimated. We are, however, not wholly in the dark on the subject. Take the State of Kansas, for instance. In 1864, Kansas possessed 40 miles of railroad, all newly constructed; in 1871, she boasted of 1,760 miles, having built 260 miles in that year and 570 in the previous one. She now possesses, therefore, 154 more miles of completed road than Massachusetts, and a little more than half as many as Ohio. These railroads were mainly constructed out of the proceeds of the sale of bonds, many of them, it is true, secured on valuable land grants, but all of them bearing a high rate of interest, ranging, indeed, on their cost price as originally issued at from 9 to 20 per cent. How is this interest to be earned? What burden, in other words, does a reasonable remuneration for the cost of this mushroom railroad system impose upon the people of the State? Upon this point we have the means of arriving at some conclusions—not very exact, perhaps, but withal exceedingly suggestive.

Railroads, as a matter of course, have to draw their income from the community they serve. The population of the United States, for instance, is in round numbers 38,000,000, and its railroads earn a gross annual income of $455,000,000. Upon an average, therefore, each inhabitant of the United States pays within a few cents of $12 per annum to the support of the railroad system. Few States have carried the science of railroad statistics to a sufficient degree of excellence to enable us, so far as their inhabitants are concerned,

to verify this average with sufficient accuracy. In Massachusetts—a wealthy manufacturing community, with a large suburban trade—the average payment of each inhabitant is $13 90; in Connecticut it is $12 60; in Pennsylvania, where the returns are less exact and an enormous coal traffic is carried on, it is reported at about $18; in Ohio, it falls below the average to $11 40. These are all old and wealthy communities, and two of them at least, Pennsylvania and Ohio, are States through which passes the bulk of the through or transit business of the country. With this annual *per capita* contribution these States, as we have seen, succeed in paying on the capital invested in their railroad systems a moderate annual remuneration, varying between 4.5 and 8.4 per cent. Yet Massachusetts has to-day some 10 per cent. fewer miles of railroad than Kansas, with, as nearly as may be, four times the population and seventeen times the wealth. To render the railroad system of Kansas equally remunerative with that of Massachusetts, each of its inhabitants ought to pay to its support $61 annually; to render it equally remunerative with that of Ohio, each should pay $41. Each does contribute, as nearly as can be ascertained, about $17 60, or an annual aggregate in round numbers of $6,400,000. This is the gross return, and evidently, in view of the wealth, products, and business of the State, all that its inhabitants can now pay. Meanwhile, the Kansas roads report a capital in stock and indebtedness of $95,000,000, or only a trifle less per mile than those of Massachusetts, of which amount no less than $58,000,000 is in the shape of interest-bearing securities, as against less than $18,000,000 in the older State. At present, therefore, the railroad system of Kansas would seem to be earning in gross a little less than 8 per cent. per annum on its capital stock and indebtedness, instead of 29 per cent. as in Massachusetts, or 17 per cent. as in Ohio; and its earnings on its debt alone, without allowing anything for the cost of operating, are but 11 per cent., or hardly, if indeed at all, sufficient to meet its annual coupons. Yet he would be a very sanguine man, and know but little of Kansas roads, who would as a permanence allow much less than 60 per cent. of this amount for operating expenses. There remains, then, about 4.5 per cent. per annum on the amount of bonded indebtedness alone as the total net earnings. In other words, as regards Kansas, the future has been frightfully discounted. Instead of earning the interest so liberally promised, the roads of that State are as yet realizing but a low remuneration on their actual cash cost. The process of railroad construction is, however, still going on as actively as ever in that State.

The same course of reasoning might be extended to other Western States as well as Kansas, though nowhere else, probably, has the process of railroad construction been so thoroughly overdone. The rule here applied is one of well-nigh universal application. No railroad system can be considered well established which calls upon those whom it serves for a larger *per capita* contribution than, at the most, $20 per annum. More than this no people can pay, and, under ordinary circumstances, no people should be called upon to pay so much. Where, however, the amount necessary to a reasonable remuneration greatly exceeds this sum, it is not unsafe to conclude that a long period of extreme depression and embarrassment is impending over the system involved; unless, as in 1857, a financial crisis, by sweeping away the rotten superstructure, puts railroads and community in a position to start afresh.

In these times, when it seems only necessary to buy a railroad bond to secure an annuity, it is well to remind a credulous public of these stern realities. We by no means seek to imply that much money has not been made, and will not hereafter be made, and that too in the immediate future, in railroad enterprises. In the face of existing facts, such a proposition would in no way be tenable. What we do mean to say is, that a form of investment always hazardous, and returning at best many more blanks than prizes, is at this time more hazardous than usual, and its risks are daily increasing. We see no reason to suppose that any general panic or financial crisis is now immediately impending over the country at large. On the contrary, a financial condition which stood firm under the shock of the Chicago fire cannot be otherwise than sound. But unless we are greatly deceived, within the next few years a great many very handsomely engraved railroad bonds will go to protest, and certificates of stock by the million will find their way into the hands of the trunk-makers. It is very improbable that the United States can construct for any length of time 7,000 miles of railroad a year without getting more than the people now on the soil can conveniently support. They apparently need some $10, or even $12, of railroading apiece each year; they may even tolerate $15, and perhaps $20, but when they are called on for $30, $40, or $50, it will assuredly be found that they are getting altogether too much of a good thing.

TWO DANGERS THREATENING OUR SCHOOLS.

AT this season of the year the public-school teachers, of all grades and all parts of the country, hold their annual gatherings. There are national conventions, State conventions, county conventions, of teachers and of superintendents, of common schools and of normal schools. No better season can be found for enquiring into the present condition of our public-school system—what is its promise for the future, and what are its dangers.

Our public-school system is a distinctively American one, grown up with our community and sprung from its character and needs, just as our political system has and our collegiate system. It is elastic enough to admit of almost unlimited improvement, and it is not very hard to introduce improvement; but it would be very hard to make any change in it which should materially affect its fundamental character. It is quite right that it should be so. We have a right to assume that an institution which has grown up with a community is well adapted to its needs; and although there are many features in which we could advantageously copy European models, and although we might on abstract grounds even prefer some European system as a whole if the question were to be considered *de integro*, yet it is perhaps quite as likely that our judgment is wrong as that the popular impulse is mistaken. Those reformers who wished, some years ago, to introduce the English or the German university system would, in all likelihood, have made a pretty mess of it if they could have had their way; we have waited not so very long a time, and now our oldest institutions, Harvard and Yale, are developing a real university system, which stands a chance of permanence because it has its roots in the old order of things.

When one considers the real excellence of these schools, and the degree in which they have become a postulate in American thought, it is hard to realize adequately the two perils that menace the system from entirely opposite directions. The first arises in the character of the school system itself, which is constantly tending to become more and more mechanical, and which favors an excessive routine and commonplace methods of instruction. The second is more vital, and is directed against the very existence of the public-school system.

The first tendency is natural and unavoidable, and is probably entirely within our control. The schools suffered at first for lack of organization and gradation; nothing more natural than that, in correcting this defect, too much stress should be laid upon organization, and that, as a result, most scholars should have come to look upon it as the first of all objects to get from one grade into another. In any school, exact discipline is indispensable; the teachers are few who can maintain exact discipline in a large school without the precision of a martinet; and that is what our school discipline tends to become. Methods of instruction were wretched a generation or so ago, and one of the first features of the new impulse that education then received was new and more inspiring methods. Of course, when the impulse had passed, things settled down into a routine, and the new methods became formal and antiquated, just as the old ones had been. All these results must have followed so long as the majority of teachers are not men of inspiration and genius, but honest, hard-working persons, who simply aim to do their work as well as they can, just as if it were ditching, or book-keeping, or reporting. It is *work*, after all.

This will explain the routine and the commonplace that are the worst characteristics of our public schools. These defects are aggravated by the excessive amount of labor that is imposed upon the teachers. Teachers, as a class, have a much higher ideal, or rather the ambition for a much higher one, than they are able to realize, and are mechanical and commonplace simply because circumstances will not allow them to be anything more. The result is, however, that thinking people are dissatisfied with the work done in the public schools—not with the way in which the work is done, but with the work itself. They want a different training for their boys and girls from the mechanical "high pressure" of the public schools; and this they find, or at any rate seek, in private schools.

Now, these evils are remediable, at least in a degree; but only with the increased culture of the community itself. The schools are but a reflection of the popular taste, which enjoys their big and showy mechanism, believes in this excessive amount of mathematics, and all these dreary rules of grammar and details of geography, and thinks the main object of a child's life is to get as fast as possible from one grade to another. As soon as parents realize that a girl who has been through the course, but cannot walk a mile, and never passes two days without a headache, is not precisely the highest possible product of civilization, and that the course itself is at once wofully narrow and extremely intense, they will demand a better system, and then they will have it. Even as it is, Hosea Biglow's words meet with more sympathy than is generally thought:

> "Three-story larnin's pop'lar now—I guess
> We thriv as wall on jest two stories less."

The corrective for the danger here discussed is an enlightened public opinion, and this has already begun to be formed. The evil has been often pointed out, and is widely recognized; and we think we are not mistaken in saying that it is already less threatening than it was five years ago. The other danger specified is fundamental and vital, touching not the character of the schools, but their very existence. It finds its best expression, of course, in the doctrine of the Catholic Church, which makes the church the necessary foundation of every human institution; but it exists no less in every form of Protestantism which demands to be recognized in public education. The first and most consistent shape which it took was opposition to the very existence of a free-school system, but it was soon driven to more subtle and circuitous forms of antagonism. The free school is so firmly seated in the American mind as an essential part of American institutions, that to try to overthrow it is labor wasted. Catholic schools, Jewish schools, Swedenborgian schools, German schools—every school which represents a single religious faith, or a single element of our compound nationality—are but an ineffectual protest against the system, and do not touch its vitality any more than any other private schools. Foiled in the effort to overthrow the system, it next aimed, with equal ill success, to divide it; at present the struggle, a much more perilous one, is to control. The controversy over the use of the Bible in schools is but a contest for the control of the schools—between Protestantism, which possesses this control by tradition, and Catholicism, which demands it as of right. We cannot wonder that an attempt to subvert a custom so revered, and of such historical prestige, should be earnestly resisted, and that the custom should be claimed as a fundamental and inherent part of the system. But it should be remembered that the nation is made up of those who are its citizens now, and that it is not at present—however it may have been in the past—a Protestant nation, except so far as a nation is represented by its majority. It should be remembered, too, that if the majority to-day and here has a right to insist upon the use of King James's Version, the majority next year, and in another place, will have an equal right to insist upon the Douai Version.

In view of the vital contest which has arisen upon this point, we see no hope for the maintenance of genuine public schools except in making them purely and avowedly secular. It may truly be said that the public school system serves as a moral bond for our entire community, just as the visible church did in the Middle Age. That age was essentially theological, and found its expression in an ecclesiastical unity; our age has no common ground of religious opinion, and can only meet upon the undisputed truths of science. Secular education is, therefore, the only consistent object of our public schools; theological dogmas should be left to the Church, the family, and Sunday-schools of the several denominations.

Neither need we fear that the schools will foster immorality if the formal devotional exercises of the opening hour are omitted. We have very little faith in any great good accomplished by these formal devotions, or by formal instructions in morality. It is urged that it is the well-instructed who recruit our most dangerous classes of criminals, and that this shows that we should have more religious and moral instruction in our schools. Are we to understand that the criminals in question have never been taught that there is a God, or that stealing is a crime, and that they do not know these truths as well as a professor of theology? It is not by set precepts or by elaborate lectures on morality that boys are trained to virtue, but by the daily exhibition of moral conduct, and the constant and insensible inculcation of the principles of morality in everyday relations. There is not a well-conducted recitation in any school in the land which does not teach at every step that virtue is its own reward, that honesty is the best policy, and that in the long run fraud does not pay. We beg for this view of a much-vexed and highly-important question the careful attention of every friend of the system.

THE BURIAL OF THE YOUNG DUC DE GUISE.

PARIS, July 30, 1872.

RAMBOUILLET belonged in the last century to the House of Orléans, and was for the younger branch of Bourbon what St. Denis was for the elder. The possessor of Rambouillet was at the beginning of the reign of Louis XVI. the Duc de Penthièvre, famous for his charity, and to this day remembered in France under the name of *le bon Duc*. Louis XVI., who was very fond of hunting, and who wished to have the forest of Rambouillet, once said to the Duc de Penthièvre: "Sire, give me Rambouillet." "It is yours, since it is your wish, but your Majesty must allow me to take away with me the bones of my ancestors." Some time afterwards, a curious procession was seen on the high road between Rambouillet and Dreux; all the coffins of the Orléans family were transported to this last place, and the old Duke, bare-headed, followed on foot the long line of carriages which bore them. The country people lined the road, and admired the filial piety of "the good Duke." He was so much beloved that he was allowed to remain in France during the Revolution, and to die in peace during the days of the Terror. This forcible usurpation of Rambouillet, and the removal of the Orléans remains to Dreux, was one of the many reasons which separated in the days of '89 the King and the Duke of Orleans, and, in this respect, it assumes historical importance.

I could not help remembering the procession of the last century as a few days ago I was going in a special train between Paris and Dreux; this train bore the remains of the young Duc de Guise, the only son, since the death of the Prince de Condé, of the Duc d'Aumale. Born in England in 1854, educated at Twickenham, this young prince had only returned to France to die there, and his unhappy father was now alone in the world, without a wife and without a child. It is almost useless to dwell on all the associations which such names bring to the miud. France has lost Metz, which was defended successfully by a Duc de Guise, and it seems now as if this name could no more be revived. Three times has the Duc d'Aumale given it to his children, but two of them died almost as soon as born; and this third Duc de Guise only grew up to eighteen years to die a sudden death, so unexpected, that his father was telegraphed for from Aix-les-Bains, where he had just gone for his health. The name of Condé died strangely enough at the antipodes, at Sydney, a few years ago. The great Condé estates, which had been left by the last Duc de Bourbon to the infant Duc d'Aumale are again in abeyance; the Duc d'Aumale will find himself as solitary in his woods of Chantilly as the father of the Duc d'Enghien. There is something almost too tragic in all these comparisons. I was making them as the train in the early dawn of morning took us through the corn-fields of the Beauce. The early peasauts in the fields turned round and wondered what this train was, full of gentlemen in evening dress, white cravat, and dress-coat, for such is the etiquette for a royal funeral.

The heat on the preceding days had been so intense that, for prudence sake, the special train had left Paris at four o'clock in the morning. In the first carriage were the Princes of Orléans and the Princess, who had had time to come back to Paris, the Duc d'Aumale, the Prince de Joinville, the Count and the Countess of Paris, the Princess de Joinville, the grandmother of the young Duc de Guise, the old Princess of Salerno, a niece of Marie Antoinette, a sister of Marie-Louise, the first Emperor's second wife; the Duc de Nemours, the Duc de Alençon, his son, and his wife, the young Duchess, a sister of the Empress of Austria and of the Queen of Naples. Then came the Belgian minister, who represented the King of the Belgians, and only the most intimate friends of the Orléans. At Versailles the train stopped a moment to take about fifty deputies, who wished to go to Dreux with their royal colleague. Dreux is a small town situated in the valley of the Eure. When the train stopped, the coffin, which was covered with white cloth, was placed on a car, which stood in waiting for it at the station, and was drawn by four white horses, with white feathers on their heads. The car was also adorned with white hangings, and bore the arms of Orléans. The procession was formed immediately. The Duke followed the car, bare-headed, and after him came his family and all the gentlemen who were in the train. Though it was then only seven o'clock, the population of Dreux and the neighboring villages lined the road; every man bowed before the white coffin and the Princes; I saw many women cry. The attitude of the population was more than respectful, it was tender and affectionate. By a long and winding slope the procession arrived at the small chapel of Dreux, which is built on the crest of the valley, and surrounded by a lovely English park. Nothing could be more quiet and silent than this secluded spot. But inside the chapel the scene was almost too sad. The sound of the organ, the chanting, the black hangings, the mystic light of the candles, the solemn emotion of all the bystanders, gave to the ceremony

quite an extraordinary character. The sobs of the Princesses were heard under their long and thick black veils. The Duc d'Aumale, as pale as a ghost, as still as a statue, kept his eyes fixed on the coffin. Many old statesmen, men accustomed to the wear and tear of life, wept like children. There were united in the presence of death the remains of the oldest and greatest family of Europe, and under what circumstances! The sons of Henri IV. were almost as much exiles in their country now as they were a few years ago in England. A new France had grown, which had forgotten that their ancestors had made France the proud country she once was; the young boy who was now buried had spent his youth rowing on the Thames between Richmond and Teddington, or following the hounds in the deep fields of Worcestershire with kind farmers who knew nothing of the history of his family. The remains of Louis Philippe, of Queen Amélie, of the Duchesse de Nemours, of the Duchesse d'Aumale, were still lying in the small chapel of Weybridge.

Four masses were said at the same time, one at the great altar, two at two lateral altars, and one in the chapel in the vault. During the whole ceremony the body-servants of the Duc de Guise, dressed in black, stood by the catafalque. When mass was over, the coffin was brought down in the vault, and immediately took its place in one of the stone tombs, which are placed in a long semicircle. Only the Duc and the family were down with the masons. The bystanders in the chapel heard the noise of the stone-cutters and the plasterers in painful silence. When the royal family left the vault, all in turn went down; there was the marble statue of the Duc de Orléans wrapped up in a military mantle, and lying on his grave; several other statues of Orléans princes; one, quite lovely, by Pradier, of an infant princess, lying on her marble pillow, with a flower in her hand. Before each tomb there is a painted-glass window. One of them is quite remarkable; it is the defence of a bridge at Agincourt, painted by Eugene Delacroix. On the walls of the chapel of Dreux are eight beautiful glass windows, painted by Ingres, and representing all the kings, queens, and princes of the royal family of France who made themselves conspicuous by their piety—Saint Louis, Queen Blanche, and others.

The Duke had the strength of mind to receive for a moment all the friends who had come to Dreux. In the park of Dreux there is an old tower covered with ivy, in the centre of which is a large, bare room; the only piece of furniture is the iron bed in which Queen Amélie died at Claremont. It was in this room that the Duke shook hands with all the gentlemen who were there. Not far from the chapel is a small house still called the Bishopric, as it was long inhabited by a bishop. It now belongs exclusively to the Comte de Paris, who sometimes sends his children there for a change of air. In another house live four priests, who are attached to the chapel, and who say mass in it daily. From the terrace of the Bishopric one sees the little city of Dreux, lying at the foot of the hill, with its old church and a picturesque old tower. Not far from the park is the Forest of Dreux, which is one of the many forests which surround Paris with a girdle of woods, and are the remnants of the old Gaulish forest which extended from the Loire to the Ardennes.

While the ceremony was performed at Dreux, there were two funeral services in Paris for those who were not of the intimate acquaintance of the Princes of Orléans. At the Church of Saint Philippe du Roule, which is the Duc d'Aumale's parish, there were hundreds of distinguished people; and in the first rank I will name Mr. Washburne and your illustrious General Sherman, who has shown that he did not forget the part which the Orléans Princes have taken in the war of secession. The sympathy with the Duc d'Aumale in his great afflictions has been of a universal character. President Grévy of the National Assembly wrote to him a very touching letter. All the members of the Right, who look on the Duc d'Aumale as a prince of the blood, sent him their names and went to the funeral. The Pope sent him his benediction, and Victor Hugo wrote on his card this line:

"Flet pater viduus cum patro doloroso."

Queen Victoria, and indeed all the kings and princes of Europe, sent their telegrams, while some of Gambetta's friends inscribed their names. There are powers which survive all other powers: the common feelings of humanity have nothing to do with politics. Nothing can destroy the past, the memories of centuries, the prestige of historical names. When all the most elementary passions of mankind can unite with the poetical instinct, the effect is almost irresistible. After so many revolutions, which have shaken almost every belief, the French as a nation have still preserved a great respect for the dead. Even a Communist workingman will bow whenever in the streets he meets a funeral cortége. He salutes not the Christian faith, nor the priest: he salutes that grim king who will always be king, even in a republic—the great king before whom all are equal—Death.

NEGRO MORTALITY AT THE SOUTH.

Charleston, S. C., July, 1872.

HOUSEHOLD service in the South has always had its peculiar phases, and just now, owing to the transition state of the labor system, these phases are peculiar to an unusual degree. There was a time when, so far as *certainty* of service was concerned, the Southern matron could boast a superiority over her Northern sister, but that has now become one of the traditions of the past. The trials of to-day are a natural result of a combination of the evils of a period of transition from the old system to the new, and a very liberal allowance of time must be made for their correction. With emancipation and the influences brought to bear upon the newly made citizen—with the historic "mule and forty acres" in constant contemplation—the feeling at the close of the war, among by far the largest number of negroes, seemed to be that a change of employers was absolutely necessary. They thought, and perhaps quite correctly, that in this way only could they fully shake off old habits, and make a complete entry upon their new condition. Once realizing this power of change, a roving inclination was rapidly developed, which has since proved the bane of the planter and housekeeper. A cook recently gave notice that she would leave the place she had held with entire satisfaction upon both sides, "because, ma'am, it look like old time to stay too long in one place." It is certainly true, however, that numbers of old servants have returned to their former homes, and a very large proportion of the entire number acknowledge by word and deed the strength of the old tie. The plantation negro, for instance, makes it a point, in coming to town on a visit, to bring berries, potatoes, eggs, or chickens to "de family"; no pay in money is desired, but some suitable present in return is expected and bestowed. A country member of the Legislature being recently in town met his former mistress in the street, and was reminded that he had not been to see her: "Tell de trut', ole miss," was the reply, "ain't hab no egg an' chicken for bring." And in seasons of sorrow or of joy their claim for recognition by "old massa or miss" is immediate.

Of labor there is an abundance. The "black and colored" population of Charleston exceeds the white by about four thousand, and a walk along the streets of the city would convey the impression of a still greater disproportion. The negro women exceed the men in about the same degree as that in which both sexes outnumber the whites. All shades abound—from the blackest and filthiest representative of the "low country" to the neatly-dressed octoroon or mulatto. The latter classes—in great varieties of shade—are largely represented in all Southern cities, and are called upon to perform the neater grades of work, and those which require careful attention. That they are found in such numbers in towns is partly due to the fact that the mixture of the two races does not produce a hardy offspring. The mulattoes cannot stand the amount of labor possible to either parent, and the toil in the cotton or rice field is too severe for them. Hence they crowd into the nearest city, and from their peculiar fitness and greater aptitude find occupation as barbers, mechanics, waiting-men, ladies' maids, dressmakers, and other similar employments. Their wants are much more numerous than the negro's, and their tastes assimilate to those of the white race, thus engendering a jealousy which causes them, as a class, to hold aloof from all of darker hue. At the present moment, on the walk outside my window, a couple of ebony damsels and a mulatto boy are belaboring one another in terms more vigorous than select as to each other's claims to "respectability" on the ground of color.

There has been considerable speculation as to the effect of freedom upon the physical condition of the former slave. By many it is thought that his ultimate fate will be that of the Indian, and for this opinion there seems to be some ground. That immorality and disease are *largely* on the increase cannot be doubted: of this fact I am assured by leading physicians, and the statistics would seem to confirm the statement. The general importance of the subject has led me into an examination of the mortuary records of the city of Charleston, and the results will be found in the following tables, commencing with 1866, and giving the relative mortality of the whites and the blacks during the last six years. It must be borne in mind that the entire population in 1866 may be estimated at 35,000 to 40,000, and in 1870 the United States census shows a total of 48,956. The average surplus of "blacks and colored" over the whites during the six years may be placed at about 4,000.

The total number of deaths in each year is as follows:

	1866	1867	1868	1869	1870	1871*
White	607	462	390	453	539	714
Black	1,164	879	818	918	1075	956

* 1871 was a yellow-fever or sickly season, and as such years are much more fatal to the whites, it can scarcely be placed on a level with the rest. The relative proportion of deaths thus far in 1872 is the same as in the first five years.

Of the entire number of deaths—9,005 in all—

7,701 are natives of South Carolina.
4 8 " " other States.
866 " " foreign countries.

The table below shows the relative mortality of children under five years of age:

	1866	1867	1868	1869	1870	1871
White	212	319	136	181	203	191
Black	392	623	372	461	405	415

In this statement I will merely add one or two facts falling under my own observation. Of all the great contrasts between the past and the present in the South, I can truly say that *not one* has struck me more forcibly than the seeming *dearth* of negro children. It is not so noticeable in the cities and towns; but in the country it might be supposed that some new Herod had inaugurated a slaughter of the innocents. Whether this statement holds true with reference to other portions of the South, I cannot yet say from my own observation; but it is certainly so in this part of Carolina. Formerly on well-kept plantations, as soon as practicable, the mothers were relieved of the care of their offspring, and the master had them properly attended to in regular "nurseries." In fact, to the slave-owner the actual profit came from the increase, and self-interest compelled a proper amount of attention. Now, however, this care is thrown upon the mother, and the testimony is unanimous that the present startling mortality among children is due to the persistent neglect of their mothers. There seems to be an absolute indifference—a want of maternal instinct. The result of such conduct—especially where there is no proper medical attendance—may be readily imagined. Few physicians would seriously think of settling down to the practice of their profession in the country at the South, especially under existing circumstances. Here and there perhaps a planter may be found who has acquired a knowledge of medicine; but it is kept subsidiary to planting interests.

A gentleman of this character gave me an instance of his experience. A year ago, in one "quarter," there were eleven births about the same time. All these children were under his care, but with two of them he had especial trouble, and gave them especial attention. At the end of the year, these two out of the eleven were the only ones alive, and they could not live much longer. There had been no epidemic, and yet such instances are of frequent occurrence. No exact statement can be given, however, for no statistics are kept.

I have also added a table of the principal causes of death. Of course, nearly all the diseases known to the medical faculty are to be found in a city of this size, and I have merely selected those from the number of whose victims some conclusions may be reached:

	WHITES.						BLACKS OR COLORED.					
	1866	1867	1868	1869	1870	1871	1866	1867	1868	1869	1870	1871
Variola	37	..	..	..	..	..	239	..	..	..	..	..
Consumption	53	44	47	38	47	53	75	85	77	94	134	135
Pneumonia	18	15	10	18	16	13	75	49	31	53	53	31
Typhoid fever	24	11	11	17	22	19	34	40	16	26	24	14
Trismus nascentium	23	16	19	11	14	14	49	73	65	47	47	80
Marasmus	19	14	9	17	15	16	25	31	48	44	59	25
Convulsions	17	22	11	23	26	16	38	27	34	49	52	40
Diarrhœa	12	20	8	9	19	11	21	25	24	26	60	34
Old age	14	12	10	16	12	18	56	45	48	19	39	21
Dropsy	17	8	9	6	10	6	71	65	53	40	42	39
Cholera infantum	20	15	19	16	12	14	18	42	45	25	39	17
Congestion of the brain	34	10	13	17	25	24	21	14	14	21	22	23
Congestion of lungs	11	2	4	10	16	13	28	3	12	26	31	27
Yellow fever	..	..	..	..	..	189	..	..	..	..	..	23

I have also added a statement of the comparative mortality of the years 1860 and 1870:

	1860.			1870.		
	No. of Population.	No. of Deaths.	Proportion of Deaths.	No. of Population.	No. of Deaths.	Proportion of Deaths.
			1 in			1 in
Whites	26,969	719	37·51	22,145	539	41·09
Blacks and Colored	21,440	753	28·47	26,811	1,075	24·94
All Classes	48,409	1,472	32·90	48,956	1,614	30·33

Correspondence.

MR. WELLS'S FIGURES.

TO THE EDITOR OF THE NATION:

SIR: I have read with interest Mr. Wells's article in the *Nation* of July 25. I presume his figures are correct, and very likely his argument is sound, for the most part. But unless I misunderstand him, he has fallen into *one* miscalculation. Early in his article he says, "I find, first, that the expenses of the National Government for the fiscal years 1869, 1870, 1871, *exclusive of interest*, premiums on the purchase of bonds, and payments on the principal of the public debt, were as follows: . . . There is thus an apparent decrease in the national expenditures for the fiscal year 1871 of $25,075,000, as compared with the expenditures for like purposes for the fiscal year 1869. *But on the 30th of June, 1870, the requirement for expenditure for interest on the public debt was* $7,180,000 *less than it was on the 30th of June, 1869*; and on the 30th of June, 1871, *this charge had been further reduced by the sum of* $13,772,000. Assuming $10,661,000 to represent the average *diminution of the interest charge* for the entire fiscal year 1871 (the reduction having been progressive by months), *this* $25,075,000 *reduction of the national expenditures would be reduced to* $14,414,000." Italics mine.

I do not see it at all. According to his own statement, the charge for interest—be it more or be it less—had been taken out of the budget before the comparison was made at all. The original figures for 1869 and 1871, as given by him (but omitted here), represent the expenses *independent* of payments on the public debt, both principal and interest. Hence the *whole difference* between them is a bona-fide reduction of expenditures, except so far as he is able on other grounds to show to the contrary.

If I am right in this, Mr. Wells has probably perceived the error before this. But figures are so constantly used as witnesses on both sides of every question, and are so unprincipled and mendacious, yet all the time keeping in many minds that absurd reputation that they "will not lie," that it seems worth while to trip them up occasionally, and warn them that they must learn to deserve their good name—as Mr. Wells's figures, I dare say, generally do.

LINCOLN, MAINE.

TO THE EDITOR OF THE NATION:

SIR: A correspondent of the *Nation*, writing from Lincoln, Maine, calls my attention to the circumstance that in the article contributed to the *Nation* under date of July 25, "*On the ratio of increase in our national expenditures*," I have understated the apparent reduction in the national expenditures for 1871 as compared with 1869, by deducting from the amount ($25,075,000 plus $5,967,000, the increased payment on account of pensions) the average reduction in the annual interest for 1871, due to the gradual reduction of the public debt, inasmuch as the interest account was not in either year an element of comparison.

Recurring to the paragraph of the article in question, I find your correspondent to be entirely correct, and I hasten to correct the error into which, by some inadvertence, I have fallen, by restating the apparent decrease of national expenditures for 1871 as compared with 1869 at $31,042,000, in place of $20,381,000. I make the correction with pleasure: first, because I don't mean that my figures "shall lie" if I can help it; and second, because on subsequent comparisons of expenditures in the same article, the error in question did not occur or was eliminated. The article, therefore, in fact corrected itself, and in its conclusions remains now, as at first, incapable of refutation.—I am yours, most respectfully,

DAVID A. WELLS.

Notes.

A WRITER in *Hearth and Home* agrees with many philosophers of ancient and modern times that the weather is a very common topic of conversation. Repeatedly, he says, you hear the gentleman saying, "It is extremely hot this evening," and the lady replying, "Yes, I think it is hotter than it was this morning," to which the gentleman assents, and says, "But it is not so hot as it was last night"; to which the lady assents, and says, "If it is as hot to-morrow, I don't know what I shall do," to which again the gentleman gives his assent, and goes on to say, "But I don't think it is possible for it

to be hotter than it was yesterday," to which the lady gives her assent, and the subject is continued at some length. The writer thinks that for so barren a topic as this some other should be substituted, and suggests that arithmetical observations, for instance, would be better than meteorological. Evidently we can recognize in him an insidious enemy of the woman's-rights movement, and he should be minced by Mrs. Livermore or Mrs. Hooker or somebody or other. Mrs. Julia Ward Howe is as gifted as most women; she is a good enough Greek scholar to explicate the text, "Let your conversation be in heaven," and show to the satisfaction of the whole Radical Club of Boston that "conversation" in this connection means "talk," and that the apostle in these words instructs us to talk always of high matters and never to gabble; but even she might readily be puzzled if asked to multiply 7 by 8, for instance, or to subtract 6 from 41, or perform any similar problem requiring that trained understanding which in all ages man, by superior brute force, has succeeded in withholding from woman. Mrs. Livermore and Mrs. Cady Stanton, who are mothers or sisters, but who sought in vain the educational privileges so freely offered their fathers and brothers, might, if this suggestion were adopted, be silenced for hours by a malicious request from some male to subtract one and eight-tenths from three and one-tenth, or to multiply some vulgar fraction by a mixed number. And as for the majority of young women in society, conversation, so far from being widened in its scope by the disappearance of meteorology, would practically be restricted to the table of five and the table of ten, which are the easiest but least interesting parts of the Multiplication Table. And to most men, too, making a change would bring no sensible relief, because the homage of the ladies would in that case be paid to the expert mathematician, and the proverb as to the sort of man held in most esteem by the fair sex would still be of full application: "The bigger mathematician a man is, the better the women like him," would be the new reading, or "He's a regular mathematician, but see how he goes down with the women." Everybody, then, may properly hold the *Hearth and Home* writer in enmity, and take a dig at him (if anything is left of him) after the *Woman's Journal* is done with him.

—Just before the close of the war, when the Government had become more tolerant than it ventured upon being while the issue was doubtful, a man by the name of Pomeroy, widely known as "Brick Pomeroy," published a Democratic newspaper at La Crosse, Wisconsin, called the *La Crosse Democrat*. The scurrility, which intellectually was drivel and morally was disgusting, of this vile sheet made it unacceptable to any but the very lowest of the Democrats of the Northwest: it was without influence, and had but few readers, though it was more or less quoted by the crazier of the "copperhead" editors and orators. But when the war closed, and the South was reopened to Northern publications, Pomeroy's paper, to the wonderment of all decent people who had not an acquaintance with the real South of those heated days, became a prime favorite in almost all the Southern States. The journals which urged that the body of Dr. Dostie, killed in the New Orleans riots, should be boiled down into soap-fat, out of which soap could be made for the use of Northern teachers, were unable to cope with the indecencies of Pomeroy's paper, or to cater so successfully for the taste of the average Southern young man, and the circulation of the *Democrat* was enormous. Money flowed in that year and the next and the next, and the rejoicing editor by-and-by moved his office to this city to practise "metropolitan journalism" and give New York a reliable Democratic paper. The occurrence of the Presidential campaign, with its fervors, either advanced the "red-hot" editor's fortunes, or prevented any visible decline of them, and he was extremely efficient down to election day in "nailing another lie," inventing dirty slanders, "carrying the news to Hiram," paddling in the muck of grossness, and, in general, behaving himself like a human being with some knowledge of the decencies of life, instead of like a brute with a strong spice of the low blackguard in him. But after this supreme effort at "Democratic journalism" the paper began to flag. It flourished but poorly in our Eastern atmosphere, and we are pleased to chronicle its complete collapse and death. We congratulate the public also on the extinction of the malodorous *Woodhull and Claflin's Weekly*, which "Demosthenes" and Mr. Theodore Tilton together were, it seems, not enough to save.

—The University of California, in search of a president, has at last been successful, Professor D. C. Gilman of Yale having accepted the office. California now has a great opportunity, if she will only do three things: first, gather an ample working library; secondly, give the new president the pick of the best men in the country, by putting the professorships on a liberal foundation; and thirdly, the best men once appointed, if she will leave the internal concerns of the university mainly in their hands, throwing over as far as possible the usual incumbrances of trustees, committees, boards of overseers, and outside people in general. The Sheffield Scientific School at Yale, with whose workings and organization Professor Gilman is familiar, shows with what signal success an untrammelled institution can administer its own affairs.

—A correspondent tells us that on p. 35 (Lévy's edition) of "Cæsar Birotteau," by De Balzac, dated 1837, he finds the following: ". . . les uns recherchèrent la silencieuse approbation d'un homme censé profond, en sa qualité d'ecouteur?"

—The constantly recurring strife between capital and labor, the real hardships endured by the laborer, and the great injuries which he is every year more and more disposed to inflict upon his employer—injuries which in the end fall upon his own head; the disturbance to the whole economical world, and the not improbable dangers to the social fabric, render welcome every attempt to discover a system by which harmony can be restored and the joint earnings of the disputing partners be divided fairly and so as to satisfy both. The French, who have shown us some of the most striking examples of the evils of the conflict, have not been behindhand in attempts to discover a remedy. The very remarkable book of M. Godin, "Solutions sociales," to which we hope again to call the attention of our readers, shows how much may be done by a wise and benevolent employer for the welfare of his workmen, and how the too often hostile parties may be bound together by a solidarity of interests. M. Chaix, proprietor of one of the largest printing establishments in France, has devised and is about to put into operation a plan similar in some respects to those which have been tried successfully by some American firms—Hovey & Co. in Boston, and Brewster in this city. His desire, as stated in his "Reglement de Participation," is to ameliorate the present condition of his employees by paying to them each year a certain sum over and above their salaries or wages, and to provide for their future by laying up a capital for them or their families. He hopes that this proposed arrangement will establish a new bond, moral and material, between the house and its employees, and that the increased outlay of the house may be in some degree reimbursed by the improved quality and greater quantity of work done. The details of the plan are as follows: To participate, a workman must have served the house three years and have shown himself faithful and capable. Among workmen so qualified, M. Chaix will divide ten per cent. of his profits in proportion to the amount of their salaries; half is to be paid as soon as the year's accounts are settled, the other half to be carried to a sort of insurance and retiring fund. A man who voluntarily leaves the service during any year will forfeit his share for that year; if he is dismissed, he will receive his share up to the date of his dismissal. The retiring fund is to be further increased by a special appropriation from the profits of the business, so large as nearly to double it. No workman will be entitled to draw his share in this until he has been twenty years in the service or has arrived at the age of sixty years. When a man dies in the service, his share is to be paid to his family. The participation of profits is to be made according to the books of the house, and the accounts are to be audited by a board of nineteen, consisting of the ten oldest employees, and nine members annually elected by a general assembly of the workmen. We have given the plan concisely, yet at sufficient length to show how carefully it has been considered by its projector. It preserves to the master the control of his business, a control absolutely necessary to commercial success, and yet it gives to all the employees a share in the results of that success, and an interest in making it as great as possible. Whether the share offered them is sufficient to be a strong inducement to extra zeal remains to be proved by experience. Whether the new system of payment by the hour, lately adopted by one of our railroads, is not better adapted to our unsettled habits, is a question. M. Chaix's plan demands a length of service which is probably very much more common in France than here. At any rate, one danger is avoided on which have split some otherwise promising schemes of co-operative societies of workmen—the difficulty of finding a manager of sufficient ability to make the business pay who would not either demand a salary exceeding the profits which ordinarily fall to the share of the employer, or run away with all the funds of the enterprise.

—Of course it is perfectly proper to say all sorts of disagreeable things about Napoleon III. now; *numquam, si quid mihi credis, amavi hunc hominem;* nevertheless, among other things to his credit, things like the following should not be forgotten. When Napoleon was at the height of his power, twelve years ago, Count Bartholomeo Borghesi died at San Marino. His literary career, remarkable at once for precocity and sustained brilliancy, gave the lie to Ascham's dictum about "quicke wittes": "for this I knowe," says the author of the "Schoolmaster," "not onely by reading of bookes in my studie, but also by experience of lyfe, abroade in the worlde, that those which be commonly the wisest, the best learned, and best men also, when they be olde, were never commonly the quickest of witte, when they were

yong. Quick wittes commonlie be apte to take, vnapte to keepe; more quicke to enter spedely, then able to pearse farre. Such wittes neuer passe farre forward in hie and hard sciences." Nobody can read Borghesi's first dissertation on a coin of the Emperor Heraclius, without admitting that it was a quick wit that could do so much at the infant age of eleven; while the productions of his manhood and old age showed that the infant phenomenon of epigraphics could also pierce far and pass far forward in high and hard sciences. On every branch of Roman numismatics and inscriptions and on antiquities of all sorts, military, sacerdotal, and political, he had his say, and somehow, whatever Borghesi had said always turned out to be right. Still, although his name had become a household word with scholars, their ideas of the man were somewhat vague and verging on the misty; many of his choicest treasures were buried in the corners of obscure Italian journals, or had been tossed out lavishly in good-natured letters to his friends, who never resorted to him for instruction in vain. There was no collective work to which his admirers could appeal, on which they could lay the finger and say confidently, "This is the man, this is Borghesi." Louis Napoleon had the sagacity to see and the energy to remedy this want, and if there was a little vanity about it, that may be overlooked. A few weeks after Borghesi's death, Ernest Desjardins was speeding over the Alps to San Marino to make preliminary arrangements, and not many months after a bulletin in the *Moniteur* announced that a commission of four Frenchmen, assisted by eight eminent foreigners, had been empowered to collect and edit Borghesi's complete works, the costs to be met from the civil list. Seven quarto volumes had appeared when the great tragi-comedy of 1870 suddenly snapped off the whole undertaking. In the present state of French finances, M. Thiers might well be looked after if he spent the public moneys of the new loan on men-singers and women-singers and the delights of the sons of men, like his predecessor. But when he jingles the national double eagles, his fingers must itch, collector and curiosity-hunter as he is, to finish this great work, which would shed lustre on the little sister-republic of San Marino, and add another enduring monument to "all the glories of France."

HENSLEIGH WEDGWOOD'S ENGLISH ETYMOLOGY.*

WE need a good etymological English Dictionary of convenient size for a handbook. Webster and Worcester are too large, and have too much else in them. It should be something like Scheler's French Dictionary or Weigand's German. It should have space for the history of each word, both its forms and meanings and the dates and works in which they are first found; and yet it should not be a very large book. Müller's "Etymologisches Wörterbuch der Englischen Sprache" is a fair beginning, and might be worth translating. Wedgwood is also in many respects a valuable work. It is very learned in its way, and is rich in illustrative quotations from rare old books, and in groups of words analogous in formation and connection of thought, gleaned from all the vocabularies of the world.

But it has a theory, and substitutes it for the established laws of phonetic change, and, to a great extent, for historical research. It would not be far wrong to say that it is not so much an etymological dictionary as an essay on the origin of language. An introduction of 69 pages is formally devoted to that subject, and a very large part of the rest of the book is really given to illustrating the theory by discussions of English words. This theory is that speech originates in imitation of the sounds of external objects, and of man's own natural cries. A good many able and cautious linguists hold or favor this view; but they generally say that it is a long time since speech originated, and that the languages of our day come from monosyllables which we can trace back thousands of years, and which have been used all that time without thought of their imitative sound, and have changed so much that we cannot detect their imitative origin, and ought not to expect to do so. Scientific etymology requires us to trace our words to their roots before theorizing. But Mr. Wedgwood easily recognizes imitative words as they stand; he runs them off by the dozen in his introductory essay: *bump, thump, plump, thwack, whack, smack, crack, clack, clap, flap, flop, pop*, etc., etc. In the letter B we find over 300 words traced to an imitative origin, at least half the whole number, and filling much more than half the space, for it takes pretty long dissertations to bring out the imitative element in many of the words. Many of them are derived from *bubbles; bubble* is an "imitation of the sound made by the bubbling liquid." A bubble and a lump or swelling are very generally designated by the same word, "because the same articulation is used to represent the *pop* of a bubble bursting, and the sound of a blow, from which the designation of a knob, hump, or projection is generally taken." Of *bladder*, "the radical image is the formation of foam or bubbles by the dashing of water." *Blade*, a leaf, is commonly connected with *flat*. "But perhaps a more definite origin may be found in the notion of foam or a mass of bubbles." . . . "We have in foam a most complete example of leafy structure." "*Bug* is simply an object of terror, from the cry *Bo! Boo! Boh!* made by a person, often covering his face to represent the unknown, to frighten children." *Breech* "designates the part on which a boy is *breeched* or flogged, a word, formed from the sound of a loud smack." *Burn* is from the roaring of the flame. Of *buffoon* it is said, "a puff with the mouth is probably indicative of contempt, as emblematically *making light* of an object. 'And who minds Dick? Dick's nobody! Whoo! He blew a slight contemptuous breath, as if he blew himself away,' David Copperfield." "*Bumbailiff* is from the notion of a humming, droning, or dunning noise applied to dunning a person for a debt." Each of these examples is further illustrated by apposite passages, words from other languages, and the like, sometimes to the length of a couple of columns.

This comparison of words does not follow the recognized laws of change in language; it leads the author away from the beaten track of scientific progress. The book cannot be put in the hands of a student as a trustworthy guide. But its unscientific appearance might easily lead a critic to overlook much real merit; for in fact a great deal of this matter is surplusage, going beyond the authorities; and Wedgwood agrees with them as far as they go. It is true that he confines himself for the most part to Anglo-Saxon words which have not yet been made commonplace by etymologists. If he were to treat the Latin words with the same freedom, he would have to face all the great masters of modern philology. He does it now and then as it is. It would be hard to find in any other learned book of the year a worse tangle of blunders than the discussion of *bind*, which is said to be derived from *bund, bunch*, which is described as identical with Latin *pondus*, and meaning a lump of some heavy material, named from the noise of a blow. Considered as an essay on the origin of language, the book is valuable, and will doubtless do something toward the settlement of the question. If we are to find out more about the original speech of man, and we doubtless are, it is to be by induction of linguistic facts, concentrating evidence on particular sounds, and showing first of one and then of another that it belongs to the natural speech of man. To establish this, it should be found in many diverse languages; found to grow up in nurseries; be heard from deaf mutes, if possible, from the deaf and blind; be like in kind to one of man's natural cries. Mr. Wedgwood has brought together a large body of facts going to show that certain sounds which he discusses are of this sort. It would be an advance if he were to lay down the criteria and method of proof, and arranged his material to suit them. He does not see the wide difference between words imitative of the sounds of external objects and those imitative of the voice of man. The imitation of external sounds is a comparatively strange and difficult matter. Words of that kind are rare in genuine old books; perhaps there is not one among the undoubted roots of the Indo-European parent speech. The frequent use of them has a modern aspect, and gives a comic or sensational air to any style:

"Bang, bang, bang! went the cannon, and the smoke rolled over the trenches." "Hoo, hoo, hoo! ping, ping, ping! came the bullets about the ears." "Haw, haw, haw! roared a soldier from the other side of the valley." "And at it both sides went, ding, dong! till the guns were too hot to be worked." When such extracts as these are made, it is not of Homer or Beowulf that we think. The primary speech is occupied with the vital needs of animal man, the utterance of joy, pain, surprise, love, hate, weariness, and the like, and it is in sounds naturally expressive of these that the scientific linguist looks to find the ultimate sources of language.

GUSTAVE DROZ'S LAST NOVEL.*

IT is always pleasant to watch the course of a writer when it is one of progressive improvement, when we can see him acquiring a steadier hand, a broader view of the world, and, withal, possessing the power of purging himself of his earlier errors. Droz has always been an admirable writer, his *genre* sketches, although stained by gross faults, were always cleverly done; far too much so, most of us will say, when it is seen that one of his most deplorable volumes has reached the fifty-third and another the twenty-seventh edition. In those books he showed great powers as a humorist, as a sort of drawing-room satirist, and much of what may, perhaps, be called the dramatic side of the novelist—that quality, namely, which serves to give his characters the stamp of likeness to life; although it must be said that, leaving aside the consideration of those marked faults which will disgust most

* "A Dictionary of English Etymology. By Hensleigh Wedgwood, late Fellow of Christ College, Cambridge. Second edition, thoroughly revised and enlarged; with an Introduction on the Origin of Language." New York: Macmillan & Co. 1872.

* "Babolain. Par Gustave Droz." Paris: J. Hetzel & Cie. 1872. New York: F. W. Christern.

readers, one could not help regretting that the skill which was shown in such trifling work could not be used for some higher purpose. The frivolity of fashionable life, of women's talk at parties, is too small game for any one who can really write. It concerns itself with too unimportant a part of human existence. The question is decided before the counsel for the prosecution opens his mouth, and the more eloquent his speech, the greater is our impatience.

His two longer novels have been already discussed in these pages; they showed his desire to try some more serious work than ridiculing popinjays and flirts, and they met with considerable success—one of them, "Autour d'une Source," being translated into English and published in this country. "Babolain" is the story, told in the form of an autobiography, of a broken-hearted man. He begins with a statement of his own character, which he says is especially noticeable for being fearful of ridicule, introspective, but, above all, proud. The truth of this analysis may be seen from this synopsis of the story: His mother dies at his birth, his father, who had been professor in a college, dies when he is six years old, and he is at once taken away by his uncle, who soon sends him to school. There, being a sensitive, physically feeble, awkward, unattractive boy, he suffers all manner of torture from his schoolmates, but, notwithstanding, makes one friend, Timoléon, whose exercises he used to do for him. Afterwards he entered the *Ecole Normale*, and, by dint of much hard work, is appointed professor of mathematics, first in a provincial college and then at the Collége Saint Louis in Paris. Just at this moment his uncle dies, leaving him heir to a considerable fortune. He does not lose control of himself at this, but takes advantage of the opportunity it gives him to enter the world, to which, in his solitary, hard-working, self-denying life, he had felt strange yearnings. He is introduced to two ladies, a mother and daughter; they are both charming in his mind, and with the younger, an artistic, vague, but beautiful creature, he falls in love. He feels keenly his awkwardness and unattractiveness, and imagines that his chance of winning her is hopeless, when, to his surprise and delight, the mother tells him that he must never come to the house again—that her daughter loves him. We cannot help quoting a few lines from one of the conversations in which the avaricious mother tries to throw some light upon poor Babolain's mind. He says:

"'Are you afraid that her lungs are attacked?'

"'I am afraid of everything, my friend. Now the trouble is only mental, I am sure, judging from her sudden changes from depressing melancholy to mad gaiety, from all the unaccountable things. For example, this morning I went into her room to see her, and I found her sitting in a corner completely absorbed in a little book that I have never seen in her hand before. I go up to her. "What are you reading, my dear?" I say. Then she hands me the volume with that graceful, frank gesture that you must know.'

"'Yes, yes.'

"'Where was I? Oh! yes. I look at the book; it was a little arithmetic that she used to have at school. I said, smiling, "You are beginning your studies again, my dear?" But she answered, throwing herself into my arms, and kissing me warmly, "Oh! science is *so* beautiful, mamma, *so* beautiful!"'"

It will be remembered that he is a professor of mathematics.

These wiles are successful; he marries the young woman, and then his troubles fairly begin. She is, of course, extravagant, frivolous, and, in time, false. His eyes are for a long time closed to her folly; he is easily managed by her, for he is madly in love with her, and by her mother, a woman who, we need only say, is the model mother-in-law of fiction. An article in a paper, abusive of his wife, causes him to quarrel with some of his colleagues, and to fight a duel, in which he is badly wounded, with a journalist. On recovering from a long sickness, the consequence of the duel, he finds his wife and her mother have left him, and that he has been deprived of his professorship on account of the other quarrel. In despair he flies to a provincial town, and devotes himself to the bringing-up of his little daughter, whom the mother had not cumbered herself with in her travels. His daughter grows up, and, to her father's great grief, marries. Here the saddest part of the story begins. His daughter and her husband take him to live with them, but gradually every indignity is heaped upon him; he is thrust away into an attic; he is robbed of every luxury; hopeless misery encompasses him; but he never blames any one except himself, and then for faults which were never his. He tells the story, but he does not seem to know its horror; his only pleasure is to play with his little grandson, the only being in the world who ever loved him, for wife and child had both detested him; but he is even robbed of his grandson on some ungrounded pretext, and soon he dies. We run hastily over this account of his old age, because it is the part to which so brief a sketch can do the least justice. It is certainly profoundly melancholy, and all the more so from his apathy, under it all, from his ingenuity in devising reasonable excuses for his daughter's heartlessness, from his pitiable groping for some one thing to love him. We will quote a few lines from a scene between him and his grandson:

"Having returned home, he let me go up to my room alone, and, a few minutes later, rejoined me there. He was flushed, excited, and held in his hands a little package, which he opened at once. It was a white pasteboard box, full of papers, rolled one around the other. He began to unroll them with his impatient fingers, throwing down box and papers as fast as he had undone them.

"'What have you there, my little fellow?' I say to him.

"He was in too great a hurry to answer; but when he had finished he held out in his hand a half-franc piece and four sous.

"'There are some sous for you!' said he, looking at me with his large eyes.

"At first I did not know what to say—not that I was ashamed of taking alms; in the hearty simplicity with which he offered me all his fortune there was so much affection and delicacy! I took his head in my hands, and, kissing his blonde locks, I said:

"'Thank you, George. Keep your money. You can get something with it—you can ride in the goat-cart, you know.'

"'You don't want my sous?' said he, evidently about to cry.

"'Keep your money for yourself, my dear boy—keep it.'

"He put his money back into his pocket without saying a word, went to the window, and looked out into the courtyard; but the glass reflected his face like a mirror. It was sad, his nostrils were swollen, and he was biting his lips to keep from crying.

"'You don't deserve such kindness,' I said to myself. 'By your stupidity and foolish pride, you are going to make the only being in the world who loves you cry.' So I said aloud:

"'George, do you still want to give me your money?' He turned round, his eyes lit with joy. 'Do you want to? Very well; give it to me, my dear: it will give me great pleasure.'

"He threw his arms about my neck and, while smothering me with caresses, he slipped into my pocket the four sous and the little piece of silver.

"'You will take good care, grandpa, not to lose them,' he murmured.

"I wrapped them up in the same paper, put them in the white box, and they are there, near a lock of his mother's hair and my other relics."

There is the character of the man, sensitive, but tactless and tardy in his kindness, and humble beyond all measure. His reproaching himself with pride is not one of the least sad things in the book. Nor, on the other hand, is he made out a hero, endowed with every good quality, but who is crushed by a cold world: he is full of good qualities, he is self-denying, generous, unselfish—to a fault, for there are some virtues which need tempering as much as vices; but one can readily see how easy it would have been to misunderstand him, how hard to get on with him. He, to be sure, was treated with unwarrantable cruelty, but such mistakes may be and are made every day. The author draws a tragic picture, but he falls behind many an actual story. He might have made it worse, but he lets us see the consolations that Babolain's very kind-heartedness brought to his sufferings. He felt pain keenly, but he was in return sensitive to a few joys that a colder eye would never have discovered. By this means he redeems the blackness of his picture. We suffer more, perhaps, in reading the book, but our pity is exalted by our perception of his superiority to his woes, and to the wretched people who inflict them. His weakness, his ignorance of the world, have brought about his distress, but they are only one side of a faith which no amount of misery, or none but its extremity, can crush. In short, the author sees not merely the prose of suffering, but also its poetry, and this it is which gives the book its great merit. Many a clever man can describe domestic afflictions, but not every one can picture to us the unconscious struggle of a noble mind. This novel, and it is the only one we have ever read that did, reminds us of Turgenef; and we trust that the author may steadily go on in the higher path he has found, without yielding to the easy temptation of merely contenting frivolity by clever nonsense or worse.

Select Letters of Pliny the Younger. Latin Text with English Notes. Edited by A. J. Church, M.A., and W. J. Brodribb, M.A. (London: Longmans, Green & Co. 1871.)—Though this book can no longer be called new, it seems to be little known in this country, and we print the title in full as a general answer to persons who have enquired of us concerning it. We have already given our opinion incidentally of its quality in No. 356 of the *Nation*, and will only add here that the editors hardly appreciated the edition of Keil, 1858, which they had before them, and that their knowledge of the literature of Pliny was so limited that they took no note of Keil's dissertation "De Plinii Epistulis Emendantis," in two parts, Erlangen, 1865 and 1866; nor of Mommsen's essay, "Zur Lebensgeschichte des jüngeren Plinius," in the *Hermes*, 1869; not to speak of the less important tractate of Hugo Holstein, "De Plinii Minoris Elocutione," in two parts, Naumburg, 1862 and 1869. Perhaps the standard critical edition of Keil, 1870, with an Index Nominum by Mommsen, packed full of original and suggestive matter, made its appearance too late to be used. At any rate, it was not consulted. If the "Select

Letters" were corrected down to the present time, they might supply a temporary want; but to edit an illusive and second-hand writer like little Pliny requires a mind saturated with the sentiment of the Trajan period and the semi-poetic phraseology of the Augustan and post-Augustan time. The editors of this volume do not impress us as likely to make a permanent mark in either the text or exegesis of this author.

The Annual Register: A Review of Public Events at Home and Abroad, for the year 1871. New Series. (London: Rivingtons. 1872.)—We noticed last year the preceding volume of this series, recommending it to our readers, though at the same time pointing out some weak sides of the publication. On perusing a large portion of the volume before us, and glancing over the rest, we find that it has become easier to speak of the Register recommendingly, and harder to censure it. The "Year 1871" is decidedly more correct in its historical parts, and more instructively entertaining in its literary, than its predecessor. Its "Appendix" contains an ample series of important documents and state-papers, including a variety of diplomatic correspondence, various treaties—the Washington treaty among them—and the full protocols of the Black Sea Conference. The latter subject is, however, both too minutely, at least for non-English readers, and too diffusely treated under the head of "English History." Altogether too much space is devoted to certain points of contemporaneous history, and too little to others. But this is now, perhaps, the only defect worth speaking of in this yearly record.

THE CLASS-ROOM TAINE.

EXTRACTS FROM

TAINE'S ENGLISH LITERATURE.

BY JOHN FISKE,

Lecturer and Assistant Librarian in Harvard University.

Taine's English Literature is already the text-book in several colleges. While neither its length nor its free treatment of all departments of our literature is any objection to its use in the higher institutions, both have rendered it unsuitable for places where the instruction is more limited, and for schools where ladies are taught. Yet most of the features which have given the book its unprecedented position can be made available for instruction. These passages have been selected by a student entirely in sympathy with M. Taine's principles, welded into a continuous work, and supplemented by a chronological table and full index. The publishers entertain the hope that the volume will supply the long-felt need of an English literature not only reliable as far as it goes, but unclogged with useless names and dates, and interesting enough to inspire the enthusiasm of the learner.

The volume will be ready early in the Fall. It will be about one-third of the size of the original work. Specimen copies will be furnished to Teachers, post-paid, on receipt of $1 25.

BAIN'S ENGLISH GRAMMAR.

A Brief English Grammar, on a Logical Method. By Alexander Bain, LL.D., Professor in the University of Aberdeen (author of "The Emotions and the Will," "The Senses and the Intellect," Treatises on Psychology, Logic, Rhetoric, etc.) 16mo, boards, 50 cts. Specimens to Teachers, post-paid, 25 cents.

In this work Prof. Bain has written a logical English Grammar, showing that expression and reasoning are both governed by the same laws, and that, therefore, Grammar should be studied in connection with Logic. The book offers materials for such a course of study.

HOLT & WILLIAMS, Publishers,
25 Bond Street, New York.

HARVARD AND YALE,

Together with many other leading institutions, in their courses of

FRENCH AND GERMAN,

Use almost exclusively the Publications of

HOLT & WILLIAMS,
25 Bond Street, New York.

As Messrs. Holt & Williams have made French and German School-books a specialty, they trust there is nothing invidious in calling attention to the fact that, for the study of these languages, they publish more than twice as many works as any other house in America, presenting a variety suitable to the wants of all instructors, from the Nursery Governess to the University Professor.

SOMETHING NEW.

LESSONS IN LANGUAGE.
BY HIRAM HADLEY.

A neat volume, 144 pages, intended for children from nine to thirteen years of age. It is an introduction to the study of English Grammar. It proceeds on the plan of teaching the *science* of language through the *use* rather than the *use* of it through the *science*.

Practice first, science afterwards.

It teaches the use of capitals and punctuation; how to write letters, advertisements, etc.; and is handsomely illustrated with pictures as texts for composition writing. Price 60 cents.

HADLEY BROTHERS, Publishers,
136 State Street, Chicago.

W. F. DRAPER,

PUBLISHER, ANDOVER, MASS.

RECENT BIBLICAL PUBLICATIONS.

A GUIDE TO READING THE HEBREW Text, for the use of beginners. By the Rev. W. H. Vibbert, M.A., Professor of Hebrew in the Berkeley Divinity School, $1 25.

Not a grammar, but a brief Manual of directions, rules, examples, and tables of verbs and nouns, for use with or without a teacher by those commencing the study of Hebrew.

A HARMONY OF THE FOUR GOSPELS IN Greek, according to the text of Tischendorf, with a Collation of the Textus Receptus, and of the Texts of Griesbach, Lachmann, and Tregelles. By Prof. F. Gardiner. 8vo, $2 50.

A harmony with the latest critical texts, valuable tables and notes.

A HARMONY OF THE FOUR GOSPELS IN English, according to the authorized version, corrected by the best critical editions of the original. By F. Gardiner. 8vo, $2.

A reproduction of the Greek work for English readers.

THE LIFE OF OUR LORD IN THE WORDS of the Gospels. By F. Gardiner. 16mo, $1.

"It is well adapted to the convenience of pastors, to the needs of teachers in the Bible-class and Sabbath-school, to the religious instruction of families. It bids fair to introduce improvements into the style of teaching the Bible to the young."—Bibliotheca Sacra.

A GRAMMAR OF THE IDIOM OF THE NEW Testament. Prepared as a solid basis for the interpretation of the New Testament. By Dr. George Benedict Winer. Seventh edition, enlarged and improved. By Dr. Gottlieb Lünemann, Professor of Theology at the University of Göttingen. Revised and authorized translation. 8vo, pp. 744. Cloth, $5; sheep, $6; half goat, $6 75.

"Professor Thayer has introduced numerous and important corrections of Masson's translation, and has made the present edition of the Grammar decidedly superior to any of the preceding translations."—Bib. Sacra.

MACMILLAN & CO.'S

SELECT LIST OF

TEXT-BOOKS FOR THE USE OF UNIVERSITIES AND COLLEGES.

A complete Descriptive Catalogue of Macmillan & Co.'s Educational Books will be sent free, by mail, on application.

SCIENTIFIC CLASS-BOOKS.

The importance of Science as an element of sound education is now generally acknowledged; and accordingly it is obtaining a prominent place in the ordinary course of school instruction. It is the intention of the Publishers to produce a complete series of Scientific Manuals, affording full and accurate elementary information, conveyed in clear and lucid English. The authors are well known as among the foremost men of their several departments; and their names form a ready guarantee for the high character of the books. Subjoined is a list of those manuals that have already appeared, with a short account of each. Others are in active preparation; and the whole will constitute a standard series specially adapted to the requirements of beginners, whether for private study or for school instruction.

ASTRONOMY. By the Astronomer Royal. Popular Astronomy. With Illustrations. By G. B. Airy, Astronomer Royal. Sixth and cheaper edition. 18mo, cloth, $1 50.

"Popular Astronomy in general has many manuals, but none of them supersede the Six Lectures of the Astronomer Royal under that title. Its specialty is the direct way in which every step is referred to the Observatory, and in which the methods and instruments by which every observation is made are fully described. This gives a sense of solidity and substance to astronomical statements which is obtainable in no other way."—Guardian.

ASTRONOMY. Mr. Lockyer's Elementary Lessons in Astronomy. With Colored Diagram of the Spectra of the Sun, Stars, and Nebulæ, and numerous Illustrations. By J. Norman Lockyer, F.R.A.S. Fifth Thousand. 18.no, $1 75.

"An admirable text-book. Those who do not know much of the science could not find a better and more accurate guide."—Museum.

"This book (Macmillan's Author's edition) is by far the best of its kind in our language. It is rare, indeed, that the great masters of a science can be induced to pause in their work of research to help the beginner over his difficulties by writing a text-book. It is, moreover, of the greatest interest to education that these works should be written by masterly hands."—The Nation.

PHYSIOLOGY.—Professor Huxley's Lessons in Elementary Physiology. With numerous Illustrations. By T. H. Huxley, F.R.S., Professor of Natural History in the Royal School of Mines. Thirteenth Thousand. 18mo, cloth, $1 50.

"The very best descriptions and explanations of the principles of human physiology which have yet been written by an Englishman."—Saturday Review.

"It is a very small book, but pure gold throughout. There is not a waste sentence, or a superfluous word, and yet it is all clear as daylight. It exacts close attention from the reader, but the attention will be repaid by a real acquisition of knowledge. And though the book is small, it manages to touch on some of the very highest problems. . . . The whole book shows how true it is that the most elementary instruction is best given by the highest masters in any science."—Guardian.

BOTANY. Professor Oliver's Lessons in Elementary Botany. With nearly Two Hundred Illustrations. By Daniel Oliver, F.R.S., F.L.S. Ninth Thousand. 18mo, cloth, $1 50.

"It is very simple, but truly scientific, and written with such a clearness which shows Professor Oliver to be a master of exposition . . . No one would have thought that so much thoroughly correct botany could have been so simply and happily taught in one volume."—American Journal of Science and Arts.

CHEMISTRY. Professor Roscoe's Lessons in Elementary Chemistry. Inorganic and Organic. By Henry E. Roscoe, F.R.S., Professor of Chemistry in Owens College, Manchester. With Numerous Illustrations and Chromo-Litho. of the Solar Spectrum, and of the Alkalies and Alkaline Earths. New Edition. Twenty-third Thousand. 18mo, cloth, $1 50.

POLITICAL ECONOMY. Political Economy for Beginners. By Millicent G. Fawcett. 18mo, $1.

LOGIC. Elementary Lessons in Logic, Deductive and Inductive. By W. Stanley Jevons, M.A., Professor of Logic in Owens College, Manchester. With copious Questions and Examples, and a Vocabulary of Logical Terms. 18mo, $1 25.

PHYSICS. Elementary Lessons in Physics. By Balfour Stewart, F.R.S., Professor of Natural Philosophy in Owens College, Manchester. Copiously Illustrated. 18mo, $1 50.

As unauthorized Reprints of old editions of some of the above have appeared, it is desirable in ordering to specify "Macmillan's Author's Edition."

MISCELLANEOUS.

ARNOLD.—A Bible-Reading Book for Schools. The Great Prophecy of Israel's Restoration (Isaiah, Chapters 40—66). Arranged and edited for Young Learners. By Matthew Arnold, D.C.L., formerly Professor of Poetry in the University of Oxford, and Fellow of Oriel. 18mo, cloth, 50 cts.

BALL.—Experimental Mechanics. A Course of Lectures delivered at the Royal College of Science for Ireland. By Robert Stawell Ball, A.M. Elaborately Illustrated. 8vo, cloth, $6.

BLACKIE.—Greek and English Dialogues for Use in Schools and Colleges. By John Stuart Blackie. 12mo, cloth, $1.

BRYCE. The Holy Roman Empire. By James Bryce, D.C.L. Third Edition, revised. Crown 8vo, $2 50.

EUROPEAN HISTORY. Narrated in a Series of Historical Selections from the best Authorities. Vol. I., 1003—1154; Vol. II., 1088—1228. Edited and arranged by E. M. Sewell and C. M. Yonge. Crown 8vo, cloth, each $1 75.

FAWCETT.—A Manual of Political Economy. By Henry Fawcett, M.A., M.P., Prof. of Political Economy in the University of Cambridge. Third Edition. Crown 8vo, cloth, $3.

FLOWER.—An Introduction to the Osteology of the Mammalia. Being the Substance of the Course of Lectures delivered at the Royal College of Surgeons of England in 1870. By William Henry Flower, F.R.S., F.R.C.S. 12mo, cloth, $2.

HALES.—Longer English Poems. With Notes, Philological and Explanatory, and an Introduction on the Teaching of English. Chiefly for use in Schools. Edited by J. W. Hales, M.A., late Fellow and Assistant Tutor of Christ's College, Cambridge; Lecturer in English Literature and Classical Composition at King's College School, London; etc., etc. Extra fcap. 8vo, $1 75.

This work is intended as an aid to the critical study of English Literature, and contains one or more of the larger poems, each complete, of prominent English authors from Spenser to Shelley, including Burns's "Cotter's Saturday Night" and "Twa Dogs." In all cases the original spelling and the texts of the best editions have been given; only in one or two poems has it been deemed necessary to make slight omissions and changes, that the "reverence due to boys might be well observed." The latter half of the volume is occupied with copious notes, critical, etymological, and explanatory, calculated to give the learner much insight into the structure and connection of the English tongue. An Index to the notes is appended.

HARDWICK.—A History of the Christian Church. Middle Age. From Gregory the Great to the Excommunication of Luther. Edited by William Stubbs, M.A., Regius Professor of Modern History in the University of Oxford. With Four Maps constructed for this work by A. Keith Johnston. Third edition. Crown 8vo, $3.

HELFENSTEIN.—A Comparative Grammar of the Teutonic Languages. Being at the same time a Historical Grammar of the English Language. By James Helfenstein, Ph.D. 8vo, cloth, $5.

KITCHENER.—Geometrical Note-Book, containing Easy Problems in Geometrical Drawing preparatory to the study of Geometry. By F. S. Kitchener, M.A. 4to, 75 cents.

MACLEAR.—A Class-Book of Old Testament History. By the Rev. G. F. Maclear, B.D. With Maps. Fourth edition. 18mo, cloth, $1 25.

——— Class-Book of the New Testament. $1 25.

——— An Elementary Manual of Old Testament History for Elementary Schools, with a Map of the Holy Land. 18mo, cloth, 50 cents.

——— New Testament. 50 cents.

SIMPSON.—An Epitome of the History of the Christian Church during the First Three Centuries, and of the Reformation in England. Compiled for the Use of Students in Schools and Universities. By the Rev. Wm. Simpson, M.A. 12mo, cloth, $1 25.

THRING.—A Latin Gradual: a First Latin Construing Book for Beginners. By Edward Thring, M.A.

WESTCOTT.—The Bible in the Church. A Popular Account of the Collection and Reception of the Scriptures in the Christian Churches. By Brooke Foss Westcott, B.D. 18mo, cloth, $1 25.

MACMILLAN & CO., 38 Bleecker Street, New York.

Equally valuable either as Text-Books or as Works of Reference.

PROF. LABBERTON'S HISTORICAL SERIES

FOR SCHOOLS AND COLLEGES.

1. OUTLINES OF HISTORY. With original tables, chronological, genealogical, and literary. By Prof. Robert H. Labberton. Oblong 4to, cloth, $2.
2. HISTORICAL QUESTIONS. Logically arranged and divided. The companion to Outlines of History. Oblong 4to, cloth, $1 75.
3. AN HISTORICAL ATLAS. Containing a Chronological Series of 100 Colored Maps, illustrating successive periods from the dawn of history to the present day. Oblong 4to, cloth, $3 50. (This Atlas can be used with any history.)

☞ The latest changes in the map of Europe are fully and accurately exhibited.

BROOKS'S GREEK AND LATIN CLASSICS.

This Series of Greek and Latin Classics is on an improved plan, with especial reference to the wants of the American student. The notes are sufficiently copious to direct and assist the learner without superseding the necessity of his own effort, and are intended to promote sound principles of Criticism, History, Morals, and Religion. Besides illustrations and parallelisms from the Classics, the notes draw upon the treasures of modern literature, and elucidate Grecian and Roman history by the events and institutions of our own time, while apposite and parallel passages from the Bible sanctify the pages of heathen poetry and theology. The impress of Republicanism and Christianity in early youth is thus stamped upon the minds of our children.

THE ÆNEID OF PUBLIUS VIRGILIUS MARO. Elucidated by English Notes, Critical, Historical, and Mythological. With a Metrical Index and Map, and Illustrated by Antique Statues, Gems, Coins, and Medals. To which is added a Copious Dictionary, giving the meaning of all the words with critical exactness. By Nathan Covington Brooks, LL.D. Demy 8vo, half arabesque, $1 75.

THE FOUR BOOKS OF THE METAMORPHOSES OF PUBLIUS OVIDIUS NASO. Elucidated by an Analysis and Explanation of the Fables; together with English Notes, Historical, Mythological, and Critical; and illustrated by Pictorial Embellishments. With a Dictionary, giving the meaning of all the words with critical exactness. By Nathan Covington Brooks, LL.D. 1 vol. 8vo, $1 75.

First Latin Lessons, 75 cents.
Historia Sacra, with Lessons, etc., 75 cents.
First Lessons in Greek, 75 cents.
Harmonia Evangelica, with Lessons, 75 cents.
Ross's Latin Grammar, $1.
Viri Illustres Americæ. Illustrated. $1 50.
Cæsar. Illustrated, Notes, Maps, and Lexicon, $1 50.

COPPEE'S ENGLISH LITERATURE. English Literature Considered as the Interpreter of English History, Designed as a Manual of Instruction. By Henry Coppée, LL.D., President of Lehigh University. 12mo, half arabesque, $2 25.

CROOKS'S AND SCHEM'S LATIN-ENGLISH DICTIONARY. A New Latin-English Dictionary, on the basis of the School Dictionary of Ingerslev, with Additions from the Lexicons of Koch and Klotz. By George R. Crooks, A.M., and Alexander J. Schem. 8vo, half roan, $3 50.

TRAUTWINE'S CIVIL ENGINEER'S POCKET-BOOK of Mensuration, Trigonometry, Surveying, Hydraulics, Hydrostatics, Instruments, and their adjustments, Strength of Materials, Masonry, Principles of Wooden and Iron Roof and Bridge Trusses, Stone Bridges and Culverts, Trestles, Pillars, Suspension Bridges, Dams, Railroads, Turnouts, Turning Platforms, Water Stations, Cost of Earthwork, Foundations, Retaining Walls, etc., etc., etc. In addition to which the elucidation of certain important Principles of Construction is made in a more simple manner than heretofore. By John C. Trautwine, Civil Engineer. 12mo, 648 pages, morocco, tucks, gilt edges. Second edition, revised, $5.

WHITE'S ELEMENTS OF THEORETICAL AND DESCRIPTIVE ASTRONOMY. For the use of Colleges and Academies. By Charles J. White, A.M., Assistant Professor of Mathematics in Harvard College. With numerous Illustrations. 1 vol. demy 8vo. Second edition, revised, $3.

☞ Trustees, School Directors, or Teachers supplied for introduction at reduced rates. Single copies for examination, with a view to introduction, sent by mail, prepaid, on receipt of half the retail price. Address the Publishers,

CLAXTON, REMSEN & HAFFELFINGER,

HAVE RECENTLY PUBLISHED

THE MINOR POEMS OF HOMER: The Battle of the Frogs and Mice, Hymns and Epigrams. Translated by Parnell, Chapman, Shelley, Congreve, and Hole, with Introductions by Henry Nelson Coleridge, and a Translation of the Life of Homer, attributed to Herodotus. 12mo, handsomely printed on toned paper, cloth extra, bevelled edges, price $1 50. Sent free by mail on receipt of price.

"It was what Mr. Burnand would call a 'happy thought' to gather the scattered translations of Homer's Minor Poems into one volume. . . . 'The Battle of the Frogs and Mice' is a mock-heroic poem, which seems to be a parody on the Iliad. The whole poem is full of wit, and Minerva's speech is deliciously funny. The translation by Parnell is admirable. Some of the hymns, despite their name, are very humorous—that to Mercury especially, in which the baby-god's theft of Apollo's oxen is amusingly described. . . . Every admirer of Homer, and indeed of Greek literature, will welcome this collection of ancient verse, which, whether justly attributed to Homer or not, possesses great intrinsic interest and value. The volume is beautifully printed and bound."—Literary World.

"All these are very remarkable productions, to the general reader as to the special student, and the publication of them in these fitting translations is an enterprise worthy of all praise. . . . This volume is in thoroughly excellent shape."—New York Mail.

"Messrs. Denham & Co. deserve much credit for having published in so attractive and tasteful a manner this welcome little volume, which consists of an hitherto uncollected edition of the Minor Poems of Homer, translated into English verse. The names of the translators will indicate sufficiently the character of the work. It is beautifully printed on tinted paper, and neatly bound in cloth."—Trinity Tablet.

Priced Catalogues of our English and foreign books sent free of charge on application.

The Nation.

NEW YORK, THURSDAY, AUGUST 22, 1872.

The Week.

THE contest between the Grant and Greeley advocates has grown so warm that within the last fortnight they began to call in the aid of what the ecclesiastics used to call "the secular arm" against each other, or, in plain English, tried to hand each other over to the police. The Kilpatrick prosecution of the editor of the *Times* for libel was a move of this nature, but failed owing to the refusal of the Grand Jury to find a bill. This was followed up by the arrest of Mr. J. P. Lindsay, the secretary or other officer of the Greeley Committee, for fraud, at the suit of the heirs of the late Professor Morse, which caused wild rejoicing in the Grant camp, tempered, however, by threats of an indictment for "conspiracy" made by the *Tribune* against the editor and a reporter of the *Times*. No other proceedings are pending at this writing, but the air is full of "charges" and insinuations, and rumors of the existence of "papers," "letters," and affidavits are rife on all sides. The public, we think, is rejoiced by every threat of suit or prosecution, and mourns when the parties come to terms, or for any other cause the proceedings terminate without a verdict, for it desires that the magistrate shall not bear the sword in vain, and it knows that he can hardly thrust it into any group of "champions" in this city without doing substantial justice.

The greatest triumph the cause of reform has yet won was achieved at Albany on Monday last in the conviction of Barnard, followed as it was by a sentence of removal from the bench and disqualification for office. The value of the full penalty cannot be overrated. It not only drives Barnard completely out of political life, for there is in New York political life even for such as he now is, but it gives a salutary shock to public opinion, the effect of which will be felt both on the bench and at the bar. We presume even Mr. George Ticknor Curtis will now acknowledge that there was something wrong about Barnard, in spite of that eminent man's assertion to the contrary. Moreover, it finally clears the New York bench of the scoundrels. McCunn is dead; Cardozo—probably the greatest knave of all—has unfortunately escaped justice, but he is effectually shelved; and Barnard is disposed of in the most exemplary and striking manner by a fair trial and prompt conviction.

The triumph of justice and decency will not be complete, however, unless those who have borne the brunt of the battle are now remembered and honored. It ought not to be forgotten that General Barlow was the first to raise his voice in this city against the judicial iniquities in which Barnard was the chief actor, and that he was followed closely by Mr. Stickney, on whom the drudgery of this magnificent fight largely fell afterwards, and who never rested till, on Tuesday last, at Saratoga, he had fairly driven the culprit to bay, and closed the case against him in a speech which destroyed the last traces of hope. On Mr. Van Cott fell the great responsibility of the conduct of the case before the Senate, and he pursued it with remorseless vigor. We would advise those, too, who doubted whether the Bar Association would be able to do anything for reform inside ten years, to look at what it has done in the present contest. It took charge of the proceedings against the judges immediately after the election last fall, and in spite of every kind of obstacle, either drove them from the bench or got them impeached. It is safe to say that it is now a power which no judge will forget or set at defiance, and that it will supply that restraining public opinion from which the courts have for a good many years been almost completely exempt. We trust its triumph will, as soon as the hot weather is over, be celebrated by some kind of festivity.

It is to be observed that among the twenty-six articles on which the Court found Barnard guilty, are the charges with regard to the appointment of Fisk as receiver of the Albany and Susquehanna Railroad, the appointment of young Tweed as receiver of the Union Pacific Railroad, the appointment of W. J. A. Fuller as receiver of the Groesbeck stock, and the issue of the celebrated "writs of assistance," which formed the principal points in the controversy between General Barlow and Mr. D. D. Field and Mr. Shearman in 1871, and in which Mr. G. T. Curtis had the fatuity to mix himself up. On all these the court have found Barnard guilty of corrupt and illegal conduct, which leaves the counsel in rather an unenviable position. We may add, before passing from the subject, that, if the reporters have not been at their old tricks, the account they give of the "sympathy" expended on Barnard was somewhat odd, and indeed a little repulsive. There is nothing in Barnard's character or antecedents to make his fall pathetic or impressive. He made his appearance in city politics as a drunken Californian loafer and rowdy, and mounted the bench in that character, and has persistently maintained it. So do not let us have any weeping over him, as if it was a Kent or a Story that had come to grief. The only emotion which is now proper is shame, deep and stinging shame, that such a person as he should have for thirteen years sat on the judicial bench of a great commercial city.

General Barlow was accused by the *World*, in a paragraph which the *Tribune* ought to have been ashamed to copy, but did copy, of having compromised or abandoned the suits against Tweed and others, in virtue of an arrangement by which Tweed was to give money and support to the Grant cause—General Barlow being a Grant man. He now writes to say that the suits were postponed solely because Barnard and Cardozo were assigned to the term of the court in which they were to have been tried, and of course denies the arrangement with Tweed, by which that person was to give one million dollars to the Grant campaign fund.

The most important event of the week, if it has really happened—and we see no reason for doubting it, except Democratic and Liberal-Republican reluctance to believe it—is the decision of the Straight Democracy to nominate Mr. Charles O'Conor for the Presidency, and Mr. O'Conor's apparent decision to accept the nomination if tendered him. These Straight Democrats are in many places very sincerely irreconcilable, and will not suffer Greeley as their candidate nor submit to "Liberal" dictation. Such are some of the Southern leaders, high-spirited men, hating subserviency and with a disdain of bartering; and such, too, are some of the Northern Democratic doctrinaires and apostles, like Mr. Chauncey Burr, or Mr. McMasters, who probably can demonstrate to his own satisfaction that every father of the church was and is and will be a Democrat, because to be anything else is to be impervious to Catholic truth, "a child of the revolution," and exposed to danger of eternal darkness. Other Straight-outs, as they call themselves, or Stay-outs, as the Greeleyites call them, are in the movement because they cannot take Grant and the Republicans, and they hate the surrender of the time-honored and unterrified principles for the sake of getting office for their office-holders, for most of whom these gentlemen have no respect. A Democrat who is such because he believes in the good old days of Benton and bullion, free-trade and sailors' rights, looks with some disgust on the Hoffmans and Oakey Halls, and cares very little for assisting them into places. Scattered specimens of these—the "legal-minded" Democracy—are everywhere to be found, while the Southern irreconcilables in the States of West Virginia, Georgia, Virginia, North Carolina, Kentucky, and Tennessee are probably still more numerous.

Numerous also is another class of Straight Democrats, and it bids fair to play an important part in the election in case the Louisville

movement really comes to anything, as is by no means unlikely. We refer, we need hardly say, to the trading Democracy of this city and State, led by the "Apollo Hall" leaders. Greeley and Brown would go out of this county and Kings with a majority decidedly reduced from one of Hoffman's and Tweed's day were Apollo Hall, with all its constituency, American and foreign, to have the support of a national nomination and the prestige of Mr. O'Conor's name—the name of a sachem in reformed Tammany. Mr. O'Conor would also, it is probable, secure the votes of many men either Republican in politics or having hardly any politics at all, who can support neither Grant nor Greeley. This is a class quite large in this city, and it holds Mr. O'Conor in high and, as all the country knows, in thoroughly deserved respect.

On the whole, "the great tidal wave" may be said, speaking Hibernically, to hang fire a little this week, though the contest is very active in Maine, and active too in the West, where Mr. Trumbull and Mr. Morton are giving assiduous attention to their personal affairs, and with the help of the various candidates are getting the people out in large numbers at barbecues and mass-meetings. But there is a cessation of "defections" and "accessions," the truth being that the men who were in the intrigue from the first and the more incautious of the fence politicians have already announced their choice, while the cautious politicians, and that body of the rank and file which likes to be on the winning side, are waiting for decisive election returns. Then, too, a depressing effect is exercised by a letter which Mr. Greeley is charged with having written, and in which he gave it as his opinion that he could carry New York, New Jersey, Rhode Island, Connecticut, and New Hampshire, but that the rest of the work must be done in the West. These are all November States, however, and as things look now, the contest will be practically settled in October, when elections will be held in Pennsylvania, which Mr. Greeley, it is alleged, does not claim, Indiana, and Ohio. Let these States go for Grant, and prophecy-making as to Connecticut and New Hampshire will be more feasible than necessary. As for Maine, which votes next month, and to which public attention is now directed, there is much speech-making and canvassing, Mr. Greeley having himself been on the stump in the most doubtful of the Congressional districts, and the party orators and workers orating and working their best incessantly. Both sides profess confidence, the Greeleyites in reducing the Republican majority and in securing one, perhaps two, and perhaps three Congressmen; the regular Republicans in enlarging Governor Perham's and Speaker Blaine's majorities. It is early yet to predict, but we judge that the Grant men will have votes enough; not too many, doubtless, but enough probably. It was never easier to distrust the correspondents and their figures, nor perhaps easier for them to be deceived, for there is much more than the usual muddle. We think it rational to expect a pretty close contest and a Regular Republican victory.

Mr. Greeley, after confining himself for some weeks to commonplaces, has made a set and carefully prepared speech, answering certain charges against him, and explaining his position on various points. The managers have kept him very close until now, holding him by the coat-tails or by the arms on nearly every occasion when the temptation to unbosom himself seemed strong. He denies in the broadest manner that he has promised any office to anybody, either before or after the Cincinnati Convention, in consideration of his support, or that anybody, North or South, has asked him for office, except a "few of the small fry of politicians," who have suggested that the promise of a few post-offices might help him; and he gives formal notice that he will not consider the claims of these applicants "till the more modest and reticent have been fully satisfied"; he declares, moreover, that he will not confine his appointments to Republicans, but that all who adhere to the Cincinnati platform will have a fair share. He denies also that any Southern man or woman has ever asked of him any pledge or promise with regard to the payment of the Confederate debt or the pensioning of rebel soldiers, or that he ever made any, and expresses the hope that, between November 5 and March 5, the "thieving carpet-baggers" of the South will take to flight, as Bullock of Georgia has done. Why or on what compulsion they will take to flight, or what he can do to them if elected, he does not explain. The main object of the speech seems to be to reassure those who were afraid the "new deal" would be narrow in its operation.

The *Tribune* is very hard on Senator Wilson because he was once a sort of Know-Nothing and is now ashamed of it and seeks to conceal it. The fact is, that we set apart a class of men to do the work of politics who in most cases have, at least in the early part of their career, to make a profession of it and live by it, as Senator Wilson had. Now they cannot live by it unless they can get elected to some office, and they cannot get elected to any office without being on the side of the majority. To find fault with a politician, then, for having been on the side of the majority, or what he thought was the side of the majority, is to find fault with him for following his calling. If it could be shown that Senator Wilson staid among the Know-Nothings after he had found they were losing ground, it would be a serious charge against him, as it would imply professional incompetency; but this the *Tribune* does not venture to assert. Mr. Wilson and all other politicians practise their profession under the rules prescribed by the public, and one of these rules makes a politician who has no party at his back, or only a small one, a ridiculous and helpless object—a failure, in short. We ought to add, too, that any one who formed his opinion of Senator Wilson from reading the *Tribune* during the last twelve years, would consider him one of the wisest, purest, and ablest of men. It is, therefore, confusing to learn now from the same source that he is a schemer, a hypocrite, and a foolish body.

Mr. Frederick Douglass, with a singular want of political perspicacity, persists in looking on the question whether General Grant slighted him in failing to invite him to dinner as a trifling one. He has written another letter to Mr. Langdon, maintaining with great perversity that he was not offended by the omission, and does not mean to be. Mr. Sumner, on the other hand, says that he (Douglass) *was* offended, and ought to have been. Apart from the deep political significance of the matter, Mr. Sumner's share in the controversy reminds one of the old gentleman in the "Book of Snobs," who used to go to the club for the purpose of finding fault with the cook and the waiters, and used to examine the plates of the young men whom he saw dining, to see if they were properly served. Standing over an unfortunate whom he found quietly and happily eating a chop, he would call the servant and roar, "What do you mean, sir, by giving a gentleman such a chop as that? Do you call *that* a chop, sir? Take it away, sir, instantly!"

The charge of drunkenness at New Haven against Mr. Gratz Brown, which rests on the statement of the hotel clerk, who testifies in detail to frequent consumption of ardent spirits, followed by disorderly and indecent behavior in the office afterwards, has been met by Mr. Brown in a letter, in which he says that "the statement is very erroneous, and in so far as it implies that his habits are intemperate, is unwarranted"; that while at the hotel he was suffering severely from the beginning of a disease which prostrated him on the following day in New York. "It will scarcely be considered," he then adds, "that the application of a stimulant for temporary relief would constitute a departure from that purpose to avoid social indulgence while in the discharge of public duties which has influenced him for some time past;" and he goes on to intimate that he has been a total abstainer "at various intervals" for many years. We find it a little difficult to make out the meaning of all this, but we take it to be that, while the statement of the clerk was correct as to the main fact, it was erroneous as to some of the incidents, and that what liquor Mr. Brown took during the evening he took as defence against premonitory symptoms of cholera; that when engaged in the discharge of official duties he takes nothing stronger

than water. We have no wish to press hard on him in this matter, but it is a very serious matter, and after what happened on the 4th of March, 1864, calls for plain speech. We feel obliged to say, therefore, that the frequency with which attacks of certain classes of diseases are now put forward as an excuse for intoxication, has deprived that plea of its value. A man who is liable to get drunk every time he has a toothache or stomach-ache, or a touch of neuralgia, is therefore not fit for high and conspicuous public office, and ought not to be entrusted with it; and it would be a proper and graceful thing for Mr. Brown to withdraw his infirmities from public discussion by withdrawing his name from the Greeley ticket.

The exact figures of the French Loan, which we gave last week, somewhat roughly, are as follows: The sum required was $700,000,000; the sum subscribed was $8,200,000,000, or not quite twelve times as much. Of this Paris took $2,635,000,000; the Departments $835,000,000; foreign countries, principally England and Germany, $4,730,000,000. The result, apart from the revelation it makes of the prodigious wealth of the French middle and laboring classes, is looked upon generally by European politicians as making the duration of "the Republic" certain, as it is tantamount to a confirmation by the popular vote; indeed, it is a stronger confirmation than any ordinary popular vote could give, as in reality every subscriber not only expresses his satisfaction but backs his opinion with money. Still the subscription to the loan also means, and perhaps more than anything else, confidence in the endurance and solvency of the French nation, no matter what may be the form of government; and in talking of the "French Republic," it is always well to bear in mind that there is nothing republican about it, in our sense of the word, but the absence of a king.

As regards the social future of France, the report of M. Legoyt, the well-known statistician, on "the movement of population" in that country, is again attracting attention. He says that all over Europe, but particularly in France, there has been during the last twenty-five years a steady decline in the proportions of births to marriages, and that this decline bears a certain relation to the growth of wealth and the spread of comfort. In France, however, the proportion of children born out of wedlock has during the last ten years increased, while that of children born in wedlock has diminished and is diminishing, and this last fact was accounted for, at a meeting of the Academy of Moral and Political Sciences, by the growth of the practice among girls in the country districts of qualifying themselves to act as wet-nurses to the Parisian children, at the cost of their character. This brought out some curious details as to the "wet-nurse industry" (*industrie nourricière*). It appears that of 53,000 children, in round numbers, born in Paris in a year, 20,000 are sent at once to nurses in the country. Of those which are kept at home, 24 per cent. die in their first year; of those sent to the country, 20 per cent.

The tenant riot in Germany, of which our correspondent gives some account on another page, is exciting a good deal of attention and some uneasiness, as all troubles among the laboring classes now do, inasmuch as all discontent is believed, and rightly believed, to be so much gain to the socialists, who are now working harder in Germany than they have ever worked in France, and are likely, if they ever gain headway in Germany, to be far more dangerous than they ever have been in France. Moreover, emigration is reported to be assuming enormous proportions among the flower of the German country population—even the faithful and stalwart Pomeranians, who furnish the pink and pride of the Prussian army, leading the way. They are apparently unwilling to share any longer in the military responsibilities of the rising empire, and those who emigrate come from the class on whom Karl Marx's crazy theories would make least impression. These, as developed in his latest work, make all taking of interest on money and profit on capital a "swindle," six hours a natural and lawful day's labor, and treat all men who do not work with their hands as little better than sneaking rascals.

A curious and interesting contest between a politician and a man of science has just been brought to a close in England, the scientific man being, we are glad to say, triumphant. Dr. Hooker, the famous botanist, is the Superintendent of the famous Kew Gardens, near London, with their Arboretum. Indeed the Gardens, though the property of the Government, are to a great extent the creation of Dr. Hooker, and of his father, Sir William Hooker, who was his predecessor in the same position, and they both not only devoted their lives to them, but have spent considerable sums of money out of their own pocket on them, and over the gardens Dr. Hooker till recently reigned supreme. On the accession of Mr. Ayrton, however, to the position of First Commissioner of Works under Gladstone, things changed. Mr. Ayrton is an active, rather sour-tempered, and overbearing "practical man," who took it into his head that Dr. Hooker was nothing but a botanist, good enough to lecture to ladies' schools, but not to manage a public work—feeling about him, in short, very much as Sweeny and Hilton felt about Mr. Olmsted and Mr. Waterhouse Hawkins when the Ring came into power in this city. So he began by lecturing him in very rude fashion, then snubbed him, and finally began to give orders directly to subordinates over Dr. Hooker's head, and, in fact, virtually removed him, all the while goading him with almost insulting language. Hooker bore it as long as it was bearable, and then made known his griefs to his brethren. Huxley, Darwin, Tyndall, and all the leading men of science at once came to his rescue, and wrote an indignant remonstrance to Mr. Gladstone. The press took up his cause vehemently, and his friends in Parliament, headed by Lord Derby, fell foul of Mr. Ayrton, and the poor man was fairly squelched in a few days, and a "Treasury Minute" published complimenting Dr. Hooker, and restoring him to all his prerogatives and emoluments.

The late revolution in Peru, which will probably prove a great gain to the cause of good government, furnishes a striking illustration of the thinness of the crust of civilization under which the South American Republics exist, and indeed makes their existence, troublous as it is, a matter of some surprise. The time had come for the election of a new President, and Don Manuel Prado seemed likely to be the successful candidate, his leading competitor being the actual President, Balta. Whereupon General Gutterriez, the Minister of War, after having in vain tried to induce the President to join him in a *coup d'état*, determined to make it himself, and began by seizing the President, and dispersing the Congress at the point of the bayonet, Bonaparte fashion. Hearing, shortly after, that his brother had been killed by the mob in the street, he ordered Balta, the President, to be assassinated in the barracks in which he was confined. By this time the people had recovered from their stupefaction, a counter revolution was rapidly rising, and the army began to desert Gutterriez, who attempted to escape in disguise, but was recognized in a shop, and instantly killed and mutilated; and at the date of the last advices, his body, and that of his brother, were dangling, naked and gory, from the tower of the cathedral. The affair has ended well for the cause of good government. Had Louis Napoleon's attempt in 1851 ended similarly, it would have saved France millions of treasure and torrents of blood. The strange part of the story is, however, not that Gutterriez should have tried to overturn the Government—for this was in strict accordance with Peruvian traditions—but that the people should have met the attempt so promptly and sternly. His mistake was probably the murder of Balta, which was the act of a savage, and raises another curious question of South American politics, viz., How is it that these South American politicians, most of whom have been educated abroad, and have learnt the morals and manners of the most advanced nations, and have an almost velvety softness of exterior, lose so little of their native ferocity, and carry into civil contests so much of the fierce passions of the Pampas?

THE POSITION AND PROSPECTS OF "REFORM."

WE still continue to receive letters from persons whose minds are troubled by the difficulty of choosing between Grant and Greeley. We have said all we can say to make our own position on this point clear. But one correspondent—a distinguished Pennsylvania soldier, who proved his patriotism by being crippled on the field of battle, and who says he cannot support Greeley, yet cannot see his way clear to supporting Grant—asks us a question which is somewhat novel, and which it is proper to answer at length. He wishes to know whether in our opinion, as in his, the election of Grant will not help to perpetuate the carpet-bag régime, with its attendant horrors and disorders, at the South. The answer is, that the election of Grant will not affect the South in any way, except by preventing the accession to office of a considerable number of the class commonly known as "unrepentant rebels." Upon the legal or political status of any class of citizens at the South, it can exert no influence whatever. The President cannot remove the carpet-baggers or any other class of adventurers. Their position and prospects are now controlled exclusively by the State legislatures and the popular vote. The Scotts, Parkers, and their kind hold office at the South now, and steal the public money, not in virtue of the support they receive from Washington, but in virtue of the ignorance, supineness, and connivance of the Southern constituencies. Since Congress passed the Amnesty measure at the last session, that region has, for all practical purposes, passed into the hands of its own people. Should the debased governments which have grown up there under the Reconstruction acts hereafter hold their ground, it will be a sure sign that they are the natural product of the communities whose affairs they administer; General Grant will be no more responsible for them than for the condition of the government of this city. It is true that General Grant lent his support to the Ku-klux legislation; we should ourselves have liked to see him succeeded by a man deeply enough imbued with the great principles of constitutional government to have opposed that legislation. The person who is offered us, however, by the opposition as his successor did not oppose it; on the contrary, he supported it more heartily than Grant; so that those who fear the effect on the South of the continuance of "Grant's rule" will do well to remember that there are exactly the same reasons, though in a rather stronger form, for fearing the effects of Greeley's rule. Greeley's rule will differ from Grant's, as we have said, solely in the fact that he will probably give a large number of offices to what is called "the rebel element" in Southern society.

It is true that the Cincinnati movement has done something for the South. There can be little doubt that the strong expression of opinion made at the Convention, both in the platform and in the speeches, did frighten Congress at the last hour into passing the Amnesty Act. We advocated in these columns and before the Convention met, the utterance by it of very decided opinions on the whole question of carpet-bag government—not so much in the expectation that it would produce any immediate results at the South, as in the hope that the Convention would found a new political organization which would bring the people back to their allegiance to the great principles of decentralization and local self-government, and revive in them that hearty sense of the necessity of intelligence and honesty to make any government prosperous or tolerable which the war had done so much to obscure. Had the Convention backed up such a protest by the nomination of a candidate devoted to these principles and conspicuous for his advocacy of them, we should undoubtedly be compelled to say, in answer to such questions as our correspondent addresses to us: "It is true that our candidate can exert no more direct legal influence on the condition of the South than Grant can. He must, if elected, obey the law; his election will found a party pledged to hostility to all the theories of government and morals which have brought the South to its present condition, and the elevation to the Presidential chair of a man so well known for his dislike of them as A, or B, or C, will be the best possible proof of the sincerity of the movement, and the best possible guarantee that the influence of the Administration will be used for four years at least to discourage them and to strengthen and diffuse sounder views of public policy." When, however, instead of this, the Convention nominated the most notorious centralizer in the United States, the most blatant advocate of everything in the direction of centralization which has been proposed in American politics for thirty years, and made the attempt to palm Greeley off on the public as a good antidote for Grant, of course it threw over the relations of the Cincinnati movement to the Southern griefs the air of a rather impudent farce. We therefore say to all doubtful voters, if you are troubled more about the condition of the South than about other things, there is nothing to choose between the candidates as regards the general course of reform; but if you wish to strengthen political purity and decency generally, and discountenance fraud and chicane as instruments of government in all parts of the country, you would do well to vote for Grant.

One has no sooner said this, however, than he feels the necessity of several qualifications and reservations. We do not give up the expectation—indeed, one could not give it up without despairing of the country—of seeing the movement which was perverted at Cincinnati restored to its original direction, and result in the foundation of a real reform party, headed and represented by a genuine and honest reformer. It may be in four years, it may not be for eight. That it must come, and that when it comes it must be irresistible, nobody who sees anything of the doubt, despondency, which prevail among the best men in the community over the condition of our political morals, or who listens to the wails of the better class of Greeleyites at the contemplation of their own precious candidates, can for a moment doubt. Now it would, we think, weaken the demand for reform, and the feeling of its necessity, if people were allowed to suppose that either candidate in the present contest properly represents, or is identified with, the cause of reform. We suppose there are few intelligent men who do not watch their "organs" throwing mud at each other with sorrowful disgust; but then, it is only those who read the newspapers with professional care who know the depth of the cant and humbug which their professions of political virtue and purity cover up. To illustrate this fully would need an article to itself, or indeed half a dozen articles, but we may cite a few before leaving a repulsive subject. The New York *Times*, the other day, produced with much appearance of horror an "exposure" of Senator Doolittle for having obtained a cotton trading permit for a Government clerk during the war, and having made the clerk agree, in a ridiculous letter written by Doolittle himself, to share the profits with him. On reading this, and learning that Doolittle was now a prominent Greeleyite, the simple-minded would naturally suppose that no such men were to be found on the Grant side. But the fact is that even a slight sketch of the doings of Mr. Harlan would make Doolittle's performance seem innocent and pure. Mr. J. M. Ashley was "exposed" a few years ago in the *Times* for conduct decidedly worse, while a member of Congress, and his guilt was affirmed by a committee of Congress; but this did not prevent General Grant appointing him Governor of Montana with the support of Mr. Sumner. It is true he has now gone over to Greeley, but only because the bounty of the Administration was exhausted. In like manner, although the illustrious Banks has cast in his lot with Mr. Greeley, does not General Grant receive the support of the illustrious Butler, who has been "exposed" twice for Banks's once, and who has none of that gilding on his vice which makes Banks at once a terror and a delight? Then, too, to whom is General Sickles faithful if not to his old chief, and surely Sickles's political morals will not bear examination in leaded type. He was appointed by Grant, and with the hearty approval of the stern and austere Greeley, to one of the most important positions in the gift of the Government. Moreover, General Schenck has committed in London an offence, which though not so comic as Mr. Doolittle's, is certainly darker, but General Grant has never reprimanded him for it, and the great "reformer" Mr. Greeley has stoutly defended him. For want of space, we say nothing of Mr. Casey, nor of Mr. G. H. But-

ler, nor of many other well-known characters, for whose weaknesses and errors the Administration is in a greater or less degree responsible. So when laughing over Greeley as a reformer, let us remember that in the other direction the prospect is also tolerably amusing, and that Doolittle is by no means the only sinner in the political world on whom the eye of the righteous can now fall.

THE CIVIL SERVICE AND THE JAILS.

THE recent conference held in London, of persons interested in prisons and prison discipline, or "penologists," as they have begun to call themselves, was, singularly enough, originated in this country, where the management of prisons, after having at one time furnished Europe with a model, now lags behind all countries of Western Europe, at least in its management of criminals. The reason of this anomaly is that, while the number of persons among us who are sincerely interested in reforms of all kinds, and who labor for them unceasingly, increases every year, their influence on the various branches of our administrative system does not increase. Our prisons have, in other words, been handed over to politicians, to whom a jail is a place, not in which crime is punished or criminals reformed, but in which a certain number of offices can be found for "energetic workers." This is, of course, not true in the same degree of all States, but it is true in *some* degree of all of them, and there has probably been no worse or more deplorable result of the introduction of "rotation in office." So that the question of prison reform, which to every thinking man is one of the gravest questions of the day, and grows graver as population grows denser, is in reality but a part of the great question of civil-service reform, and the first and best thing for our "penologists" to do, when they come home, is to lend a hand in putting an end to the great abuse which makes even wardenships in jails one of the "spoils" of political victory.

But some good work in the direction of reform has been done in this State by our Prison Association within the last year. Dr. Harris, the Secretary, has at last succeeded in procuring the adoption by the Legislature of an amendment to the Constitution, substituting for the present three elected Inspectors of Prisons, holding office for three years, a board of ten unpaid inspectors, appointed by the Governor, and holding office for ten years, and having complete control of all the prisons of the State. Should this amendment be carried, when submitted two years hence, it will take our prisons "out of politics," and put other persons than energetic Greeley or Grant "workers" into the wardenships, and put the whole prison system of the State into the hands of men really interested in the great problems of criminal justice. Moreover, Dr. Harris has also succeeded, or almost succeeded, in making arrangements with many of the great employers of labor throughout the State by which they agree to give work to a certain number of discharged convicts on their leaving the prison, and keep their secret, and thus, in all probability, restore a majority, at least, to the paths of honesty. There is no reason why this movement should not be indefinitely extended, if the public could be got to interest itself more warmly in the condition of the prisons, or, in other words, in the machinery by which we seek to protect life and property. It is the duty of the police and the district attorney to make sure that the criminals are caught and locked up, but criminals cannot be made into honest men without the co-operation of the community at large.

We must, however, at the same time protest against the tendency which showed itself at the London conference, as it shows itself on all such occasions, and which the humanitarian view of crime, viz., that it is a disease simply, not unnaturally fosters—the tendency to treat the reformation of the criminal as the great end of criminal justice. With all due respect to penologists, this is not the great end of criminal justice. A criminal is seized and shut up, not for his own good, either primarily or secondarily, but for the good of society. We restrain him of his liberty not that we may improve him, but that honest men may live in peace and security. We have no right, or shadow of right, to lock anybody up because we disapprove of his character, and think that if we get him completely into our power we may mend it, and the preaching of any doctrine which helps to spread any such notion as to the relations of society to the individual is, to say the least, at this juncture very likely to do mischief. The only good reasons we can give a thief for carrying him off to jail are two in number—first, that we may prevent him from stealing for a greater or less period, and, secondly, that we may so associate stealing in his mind and in that of spectators with disagreeable consequences, that they may dread to steal hereafter. In other words, in all our dealings with thieves, the security of the honest and industrious ought to be our first and great concern. The anxiety about the thief's moral condition and the disposition to treat him simply or chiefly as a sick man to be doctored, and not as a culprit to be deterred, which finds vent so frequently in humanitarian literature, though it has its good side, is too often the direct product of that habit of trying to "look at the world as God looks at it," to use their own phrase, or, in other words, of considering themselves as in a certain sense divine beings, into which so many of our Sentimentalist friends have of late years fallen. Once you have worked yourself into the belief that in your dealings with a criminal you act, not as the representative of a community of hard-working human beings, trying to protect themselves against fraud and violence, but as the representative of the Creator of the universe, showing mercy to fallen man, of course the temptation to tinker the criminal's heart and try moral experiments on him, and forget all about the person whose hard earnings he filched, or whose throat he cut, becomes irresistible.

We should be sorry to have it supposed, however, that we do not think punishment, or, in other words, deterring measures, ought to be accompanied in all cases by assiduous and energetic attempts to turn the criminal out of prison a better and wiser man than when he entered it. But this, as a century of experience has shown, can only be done by fortifying him against temptation. Under lock and key, however, he is exposed to none of the ordinary temptations of life, and therefore he cannot mend and does not mend. The Irish system, which tries him by actual contact with the world, and only lets him go when he has shown by contact with the world that he can successfully resist the commoner temptations to relapse, is now almost universally recognized to be the only one which produces the smallest valuable result. But it cannot be tried here with our present civil service. It needs a trained, upright, experienced, and careful body of officials to work it, and these we have not got and cannot have until we make merit the strongest title to office and make tenure dependent on good behavior. In no field of our administration does the present system appear so badly as in our prisons, and in no department of its affairs is the responsibility of the community so great; a people who would hand its criminals over to the care of "scallawags" and adventurers certainly must sing and pray in vain. Criminals are not patients to be doctored; but they are often unfortunates to be helped; they are the stragglers and shirkers and weaklings of the great army of civilization, whom we cannot allow to maraud, but whom we have no right to sell into slavery.

A SUMMER IN EUROPE.

IV.—WELLS AND SALISBURY.

THE pleasantest things in life, and perhaps the rarest, are its agreeable surprises. Things are often worse than we expect to find them, and when they are better, we may mark the day with a white stone. These reflections are as pertinent to the fortunes of man as a tourist as to any other phase of his destiny, and I recently had occasion to make them in the ancient city of Wells. I knew in a general way that it had a grand cathedral to show, but I was far from suspecting the precious picturesqueness of the little town. The immense predominance of the minster towers, as you see them from the approaching train, over the clustered houses at their feet, gives you indeed

an intimation of it, and suggests that the city is nothing if not ecclesiastical; but I can wish the traveller no better fortune than to stroll forth in the early evening with as large a reserve of ignorance as my own, and treat himself to an hour of discoveries. I was lodged on the edge of Cathedral Green, and I had only to pass beneath one of the three crumbling Priory Gates which enclose it, and cross the vast grassy oval, to stand before a minster-front which ranks among the first three or four in England. Wells Cathedral is extremely fortunate in being approached by this wide green level, on which the spectator may loiter and stroll to and fro, and shift his standpoint to his heart's content. The spectator who doesn't hesitate to avail himself of his privilege of unlimited fastidiousness might indeed pronounce it too isolated for perfect picturesqueness—too uncontrasted with the profane architecture of the human homes for which it pleads to the skies. But, in fact, Wells is not a city with a Cathedral for a central feature; but a Cathedral with a little city gathered at its base, and forming hardly more than an extension of its spacious Close. You feel everywhere the presence of the beautiful church; the place seems always to savor of a Sunday afternoon; and you fancy that every house is tenanted by a canon, a prebendary, or a precentor.

The great *façade* is remarkable not so much for its expanse as for its elaborate elegance. It consists of two great truncated towers, divided by a broad centre bearing beside its rich fretwork of statues three narrow lancet windows. The statues on this vast front are the great boast of the Cathedral. They number, with the lateral figures of the towers, no less than three hundred; it seems densely embroidered by the chisel. They are disposed in successive niches, along six main vertical shafts; the central windows are framed and divided by narrower shafts, and the wall above them rises into a pinnacled screen, traversed by two superb horizontal rows. Add to these a close-running cornice of images along the line corresponding with the summit of the aisles, and the tiers which complete the decoration of the towers on either side, and you have an immense system of images, governed by a quaint theological order and most impressing in its completeness. Many of the little high-lodged effigies are mutilated, and not a few of the niches are empty, but the injury of time is not sufficient to diminish the noble serenity of the building. The injury of time is indeed being handsomely repaired, for the front is partly masked by a slender scaffolding. The props and platforms are of the most delicate structure, and look in fact as if they were meant to facilitate no more ponderous labor than a fitting-on of noses to disfeatured bishops, and a rearrangement of the mantle-folds of strait-laced queens, discomposed by the centuries. The main beauty of Wells Cathedral, to my mind, is not its more or less visible wealth of detail, but its singularly charming tone of color. An even, sober, mouse-colored gray covers it from summit to base, deepening nowhere to the melancholy black of your truly romantic Gothic, but showing, as yet, none of the spotty brightness of "restoration." It is a wonderful fact that the great towers, from their lofty outlook, see never a factory chimney—those cloud-compelling spires which so often break the charm of the softest English horizons; and the general atmosphere of Wells seemed to me, for some reason, peculiarly luminous and sweet. The Cathedral has never been discolored by the moral malaria of a city with an independent secular life. As you turn back from its portal and glance at the open lawn before it, edged by the mild gray Elizabethan Deanery and the dwellings hardly less stately which seem to reflect in their comfortable fronts the rich respectability of the church, and then up again at the beautiful clear-hued pile, you may fancy it less a temple for man's needs than a monument of his pride—less a fold for the flock than for the shepherds—a visible sign that beside the actual assortment of heavenly thrones, there is constantly on hand a choice lot of cushioned cathedral stalls. Within the Cathedral this impression is not diminished. The interior is vast and massive, but it lacks incident—the incident of monuments, sepulchres, and chapels—and it is too brilliantly lighted for picturesque, as distinguished from strictly architectural, interest. Under this latter head it has, I believe, great importance. For myself, I can think of it only as I saw it from my place in the choir during afternoon service of a hot Sunday. The Bishop sate facing me, enthroned in a stately Gothic alcove, and clad in his crimson band, his *manches bouffantes*, and his lavender gloves; the canons, in their degree, with the archdeacons, as I suppose, reclined comfortably in the carven stalls, and the scanty congregation fringed the broad aisle. But though scanty, the congregation was select; it was unexceptionably black-coated, bonneted, and gloved. It savored intensely, in short, of that inexorable gentility which the English put on with their Sunday bonnets and beavers, and which fills me—as a purely sentimental tourist—with a sort of fond reactionary remembrance of those animated bundles of rags which one sees kneeling in the churches of Italy. But even here, as a purely sentimental tourist, I found my account: one always does in some little corner in England. Before me and beside me sat a row of the comeliest young men, clad in black gowns, and wearing on their shoulders long hoods trimmed with white fur. Who and what they were I know not, for I preferred not to learn, lest by chance they should not be as mediæval as they looked.

My fancy found its account even better in the singular quaintness of the little precinct known as the Vicars' Close. It directly adjoins the Cathedral Green, and you enter it beneath one of the solid old gate-houses which form so striking an element in the ecclesiastical furniture of Wells. It consists of a narrow, oblong court, bordered on each side with thirteen small dwellings, and terminating in a ruinous little chapel. Here formerly dwelt a congregation of Vicars, established in the thirteenth century to do curates' work for the canons. The little houses are very much modernized; but they retain their tall chimneys, with carven tablets in the face, their antique compactness and neatness, and a certain little sanctified air, as of cells in a cloister. The place is deliciously picturesque, and approaching it as I did, in the first dimness of twilight, it looked to me, in its exaggerated perspective, like one of those "streets" represented on the stage, down whose impossible vista the heroes and confidants of romantic comedies come swaggering arm-in-arm, and hold amorous converse with the heroines at second-story windows. But though the Vicars' Close is a curious affair enough, the great boast of Wells is its Episcopal Palace. The Palace loses nothing from being seen for the first time in the kindly twilight, and from being approached with an unexpectant mind. To reach it (unless you go from within the Cathedral by the cloisters), you pass out of the Green by another ancient gateway into the market-place, and thence back again through its own peculiar portal. My own first glimpse of it had all the felicity of a *coup de théâtre*. I saw within the dark archway an enclosure bedimmed at once with the shadows of trees and heightened with the glitter of water. The picture was worthy of this agreeable promise. Its main feature is the little gray-walled island on which the Palace stands, rising in feudal fashion out of a broad, clear moat, flanked with round towers, and approached by a proper drawbridge. Along the outer side of the moat is a short walk beneath a row of picturesquely stunted elms; swans and ducks disport themselves in the current and ripple the bright shadows of the overclambering plants from the episcopal gardens and masses of purple valerian lodged on the hoary battlements. On the evening of my visit, the haymakers were at work on a great sloping field in the rear of the Palace, and the sweet perfume of the tumbled grass in the dusky air seemed all that was wanting to fix the scene for ever in the memory. Beyond the moat, and within the gray walls, dwells my Lord Bishop, in the finest palace in England. The mansion dates from the thirteenth century; but, stately dwelling though it is, it occupies but a subordinate place in its own grounds. Their great ornament, picturesquely speaking, is the massive ruin of a banqueting-hall, erected by a free-living mediæval bishop, and more or less demolished at the Reformation. With its still perfect towers and beautiful shapely windows, hung with those green tapestries so stoutly woven by the English climate, it is a relic worthy of being locked away behind an embattled wall. I have among my impressions of Wells, besides this picture of the moated Palace, half a dozen memories of the pictorial sort, which I lack space to transcribe. The clearest impression, perhaps, is that of the beautiful church of St. Cuthbert, of the same date as the Cathedral, and in very much the same style of elegant, temperate Early English. It wears one of the high-soaring towers for which Somersetshire is justly celebrated, as you may see from the window of the train as you roll past its almost top-heavy hamlets. The beautiful old church, surrounded with its green graveyard, and large enough to be impressive, without being too large (a great merit, to my sense) to be easily compassed by a deplorably unarchitectural eye, wore a native English expression, to which certain humble figures in the foreground gave additional point. On the edge of the churchyard was a low-gabled house, before which four old men were gossiping in the eventide. Into the front of the house was inserted an antique alcove in stone, divided into three shallow little seats, two of which were occupied by extraordinary specimens of decrepitude. One of these ancient paupers had a huge protuberant forehead and sat with a pensive air, his head gathered painfully upon his twisted shoulders, and his legs resting across his crutch. The other was rubicund, blear-eyed, and frightfully besmeared with snuff. Their voices were so feeble and senile that I could scarcely understand them, and only just managed to make out the answer to my enquiry of who and what they were—"We're Still's Almshouse sir."

One of the lions, almost, of Wells (whence it is but five miles distant) is the ruin of the famous Abbey of Glastonbury, on which Henry VIII., in the language of our day, came down so heavily. The ancient splendor of the architecture survives, but in scattered and scanty fragments, among influences of a rather inharmonious sort. It was cattle-market in the little town as I passed up the main street, and a savor of hoofs and hide seemed

to accompany me through the simple labyrinth of the old arches and piers. These occupy a large back-yard close behind the street, to which you are most prosaically admitted by a young woman who keeps a wicket and sells tickets. The continuity of tradition is not altogether broken, however, for the little street of Glastonbury has rather an old-time aspect, and one of the houses at least must have seen the last of the Abbots ride abroad on his mule. The little inn is a capital bit of picturesqueness, and as I waited for the 'bus under its low dark archway (in something of the mood, possibly, in which a train was once waited for at Coventry), and watched the barmaid flirting her way to and fro out of the heavy-browed kitchen and among the lounging young appraisers of colts and steers and barmaids, I might have imagined that the merry England of the Tudors was not utterly dead. A beautiful England this must have been as well, if it contained many such abbeys as Glastonbury. Such of the ruined columns and portals and windows as still remain are of admirable design and finish. The doorways are rich in marginal ornament—ornament within ornament, as it often is; for the dainty weeds and wild flowers overlace the antique tracery with their bright arabesques and deepen the gray of the stonework, as it brightens their bloom. The thousand flowers which grow among English ruins deserve a chapter to themselves. I owe them, as an observer, a heavy debt of satisfaction, but I am too little of a botanist to pay them in their own coin. It has often seemed to me in England that the purest enjoyment of architecture was to be had among the ruins of great buildings. In the perfect building one is rarely sure that the impression is simply architectural: it is more or less pictorial and sentimental; it depends partly upon association and partly upon various accessories and details which, however they may be wrought into harmony with the architectural idea, are not part of its essence of spirit. But in so far as beauty of structure is beauty of line and curve, balance and harmony of masses and dimensions, I have seldom relished it as deeply as on the grassy nave of some crumbling church, before lonely columns and empty windows, where the wild flowers were a cornice and the cloudy sky a roof. The arts certainly have a common element. These hoary relics of Glastonbury reminded me in their broken eloquence of one of the other great ruins of the world—the "Last Supper" of Leonardo. A beautiful shadow, in each case, is all that remains; but that shadow is the artist's thought.

Salisbury Cathedral, to which I made a pilgrimage on leaving Wells, is the very reverse of a ruin, and you take your pleasure there on very different grounds from those I have just attempted to define. It is perhaps the best known cathedral in the world, thanks to its shapely spire; but the spire is so simply and obviously fair that when you have frankly made your bow to it you have anticipated æsthetic analysis. I had seen it before and admired it heartily, and perhaps I should have done as well to let my admiration rest. I confess that on repeated inspection it grew to seem to me the least bit *banal*, as the French say, and I began to consider whether it doesn't belong to the same range of art as the Apollo Belvidere or the Venus de' Medici. I incline to think that if I had to live within sight of a cathedral and encounter it in my daily comings and goings, I should grow less weary of the rugged black front of Exeter than of the sweet perfection of Salisbury. There are people who become easily satiated with blonde beauties, and Salisbury Cathedral belongs, if I may say so, to the order of blondes. The other lions of Salisbury, Stonehenge and Wilton House, I revisited with undiminished interest. Stonehenge is rather a hackneyed shrine of pilgrimage. At the time of my former visit a picnic party was making libations of beer on the dreadful altar-sites. But the mighty mystery of the place has not yet been stared out of countenance, and as on this occasion there were no picnickers, we were left to drink deep of the harmony of its solemn isolation and its unrecorded past. It stands as lonely in history as it does on the great plain, whose many-tinted green waves, as they roll away from it, seem to symbolize the ebb of the long centuries which have left it so portentously unexplained. You may put a hundred questions to these rough-hewn giants as they bend in grim contemplation of their fallen companions; but your curiosity falls dead in the vast sunny stillness that enshrouds them, and the strange monument, with all its unspoken memories, becomes simply a heart-stirring picture in a land of pictures. It is indeed immensely picturesque. At a distance, you see it standing in a shallow dell of the plain, looking hardly larger than a group of ten-pins on a bowling-green. I can fancy sitting all a summer's day watching its shadows shorten and lengthen again, and drawing a delicious contrast between the world's duration and the feeble span of individual experience. There is something in Stonehenge almost reassuring, and if you are disposed to feel that life is a rather superficial matter, and that we soon get to the bottom of things, the immemorial gray pillars may serve to remind you of the enormous background of Time. Salisbury is indeed rich in antiquities. Wilton House, a most comely old residence of the Earl of Pembroke, preserves a noble collection of Greek and Roman marbles. These are ranged round a charming cloister, occupying the centre of the house, which is exhibited in the most liberal fashion. Out of the cloister opens a series of drawing-rooms hung with family portraits, chiefly by Van Dyck, all of superlative merit. Among them hangs supreme, as the Van Dyck *par excellence*, the famous and magnificent group of the whole Pembroke family of James I.'s time. This splendid work has every pictorial merit—design, color, elegance, force, and finish, and I have been vainly wondering to this hour what it needs to be the finest piece of portraiture, as it surely is one of the most ambitious, in the world. What it lacks, characteristically, in a certain uncompromising solidity it recovers in the beautiful dignity of its position—unmoved from the stately house in which its authors sojourned and wrought, familiar to the descendants of its noble originals.

ENGLAND.

LONDON, July 26, 1872.

THE approaching end of the Parliamentary session is celebrated in England by a barbarous practice bequeathed to us from former ages. I hope for their own sakes that none of your readers ever attended a banquet, as the hideous ceremony is called, in the city of London. If such should ever be their hard fate, let them pray that it be not in the summer. For in that eminent and honorable city there linger still traditions derived from the last century. The vast eating and drinking of our forefathers is a puzzle to most modern readers. Where did the two-bottle heroes get the digestions which carried them in triumph through the swinish gormandizing represented on Hogarth's canvas? M. Taine, I believe, can explain that, and, indeed, everything else, by talking a little about the race and the climate. Something, however, might be added even to his explanations by a course of experimental enquiry in the city. The rich old companies still enjoy large revenues, into the distribution of which no human creature presumes to pry. They do not like, one supposes, to apply them to useful purposes, lest they should be appropriated by school boards, or guardians, or other diabolical inventions of the present day. Accordingly, they are obliged to eat and drink them; and human nature of the non-aldermanic variety shrinks from contemplating the scenes that are produced by a resolution to proportion a feast not to appetite or to æsthetic considerations, but to a certain predetermined and monstrous scale of expenditure. The Lord Mayor's dinners are not, indeed, regulated in this fashion, but their style savors of their place of origin. They are of the heavy and florid order; there hangs about them a kind of turtle-soup atmosphere; if wise, you should take with you a plan for picking your way judiciously through the labyrinth of dishes, for a direct assault will undoubtedly reduce you in very short space to utter prostration. When after dinner you are giving thanks for your escape from suffocation and subsiding into that stolid peace of mind which is ominous of a coming headache, Her Majesty's ministers are dragged forth to make sport for you, jaded with the cares and excitements of the session, overpowered with the heavy pomposities and elaborate overfeeding to which they have just been sacrificed. They rise and endeavor to say something which shall sound as if it had a meaning, and which shall really mean as little as possible. Of that art Mr. Gladstone is an acknowledged master; he can take as long in passing a given point as any known orator, and yet there is a fine moral unction about all that he says which sometimes leaves you with the impression that you are a wiser and a better man for having listened to him.

On Wednesday last he talked a column of good platitudes about the Geneva arbitration and the great heart of England which was admirably adapted for the occasion and brought down the cheers of the wearied guests. Upon these topics, however, I have nothing particular to say. We are all glad that the Geneva arbitration is on its legs again, and I have every reason to believe that the heart of England is in its normal condition. A speech rather more to my immediate purpose was delivered by Hon. Mr. Bruce, a gentleman whom everybody likes and respects, and who is also more unanimously denounced than any one of his colleagues, with the single exception of Mr. Ayrton. Mr. Ayrton indeed is denounced because he is always treading upon everybody's toes with obvious delight in the process; whereas Mr. Bruce is denounced because he has so great a dislike to treading on any one's toes that he is inclined to be an over-pliable minister. On the present occasion, he had to speak on behalf of the House of Commons, and he did it with much spirit. Parliament, he said, has passed some four thousand acts during the reign of her present Majesty, although complaints are made of its going too slowly. It attends to the largest and the smallest subjects; it concerns itself with the affairs which occupy two hemispheres, and with affairs which would be fitter for a vestry. It determines the fate of vast populations in India and investigates the conduct of a policeman who hap-

pens to break a man's head at Bethnal Green; it passes laws for the protection of the laboring population against themselves and their employers, and laws to provide against the extermination of sparrows. This is a very inadequate expression of the truth, and it explains, amongst other things, why the immense mass of legislation which is executed still leaves Parliament open to the charge of being behind its work. It attends, in fact, to so many things which are not its business that it has no time to spare for things which are its business.

A cry is being now raised by the Radicals against over-legislation. Mr. Vernon Harcourt, who has recently developed into a very full-blown Radical indeed, has been expatiating upon this subject; he gave as an example a bill which has recently been brought in to force railway companies to provide foot-warmers for their passengers. It is, indeed, absurd that the progress of legislation—say on land-laws or education—should be stopped, as it constantly is, by such preposterous discussions about the pettiest details. And it is evident that however much Radicals may cry out, they are indirectly doing much to increase the evil. There is a constantly increasing demand from constituents that the state should extend its sphere of action. The assumption of telegraphs by the state has undoubtedly been a great success. There is a cheap and uniform tariff all over the country; the number of offices has been very largely increased; and, on the whole, the service is performed much more regularly and efficiently. Now an agitation is being set on foot for the purchase of the Irish railways by the state. If that is carried out, there seems to be no reason why the same principle should not be applied in England. Indeed, the power which is beginning to be exercised by the great companies, now that they have found out the policy of combining instead of competing, gives a very plausible reason for entrusting it rather to public officials than to private persons, whose interest is far from identical with that of the public. The lowest class of voter is much more anxious that certain things should be done than that they should be done according to orthodox political theory; and it is very natural that he should use his vote to bring about the result he desires without bothering himself by theories as to centralization and local self-government. Without going into too general a discussion, there can be no doubt that the current is setting in this direction, in spite of the occasional protests of men like Mr. Harcourt and Mr. Fawcett. The appeals for Government interference increase on all sides, and every such appeal throws more work on the already overtaxed strength of Parliament. We have just had our annual testimony to the fact in the process known as "the slaughter of the innocents." Ministers, that is, have given notice of their intention to abandon a large number of the measures which they had been sanguine enough to introduce at the opening of the session. The same ceremony takes place to a greater or less extent every year; and besides the official slaughter, private members suddenly acquire unusual power of obstruction at this period of the session. Poor Mr. Cardwell is suffering in consequence. His plan of army reform, which was received with general applause, involved, like all other plans of reform, a considerable expenditure at the outset. Besides the eight millions which had to be paid for the abolition of purchase, large sums had to be provided for the new scheme of localizing the forces. We are, as you may remember, more or less imitating the Prussian system; and the country is to be divided into a number of military districts, within each of which the army, the militia, and the volunteers are to be brought into close relations, instead of being, as hitherto, disconnected and even competing forces. This change involves the building of barracks and a preliminary expense of some three millions. Of course, the expense is only preliminary; that is always understood in all plans of reform, and, ultimately, we shall pay less for a more efficient army. Now, a few Radicals refuse to listen to the voice of the charmer. They maintain that we pay fifteen millions annually for an army too small to be of use on the Continent and too large for home purposes, and they insist upon retrenchment. Mr. Gladstone, in his great electioneering campaign before the last general election, was indeed weak enough to talk about retrenchment, and some people seem to have taken him seriously. Moreover, there is an impression abroad that his military centres will be rather nuisances than otherwise. Some of the towns in which it is proposed to place them declare that the presence of a large garrison has a demoralizing effect. Various officers and military chaplains have indeed asserted with much emphasis that the British army is the most moral part of the population, and that it exerts an elevating and purifying influence upon every place where it resides. I fear that this is pitching the note a little too high. The British army is a very excellent body of men in some ways; but anybody who knows what a young Englishman—I need not perhaps confine myself to one nationality—is between the ages of eighteen and twenty-five, or thereabouts, may guess pretty well what are the ordinary consequences of bringing together some hundreds of such lads, and giving them several hours of idleness in the course of every day. I have never observed, in fact, that the British soldier, much as I respect him, generally exercises an elevating and purifying influence on the British maid-servant. Be that as it may, Mr. Cardwell's proposal, though the soundness of its principles is generally admitted from a military point of view, has given offence to a good many people, and he has unluckily been beguiled by his sense of security to allow it to be put off to the end of the session. The consequence is that its opponents can easily talk it to death, though they are in a small minority. They have allies in every private member who has some crotchet on his hands, for which he has not been able to obtain a hearing in the course of the session. Several hours, for example, were wasted last night in an utterly fruitless discussion on the propriety of capital punishment. No practical conclusion could be anticipated from it, and the bill introduced for the abolition of the penalty was of course thrown out by a large majority. Indeed, just at present, owing to Mr. Bruce's indiscreet remissions of sentences and some other causes, hanging is rather popular in the House of Commons. Meanwhile, poor Mr. Cardwell's bill is in grievous danger; and if it breaks down, the most effective measure of army reform hitherto proposed will be postponed for another year.

THE TENANT RIOT.

BERLIN, July 30, 1872.

IF the exaggerated stories with which couriers had filled the ears of American travellers just arriving at Berlin have caught the wings of the telegraph, one may expect to see in New York papers columns of enormous capitals, "Great riot in Berlin; troops called out; houses demolished; rise of the commune; war of labor and capital; international revolution." Such phrases have already begun to take shape, and they will of course grow by repetition. There has been a serious breach of the peace, which cost some damage to persons and property, and threatened to become a wild riot; but it had no political motive and no clearly defined purpose. Yet, as an accidental kindling of mob fury, it shows what combustible materials are lying loose around us.

In the region of Wallner's theatre, in the northeastern part of the city, is a densely peopled quarter, occupied chiefly by workingmen and their families. Here the pressure of rent has caused much suffering, and the dread of further exactions from the landlords has raised the question of combined resistance. Two or three incidents following in close succession last week, brought the question of tenant *vs.* landlord to a peremptory crisis. The first was a police order forbidding the erection of any more barracks outside the city. Many of the poor had become "squatters." They had betaken themselves to vacant lots, and with rejected railway wagons and loose timber had built rows of shanties, where men, women, and children were huddled together in indecent squalor. But the fire-laws and the health-laws (cholera impending) have been applied to stay such proceedings in the future, and the workman, if ousted by his landlord, sees nothing before him but the overcrowded poor-house. Of course there was the more need that landlords should walk warily.

But just at this moment came the second incident. A poor tenant sought to reduce his rent by sub-letting one of his mean apartments. Now, by law and by contract, sub-letting requires the previous consent of the landlord; and this not having been asked, the landlord proceeded to evict the chief tenant, retaining, of course, the "advance" rent. The court being appealed to, decided for the landlord. The poor tenant, finding himself upon the pavement, with his family and household goods, and no home in prospect, maddened at sight of the landlord complacently looking on, seized said landlord neck and heels, shut him up in a huge chest at hand, by his son's help lifted the chest upon the cart, and would probably have emptied the load into the Spree had not the cries and struggles of the victim brought the police to his relief. This feat caused much exultation among the *Leute* (as the common people call themselves), and I suspect that half Berlin chuckled over such an ingenious method of bringing a landlord to close quarters.

Next day, another tenant in the same region was obliged to move, through inability to pay his rent. He had gathered his effects on the pavement, when a dispute arose between him and the wagoner as to the price of transportation, and the wagoner drove away. The neighbors knew nothing of the merits of the case; the sight of a family and furniture in the open street was to them proof positive of forcible ejection; the cry, "eviction, eviction," ran through the streets; a crowd gathered and saluted the landlord with volleys of abusive cries and with threats of revenge. This was on Thursday, and continued far into the night. On Friday the crowd increased, and made such demonstrations of violence that the police, and finally the armed guard, were summoned to disperse them. To the summons of the authorities the crowd responded with brickbats, bottles, sticks, dirt, and stones. There was one attempt to build a barricade. Lamps and windows

were broken, and a guardsman and a police-lieutenant were seriously injured. Two houses, from which stones were thrown, were seized by the guards and emptied of their inmates, many being wounded in the fray. Of course the Internationals and other demagogues will seek to make political capital out of the affair; and it certainly threatens new complications between capital and labor. Workingmen will not consent to be turned homeless into the street, nor submit to see their fellows so treated. The mob reached its height on Saturday at midnight, and on Sunday the police had quiet possession of the streets.

A curious commentary upon this state of things was a great ball given on Sunday in the same neighborhood, as a jollification over the success of the recent strike for reduced hours and increased pay. And as an illustration of what comes of this new concession to the "rights of labor," I may mention that on Monday morning I had urgent need of a plumber to stop a leak which threatened mischief to my neighbors as well as myself. But the "boss" told me he could not command the services of his men till after noon on Monday. They quit work on Saturday at noon, have all day Sunday, will do nothing on Monday morning—but cannot pay their rent, and will pull down the house about the ears of the landlord if he attempts to enforce his contract. At the same time, drunkenness is fearfully upon the increase, the vilest schnapps taking the place of the comparatively harmless lager. What can be done with or for the workingman when he thus abuses and degrades himself? AUSWANDERER.

Correspondence.

"KEEPING THE RASCALS ROTATING."

TO THE EDITOR OF THE NATION:

SIR: As an indication of how some of the rank and file of the Republican party may look at it, I desire, as one of them, to answer a point which has been raised several times in the *Nation*.

I shall vote for Greeley without reference to the question of whether any reforms are probable under his Administration, if he should be elected. Conceding the worst which is said of him and his chief supporters, I should still vote for him on the principle—erroneous perhaps—that if we cannot have a good set of officers, the next best thing is to keep the rascals *rotating* as fast as possible, instead of confirming those in office in the opinion that they may do as they please, by the tacit approval of their bad acts indicated by re-election. A prominent part of Barnard's defence is that the people re-elected him for a second term, after a full knowledge and discussion of the charges on which he is now being tried, and thereby set the seal of approval upon his administration. My vote will not be given towards having Carl Schurz confronted with a similar argument in the Senate next winter.

The *Nation* is aware that some of the "Reformers" elected to office in this city last fall were as corrupt as any of the Tammany Ring. Was that a good reason for voting for the rogues then in power? My judgment as a simple "average voter" was, that it was best to break up the ring even at the risk of electing other rogues in the effort. A similar consideration, if none others existed, would decide my course in the Presidential contest this fall.

I cannot see what motive Greeley would have in acceding to the demands of the "horde of hungry applicants" for office, unless they were honest and capable as well as "hungry." What would he have to gain by it? He cannot possibly be a candidate for re-election, and will have no reason for propitiating them. The *Nation* has hinted that he is pledging himself to them now. He says he is not. Unless the *Nation* has incontrovertible facts in its possession, it seems a little uncharitable to make such charges even in the most indirect manner.

The *Nation* has several times charmingly admitted the possession of those little infirmities of temper and judgment from which none of us are entirely free. Will it permit me to say that one of its readers, at least—but the mote may be in his own eye—thinks he sees a slight tempering of judgment with prejudice in its remarks on Greeley's recommendation of Bailey? Men have turned out defaulters after enjoying the reputation of perfect honesty for half a lifetime. Might not the editor of the *Nation* have recommended a man who had borne a good character for years, and would it not be quite within the range of possibilities that he should become a defaulter? And if he should, would the editor's position as an advocate of civil-service reform be affected by it? Might not such a thing happen to any one? Would such a recommendation relieve the Government of its duty to exercise a careful supervision over its appointee? Is it not in the failure of that supervision, and not in the original appointment, that the fault of the Administration in this case lies? Is the *Nation* sure it has presented fairly Greeley's connection with young Vanderbilt? Perhaps it has been misled as to the facts.

Suppose Theodore Tilton does support Greeley, what does it prove against Greeley? A party large enough to carry this country must contain a good many fools as well as rascals. Do not both parties contain their share? Can we judge accurately of their comparative numbers in the two parties? and if we can, does it afford a just criterion of the qualifications of the respective candidates? As to Tilton's *prominence* in the Greeley party, if that is the point, I suppose he makes his own position. And after all, though we agree in an unspeakable contempt for some of his ideas, is he not as reputable and desirable a member of a political party as Tom Murphy and the Custom-house thieves and prize-fighters? I assure you I am not inclined to dodge any facts which I can get hold of, whether agreeable or disagreeable, and, in my anxiety to get at the facts, go even to that fountainhead of truth, the New York *Times*. I do not have to read far in that paper, however, to feel strongly drawn toward Greeley. This is a practical confirmation of the *Nation's* views on the effect of that paper's course.

These are merely the thoughts of a young "average voter," of no value except as they may be significant of the ideas of the class to which he belongs.—Very respectfully, your attentive READER.

NEW YORK, Aug. 16, 1872.

[The plan of contenting one's self with "keeping the rascals rotating as fast as possible," in lieu of all positive reform, certainly would make the future of the nation seem very gloomy. As regards Mr. Greeley's relations to Bailey, the defaulting collector, all we say is that he is not in a position to abuse the President about Bailey. Mr. Greeley himself has been a prominent actor in and determined supporter of the system under which Bailey was appointed, and under which Baileys in general are not properly looked after or duly punished. As regards Vanderbilt, if our correspondent knows of any facts throwing doubt on our story, we shall be glad to publish them; we know of none. If he means to say simply that Mr. Greeley's antecedents make the story improbable, he can hardly know much about Mr. Greeley. The fact is there are two Greeleys—Urban Greeley and Rural Greeley. Rural Greeley is the person over whom the farmers in the West get enthusiastic. He is a philosophical abstraction, who writes the good editorials in the *Tribune* (the bad ones have been all written by worthless fellows no longer in the office), and who knows almost everything. Urban Greeley, on the other hand, is a *man* well known to the citizens of New York, who are not enthusiastic about him, and who laugh when you speak of him. It is this one who is running for the Presidency. He is rather an odd body, with many virtues, but egregiously vain, ludicrously incompetent in dealing with men, and generally followed by a train of scheming ne'er-do-weels, who flatter him grossly, and get money and recommendations to office out of him without stint. Many things which appear wildly improbable of Rural Greeley, who discourses so wisely in the *Tribune*, are true as gospel of Urban Greeley, who figures on committees and "confers" with Mr. John Cochrane.—ED. NATION.]

A $5,000,000 SWINDLE.—THE NATIONAL AIR-LINE RAILWAY COMPANY.

TO THE EDITOR OF THE NATION:

SIR: Perhaps the most extraordinary appeal ever made to the financial world for a loan has just been made by a body of men calling themselves "The National Air-Line Railway Company" in New Jersey.

It is extraordinary, because the only security offered to the public in return for their money is a pretended charter from the Legislature of New Jersey which was never asked for and never granted.

That such a call for money is made in Wall Street and on the ignorant everywhere is the more extraordinary, because it is made after the Governor of New Jersey, the President of the Senate, and the Speaker of the House have unitedly declared that no such charter as this, under which $5,000,000 is sought, was ever granted, and that the pretended charter now exhibited is a fraud.

It is hardly likely that any trust company of New York will connect itself as trustee with such an attempted operation, or endanger either its own standing or the moneys it holds in trust for private persons and for banks

and corporations near to or distant from New York, when the real character of this pretended charter is known.

The more railroads New Jersey has, the better it will be for her; but people will think twice before they invest under a charter which was never granted. JERSEY.

Notes.

A. DENHAM & CO. announce that they will publish shortly "The Lives of the Novelists," by Sir Walter Scott, with notes. The volume will contain the lives of Richardson, Fielding, Smollett, Cumberland, Goldsmith, Dr. Johnson, Sterne, Walpole, Mrs. Radcliffe, Le Sage, Johnstone, Bage, and Mackenzie.

—The late Admiral Dahlgren is reported to have left behind him a very large mass of memoirs and journals of his life from the time when he was fifteen till his death. They are said to be very full and minute, and of historical value. They will be published for the benefit of the family of the admiral, who died poor after long serving the country.

—The "untamable" fly, as Shakspeare calls him, or the "undaunted," as he is called by Homer, and who is just now being execrated and poisoned by all housewives, is to be the subject of the essayists who next year compete for the Walker Prize offered by the Boston Society of Natural Science. The full wording of the title is as follows: "On the Development and Transformations of the Common House-Fly."

—The *Evening Post* makes the strange and injudicious enquiry, what the London *Spectator* means by the word "pékin," used in a recent issue. "Pékin," we supposed nearly everybody knew, is the ordinary, old, widely-spread, well-settled slang term applied by French military men to civilians. Fifty years ago, or more, it furnished Talleyrand with the materials for one of his most stinging witticisms. Hearing it used by an army officer, and, like the *Post*, not knowing what it meant, he enquired. "Oh," said the officer, "nous autres, nous appelons pékin, tout ce qui n'est pas militaire." "Comme nous," retorted Talleyrand, "nous appelons militaire tout ce qui n'est pas civil."

—Mr. Thurlow Weed has been interviewed recently by a Western writer, who found him busy in the preparation of his memoirs, which will be a mine of American political history. Among other things upon which he is reported to have talked was the late Dickens's first visit to this country, and Boston will turn in her grave—if that is the proper way of speaking about the condition of that city—when she hears why it was that Dickens's visit was not a success. Boston, Mr. Weed says, got hold of Dickens first, and so toadied him, and abased herself before him, that she perfectly disgusted the rest of the country, which was therefore disposed to take offence at him. The quarrel was at once ready, then, when the young author began his injudicious urging, in season and out of season, of an international copyright law. Thence coolness, satire in the "American Notes," and exacerbation. We dare say there is no great amount of truth in this narration, but we advise other New York journals to reiterate it for the purpose of driving the Bostonians crazy. We would add, too, that one of the Prussian Band who played at the Jubilee wrote home to a friend that the great Boston Jubilee was, to tell the truth, nothing more nor less than a great American humbug. It is a fact that the Boston press became seriously angry with the New York correspondents for jeering at that peculiar affair.

—Four years ago *Harper's Magazine* printed an article entitled "Fish Culture," which described Mr. Seth Green's system and gave an account of a pond or brook in New Jersey in which fish were artificially propagated. This account contained the following paragraph—or rather let us say that it is currently said to have contained the following paragraph. The Chicago *Tribune* would no doubt have one opinion on that matter, and the *Times* of this city would beyond question violently uphold another. The subscribers to these journals, if either of them now has any left, might refer to *Harper's* for November, 1868:

"Some of the larger fishes are marked by striking peculiarities, and have received distinguished names. One is known as 'Bartimeus,' from the fact that he is blind. A long, lean, lantern-jawed fellow is appropriately yclept 'Don Quixote,' while a huge three-pounder, who fought it on that line during the entire season, killing and devouring over a dozen large fishes, is called 'General Grant.' There was formerly, in the large pond, a curious, parti-colored fish, with irregular spots and streaks of white and black, the colors varying almost weekly, who was known to some of the numerous Democrats in the vicinity as 'Horace Greeley'; but he is now no more, having been unfortunately *killed and eaten by 'General Grant.'*"

—The attention of all legislators in all our States may well be given to the experience of Maryland in regard to divorce legislation. Settled by Roman Catholics and always conservative in all respects, Maryland for the greater part of her history gave a practical prohibition to divorce, but not long since she relaxed the rigidity of her laws and allowed it after three years' desertion. This had the effect of making applications for separation very numerous, and it has been found necessary to empower the judges to forbid the parties guilty of desertion from marrying again. This has almost stopped the bringing of suits, we are told, for in Maryland as elsewhere what a divorce suit means in very many cases is that one of two people who should be held to decency and self-restraint as severely and strictly as possible, wants to escape from obligation to his present partner with a view of taking up another. And what it means in a great many other cases, which call out an undue amount of sympathy from legislators, is that two people have carelessly or recklessly involved themselves in a partnership which has its irksomeness in one way or another, and which they wish to throw off, but which, in the interest of children and in the interest of the marriage tie, they should be compelled to put up with. Instead of leaving such people, having made their bed, to lie in it, it is usual for our easy-going legislatures and courts to let them make another, or indeed as many more as they see fit. The most rigid theory of marriage as an utterly indissoluble compact, a sacrament, could not be more pernicious in its influence upon morality than our Indiana theories have proved, and this, we think, is daily getting to be more manifest. Maryland seems to have hit upon a reasonably happy medium between the Romish view and the Spiritualists'.

—It would have been unreasonable to expect that our American public should not have had an imposition practised upon it as regards the real working of the postal telegraph system in the various countries where it has been tried; the telegraph is too valuable a property to be given up without a prolonged struggle on the part of the corporations who now monopolize the lines, and if the struggle involves a little economizing of the truth, why, we must recollect that there is a good deal of human nature in man. As a matter of fact, however, the system has by no means undergone the disastrous breakdown which has been asserted of it. In England, for instance—of which India is clearly not a part, though the "abridged" report would have us think so—the telegraph in Government hands has not been worked at a loss, but has during the last fiscal year afforded a revenue of more than a million and a half of dollars, while about five million is set down as the expected revenue for the year ending next June. And this though the expenses have been abnormally large, by reason of abnormal work of construction, and though the messages now pay very much less than when the companies were competing with each other. There is probably some truth in the complaint that Government can tamper with the political news; but to say nothing of the means of evading interference, public opinion would speedily put an end to such a practice. What is true of England as regards the benefits necessarily accruing, is true of nearly all other European countries where the system has been tried, and there is little doubt that we shall live to see it true of the United States also; only in this, as in other matters, we shall find that Senator Carpenter's views in regard to civil-service reform, or Mr. Greeley's, are not so valuable as other views. We see by the last number of *Nature* that a *Journal of the Society of the Telegraph Engineers* has been established, and that the society already numbers 230 members, among whom are some of the most eminent scientific men of the time. The same paper tells us of an interesting soirée held at the Albert Hall under the auspices of this Society and the Postal Telegraph Department. A model of every kind of telegraphic instrument which has been in general use from the beginning of commercial telegraphy was exhibited, and each instrument was put in practical use, one feature of the entertainment being the "calling" of Kurrachee Station in India, which replied, and stated that "locusts were swarming in Scinde," the message being received with much interest and pleasure. Evidently the social and commercial use of the great invention is indeed in its infancy, and the statesman who declared that he was a slave to telegrams, which everywhere pursued him, and that he prayed for the return of the mounted post, may as well retire from public life.

—"Hereditary feud with trees" has been charged upon the Yankee, and no doubt arboricide has been one of his many national sins, but already he begins to repent and amend. In the East he long since began to see "whether the town would set out shade trees or do anything in relation to the same," and if the commissioners of roads too often chose the inevitable elm, that over-graceful idler in the New England landscape, or the bourgeois maple, and if they sometimes even down to this day whitewash the trunks of the horse-chestnuts, they at all events have been "in better business," as the deacons would say, than their fathers were when of every green thing they remorselessly made cordwood. In the central States, too, and the Northwest, where the land was peeled with reckless waste, better counsels have for some time prevailed, though that necessary officer, a Commissioner of

Woods and Forests, has, we believe, nowhere come into existence. Perhaps our German fellow-citizens, recollecting his usefulness at home, may teach us the wisdom of calling him into existence. In California, as we see by an interesting paper read before the Academy of Sciences of that State, a vigorous effort has been made to increase the forest area, and if all be true as stated in the paper before us, the forest thus created will have extraordinary value. It appears that Australian forest trees propagated from the seed thrive remarkably in California—almost as well, or quite as well, as the native trees, so that it is not beyond the probabilities that the gigantic *Sequoias* native to the soil may in process of ages find themselves rivalled by the invading *Eucalyptus amygdalina*, which towers to the height of four hundred feet. And the ages need not be so very many either, for the growth of these trees is said to be fabulously rapid. Mr. R. E. C. Stearns, the writer of the article, says that he himself set out a small tree of the *Eucalyptus globula* species—the Blue Gum of Tasmania and Victoria—which, at the time of planting, was six and a half feet high and half an inch in diameter, and that in eleven months and three days afterwards its diameter was one inch and three-quarters, its height was "a trifle over fifteen feet," and its lateral growth was equally remarkable. "It was not a very good time for Blue Gums either," for very little rain fell after this tree was planted, "and furthermore, the locality was upon nearly the highest land in Petaluma." Very strong, too, is this swiftly-growing wood. "It is considered to be generally superior to American rock elm;" and "a test of strength has been made between some Blue Gum, English oak, and Indian teak, and the Blue Gum carried 14 pounds more weight than the oak, and 17 pounds 4 ounces more than teak, upon the square inch." Besides these good qualities—height so great that a whole keelson can be cut from a single tree, capacity to take a fine polish, great strength, easiness of "working," rapid growth, density of shade—the *Eucalyptus globula* has one or two more: its leaves are medicinal; in tincture they are as sure a cure for intermittent fever as quinine itself. "Dr. Lorimer gave it to fifty-three patients, of whom forty-three were completely cured. In five other cases there was a relapse, owing to a failure in the supply of the tincture. In eleven of the cases quinine had been used without effect, and nine of these were cured by the *Eucalyptus*." Dr. McLean, of Netley, England, says that except the subcutaneous injection of morphia, he knows no remedy for cardiac asthma and certain cases of chest aneurism so efficacious as to merit comparison with the tincture of *E. globula*. The German doctors use it in the form of cigars, as well as in tincture, and pillows stuffed with the leaves are held to be good in cases of sleeplessness. These trees diffuse also, we must recollect to say, an aromatic odor which causes them to be shunned by all insects save one, and he appears to have formed his character on the model of the Eucalyptus, for he spends a blameless life in excreting a sort of manna out of which the bees make excellent honey. Various other varieties of this genus of trees are now domiciled in California, and with them also several kinds of acacias, all noteworthy either for beauty or shade or flowers of which is made the dyestuff that dyes the "peculiar Chinese yellow color," by which we suppose the color of nankeen is meant. We advise our readers to procure this little pamphlet from the California Academy. It is, we doubt not, trustworthy, and it is peculiarly interesting. It is rather curious, by the way, to find Mr. Stearns protesting, at the end of his acount of the *Eucalypti*, that he "does not wish to be understood as making an unfavorable comparison as against our indigenous species"—the ignominious traitor! Wherever the *Eucalypti* can be made to grow, they certainly ought to be planted. To say nothing of their uses, the majesty of a grove of them would be half a religion to the villagers who, fifty years from now, would be enjoying their presence.

—The great age often attained by literary men has recently been made the subject of comment in England, and, indeed, despite the invasion of this class by feeble-minded persons in hectic bodies who succeed in getting themselves called literary, the poets, historians, philosophers, editors, and their brethren appear to share longevity fairly with other men who live reasonably well-ordered lives and—a great point—keep the brain in regular and healthy activity on subjects which do not too much enlist the meaner passions. Mr. Carlyle, hot-tempered and sanguinary as he is, may properly enough be ranked in this category, though if he dies within twenty years no one will be able to say that choler and turbulency have not untimely snipped his thread. Sir Charles Lyell also is aged, and the names of Sir Roderick Murchison, Victor Hugo, Savage Landor, De Quincey, Guizot, Michelet, Thiers, Milman, Humboldt, Goethe, and Wordsworth will occur to everybody as among men of our day who attained old age after long literary labor. Here in America we have a literary veteran in the person of Mr. Richard Dana the elder, born in 1787. Mr. Bryant, too, may claim that honor. So we suppose may Mr. Emerson, Professor Tayler Dr. Walker, Mr. Thurlow Weed, Mr. Whittier, and Mr. Longfellow. The two former, by the way, have had the coincident luck of losing their houses by fire this summer, the loss being not very heavy in either case, but, on the other hand, falling on men not rich.

—M. Chaix, to whom we referred last week, was not the first to give his workmen a share in his profits in addition to their wages. We learn from a correspondent that M. Lecaire, a painter and glazier in Paris, adopted the same plan in 1842, and continued it for twenty-seven years, during which the system succeeded so well in securing better work, and in elevating the moral and material condition of the employees, that he adopted the following scheme of division: 25 per cent. of profits for the capital, 50 per cent. to be divided among the workmen, and 25 per cent. for the sick and for pensions. Last year the sum to be divided was 150,000 francs. It will be seen that the proportion received by the workmen is very much larger than M. Chaix proposed to give them; each workman's share amounted to nearly 12 per cent. of his wages. If all M. Lecaire's outlay in this way has been returned to him by the improvement in quality and quantity of work done, he must have begun his experiment with bad workmen, but perhaps not worse than the average. In the interesting "Ouvriers des Deux Mondes," published by the Société des Etudes Pratiques d'Economie Sociale, it is more than once mentioned of certain trades and certain parts of Paris that the men have no idea that anything is really due to their employer for the wages they receive, and, whenever his eye is off them, take every opportunity to shirk. A head cursed with such hands might be willing to forego part of his gains to secure the satisfaction of being well served.

AMOS KENDALL.*

WE wonder how many of our readers of less than fifty years of age have any idea connected with the name of Amos Kendall? Indeed, one must have passed somewhat beyond that milestone *pel mezzo del cammin di nostra vita* to have a very distinct recollection of his political personality. But to such as are so fortunate, or so unfortunate, as they may esteem it, his name recalls times the events and persons of which seem almost mythical, seen through the long vista of intervening years. There were giants then in the land, for the like of whom we should look in vain among the public men of these times. Clay, Calhoun, Webster, John Quincy Adams, Edward Livingstone, not to mention the *dii minorum gentium*, were in the fulness of their prime forty years ago. General Jackson, if he cannot be entirely refused a place among the giants of those days, we think history will relegate to that class known to nursery lore as the Ogres, who have a giant's power, but use it giant-like. Van Buren only carries his head among his contemporary giants because mounted on the shoulders of his predecessor, who lifted him up and set him in the White House when he had done with it himself. Amos Kendall had no pretensions to belong to that Brobdingnagian race, but his name was almost as much bruited in men's mouths then as that of any of them. In those days of rotation in office, of the scandal touching Major and Mrs. Eaton, of the Kitchen Cabinet and its summary dismissal "as a unit," as well as when the more important matters of the Bank war and the removal of the deposits stirred the public mind with a fierceness of agitation which seems strange and almost puerile to us who have lived through the last twelve years, Amos Kendall was as well known and as well abused a man as any of his betters, and for no particular reason that we can gather from this narrative. Perhaps the intense hatred felt by the opposition towards all the promoters of Jackson's election, and who were believed to have his ear, was yet more embittered to the sense of Mr. Clay and his partisans by the feeling, for which there was no just ground, that Mr. Kendall properly should have belonged to their faction.

The history of Amos Kendall is that of multitudes of other Americans who have worked their way from humble beginnings to eminence in the world. He came of a good stock, from the like of which many such have sprung. He was born in the town of Dunstable, just on the boundary line of Massachusetts and New Hampshire, on a farm better suited to the raising of men than of any of the usual crops of agriculture. His father was a fine old Puritan yeoman, fearing God, regular in public and private worship, receiving the Bible in its entirety as the Word of God, and the Westminster Catechism as its all but inspired expositor, faithful in his calling, and bringing up a numerous family by the hardest kind of work and the most rigid economy. Mr. Kendall's account of his childhood and youth, of his father's way of life and method of rearing his children, of his own recreations, and of his studies during hours of play, is both entertaining and interesting, containing, as it does, the picture of a state of society which is fast passing away, if it has not already disappeared. Deacon Kendall, for such was the rank in the church of the excellent father of Amos, entertained the just ambition

* "Autobiography of Amos Kendall. Edited by his Son-in-law, William Stickney." Boston and New York: Lee & Shepard. 1872.

felt universally, or nearly so, by men of his class in New England, of giving to one of his sons a liberal education, hoping, like the parents of Dominie Sampson, "to see him wag his head in a pulpit" before he died. Amos, as the most bookish of the nine sons—of whom six were living in 1858, when Amos, the fourth, was in his seventieth year—was naturally selected as the fittest for the purpose. He scrambled into his education, as multitudes of eminent men have done before him, by the self-help of school-keeping in the winters, eked out by the very moderate advance of forty-two dollars and eighty-four cents from his father. He was fitted for college in forty-seven weeks by the academies of New Ipswich, N. H., and Groton, Massachusetts, the whole cost of his preparation, exclusive of books, being eighty-five dollars and thirty-nine cents. And here we will pause to protest against a new Americanism which has found its way into the newspapers, though we do not recollect seeing it in a book before this one. We mean the use of the word "*academic*" education to describe the time passed in a country academy. It means, as everybody ought to know, a complete education, ending with a full university course. "Academic life" means properly only the time spent in college halls and walks—not that passed in a preparatory country school.

In 1807, Mr. Kendall entered Dartmouth College and struggled through his four years there much as he had fought his way to its gates. School-teaching was his main dependence for paying his bills, his father contributing about three hundred dollars to make out the deficiency. The account of his four years at Dartmouth is curious as the story of college life "sixty years since" at one of "the freshwater colleges," as Dr. Holmes styled them once, to the discontentment of their *alumni*, though it is not apparent why it should be regarded as disparaging, since the English Cambridge and Oxford stand in exactly the same category. It is to be hoped that the standard of manners and morals has been raised since his time in that school of the prophets. There was certainly room for the improvement in refinement and manners, and a just sense of what was due to others as well as themselves, which one cannot doubt has long since been made. Mr. Kendall seems to have stood the rough and coarse ordeal very well, and to have made the best of the modest advantages which the college then gave its students. He graduated in 1811 at the head of his class, which contained in its ranks Chief-Justice Shepley of Maine, and Chief-Justice Parker of New Hampshire, afterwards Royall Professor of Law in Harvard University. He made one or two rather ambitious attempts in literature, notably, a tragedy called "Palafox, or the Siege of Saragossa," which was enacted with applause at Harvard by the students, but which Mr. Powell, the manager of the Boston Theatre, cruelly rejected, although the author had been at the pains to introduce female characters, which before had been wanting. But though he was not discouraged by this rebuff from writing another tragedy, he does not seem to have attempted to bring it on the stage. He did not feel the devotion for the ministry which his worthy father had hoped he would, and turned his thoughts rather to the law. He studied his profession chiefly at Groton, under Samuel Merchant Richardson, who afterwards removed to New Hampshire and became Chief-Justice of that State. Here, too, he underwent his first love, which like most such was a hopeless one. He sustained his disappointment with philosophic resignation, and tells as a curious fact that, many years afterwards, his only son met casually the only daughter of the lady, and, more fortunate than his sire, secured her affections and her hand.

Mr. Kendall grew up and entered life in the midst of the violent contentions of the Federal and Democratic parties for the control of the Government, and he cast in his lot with the Democrats. He remained faithful to the party through all the phases of its checquered life, even after it had changed places, in 1850, with the Federalists of half a century before, and actually claimed that centralization of power in the General Government in the interest of slavery which had been the main charge against the old Federalists. One may judge of the violence of the party spirit of those times by a sermon preached by the minister of Groton, we presume the Rev. Dr. Chaplin, quoted by Mr. Kendall, from the text, "Ye are of your father the devil," comparing the President to Beelzebub and the members of Congress who voted for the war to the lesser devils in his service! The clergy were, almost to a man, Federalists; but Mr. Kendall was mistaken in thinking that the repeal of the constitutional provision for their compulsory support was in consequence of their interference with politics. The Massachusetts Constitutional Convention of 1820, when the old spirit of party was far from extinct, refused absolutely to change the Constitution in that particular, and it was not till about ten years later that the alteration was made, long after the Federal party had disappeared and the Democratic party had taken "a new departure," under its old name.

But we must hasten on. After finishing his law studies, he determined to emigrate to Kentucky and seek his fortune in that new country. If any one wishes to know the pleasures and pains of travelling in the days before steam, he can learn the lesson by reading Mr. Kendall's itinerary from home to Lexington, by way of Washington. At Boston, he heard "a youth of great promise, the young Mr. Everett," preach, and in Washington he went to President Madison's levee, and "felt no awe, although Mrs. Madison is a noble, dignified person, apparently more able to manage the affairs of the nation than her husband." In Kentucky he was employed at first as tutor in the family of Mr. Clay, afterwards was admitted to the bar, and later became an editor, first of a religious, and afterwards of a political paper, which office he soon found to be his true vocation. He had various love affairs, and was twice happily married, though at neither time to the charming young lady who expressed her delight with a "little select manuscript" of his poetry, by "kissing the pieces and saying he was a charming poet!" After the breaking up of the old party lines, the country divided rather upon men than principles. With the election of John Quincy Adams in 1824, the embittered controversy arose between the Ins and the Outs, as represented by Mr. Adams and General Jackson. There was nothing really to quarrel about, as both candidates were Democrats and held substantially the same opinions. Many of the old Federalists, mindful of what they esteemed Mr. Adams's apostasy in 1807, joined the Jackson party, and helped to carry it triumphantly into power. This part of Mr. Kendall's life is not very clearly set forth in the autobiography, But he was evidently a warm partisan of Jackson, and after the election he came to Washington for his reward. He was made Fourth Auditor, and discharged with firmness that part of his duty which consisted in discharging opposition clerks, though his humanity revolted against it, and he assisted cases of especial hardship out of his own pocket. His letters to his wife at this time are curious as depicting the fashionable life, the dinner-parties and balls, and ladies' dresses of forty-odd years ago. We fear that it may excite a pang of envy in Washingtonian breasts to read that a good house could be had then for a rental of a hundred and seventy-five dollars! One circumstance relating to the time of Jackson's accession Mr. Kendall misstates—unintentionally, no doubt. He speaks of "the want of manliness" shown by Mr. Adams and his cabinet in not remaining to receive their successors. The fact was that General Jackson did not call upon President Adams, according to etiquette, when he arrived in Washington, and consequently neither Mr. Adams nor his cabinet could in common self-respect attend the inauguration, nor accord him any attention. The etiquette is that the incoming President, on arriving in Washington, calls on the outgoing one, who invites him to dine, and attends the inauguration. It was General Jackson, and not Mr. Adams, who showed a "want of manliness" on that occasion. He had acquired a degree of external polish of manners, but a very slight scratch brought the Tartar to the surface.

Mr. Kendall remained Fourth Auditor until 1835, when he was appointed Postmaster-General. He seems to have discharged the duties of both offices with great industry, honesty, and skill, and left them both in a better condition than he found them. We find it hard to account for the bitterness with which he was attacked by his political opponents and the kind of evil odor which they managed to attach to his name. It was probably owing to the fact that he was known to be in the confidence of the President and accessary before the fact to the removal of the deposits and the destruction of the Bank, if not an actual accomplice in the crime. And he had popularly the reputation of being the vigilant and untiring promoter in the press of all Jackson's schemes. Very likely, too, Mr. Clay, who was "a good hater," could not forgive the success of a man who, he might think, had deserted his flag for that of his enemy; and a sign from Mr. Clay was enough to make the whole pack of his followers open mouth upon any one at whom his long finger pointed. In private life Mr. Kendall was everything that the best obituary could ask for—an affectionate husband, a prudent and judicious father, a frugal yet liberal householder. We do not think that any malversation was ever even suggested by malice against him, and he carried nothing with him out of office but the honest savings of his salary. We are happy to gather that, in his latter years, he was easy, perhaps affluent, in his circumstances, through the honorable part he had taken in the promotion of Morse's electric telegraph. Though a Democrat all his life, and we apprehend what would be called a pro-slavery one, he did not sink into the slough of Copperheadism when the trial hour came. He wrote earnest words against secession, did not spare the criminal weakness of Mr. Buchanan, and offered his own residence, as well as his other houses, for the accommodation of troops as soon as they were expected after Sumter. His long life was not free from the common doom of man, and his old age had its full share of the bereavements as well as of the honor, love, and obedience which should accompany it, some of them of unusual severity. His natural strength of mind, reinforced by religious faith, enabled him to bear these calamities like a man, though he felt

them like a man. When he was seventy-six years old he entered the Baptist Church by the rite of immersion, and was an enthusiastic disciple, showing his faith by works as well as words, as long as he lived. We are glad to learn that he condemned the substitution of the word "immerse" for "baptize" in the new version, made expressly for that purpose. Mr. Kendall died happy, with his eyes fixed on the rising sun, on the 12th of November, 1869, in his eighty-first year. His life was a long, useful, and happy one. Though he was not a great man, and his part in public affairs not a very important or conspicuous one, he did well what his hand found to do, and this is no small praise. This biography of him, though it might have been somewhat retrenched, is well edited, and will answer its purpose as a monument to a revered relative. We think, however, that the casual glimpses it gives at the private life of New Hampshire, of Kentucky, and of Washington, a generation or two ago, are what will give it its chief interest to the general reader.

POOR'S RAILROAD MANUAL.*

THIS is the fifth of Mr. Poor's annual publications, and well sustains, without advancing, the high character won by its predecessors. Some idea may be formed of the enormous labor involved in its preparation from the fact that it contains statistical information in regard to some 1,500 corporations scattered throughout the United States and the British Possessions, in regard to many of which little if anything is publicly known beyond what can be found in the pages of this volume. Very few comparatively of the States of the Union have as yet got to the point of exacting from their railroad corporations any official returns whatever, and even when they are exacted, these are altogether too frequently calculated to confuse rather than to enlighten. Many corporations are controlled by "rings," which do not scruple in the slightest degree at furnishing false information in furtherance of their plans, and not a few are so managed that no intelligent account of their condition could be furnished by their officials even if they were most honestly desirous of doing so. Take, for instance, such a corporation as the Indianopolis, Cincinnati, and Lafayette—an important line in the States of Ohio and Indiana. This company for several years made no returns whatever. In one of his earlier "Manuals" Mr. Poor published such statistical information in regard to it as he could procure, and which was certainly calculated to throw grave doubts on its solvency. Great indignation was expressed thereat by those in charge of the affairs of the company, and for the next issue of the "Manual" they prepared and Mr. Poor published a set of accounts which appear to have been manufactured to order. In due course of time the company was discovered to be hopelessly insolvent, and passed into the hands of receivers. It then gradually appeared that either no accounts existed or that they were so kept as to be wholly unintelligible. In any event, two years of patient labor have failed as yet to disentangle them. So, also, as regards the Rutland and Burlington Railroad of Vermont. The trustees of this corporation spoke in one document of certain trifling outstanding accounts, which in the next document, issued a few months later, assumed definite proportions in the shape of a million and a quarter of indebtedness. In preparing his "Manual" Mr. Poor has, of course, access only to such information as those managing the affairs of the several corporations see fit to furnish. This he publishes for what it is worth, and in many cases it is worth very little. The public, therefore, should not be allowed to suppose in referring to this book that they can rely upon the accuracy of all the information contained in it, and invest their money accordingly. As we understand it, Mr. Poor makes no such pretensions in its behalf. On the contrary, he seeks simply to bring together in a compendious form that which is publicly known in regard to American railroad corporations, and all persons must accept that information at their own risk.

While in fulfilling his task Mr. Poor is entitled to the utmost credit for the information he has collected and the industry he has displayed, the great difficulty with his "Manuals" is that the series does not improve. His original idea was a good one, but he fails to develop it. A more awkward and clumsy arrangement of matter than pervades this book, in close imitation of its predecessors, could not well be imagined. Indeed, it cannot be said to be arranged at all; the contents are flung together purely at haphazard. There seems almost to be something offensive to Mr. Poor in those chronological, alphabetical, or generic arrangements which mankind usually adopts with a view to convenient reference or intelligent study. For instance, he undertakes to print statements of the debts and liabilities of the several States of the Union. In doing this, he would naturally be expected to arrange the States either alphabetically or geographically. He does nothing of the kind. He begins with Pennsylvania and takes up Connecticut next, which is followed by Maine. New York is sandwiched between Michigan and Iowa, and Missouri between Maryland and Vermont. This is a trifling indication of an inherent defect which seriously impairs the value of the whole work. When the investigator approaches a study of the railroad system of America, and seeks to get precise information as to the affairs of any one of its large corporations, the book becomes little better than a lumber of figures. The proper arrangement is obvious enough. The railroads of the United States, in obedience to certain geographical considerations, are rapidly grouping themselves into families. These families should have been carefully brought together, so that at one glance the whole condition of the group could have been taken in. Instead of this, they seem to have been scattered up and down the volume with the express purpose of making connected reference impossible. Take, for instance, the Reading Railroad. This is a large corporation, the centre of a group of roads which it has built, purchased, or leased. To understand the condition of this company, it is necessary to know that of all the other companies united in interest with it. The obvious arrangement, therefore, would be to give the necessary information as regards the Reading Railroad, immediately followed by the information regarding all the other roads dependent upon it, the whole to be followed by a *résumé* of all facts connected with the group. Instead of pursuing this course, Mr. Poor puts the Reading Road itself on page 314 of the "Manual." The company, we are informed, own eight separate roads and branches, and lease sixteen others. To get any detailed information as to these members of the Reading system, it is necessary to consult the index and to refer to the pages of the "Manual" in the following order: beginning at page 314, we seek pages 16, 17, 359, 264, 420, 273, 248, 425, 57, 97, 58, 66, 421, 262, 417.

A more complicated instance yet is furnished in the Pennsylvania road. The system of this great corporation is one most difficult to understand. There is, in the first place, the Pennsylvania road proper, with its various branches and leased lines; there is, then, the Pennsylvania Company, incorporated solely to manage and control certain roads leased by the Pennsylvania Railroad. This family of united roads is the largest in the United States, including in a single interest some thirty corporations, and operating over 4,000 miles of road. Instead of bringing its members together, and thus making the system intelligible, Mr. Poor gives us the Pennsylvania Railroad in one place, between the Central of New Jersey and the Chicago, Detroit, and Canada Grand Junction, with neither of which has it the slightest connection, while the Pennsylvania Company makes its appearance nearly a hundred pages further on, side by side with the Dakota Southern and the McMinnville and Manchester railroads. As to the other members of the group, an industrious investigator might hunt them up in the course of a day or so of careful study; but if any person desires a thoroughly confusing problem to solve, he had better try to ascertain from Mr. Poor's compilation what is the capital and the net income of that system of roads which is now united under the management of the celebrated Mr. Thomas A. Scott and the Pennsylvania Railroad Company.

Neither can we say much in commendation of Mr. Poor's preliminary sketch of the railroads in the United States. It may have been novel once, but it is certainly so no longer. A manual which is to make its appearance each year ought apparently to give, in a preliminary sketch, some idea of what has been done during the year to which it relates. It should speak of that year's growth, business, consolidations, changes of management, etc., and thus afford the material for a connected historical review, and some general ideas of the course through which this great interest is developing itself. Mr. Poor does nothing of the sort. Year after year he reproduces the same facts and the same theories in identical words. We are regularly told of the length of the *radii* upon which a bushel of corn and a bushel of wheat can be transported, respectively by rail and by highway, before the cost of transportation will consume all marketable value; we regularly have Mr. Poor's not very original views on the subjects of land-grants and the relation of railroads to national finances. We begin to be very weary of these. They do not apparently change greatly year by year, and four repetitions would seem to be sufficient. At least, if the repetitions are to continue indefinitely, they ought to be accurate, and we should not find such singular statements (p. xxix.) as that the increase of tonnage in the United States, from 1861 to 1871, was at the rate of 23 per centum per annum, and the increase of population was at the rate of 2.3 per cent. per annum; and, consequently, "the tonnage of the country increased annually from 1861 to 1871 at a rate 2.5 per cent. greater than the population."

These, however, are but the defects of what is still a most valuable work, which must be improved, developed, and carried forward, both in conception and execution. If Mr. Poor does not do this, somebody else will. The advertisements must occupy a great deal less room, and the general statistical tables a great deal more. Some method of arrangement must be introduced as regards matter; and the statistics, now a most undigested mass,

* "Manual of the Railroads of the United States for 1872-73. With an Appendix, containing a full analysis of the Debts of the United States and the several States. By Henry V. Poor." Fifth Series. New York: H. V. & H. W. Poor. 1872. 8vo, pp. xlviii.-684.

must be compressed into tables which will render possible an intelligent and comprehensive view of the whole. The railroads of the United States already represent, at the lowest estimate, three thousand millions of invested wealth. Their securities are pressed upon every money market of the world. It is only, however, within the last six years that this system has evinced unmistakable symptoms of a rapid crystallization. The process now begun will unquestionably go on with an irresistible force and a constant tendency to an increased complexity. The public will, therefore, not much longer be satisfied with such results as Mr. Poor has hitherto given it. It is very well for a beginning, but the time is at hand when this body of raw material must be digested as well as collected. Whether Mr. Poor will prove equal to this task remains to be seen; in the shape thus far assumed, his series of "Manuals" will scarcely admit of a much longer continuation.

SOME RECENT NOVELS.*

IN this long list of novels that we have before us to-day there is no book of very marked excellence, although a few of them are certainly very readable, especially in a time of year when more serious volumes have a way of falling unregarded from the hands of the slumbering reader. The first on our list, "Marjory," certainly deserves this praise. It is a most unambitious tale of the sufferings of a charming young girl, who falls in love with a young man, and who then is tortured by the familiar passion—jealousy. More serious troubles, too, befall her, and the result is that we have a very good story. It is told with the utmost simplicity, and we hardly know any novel that we should so soon recommend as a model to those writers of magazine stories, or even of longer tales, who have no particular power of their own in the delineation of character, and whose only aim is to entertain the reader for a short time. We fear, however, that there are but very few who will fancy this advice in any way appropriate to them. But any one who reads this story will see for himself its apparent simplicity—it really contains a great deal of art—and will feel the direct singleness of impression that it makes upon him. The supernatural part is admirably managed; the quiet tone of all the rest makes this seem extremely possible and very impressive. There is in some books a way of making even ghosts almost as awkward and unnatural as the shadowy heroes and heroines of the story. The girl's feelings are well told, quietly and decorously, as she suffered; it reads as would a true story told by a good narrator, who was wise enough to know what to leave out. There is no rule for the writing of good stories, though there are certain conditions which the author must bear in mind if he wishes to do satisfactory work. But in such matters example is better than precept, and once more we recommend "Marjory" to writers as well as to readers who would like a pretty tale.

Mrs. Hammond's "Josephine Eloise" might possibly have been improved by some such study; as it is, in spite of the infinite diversity of the passions and sufferings of tortured humanity, there is nothing in this story which has ever been seen upon the face of this earth, except, indeed, in print. It is the story of a foundling who, after a life of much discomfort in this country, is found to be the daughter of an English earl, and who marries at the end of the book the renowned Lord Delmore. A great part of the story is about the machinations of a villain. In this way he entangles a victim in his fell wiles:

"When in a state, by so freely indulging, he had almost lost his reason, and by threats he would induce him to sign checks for large sums, and to sign away to him large amounts of property."

George Eliot need not fear a new rival here.

"Bede's Charity" is by no means an exciting tale. It does not deal with complications of the human heart, but rather with the exercise of Christian virtues. It is a religious story; but it has merits which we would gladly see in profane works—simplicity and naturalness. It lacks vulgarity, and that is, perhaps, rarer praise for religious tales than even those of other sorts.

Mr. Trollope's last novel (we believe it is his last), "The Golden Lion of Granpere," carries us to new lands, but only to show us how like are the manifestations of the tender passion, especially in Mr. Trollope's eyes, in all corners of the earth. The story need not be told. It is enough to say that there are two men and one girl, for those who know this author, to imagine the complications he devises for their torture. It is certainly a relief to get away from the clergy of the Church of England, indeed, from his Englishmen clerical or secular, although it is but little joy to get among Alsatian love-makers.

"The Rose Garden" is a very pretty little love-story, the scene of which is laid in France. There is a frivolous, flirtation-loving girl and a reserved cousin, both of whom are interested in a fascinating youth. A little social tragedy, some of it really well told, especially the conduct of the rejected Frenchman, comes in to ensnare the reader, and there are some good descriptions of Southern France. We recommend the story heartily. It is really a pretty tale.

Mr. Henry Kingsley has written a sort of historical novel, which, on account of its introducing Margaret Van Eyck, he calls "Old Margaret," apparently because her grave is covered with the dust of years. One might as well speak of "Old Joan of Arc," or "Old Lucy of Lammermoor," or "Old Keats." The novel is alive with intrigue, which it needs close attention to understand, and the author gives one the impression of his being a jaunty showman who has visited Ghent, and seen the Van Eyck's "Adoration of the Lamb," and then has prepared a melodramatic panorama which he explains to the awe-stricken public. He is quite at home with them all, he hears them soliloquizing, he is very fond of going to their club with the men, and he cannot conceal his admiration for their extreme blood-thirstiness. To our mind the book is an utter failure; a writer of historical novels should certainly try to represent his characters as human beings whom he fully understands, but that impression is not given by his incessant slapping them upon the back, as if to prove his familiarity in the eyes of doubters and bystanders. We respectfully warn readers from this book.

"By his Own Might" is a translation of a German novel, which is intended to teach the young the advantages of overcoming all obstacles in the way of good works. As a work of fiction, we must say that we found it extremely dull, though perhaps no duller than most German novels. With all respect for the Germans, it would seem as if they thought fiction were a science, and, given a problem, two or three incarnate qualities, and some morally sound conversation, the novel must be good, if the issue is sound. There are too many in this country who read with pleasure the novels that are translated from the German; they will find this one as interesting as most. Other people will find it extremely dull.

"Sybil's Second Love" is one of the volumes of the republication of Julia Kavanagh's novels, over which those who are now experienced matrons used to sob twenty years ago. It must be interesting for them to notice with what dry eyes they can now read them, and how nearly equally indifferent their daughters will be towards what once tore the mother's heart.

"A Good Investment" is an American novel, containing an account of life in Southern Ohio, apropos of the rise in the world of a bright young boy. The story is unaffectedly written, the romance is pleasant, if not madly exciting, no more are the ordinary flirtations of other people, and we are glad to recommend the book as a good step in the right direction on the part of an American novel-writer. There is a good deal of truth of local coloring in the figure of the old man whose lands were the subject of the investment. Not so good is the love-story, with its haps and changes; and perhaps the novel tries to contain too much, but, as we say, it may be awarded a word of praise.

"Thrown Together" is by the author of "Misunderstood," which was a doleful tale of childhood's woes. This is another of the same sort, and is written by a woman who feels keenly the manifold troubles that children endure from their own sensitiveness, their parents' real or apparent indifference, or whatever it may be. We have only space to say that this gives an account of the infancy of a little boy and a little girl, and of their influence on one another. The girl was a sensitive, proud little thing, and was by no means appreciated by her parents; the boy was his mother's joy; gradually the children become friends, obdurate parents are tamed by the example of the children and by domestic affliction, so that the book ends happily. It would be well, we think, if all parents were to read this book; to some it may seem exaggerated, yet we fancy that there is nothing in it but what might be true, and indeed is true, of the lives of many children. One is so inclined to forget his childhood, or to clothe it with a purely imaginative interest, and thereby to lack sympathy with his children, that they often really have good ground for their belief that their father and mother never were young.

PROGRESS OF THE NORTHERN PACIFIC RAILROAD.

THE entire aspect of the far Northwest is undergoing a rapid change in consequence of the construction of the Northern Pacific Railroad. For the first time in the world's history the awful solitudes of that remote and hitherto almost totally unknown region resound to the busy hum of industry and advancing civilization. On all the railroad and water routes to the new country the facilities for transportation have been more than quadrupled during the present season, but without affording adequate outlets for the pressure of goods. The large increase of vessels on the Upper Lakes is chiefly due to the requirements of the great railroad company, and there is scarcely a city or town along the highway of travel that does not feel the effects in an increase of business activity. The mere transportation of the vast supplies necessary for the new railroad would alone tax the transportation facilities of the sparsely settled country to the utmost. But in addition to this, long trains of settlers and immigrants follow the track of the railroad surveyors and builders, so that the country is being thoroughly explored, and is filling up with a rapidity which is destined to increase into the largest proportions.

The railroad has been entirely completed in Minnesota, and operations are now centred in Montana, where track-laying progresses at the rate of three miles a day. In October next the whistle of the locomotive will be heard on the Upper Missouri River. Quite a heavy business is now done on the Minnesota line. In addition to an important local trade, the business of the Hudson Bay Company and the British settlements in the lower Red River Valley now goes over the road, and forms quite a large aggregate. The St. Paul and Pacific Railroad, now owned and in progress of construction by the Northern Pacific Railroad Company, traverses the richest portion of Western Minnesota. Other branch roads are projected or in progress of construction to connect with the main line, and the necessary preparations impart a bustle of activity to the entire country. The trunk road is now in progress of construction along the Yellowstone River in Montana. The preliminary work of surveying and laying down the route having been effected, the surveying parties are extending their labors further west to the defiles of the Rocky Mountains.

The observations and experiences so far amply confirm all that has been said of the fertility of the belt of country along the line of the railroad. In Dakota the climate is genial and the soil is admirably adapted for the cultivation of grain, so that the time when this may become the great wheat-raising centre of our country may not be distant. The country is chiefly prairie, intersected with a few small rivers or streams, and affording at all points ample supplies for men and cattle. Natural water springs can be reached almost anywhere by excavations of a depth of ten or twelve feet from the surface. Occasional lakes are found. The rainfall this summer has been very abundant, and the country is well drained. Of the soil fully nine-tenths is arable land, and the remainder is more broken and not adapted to cultivation. The Missouri River, at the point where the railroad strikes it, is very wide and deep, with a rapid current. The shores on either side are well-wooded, as are also some islands which have been formed by the section of the river. The Missouri is navigable above the point of railroad intersection a distance of one thousand miles to Fort Benton.

The Northern Pacific Railroad Company from the commencement adopted a policy of conciliation to the Indians, which has so far prevented all difficulties, and which is worthy of imitation by other companies. It inaugurated a system of obtaining supplies of fuel, food, and other articles from Indians, and of hiring them for such services of tending cattle and other work for which they might be fitted. Payment was always promptly in cash or goods at cash value, and strict equity was always observed in the dealings with them. By these means the savages were converted from enemies into friends, and their interests were identified with the progress of the road. The country is so peaceable that unarmed men attached to the railroad company traverse the entire region between the Missouri and Red Rivers, and so far without molestation. Still more, six surveying parties are now operating between Montana and the Pacific without escort of any kind. The Company is fairly entitled to the merit of amicably settling for the United States Government, at once and for ever, the Indian question on the most difficult and threatening portion of our frontier.—*New York Daily Bulletin.*

A LIBRARY OF EDUCATION,
FROM THE
BEST WRITERS OF ALL COUNTRIES.

VOL. I.—Locke's Thoughts on Education.

VOL. II.—Locke's Essays on Study and Reading; Milton's Epistle on Education, with Lives of Locke and Milton.

VOL. III.—Horace Mann's Papers on the Study of Physiology in Schools.

VOL. IV. — Scottish University Addresses: (1) MILL, on Literary and Scientific Education; (2) FROUDE, on Hand-work before Head-work; (3) CARLYLE, on the Choice of Books.

VOL. V.—The Bible in the Public Schools—the Opinions of Individuals and of the Press, with Judicial Decisions.

VOL VI.—The Bible in the Public Schools. Part II., containing the Addresses of A. D. MAYO and THOMAS VICKERS, of Cincinnati.

Other Volumes, in preparation, will be duly announced.

It is our design to make COMPLETE AND STANDARD EDITIONS of the works of Educational writers of Eminence, and reduce the cost to a minimum. We have adopted a model, very successful in France, which puts the products of the best minds within the reach of all.

THE PRICE—TWENTY-FIVE CENTS a vol., post-paid.

J. W. SCHERMERHORN & CO.,
14 BOND ST., NEW YORK.

PATENT JOURNAL. The London Journal of Arts and Sciences. First and Second Series complete, together with the conjoined series (Arts and Sciences and Repertory), by W. Newton, etc., to 1854 inclusive. 68 vols., half calf, neat, newly bound, $250.

☞ These three series are the acknowledged best authority for English Patent Cases in the years they represent, and, with Newton's Journal of Patents, from 1855 to date, are the best Books of Reference any one interested in Patents can possess.

EXHIBITIONS. The Exhibitions of 1851, 1853, 1855, 1862, and 1867. Illustrated issues with the Art Journal. In 3 vols. half morocco, elegantly bound, half green mor., $45.

HALL'S IRELAND. Bartlett's Illustrations. India proof before letters. 2 vols. folio, half mor., $85.

VANITY FAIR ALBUM. Three Series. 3 vols. folio. Pelegrini's Caricatures and Portraits of English Statesmen, etc. $45.

LODGE'S PORTRAITS. Folio edition. Large-sized Portraits. Published at £84. Embossed, brilliant impressions. 3 vols., full russia, $120.

THOMAS'S DICTIONARY OF BIOGRAPHY AND MYTHOLOGY. 2 vols. imp. 8vo, half mor., $22 50.

LIFE AND LETTERS OF PROFESSOR FARADAY. Illustrated. 2 vols. 8vo, cloth, $7 50.

BAGSTER'S POLYGLOT BIBLE. In eight languages. 2 vols. folio, half mor., gilt top, $75.

THE KERAMIC GALLERY (Autotypes), containing several hundred illustrations of rare, curious, and choice examples of pottery and porcelain from the earliest period. With historical notices and descriptions by Wm. Chaffers. 2 vols., $40.

AUDUBON (J.) BIRDS OF AMERICA. 4 vols. elephant folio, newly bound, half russia. THE GENUINE ORIGINAL EDITION, consisting of 435 carefully colored plates, each bird represented the full size of life with its prey. An original subscriber's copy. London, 1836-1838. $1,100.

AUDUBON (J.) The Text for the Above. Embellished with woodcuts. 5 vols. 8vo, bound in half russia, $30.

HALLIWELL'S SHAKESPEARE. The Great Edition. 16 vols. folio, $600.

MACGILLIVRAY'S (W.) HISTORY OF BRITISH BIRDS, Land and Water, Indigenous and Migratory. Both series with several hundred illustrations. 5 vols. 8vo, bright new calf, gilt, $45.

OTTLEY'S (W. H.) HISTORY OF ENGRAVING ON COPPER AND WOOD. With an account of engravers and their work, and many fac-similes of early engravers. 2 vols. 4to, half calf, gilt, $45.

REYNOLDS (Sir Joshua), ENGRAVINGS FROM THE WORKS OF, comprising 200 beautiful mezzotint engravings of portraits after this famous painter, executed by the most eminent English engravers. Brilliant proof impressions on india paper. 3 vols. roy. fol., half mor., top edges gilt, 1865, $600.

This magnificent work contains engravings from some of the choicest pictures the illustrious painter produced, and which were unobtainable by the late Mr. S. W. Reynolds, and were consequently not engraved by him in his well-known work. It is complete in itself, but may be added as a second series to the work originally published.

As a very limited number of the edition of proofs on india paper was issued, and that to Subscribers only, the work must ever remain scarce.

LEECH'S PICTURES FROM PUNCH. Fifth series. 3 vols., bound in blue half mor., oblong folio, $25.

BLACK'S GENERAL ATLAS. Half mor., fol., 1871, $22 50.

MY GARDEN—Its Plants and Culture. By Alfred Smee, F.R.S. Illustrated with one thousand two hundred and fifty engravings. 8vo, cloth, $8.

GEO. GEBBIE,
730 Sansom Street, Philadelphia.

HARVARD UNIVERSITY,

CAMBRIDGE, MASS.

The next term begins in all departments on Thursday, Sept. 26, 1872.

The examination for admission to Harvard College begins on Thursday, Sept. 26, at 8 A.M. The examinations for admission to the Engineering Department of the Lawrence Scientific School, to the Mining School, and the Bussey Institution, begin on Thursday, Sept. 26, at 9 A.M.

For Catalogues, circulars, or information about any department of the University, address

JAMES W. HARRIS, Sec.

YALE COLLEGE.

THE SHEFFIELD SCIENTIFIC SCHOOL

Offers professional training to Civil and Dynamical Engineers, Chemists, Geologists, Naturalists, etc., and also courses preparatory to such pursuits as Mining, Medicine, Agriculture, Manufacturing, etc. Letters may be addressed to Prof. D. C. GILMAN, Secretary,

New Haven, Conn.

W. C. WILLCOX'S FAMILY SCHOOL,

STAMFORD, CT.

Twenty-third Year begins Sept. 11.

Employs only teachers of education and experience. Fits for Yale College, Sheffield Scientific School, West Point, or commercial life. A safe, healthy, and happy home for boys, with faithful instruction and salutary discipline. Military drill, gymnastics, and boating, under a master of established reputation. Send for Catalogue.

CHEGARAY INSTITUTE,

Established in New York in 1814. English and French, for Young Ladies and Misses, Boarding and Day Pupils, 1527 and 1529 Spruce Street, Philadelphia, Pa. French is the Language of the Family, and is constantly spoken in the Institute.

OFFICE OF THE

ATLANTIC

MUTUAL INSURANCE CO.

NEW YORK, January 26, 1872.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1871:

Premiums received on Marine Risks from 1st January, 1871, to 31st December, 1871,	$5,412,777 51
Premiums on Policies not marked off 1st January, 1871,	2,033,675 18
Total amount of Marine Premiums,	$7,446,452 69
No Policies have been issued upon Life Risks, nor upon Fire Risks disconnected with Marine Risks.	
Premiums marked off from 1st January, 1871, to 31st December, 1871,	$5,375,793 24
Losses paid during the same period,	$2,735,980 63
Returns of Premiums and expenses,	$973,211 84

The Company has the following Assets, viz.

United States and State of New York Stock,	
City, Bank, and other Stocks,	$ 3,143,240 00
Loans, secured by Stocks and otherwise,	3,379,050 00
Real Estate and Bonds and Mortgages,	217,500 00
Interest, and sundry Notes and Claims due the Company, estimated at,	386,739 41
Premium Notes and Bills receivable,	2,405,987 95
Cash in Bank,	274,345 01
Total Amount of Assets,	$14,806,812 37

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday the Sixth of February next.

The outstanding certificates of the issue of 1868 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Sixth of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment, and cancelled.

Upon certificates which were issued (in red scrip) for gold premiums, such payment of interest and redemption will be in gold.

A dividend of Forty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1871, for which certificates will be issued on and after Tuesday, the Second of April next.

By order of the Board,

J. H. CHAPMAN, Secretary.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

The Nation.

NEW YORK, THURSDAY, AUGUST 29, 1872.

The Week.

THERE is no question that "the Greeley movement" is just now flagging. This is acknowledged on all hands. Of course the reasons assigned for it vary. The *World* says there is "a lull in the canvass"; while other prominent Democrats say there is "a pause" caused by the preparations for the Louisville Convention, there being much curiosity and some anxiety to see what will come of that undertaking. Nobody, of course, supposes that its candidate will stand any chance of election, but he might draw too heavily on the Greeley vote. If, for instance, Charles O'Conor were nominated, it would play sad havoc with the majority with which Mr. Greeley expects "to leave the city" in November. The fact seems to be that Greeley is not a candidate to bear examination. The criticism of the canvass tells on him as it probably never told on any candidate before. One of his prominent supporters remarked in our hearing, after the nomination at Cincinnati, that "it would either prove an avalanche or a fizzle," and the more ardent Greeley men expected it to prove an "avalanche," or, in other words, expected to carry him into the White House by hurrahing and repeating catchwords. This expectation has been completely disappointed, and although the movement has as yet by no means turned out a "fizzle," discussion tells on it daily. The result of the North Carolina election has scared the doubting, and there has been a total stoppage of "accessions." Moreover, Grant's silence compared to Greeley's noise—for in the popular eye the latter, his retirement to the contrary notwithstanding, is still the true editor of the *Tribune*—begins to tell powerfully in Grant's favor, and even to excite a kind of enthusiasm about him which is stimulated by the personal attacks on him. A man who, in the midst of the insensate howling about his spending a couple of months at the seaside, goes calmly to the Thousand Islands on "a jaunt," and lets his enemies rave away, shows a quality by which the hearts of most people are more or less stirred. "By Time!" says Hosea Biglow, "I do like a man that ain't afeard."

It must be admitted that the "beneficent revolution" is attended with more horrors in Massachusetts than in any other part of the country. In the first place, it is alleged that Mr. Slack, of the *Commonwealth*, has been turning on his benefactor, Mr. Sumner, and basely abusing him in his paper, all for a "little office"—that of Assessor of Internal Revenue, given to him by Grant. For this, if true, Slack should of course be tied up, *more Romanorum*, in a bag, with a dog, a snake, a cock, a viper, and an ape, and drowned with proper solemnities in Boston Harbor. Next, Mr. F. W. Bird has been in hot pursuit of Mr. Henry Wilson, and has, in company with Mr. Albert Pike and others, tracked him into a Know-Nothing lodge, and revealed him to "our adopted fellow-citizens" taking terrible oaths not to vote for or appoint to office either foreigners or Catholics. The tragedy has been deepened by Mr. Wilson's having, since his nomination, solemnly declared that he had all his life long cherished as "a bright hope" and "a living faith" the belief that all men should have "complete liberty and exact equality." Mr. Wilson, it appears, did proclaim this belief in the Massachusetts Constitutional Convention in 1853; but the Know-Nothing Movement then beginning to wear the appearance of a "tidal wave" or "prairie fire," he joined it the following year. In 1855 he was a candidate for the Senate, and the Know-Nothing movement was dead or dying, and he had to repudiate it or conceal all sympathy and connection with it; so he composed a somewhat evasive letter, which he submitted to Mr. Frank W. Bird, his friend, who revised it for him, but, he says, informed him that in writing it he was "going to roll in the mud." He was then elected, and in 1857, Mr. Bird, in spite of "the mud," wrote a letter expressing his "entire conviction of Mr. Wilson's sincerity and integrity." But Mr. Bird now publishes the muddy letter as proof of Wilson's unworthiness.

Mr. Bird also makes an onslaught on Mr. Garrison for presuming to address admonitions to Mr. Charles Sumner, he being, according to Mr. Bird, by far Mr. Sumner's inferior in "practical statesmanship," inasmuch as he warmly advocated disunion previous to the outbreak of the war. Whereupon the New York *Times* appears on the scene, and shows that Mr. Bird himself acted as president of a Disunion Convention at Worcester, Mass., in 1857, and three days previously addressed a letter to Mr. Garrison's *Liberator*, in which he urged that paper to "accustom people to look at Disunion as a possible, probable, and, in the present state of things, desirable result." Moreover, Mr. Wendell Phillips proclaimed in 1868 that General Grant was in the habit of appearing drunk in the streets of Washington, and that Senator Wilson's testimony to Grant's sobriety only made Grant's drunkenness all the more probable, and that Wilson's own rise was "an alarming result of democratic institutions." When we say that this conscientious and consistent Sage is now not only going to vote for Grant and Wilson himself, but is busily recommending others to do so, our readers may guess what confusion reigns "inside politics" in Massachusetts.

There has been a fresh contribution this week to Mr. Greeley's civil-service record, which also is not favorable. It appears from the *Tribune* that one Camp has owed him money for nine or ten years, and it appears from the *Times* that Mr. Greeley strongly recommended this Camp for employment in the civil service in 1861. This case is not, we imagine, quite so discreditable as the Vanderbilt case, but still it sets people thinking. There has been also during the week one charge made against him which the admirers both of Rural and Urban Greeley will find very amusing. A Miss Jenkins accuses him in the *Woman's Journal* with not only generally opposing the admission of women to the higher grades of occupation, but with desiring that a woman should sew for thirty cents a day and "sell her virtue" to a Treasury Clerk, enjoying a salary of $1,600 a year, rather than that she should have the clerkship. One is pained to learn also from Miss Jenkins that Mr. Greeley has avowed these detestable sentiments "publicly, privately, and repeatedly." What a bad old fellow Greeley must be, if Miss Jenkins be an accurate reporter! But the *Tribune* thinks she is naughty, and asserts what she knows to be untrue. The fact is, she has in this case been simply guilty of a common old-fashioned male fallacy, which consists in imputing to a person as actual intention, whatever you can show to be a probable, or even possible, though remote or indirect, consequence of his acts or opinions, as, for instance, when Mr. Sumner accused General Grant of helping to confirm the Dred Scott decision by voting for Buchanan, the simple truth being, we believe, that he voted for him because he had rather a contempt for Fremont, as had most soldiers. So also it was held by one of the old Abolitionists that a man who would use the United States Post-office to transmit his letters would commit a murder; inasmuch as in using the Post-office he supported the Constitution, which upheld slavery, which was the sum of all villanies. There is no end to the nice little crimes one can bring home to one's enemies in this way.

Among the recent contributions of moment to the literature of the canvass is a letter of Mr. R. H. Dana, jun., in reply to a number of colored men of Boston, who asked him for advice about their voting. He denies Greeley's claim to be considered either an original abolitionist or original free-soiler, denounces him personally as "a Radical without root, a visionary without faith, an extremist without persistence, and a strifemaker without courage," and as "boorish" and "profane," and declares him better fitted for almost any

office in the world than that of President of the United States. Mr. Garrison has also written another letter to the *Boston Journal*, showing that there is no ill-feeling at the North towards the South, that there is, therefore, no occasion "to clasp hands across the bloody chasm," and that all that is needed for peace and unity is that the South should lead a godly and sober life. Two remarkable articles on the canvass have appeared, one in the last *Lippincott* and the other in *Old and New*, which everybody should read. The former is a review of the Greeley movement, and the latter a comparison of Grant and Greeley, a good specimen of vigor and simplicity. The Grant "managers" could not do better than have it reprinted for use as a campaign document. Of course, it overlooks all the ascertained defects of Grant's Administration, and probably that will not constitute an objection in the eyes of those gentlemen; but its analytic attack on Greeley is admirable.

The New York Grant Republicans have made a very good State ticket, headed by General Dix, though we believe it is uncertain at this writing whether he will accept. Their taking him, a man of Democratic antecedents but high character, seems to have been the result of the reappearance in the field of Mr. Thurlow Weed, who once more pulls the wires as in the olden time, and is said to have urged Dix's nomination as a counterpoise to the Liberal-Republican defection to Greeley. Mr. Weed's return to politics will add fresh bitterness to the canvass, for to him Honest Horace owes a most savage grudge, totally unworthy of his gentle and forgiving nature and his high mission as a national pacificator. The last fight he had with Weed, in 1867, was of a most ferocious character—Greeley so far forgetting himself as to call his foe "a hoary old villain." And by the bye the main objection made by the Greeleyites to the Dix nomination is General Dix's age (74), on which they dwell with barbarous joy, reminding him daily of "the tomb," "the grave," "funerals," and "obsequies." This is by way of "elevating politics," and giving its conflicts a more civilizing and humanizing tendency. It was also a favorite mode of attacking Thaddeus Stevens in his latter years. As for the Democratic State nominations, Judge Church and Governor Hoffman have declined to be candidates, the latter since the 12th of July, 1870, having a better chance as a candidate before a Democratic Assembly and Senate than before the Democracy at large. It is now rumored that Mr. O'Conor may be asked to stand.

South Carolina politics have taken an unexpectedly good turn, though that very much can be expected to come at once of the revolt against the Scott Ring we are not in a position to say. There is at all events a split in the ranks of the Republicans, and some consequent hope for the future of the State. The Convention met a week ago to-day, and at once went into the usual performances of a South Carolina Republican Convention. Everybody bawled, some of the members drew pistols, everybody called everybody else a thief and a seller or a buyer of votes, or both, and not many could deny the truth of any of the impeachments. The assemblage was throughout violently uproarious. It is doubtful if any American political meeting of the same size, unless it may have been the last Republican Convention, ever contained so much unmitigated and mean rascality, accompanied by so much ignorance, as was there gathered together. The thing to be done was to secure the gubernatorial nomination for the notorious F. J. Moses, and the tactics of the opposition were to show, or rather to remind, the Convention that Moses was a thief and a corrupter of voters, and, in case this move failed, to bolt. The charges were openly made, countercharges preferred, and, after any amount of turbulence and confusion, Moses was duly nominated.

The bolt then took place, led off by Judge Orr and Senator Sawyer, who took with them about a third of the delegates. Of these the greater number were honest men pledged to reform, and about thirty of them were colored; but not all were honest. C. C. Bowen, for example, was among them, and a part of the opposition to the Scott and Moses gang means merely that thieves have fallen out. The bolters proceeded to nominate a full State ticket, having at the head the name of ex-Auditor and ex-Superintendent of Education, Reuben Tomlinson, formerly of Pennsylvania, but now for ten years a resident of South Carolina and a useful citizen. There is indeed no State in which Mr. Tomlinson would not be a useful citizen so far as integrity, ability, and honesty go to make a citizen useful, and in him, could he be elected, South Carolina would have, for the first time since the war, a creditable governor, sagacious and honorable. We do not know that he has any chance of election. But it is certain that he ought to get the votes of all South Carolinians who have ever spoken a word of detestation against the true carpet-bagger while at the same time expressing a willingness to welcome honest Northerners into the State; and he has the advantage of being well known to the negroes in every county. He is probably by far the most available candidate that could have been found within the State limits. In view of the scandalous condition of South Carolina politics, his success is a matter of national importance, and we hope it may be furthered by all possible influences. The Republican party cannot carry many of the Moses sort through many election campaigns, Presidential or not. Both wings of the party declare for Grant and Wilson. Niles G. Parker was, as might have been expected, badly besmirched in the Convention.

Other good news from the South is that the colored Republican vote in Louisiana is now definitely divided, and that the larger part of the negroes have repudiated Warmoth, who is no doubt "the worst in the world," so far as Louisiana is concerned. He is repudiated also by the Democracy, who have sent word to the National Committee here in New York that they will have nothing to say to the Greeley and Brown Liberals until Warmoth's name is taken off the Greeleyite National Committee. To get rid of Warmoth, if indeed he is got rid of while he has a negro following and the governorship, is well, but Louisiana politics are not yet millennial; the Casey or Custom-house Republicans have brought over the Pinchback negroes, and the two tickets are fused, Pinchback getting the nomination for Congressman at large. This is probably the winning ticket.

The *Evening Post* thinks we spoke "too flippantly" of the Doolittle exposure in the *Times*, and that we said in effect: "What of it? Ashley and others are quite as bad, if not worse." We hope we need not say that it is absurd to charge the *Nation* with thinking or speaking lightly of an offence like Doolittle's, and the *Post's* reproduction of our remarks is singularly misleading. The point we make about this case of Doolittle's is, that "exposures" of men like him made by party organs, especially during a Presidential campaign, contribute nothing, or next to nothing, to the work of reform, for the simple reason that for the one rogue it attacks each organ has two or three behind it whom it is defending, or whose operations it cannot be got to see. We have no doubt whatever, as we have said half a dozen times already, that if the press, or even the more influential portion of it, united in attacking rogues of all parties, there would in a single year be such a "purification of politics" as never was witnessed in any age or country. But as matters stand, "exposures" pass as common incidents of the canvass over which people smile. Doolittle is attacked by the *Times*, they say, because he is a Greeley man, and the *Tribune*, too, which would follow up Doolittle night and day if he had presided at the Philadelphia Convention, has nothing to say about his cotton operations, and retorts on his behalf with a story about Grant, and so the dreary game goes on.

Two cases have just occurred which bring the British civil and ecclesiastical law into sharp collision. An Irish priest, Father O'Keefe, a man of high character and greatly beloved by his congregation, was greatly startled one Sunday morning by hearing himself denounced from the altar in his own church as "a liar," just as if he was engaged in a political canvass in this country. Asking the meaning of the performance, he learned that the curate was

obeying the bishop's orders. So he sued the bishop for libel, but was nonsuited because he could not prove the transmission of the order, and the bishop suspended him from his office for bringing the suit. He then turned round and sued the curate, and, *pendente lite*, the bishop suspended him, *ab officio et beneficio*, for bringing this suit, and appointed another priest in his place. Now the parish priest is in Ireland *ex-officio* visitor or manager of the common school of the district, and on the bishop's reporting Mr. O'Keefe's removal, the School Commissioners removed him also from the position of visitor, thus helping to inflict a penalty on a man for bringing a lawful action in the Queen's courts. Whereupon there is great excitement among the enemies of ecclesiastical assumption.

In the other case, a minister of the Anglican Church borrowed the church of a brother clergyman to celebrate a marriage in; it turned out, however, that the bride had been divorced for adultery, but without prohibition to remarry, on discovering which the incumbent of the church forbade the ceremony, and denounced the other clergyman to the bishop, who turned him out of his diocese; denounced him to the managers of the Curates' Augmentation Fund, who cut off the addition they made to his stipend. Whereupon the minister who performed the ceremony brought his action for libel, but was defeated. In this case, the divorce was legal, the marriage was legal, the parties had under the law a legal right to be married in that particular church as their parish church, and though the minister, as having conscientious scruples about divorce, had a legal right to be excused from the performance of the ceremony, he had no legal right to hinder another minister from performing it. Nevertheless, the minister who did perform it has been visited with the most tremendous penalty which can befall a man in his profession except degradation from his office—furnishing a curious illustration of the way in which statutes turn out defective through the operation of unforeseen circumstances. The case is one of the little things which are hastening the downfall of the Established Church.

There remained of the fund raised in Boston for the relief of the distress caused by the war in France a sum of 2,000 francs, which the subscribers asked to have used as a prize to be given by the French Academy to some one whom it might select for the honor, as having displayed signal courage or devotion during the siege of Paris. The Academy, however, was unable to single out any one person as specially deserving it, and decided to bestow it on a body of persons, the Brothers of the Christian Doctrine, a Catholic order of teaching monks. The Duc de Noailles, who presided at the last meeting of the Academy, and made the speech on the occasion of the distribution of the annual "prix de vertu," after giving the history of the Boston subscription, and alluding in feeling terms to the bonds which had so long united France and America, explained what the Christian Brothers had done to merit the prize. They had, headed by their aged Superior—eighty years old—placed all their schools and buildings at the disposal of the Government as soon as the news of the first disasters reached Paris, and offered themselves as nurses and hospital attendants, and started a hospital of their own. They sent five or six hundred of their fraternity to the front, and yet kept their schools going during the whole siege, each brother taking his turn of duty alternately on the field and in the schools. Their stretchers were pushed forward in every engagement under the heaviest fire. Two were killed on the field, many were wounded, and eighteen died of disease and exposure. During the reign of the Commune they endeavored to continue their humane labors in the worst insurgent quarters, but were seized, put in the prison of Mazas, and were going to be slaughtered when they succeeded in making their escape after the entry of the troops. One was killed at the last moment.

Two of the other prizes were given to colored persons born in slavery. One was a woman in Cayenne, named Toussaint, now eighty-eight years old, who devoted herself after her liberation wholly to works of charity. She distinguished herself as a nurse when the yellow fever ravaged the colony in 1832, and was still at her post when it came again in 1850 and 1854, as well as during two smallpox epidemics. The common council, the clergy, and the principal inhabitants of the colony have recommended her for the prize. The other case is that of a man named Louis Soliveau, of Guadaloupe, who purchased his freedom but remained with his old master, who soon after lost most of his fortune. Soliveau then took charge of him and his family, and kept them above want, besides acquiring an education which enabled him to make a fortune of his own in manufactures. After his master's death Soliveau continued his care of the widow and son, was appointed guardian of the latter after the widow's death, and so managed his little inheritance during his minority that he was able to present it to him freed from encumbrance on his coming of age. The Academy has done well to make him famous.

It is apparently not only royalty, but all kinds of institutions, which are having a hard time in Spain. King Amadeus has got bravely over the attempted assassination, and the courage with which he met it is undoubtedly telling in his favor, but the Republicans do not lose ground in the elections, and the Socialists gain ground in the great towns, and while as implacable and frantic as their brethren in France, they have not to meet that large peasant proprietary and wealthy and cultivated middle-class which defend the "cause of order" in France. In Malaga there is a strike going on of an unusually formidable character, keeping the troops under arms day and night, and throwing fifteen thousand persons out of employment. It was with great difficulty that the strikers were persuaded to allow the gas-works to supply gas to the city. Several of the manufacturers declare their intention to give up their business and leave the place, the turbulence and insubordination of the workmen having made it unprofitable for two or three years past. The present movement is said to have been set on foot by order of the International. One curious feature of it is the participation of the students of the college, who have placarded the walls with a statement of their grievances, in which they demand that their hours of "labor" shall be from nine to twelve and four to six simply, and that the writing-masters shall supply them with better pens. In Catalonia, the Socialists are vigorously engaged in propagandist work among the peasantry, and, it is said, with some success.

The new plan of the Papacy, for pushing the faithful into politics, to take the chances of the ballot-box, has not turned out well. Indeed, in the city of Rome, in which one might expect it to succeed, if it succeeded anywhere, it has proved a total failure. There were 15,000 voters registered, but only 8,000 voted at the late municipal election, and of these the Clerical party obtained only 1,611; the extreme Radicals only 834; while the Liberals, or Moderates, carried everything, electing all their candidates by large majorities. The Papal party did not elect one, though they worked hard, and had four inspectors at every polling-place. The Liberals were so sure of their game that they were in excellent humor, and in the districts in which they were in a majority had a standing collation ready for the Clericals, who partook freely, without flinching, holding apparently that the ice-cream of the children of the devil was not so poisonous as their doctrines. The Liberals, before the election, held frequent and boisterous meetings, on the American and English plan; but the Clericals, being more genteel and timid, only had one or two gatherings at private houses to frame their tickets. They ascribe their defeat to the abstention of many of the voters through intimidation; but the *Unità Cattolica*, which makes the charge, does not say where the intimidation took place. Among the Clerical voters was the Jesuit Father Secchi, the well-known astronomer.

"THIS PARTICULAR MEASURE."

IT is very remarkable and suggestive that the one reform of all those which have been talked of or called for during the last seven years, over which the President has any discretionary power, is hardly alluded to by those who are clamoring for a change of Presidents as a means of reform. We are every day given to understand that in some mysterious manner the election of Mr. Greeley will cause the disappearance of the "thieving carpet-baggers" from the South. He himself, in that remarkably prepared speech published the other day, used language which would of itself justify the application of the term imposture to his "movement," when he expressed the belief that between Nov. 5 and March 5 the carpet-baggers would take to flight, evidently meaning to produce the impression among the unreflecting that there was some machinery at the disposal of the President which he would use to drive the Scotts and Parkers out of the South, or the dread of which in his hands would cause them to run away before he was inaugurated. As every intelligent man knows, and as every honest man ought to say, the carpet-baggers will have no reason in the world to fear Greeley, even if he is elected. He cannot meddle with them in any way. All that part of his canvass which is devoted to raising the expectation that he can and will meddle with them is misleading and, to a certain extent, fraudulent.

The one thing which he can do is to reform the civil service, but what he will do about the civil service he and his followers are careful not to say. It is true they use the same vague language about it which Congressmen have been using for the last ten years, but which, as we all know, might be used for twenty years to come, without producing any result—that is, they are in favor of civil-service reform in general, as they are in favor of holiness and patience and chastity; but if you ask them whether they are in favor of any "particular measure" of civil-service reform, they seem suddenly to lose all interest in the subject. *In what way* Mr. Greeley will reform the civil service, nothing would induce him to tell you, beyond saying that he would "appoint none but good men to office," and would "punish and dismiss the unworthy," and that, as he was only going to serve for one term, "he would have no motive" to keep rascals in the employ of the Government or otherwise abuse his trust.

We have, however, his all but positive assurance that he will use his patronage to reward those who will aid in his election, or, as he calls them, his "political brothers," no matter from what party they come, and he has hinted significantly that he will do this in a large and liberal manner. Now this means simply that he will make a general clearance of Grant office-holders in order to put his own friends in their place. With less than this he cannot possibly satisfy even a tenth part of his supporters. In other words, he will, in the first year of his term, appoint on a moderate calculation about 40,000 persons to office, and in the old way—that is, on the recommendation of Congressmen and local politicians. Among these there will be, we believe, the largest proportion of rascals ever exhibited by the appointments of any one President. Mr. Greeley's own character and the peculiar composition of his following make it certain, at all events, that he will appoint *as many* rascals as any other President. In about a year we shall begin to find them out, and call his attention to them; to ask why he appointed such an ignorant fellow as A, or why he does not dismiss such a drunkard or libertine as B, or punish such a defaulter as C. The course he and his organs will almost certainly pursue will then be this: They will say, as regards A, that he came recommended in the strongest manner by Mr. Banks, or Frank Leslie, or Mr. Matt. Morgan, and that the President has to act on recommendations; that he cannot possibly know personally everybody he appoints; that, as regards B, his administration of his office had been admirable, and that the whiskey tax was one per cent. greater in its yield under Greeley than under Grant; as regards C, they will preserve dead silence, and let you hammer away. In other words, we shall have repeated under Greeley the very process, with numerous and weighty aggravations, which we have been witnessing under Grant, and yet Greeley will all the while say that he yearns for civil-service reform. The whole party in power will be in favor of civil-service reform, and yet the civil service will be worse than ever, and "particular measures" of reform in greater disrepute than ever.

No mention of a "particular measure," it will be remembered, was made in the Cincinnati platform, and just as little in the Philadelphia platform; and yet in both there were deep and very well-framed groans in favor of purity and efficiency in general. In other words, the politicians on both sides are opposed to sin, but whether they are opposed to lying, stealing, or adultery, they decline to state. Should you hereafter catch one of them stealing, and ask him how he reconciles this with his expressed horror of vice, he will reply that it is "the system" which is at fault, that theft has been a common offence in all ages, and that he sees no chance of extirpating it, and no use in providing any penalties for its commission until all men unanimously resolve to lead honest lives.

One gentleman of the Greeley party, we believe, Mr. Pike, who has stated very ably in the *Tribune* some of the common and more formidable difficulties in the way of civil-service reform, and who has lately been lecturing on it in New England, has laid it down that inasmuch "as rotation in office" has become the fundamental law of our political system, all hope of introducing fixity of tenure or appointment by competitive examination is idle, and that the utmost that can be done towards reform is to make all local Federal offices elective; that, in short, it is only by handing the appointing power over to the people directly that we can hope to take it away from the politicians whose possession of it now is the great source from which all the abuses flow. Now, this "fundamental law" is pure assumption. There is no such law and no such practice. The fundamental law of American politics is that the work of administration be efficiently done. It is this which is demanded of every President, and it is his failing to do this which is the great charge against every President. For this purpose the rule of fixity of tenure is actually adhered to in every department to whatever degree it is found necessary to keep the machinery going. It is an actual fact that in all the departments at Washington, and in all the great custom-houses, all officers who are absolutely necessary to anything like the conduct of the business are permanently retained. The collector of this port—the real collector, we mean Mr. Clinch—has been in office thirty years. It is he who conducts the business of the Custom-house; the political collector, who obeys the "law" of rotation, does not necessarily know anything about the business, and Mr. Murphy, who last filled this place, testified before the Congressional Committee that on all matters of importance he had to refer people to Mr. Clinch, his own work being mainly "controlling primaries." In short, the fundamental law of the American civil service is that its work shall be done by business men on ordinary business principles, like the work of a banking-house. What has happened is, that the politicians have been allowed to reduce the real working permanent force of the Departments to a point at which efficiency is no longer possible, and to surround it with a large body of ill-paid, ill-used, incompetent adventurers, removable at pleasure. The object of the reform movement is to get rid of these, or to sift them and put them under the same régime as the permanent officials—for instance, either to abolish the office of political collector or convert the holder into a real collector.

The pretence that the employment of these adventurers under these conditions is one of the fundamental necessities of democracy is one of those numerous but patent attempts to impose on people by the aid of phrases of which our politics and that of France are now so full. Absurdity or impossibility is now hardly ever broached without wrapping it up in some gorgeous term, and making it appear to bear some mysterious relation to the Progress of Man towards an Unknown but Glorious Future. Some of the very bases of social morality are occasionally attacked in this way. We are asked to return to promiscuous intercourse, like the beasts of the field, in the name of the Development of the Individual Soul; to abolish property

in the interest of the Great Principle of Collectivity; and now we find ourselves gravely assured that the receipt and disbursement of the enormous revenues of a great nation has, under a Fundamental Law, to be carried on by successive batches of broken-down adventurers, and that the utmost we can do by way of improvement is to elect them by ballot. We shall hear before long that book-keeping by double entry is a Crime against Humanity, opposed in every part to the Spirit of the Age, and originally devised by Heartless Plutocrats to prevent the proper distribution of the products of labor among the long-suffering Masses; that in the good time coming there will be no book-keeping, but a fair and honest "divide" at the close of each day of the cash in hand among such honest workers as happen to be short of money.

THE USES OF THE GENEVA ARBITRATION.

NOW that the experiment of arbitration is almost certain to result in success, as far as the differences between Great Britain and the United States are concerned, the question begins to be debated more earnestly than ever, whether what is happening at Geneva is likely to furnish an example which other nations will follow, or, in other words, whether it will do much to prevent war hereafter. The *Pall Mall Gazette*, which discusses this class of questions with almost unequalled ability—playing with regard to them, to some extent, the part which the *World* plays here, or would play, if its morals were equal to its brains—is satisfied that the principle of arbitration can never be of general application; that there are certain kinds of differences which may be settled by it, such as questions of money or boundary, or, in other words, questions of more or less; but that there are others, such as questions of pride or passion, which may not; and in the former category it puts the questions now pending between England and the United States. It maintains, however, that the value of the Geneva Tribunal is lessened even as to this category by the fact that the two litigants are nations possessing a common system of jurisprudence, and a common reverence for law, unknown in the rest of the civilized world; and that, therefore, even as regards a question of dollars and cents, there is no good reason for believing their example would prove very powerful. This view of the case is strengthened by the extraordinary frequency and bloodiness of wars between the most highly civilized nations within the last thirty years. Since 1848, there have been the war between France and England, and Russia; between France and Italy, and Austria; between the Northern and Southern States of this Union; between Prussia and Italy, and Austria; and between Prussia and France; or, in other words, five wars on the greatest scale, in the very heart of Christian civilization. Nay, one of these, the late Franco-German war, was begun by the French in disregard of an express stipulation of the Treaty of Paris, which bound the signataries to try to submit their differences to arbitration before engaging in hostilities.

We believe this view of the matter not only makes an incorrect presentation of the nature of the dispute between England and the United States, but overrates enormously the popular readiness for war and inclination to engage in it, and overlooks what is of prime importance, the peculiar conditions under which the late great wars broke out.

It is true that the fact that the dispute between England and America was capable of settlement in dollars and cents has powerfully aided in converting it into a peaceable lawsuit, and that the fact that the jurisprudence of the two countries supplied a common measure of damages, has done much to simplify the procedure. But then it has to be taken into account that probably no international dispute was ever attended by such a force of passion. Few or no European writers who talk of national hate or resentment, have an adequate idea of what this means in a community possessing as much education and taking as much personal interest in public affairs as the people of the United States. The wildest popular excitement in England or any other European country on a foreign question falls very far short, in extent and intensity, of that which prevails under similar circumstances here, because it only reaches a comparatively small class. The number of persons in England to whom a dispute with a foreign state comes home as a personal matter, and who contribute their personal passions to shape the policy of the Government, is comparatively very small; here, the number who do not throw themselves into it, and whose influence is not felt in it, is very small. It is difficult, indeed, to give any one who was not in personal contact with the American public between 1862 and 1870 an idea of how very much deeper than pecuniary "damages" the *Alabama* question went, and of the consequent magnitude of the triumph over barbarous passions wrought by the Treaty.

We should say, therefore, that although the judicial habits of the two countries have made peaceful settlement easy, once settlement was resolved on, the decision in favor of peaceful settlement was attended with at least the ordinary difficulties, and we here leave out of sight the obstructive influence exercised by the unfortunate historical relations of the two countries, important for the purposes of our argument as this is. In considering the readiness of nations to go to war, and trying to form a judgment as to the probabilities of war hereafter, and of the likelihood of the Geneva precedent's obtaining a ready acceptance, we find, too, that of the five wars we have mentioned, all but one were due to circumstances of an abnormal character, in their very nature provocative of war, and very unlikely ever to arise again. For instance, the status inflicted on Italy by the treaties of 1815 was something which could not be maintained except by the constant use of force for forty-four years, and was therefore a standing incentive to violence. It constantly excited the Italians to revolt, and tempted other powers to assist them, and finally led to the events of 1859. Perhaps Louis Napoleon would have attacked the Austrians in any event, for dynastic reasons, but he would have found it more difficult to do so, or, in other words, peace would have had an additional guarantee, had an enslaved Italy not lain ready to his hand. In like manner, the wars of 1866 and 1870 were prepared and brought on by the movement towards German unity, which was the natural result of the unnatural condition of Germany, or at all events was a movement the like of which is very unlikely to recur again. With Germany and Italy united, two provocations to war, which it has taken a century to create, have passed away. Something else may take their place, but it will need at least the same length of time to create them, and in our day pacific influences gain strength in a geometrical ratio.

We may say the same thing, *mutatis mutandis*, of our rebellion. The slave question almost naturally resulted in war, but neither it nor anything else resembling it as a stimulus to quarrelling is now to be found among us, or is likely to arise, while the obstacles to war multiply with a rapidity unknown in the early days of the slavery controversy. There then remains as a source of continued apprehension the Turkish question, which brought on the Crimean war; and it must be confessed that this does give every reason to expect a renewal of hostilities, and presents a problem more difficult to solve by arbitration than any, for arbitration in it would mean neither more nor less than the submission by Russia to a court of the question what "the destiny" of the Russian people ought to be, and this is almost ludicrous to expect. In calculating the influence of the Geneva Tribunal, we have, too, to take into account the enormous influence of habit on the human mind, and the effect it has in perverting the judgment. The toleration which war meets with from public opinion is due to very much the same causes as the toleration accorded in some countries to duelling. Duelling is senseless, all admit, though nobody can picture to himself any good way of avoiding it; but let a few men of undoubted honor and courage avoid it, or the law rigorously put it down, as in England, and the spell is broken—the practice suddenly becomes ridiculous. We have little doubt that some such sobering and enlightening influence with regard to war will be exercised by the Geneva arbitration. It will familiarize civilized nations with the idea that there is an honorable way of avoiding

war, and the general popular abhorrence of war is ordinarily and naturally so strong, that if a practical and tried way of avoiding it were present to everybody's mind, very few would think of examining any particular dispute to see whether it came under the class which philosophers pronounced capable of settlement by arbitration, and generals and politicians would find the difficulty of resorting to hostilities enormously increased. Even the discussion whether a case was fit for arbitration or not would have a pacific influence.

THE ABSURD MOVEMENT.

THE following, which we have received from a correspondent, we present as a very neat specimen of the *reductio ad absurdum;* some of our Greeleyite friends may read it with profit:

"There are two occasions when the party in power in a country is in danger. First, when it manages affairs so badly that the opposition party grows strong by reason of its failures; and, secondly, when it manages affairs so well that it crushes out the opposition party, and, being thenceforth the only party in the land, is exposed to bolts within its own ranks. It is needless to say which of these is the cause of the present danger to the Republican party.

"The bolters in this case insist that the Republican party has done its work so well, that it ought to be allowed to die—as if it were when a party has done well, and not when it has done badly, that it ought to die! If it had failed of its work, or if it were thought incapable of doing it, that would be a ground for letting it die. But to insist on killing the Republican party for doing well, and recalling to life the Democratic party, which had practically died from sheer crime and faithlessness, is a strange procedure.

"The Liberal Republicans say that they, by withdrawing from that party which has done well, and uniting with that which has done badly, will form a new party that will do better. As if those who are dissatisfied with a good party, and those who constitute a bad party, were together the right elements for a good party!

"Let us withdraw our confidence, they say, from the Republican party, because it has done everything so well that it has left nothing more to desire. For, the Republican party having been called upon to do a certain work, and having done it well, it should never be entrusted with doing anything more. But there being other things to be done in our country, we should beware of entrusting them to those who have done well before.

"There is, therefore, they insist, necessity for a new party—a party that will not be open to the objection of having done its work well. This party is to be made mainly out of the Democrats and past rebels; for they alone have not done their work well, that work having been to break up the Union.

"It seems to us very strange that any Republican should talk of letting the Republican party die when it is in its greatest strength. Faithful members of a party are ordinarily willing to let the party die only when they see that it cannot live, or that it is irresistibly going to dissolution.

"But so far from seeing any signs of death or dissolution, or even of exhaustion, in the Republican party, the Liberals themselves have complained that it is so strong and so effectively organized that they have had to groan under the party whip or tension. And so, not being able to complain of their party's failure or of its weakness, their next strongest pretence, after the one that the Republican party should be allowed to die because it has done its work well, is that it should be allowed to die because it is too strong and vigorous to live. But, as if to match their logic with their policy, the Liberals have resolved to let the Republican party die by withdrawing its unhealthy elements from it, namely, themselves, whom, they say, it was in danger of crushing out and killing by its too great strength.

"And as for the new party, the most commonly alleged reason for its formation is that it might free the individuals from the tyranny of party. Since Grant was to be imposed on them against their individual preference, they thought it their duty to take up another who should be of their own principles. Refusing accordingly to submit to Grant because not of their principles, but only the nominee of a party, they submit to Greeley, who is not of their principles, for the sole reason that he is the nominee of a party (that of Cincinnati). For Schurz, Sumner, the free-traders, and nearly every other supporter of Greeley, including the Democrats, all assert that Greeley is not their man, but that they will now support him because nominated.

"The Liberals accordingly have set out with the principle not to take up with any one merely because the choice of a party, and conclude by taking up Greeley for no other reason than that he is the choice of a party. They think it wrong to submit to the choice of the Republican party when it is not their own, but right to submit to the choice of another party when it is not their own. In other words, they think it wrong to submit to the decision of their own party when they do not approve it, but right to submit to that of another party when they do not approve it. And so they commence to resist the tyranny of party by submitting to the tyranny of party. This is like their professions that they are for principles as against men in this movement, when, being of every variety of principle, they all unite on the single basis of defeating Grant. Being for principles and not men, they would yet, however, have remained in the Republican party if it had nominated any other man. And having left the Republican party because of one man, they now will not leave the Liberal party for the same reason, *cæteris paribus*. But many of them insisting that Grant is good enough, and that they merely do not like his party, would yet have been willing to remain in his party if it had taken up any one else."

"A $5,000,000 SWINDLE."

WE have been called on by Mr. William Bell, the Vice-President of the "Stanhope Railroad Company," the enterprise referred to by a correspondent in the last number of the *Nation*, under the above heading, to make a retraction of the statements contained in that letter, which, he says, are libellous. We knew nothing about the matter ourselves when the letter was published, but we had taken care to provide ourselves with somebody who did, in the person of Mr. Nathaniel Niles, the Speaker of the New Jersey House of Assembly, whom we now, with his consent, produce for Mr. Bell's satisfaction, and who is the writer of the letter in question. Moreover, we have looked into the matter carefully ourselves, and have before us at this moment a letter of Governor Parker, of New Jersey, addressed to the President of the Senate and Speaker of Assembly, stating that he had been informed that Bill No. 327, chartering this Company, contained provisions that did not pass the Legislature, and requesting them to report whether any "interpolation had been fraudulently made" before engrossing; also, the report of the President and of the Speaker of the House, made in compliance with this letter, in which they say that the following addition "was surreptitiously and fraudulently interpolated" in the eighth section after it had passed the Legislature, converting the charter from that of a little coal-road, "from some point on Walkill Mountain to the Morris and Essex Railroad at Stanhope," into one of almost unlimited powers. The following is the addition which is not to be found in the copy of the Bill as it passed the Legislature, and we have before us the certificate of the two clerks that the bill was *nowhere amended* in its passage. We append the addition as an illustration of a fraud which has been by no means uncommon at Albany:

"And it shall be lawful for the said corporation at any time during the continuance of its charter, from time to time, to unite and consolidate as well as merge its stock, property, franchises, and road with those of any other corporation or corporations heretofore or hereinafter incorporated within or without this State, and such other corporation and corporations are hereby authorized to unite, consolidate, and merge their stock, property, franchises, road, and roads with this corporation; and after such merge into this corporation, this corporation may, from time to time, lease its roads, franchises, and property, or any part thereof, to any other corporation or corporations within or without this State, and such other corporation or corporations are hereby authorized to take such lease or leases, and this and the other corporation or corporations may use and operate this road or their own roads, or all or any of them, according to the provisions and restrictions contained in the charter of this corporation, or in the charter of such other corporation or corporations, or both, and this and the other corporations may make contracts and engagements with any other corporation or corporations, or with individuals, for operating this road or said other roads or parts of either, or both, as well as for transporting passengers, freights, and trains over this road and said other roads, or any part thereof, or over any road, and demand and re-

ceive for the transportation of passengers, freight, and trains over their roads and the roads of such other corporations as are above mentioned, and over any other roads, the same rates of fare, freights, and toll as are authorized to be charged by this corporation for like services over this road; and this corporation may be known by such new name as its directors shall by certificate, filed in the Secretary of State's office, declare to be its name; and to build this road and the road of any other corporation which may lease the same, it and its lessees may make the bonds and mortgages hereinafter authorized, and it and its lessees, successors, and assigns may exercise and possess all the railroads, franchises, and property so as aforesaid merged into it without restriction as to the gauge of tracks, in *the same manner and with like effect as if it had been specially created by act of the Legislature of this State* to exercise the same; and the Legislature shall have power to alter, revoke, or annul this charter whenever the courts shall have decided it to be injurious to the citizens of this State by reason of a misuse of the powers herein granted, and not otherwise."

We ought to add that the company produce an "opinion" of counsel to the effect that nobody can "go behind" the engrossed copy of a law as it stands filed in the Secretary of State's office. Perhaps not legally; but anybody can go behind it morally, and we think the public ought to be warned against having anything to do with an enterprise thus tainted with fraud in its very inception. We believe measures are to be taken in the next session of the Legislature to rectify the error in some way.

Correspondence.

PHILOLOGICAL CONVENTIONS.

To the Editor of the Nation:

Sir: This year and last the press has generally shown more interest in the Philological Association, and given a greater space to the report of its proceedings than during the first two years of its existence. The practice introduced at the session of '71, of making brief synopses, by the readers themselves, of the papers read, though originally intended only to secure accuracy in the annual reports, has proved a great convenience to the newspaper representatives, and also supplied, to some extent, the want of special knowledge on their part. Still there is a manifest indisposition in some quarters to acknowledge any use or merit in the Association. The *Times* utterly ignored the last two meetings, as if the enterprise had come to an end in its second year; and when the editor's attention was called to the matter, he pooh-poohed the whole concern, expressing a very positive opinion (see *Times*, 6th inst.) that subjects like *the Greek particle* (*Qu. which* particle? or was there some confusion between *article* and *particle* in the writer's mind?) could not be profitably discussed at public meetings. As the *Times's* conceptions, inadequate and wide of the mark as they are, will naturally influence a large number of readers, it is well that a few words should be said to counteract their mischievous tendency by explaining the real state of the case.

When the various peaceful arts began to pick themselves up and put themselves together after the war, there was a fair amount of scholarship scattered here and there in the country; but it *was* scattered, and had small means of contact and mutual encouragement. The best colleges were naturally the nuclei of it, and if they or their representatives could have combined in any way, something, nay, a great deal, would have been done by mere force of contact. But our colleges, partly from jealousy and rivalry, partly from the fact of their local separation, did not combine, even for social purposes. The attempt to form a university club some years ago was a failure.

And no matter how large or wealthy a local centre, there was little chance of anything being done outside of the regular professional work of professional teachers. There is a Greek club in New York. It is made up of a few professors and schoolmasters. The two or three young men of fortune who belonged to it have been carried off by the superior attractions of political life. In smaller places a stray scholar was completely lost. Instances have been known of philologists in Southern and Western towns writing for English periodicals, and thus revealing their existence to the scholars of the North and East.

The first benefit, then, of a Philological Convention is that it brings together a number of professional and amateur scholars from all parts of the country, and makes them acquainted with one another. The mere fact of seeing seventy or eighty men together, and knowing that they are engaged in the same pursuit and have the same literary sympathies, is a great encouragement and spur to the scholar. Intercourse and conversation (apart from any special discussion of the papers read) increase interest in the subject. Sometimes this interest takes a very tangible form, as when a gift is made to a college library "for the purchase of classical and philological works."

The *Times* appears to confuse the scientific papers read at a philological convention with popular lectures (which it not unjustly characterizes as "of very doubtful efficiency), and to limit the effects and bearings of the Convention to the few days of actual session. This is a very narrow view. The papers occupy weeks, sometimes months, of preparation; they are often the subject of correspondence among the members, both before and after the meeting; they, or some of them, remain permanently on record in the printed Transactions of the Association.

And this brings us to the last and probably greatest merit of the Convention, that it has furnished American scholars with a medium for presenting their views to the public. I say *probably greatest*, because the want of such medium was, after all, the worst discouragement to the growth of American scholarship. The scholar who had speculated on any classical or philological point, if he wished to publish the result of his lucubrations, found himself regularly blocked up. The great bulk of our newspapers and periodicals would as soon have thought of publishing an essay written in Greek, or Latin, or French, as one written *about* anything in any of those languages. Indeed, they had not, as a general rule, the necessary types. The only channels for such communications were certain religious or semi-religious magazines, which naturally gave the most attention to their doctrinal views, and circulated chiefly in the particular churches which they represented.

This was not the kind of organ needed by the American scholar, and I have known promising philologists to be nipped in the bud by the impossibility of finding proper means of expression and expansion.

This want the Association has long supplied in part, and will supply fully as soon as its Transactions reach the dignity and dimensions of a regular Philological Journal—which promises to be the case in a very few years.

After all which, if any one should say that scholars, and philologists, and critics are not wanted here, and that they had better turn politicians or diplomatists, or "practical men of business," I answer that scholarship has a very positive though indirect influence on our material destinies. Our national neglect of the meaning of words, our national ignorance of the value of words, are among the causes that have brought about that stupendous phenomenon in a country professing to be not only civilized but enlightened, the nomination of Horace Greeley for the Presidency. I doubt much if such a thing could have happened among any people who had properly cultivated the Humanities. Look at Europe: the French have, not undeservedly, the reputation of playing the most fantastic tricks in government, and Gambetta is probably the weakest European specimen of a popular idol; yet Gambetta, as compared with Greeley, is a pillar of stability and a model of decency.

C. A. Bristed.

Lenox, Mass., Aug. 16.

MAZZINI AND MR. W. J. LINTON.

To the Editor of the Nation:

Sir: Permit me as an old and intimate friend of Mazzini, working long years with him, to make some brief comment on the review of his Life in the *Nation* of July 25. I do not venture to intrude upon your space so far as would be necessary to answer the whole article, but notice of certain points may be enough to indicate the reviewer's want of sufficient information, and, showing his facts to be incorrect or inexact, may prevent undue reliance upon his conclusions.

The reviewer speaks of a period—"from 1815 to 1848"—when "the individual action of patriots was alone possible, and they everywhere labored to overthrow the existing order of things, and to supplant it by new institutions more in accordance with the spirit of the time. Mazzini was early recognized as the head of this movement."

I take this as a sample of inexactness.

Mazzini was just ten years old in 1815. There were two distinct movements in Italy between 1815 and 1848: that of the Carbonari, which only labored to overthrow, and had not even a thought of new institutions, of which Mazzini was never even a prominent member; and the Republican movement of Young Italy ("La Giovine Italia"), founded by him at Marseilles in 1831, which supplanted Carbonarism. It would be inexact enough to speak of Mazzini as "early recognized as the head of *this* movement"; but your reviewer's sentence is altogether dark and insignificant.

"The volume under examination contains the history of Mazzini's labors in that period of the Italian revolution." Namely, "for more than twenty years"—"between 1815 and 1848," or between 1831 and 1848?

Your reviewer proceeds with, I suppose, his own view of Italian history since 1848.

"In 1848," he says, "the national movement took a more practical direction," "under Cavour" and others, which I only notice in passing to qualify with the remark that Mazzini planted, Mazzini watered, and Cavour's practicality was to steal the increase. I pass also the reiteration of the old calumny that Mazzini obstinately set his republicanism against the

national party, and the simple misstatements of his abandonment by Garibaldi, his opposition to "all the steps which have led Italy to her present position" (unless by the "present position" is meant the position of the postponement of the republic for the convenience of the Piedmontese monarchy), his intriguing, etc., etc., and come to "the annexation of Southern Italy, when it was delivered by Garibaldi, *chiefly* through the aid of the national party, *under the leadership of Cavour*": concerning which, I ask if Garibaldi's thousands were of the national party or the republican, and reassert what has been publicly stated by Garibaldi himself, and can be proved by plenty of living witnesses—that the whole of that Sicilian campaign was planned and organized by Mazzini himself, not without the knowledge of Cavour, perhaps, but independently of his leadership or consent.

After this I little mind the reproach that "a republic or nothing seems to have been Mazzini's motto," nor the complaint (not misstated) that his republicanism was not identical with American. Facts incorrect, we can afford to leave some inferences without remark.

W. J. LINTON.

[Out of respect for Mr. Linton and the truth of history, we comment upon his letter at a length not called for by the intrinsic value of his statements. In asserting that Mazzini was early recognized as the head of the Italian revolution, we alluded both to the precocious age in which he appeared as an agitator in the liberal cause, and to the early stage of the revolution, in which he became its principal leader. Admitting that this was only in 1831, he was then but twenty-six years old; and it must be borne in mind that before that time the revolutionary spirit of the country had not reached that culminating point which demanded a chief of more extensive influence. But the action of Mazzini, as an agitator, began long before that year. He himself tells us that, when yet a student at the University of Genoa, he organized a secret association for the promotion of liberty in the Peninsula. Prominent among its members were the young brothers Ruffini, one of whom, the author of "Doctor Antonio," has recorded in his "Lorenzo Benoni" the part which Mazzini, whom he designates under the appropriate name of Fantasio, took in that movement. Montazio, another friend and biographer of the Italian patriot, speaking of that association, says: "It was composed of a few young men of independent character, chosen spirits, all longing for a new order of things. They rallied around Mazzini, who was the sun of that constellation of growing revolutionists, and who, surrounded as he was by his young companions, seemed a young Christ among his young apostles. To this position he was entitled not less by his superior intellect, than by his commanding aspect and fascinating manners."

As early, too, as 1826, when he was only twenty-one years old, he made his power felt in the department of literature. A devoted adherent of the Romantic school, then the exponent of Liberalism in Europe, he strove, under the cover of literary reform, to promote a revolution in political ideas; and his numerous contributions, published in the *Antologia* of Florence, the *Subalpino* of Genoa and other journals, greatly advanced the political education of the country. A reference to these early writings will conclusively establish his claim to the position of a leader in the revolutionary movement early in the period between 1815 and 1848.

As for his standing in the order of the Carbonari, he himself tells us that he was initiated into its second rank, and held in it the degree of Master, in which capacity he devoted himself to the enlistment of new members among his fellow-students, and that in this he was so successful that he was soon sent to Leghorn to establish a branch of the Order in that city. Here he enrolled among its members several patriots, among whom were Guerrazzi, the novelist, D'Adda, just freed from an Austrian prison, and Bini, a young poet of high promise. Indeed, Mazzini's arrest, imprisonment, and subsequent exile were due to the fact that he was discovered by the police in the act of initiating a new member into the Order. The assertion that the Carbonari only labored to overthrow existing institutions, and had not even a thought of establishing new ones, is best answered by the fact that the French Revolution of 1830 owed its origin and success chiefly to this Order; and it is well known that, at the time of Mazzini's connection with it, it was under the management and direction of Lafayette, Barthe, and Guizot, then the chiefs of the Haute Vente of Paris.

Thus Mazzini's power was felt in the early period of the Revolution. It is true, however, that his influence was greatly extended, and, indeed, became formidable in the years in which he labored through the organization of "Young Italy," and it was to this period that we alluded, when we spoke of the twenty years of his most efficient work.

While in our article reviewing the "Life of Mazzini" we fully recognized the eminent services rendered by the great Agitator to the national cause, by paving the way for the subsequent success of Cavour's policy, we asserted at the same time that that policy was essentially in contradiction to the method on which Mazzini insisted, and that he opposed all measures which led Italy to her unification. The policy of Cavour consisted simply in making the house of Savoy the rallying-point of the movement, in attracting the other states by the allurement of constitutional government, and by converting the foreign powers from enemies, as they were, to his plan, to friends and allies. This programme Mazzini never accepted. In 1848, a few days after the Revolution of Paris, he had an interview in that city with Gioberti and Mamiani, two chiefs of the national party, who urged upon him the necessity of laboring in common with them. He declined at once all co-operation; insisted that the freedom and independence of Italy could be secured only through a republican movement, scorned the idea of making Piedmont the centre of national organization, and ridiculed the attempt to make allies of foreign powers in such an enterprise. Throughout his life he was faithful to his ideas. He wrote pamphlets, edited reviews and newspapers, and kept up an enormous correspondence with his friends (a portion of which has just been published in Milan), and the historical critic had never more abundant materials from which to form an opinion of the views of the writer. To deny that he opposed all measures adopted by the national party, and to characterize the statement that he obstinately set his republicanism against the national policy, as an old calumny, is to disregard contemporary history. Almost every page of the various papers he edited, beginning from the *Italia del Popolo*, which he published in Lausanne and in Genoa, and ending with the *Dovere* and the *Unità Italiana*, his latest organs, is an eloquent proof of his uncompromising opposition. This opposition was echoed by his adherents in the Parliament, who were most bitter in their hostility to the foreign alliances of 1854, of 1859, and of 1866, which proved to be the three great steps towards Italian reconstruction.

Nor did Mazzini confine his opposition to the public journals or to parliamentary debates. In 1849, he organized a formidable rebellion in Genoa against Piedmont, then the only free constitutional government in the Peninsula; and another in 1857, when a party of his followers surprised Fort Diamante in that city, while others embarked on a steamer to revolutionize Leghorn and Naples. On the trial, the jury, in both cases, declared that the expeditions had been instigated by Mazzini for the purpose of overthrowing the existing government, and of supplanting it by republican institutions. Again, being elected member of the Parliament, he publicly declined the office on the ground that by accepting it he would be obliged to take the oath of allegiance.

That Garibaldi abandoned Mazzini soon after the formation of the National party is proved by his having given his formal adhesion to the programme of Cavour, and by his having sworn allegiance to the king and the constitution, as a general of the army and member of the Parliament. After this action on the part of the hero of Caprera, there was a lasting estrangement between the two patriots, and every attempt of common friends to reunite them proved fruitless. The last effort in this direction was made only a few months before the death of Mazzini, and it was met by Garibaldi with a decided refusal, on the ground stated in a letter, then made public, to the effect that Mazzini was too intolerant and overbearing in his political relations to leave any hope of a permanent reconciliation.

That the deliverance of Southern Italy was accomplished by

Garibaldi chiefly through the aid of the National party there is no doubt whatever after the publication of the official documents in relation to that expedition. It is true that the first volunteers who enlisted were in sympathy with the republican movement, and that Mazzini furnished a part of the funds required for the enterprise. But it is equally true that, as soon as it became understood that the expedition was secretly favored by Cavour, young men of other parties joined it, and means from other sources were provided to ensure its success. The position of the Italian Premier on that occasion was of a most trying character; but when at last he decided to aid the expedition, he did so with an unsparing hand. He allowed arms and ammunition to be taken from the arsenals, he gave orders to the authorities at the different ports not to prevent the sailing of the vessels, he supplied money from the public treasury, and sent to Sicily La Farina, a Sicilian patriot, then President of the National Association, to supervise the arrival of the Garibaldians and to provide for their necessities. When urged by the foreign powers to prevent this invasion of Southern Italy, he despatched to sea a frigate, with instructions to its commander to keep at a convenient distance. At the port of Catania, a band of volunteers was taken on board one of the ships. The commander of a Government frigate telegraphed to Cavour informing him of that fact, and asking for instructions. Cavour's answer was, "Do as the interests of our country require." Thus the expedition was allowed to proceed.

Of these and other important facts in relation to that enterprise, official evidences may be found in the "Memorie" di G. La Farina, and also in the volume of his correspondence which has been more recently published. From these and other equally reliable sources, we must believe that had not Cavour given to the expedition not only his tacit consent, but his earnest support, although in an unofficial manner, Garibaldi would never have been able to land at Marsala, and much less to make his triumphal entrance into Naples, accompanied only by few of the officers of his staff, at a time when the King of the Two Sicilies had yet in that city an army of more than sixty thousand men.—Ed. Nation.]

MR. WALKER'S FIGURES ABOUT INDIANS.

To the Editor of the Nation:

Sir: In a letter under date of July 27, published in the *Nation*, I observe that Gen. Walker rather sharply arraigns Mr. Wells for an understatement in his recent financial article of the number of Indians in the United States, and that the circumstance has been somewhat extensively made use of by the Administration journals throughout the country to impair in other respects the force of Mr. Wells's arguments and conclusions. In all fairness, however, it seems to me that the criticism in respect to this matter has not been rightly apportioned, and that the gentleman who is called upon to rise and explain is not Mr. Wells, but Mr. Walker himself. Thus if any one will take the trouble to turn to the "population" volume of the Census Reports recently issued by Mr. Walker as Commissioner, he will find on the first page the following title: "Table I. Population of the United States (by States and Territories) in the aggregate and as white, free colored, slave, Chinese, and Indian, at each census." Following this is a table of aggregate population (page 3), namely: 38,555,983; then a table of the whites, 33,586,989 (page 4); then of free colored, 4,880,009 (page 5); then of slave, none in 1870 (page 6); then of Chinese, with the number of Japanese included, 63,254 (page 7). Then, on the same page, the number of Indians, 25,731 in 1870 and 44,021 in 1860, the exact figures cited by Mr. Wells in his article. It may be, as Mr. Walker says, that the Indians thus enumerated in the total population tables of the last census are merely the "tame" ones, with whom the Government has no immediate concern, and that there are some half a million other Indians of the "wild" kind in addition; but if this be so, no one can know it officially from anything contained in the last census reports, professing to give the total population. On the contrary, the figures made use of by Mr. Wells are the exact transcript of the official statements; and there is not a line or a word in any column of the last census that I have been able to find which could possibly lead the reader to an inference that there were any Indians other than those specified. The only just criticism, therefore, which can properly be made against Mr. Wells is that he has used the census figures as they are officially printed, in place of making a census for himself.

Furthermore, if there are some half a million wild Indians not yet enumerated specifically, what does Mr. Walker mean by telling us in his reports that the total population of the United States is 38,555,983 (33,586,989 whites, 4,880,009 colored, 63,254 Chinese and Japanese, and 25,731 Indians), inasmuch as it is certain that the total population approximates or exceeds 39,000,000? It is, moreover, no answer to say that the published tables refer only to the representative population, for the titles used in all these census tables are "Total of the United States" and "States and Territories," with no words in connection limiting the meaning of such titles. There are, besides, no enumerations of the people of the Territories required for determining their representation, for each Territory is entitled to one delegate, whether the population be great or small.

Mr. Walker, as an officer of the Administration, also endeavors to explain away the recent enormous increase in Indian expenditures, by saying that the railroad, while it has decreased the cost of transportation, has also diminished the supply of buffalo. But I think this argument will prove rather flimsy; for, however it may be in the future, it is tolerably certain that up to 1869, when the great increase of Indian expenditures was inaugurated, the railroads had exerted but comparatively little disturbing influence; and we all know that when the Grand Duke Alexis was here last year, his party found buffalo very plenty within a very short distance of actual civilization.

Fair Play.

[Considering the matter technically, one might as well look to find in the United States census the population of any other kingdom or nation with which we have treaty alliances as to find there the population of tribes of "Indians not taxed." They are not citizens, but aliens, and usually enemies. Still, one would almost expect to find them enumerated, and Mr. Wells's mistake was an easy one to fall into. As, however, it affected his figures, making them show a worse case for the Administration than was necessary, it was no more than right and fair for the friends of the Administration to correct it.—Ed. Nation.]

Notes.

Messrs. Scribner, Armstrong & Co. were quick to secure from Stanley, the *Herald* correspondent, the refusal of his account of the discovery of Doctor Livingstone, Messrs. Sampson, Low & Co. being the London publishers. "It will make a volume of five hundred pages octavo, and will be profusely illustrated with designs, nearly all full-page, from Mr. Stanley's pencil. The narrative will not be a rehash of the letters already published in the newspapers; it will be rewritten throughout, and will contain a complete and consecutive account of Mr. Stanley's journeyings and adventures, and of his four months' sojourn with Dr. Livingstone." Meantime, there are still many doubters as to whether Stanley has not hoaxed the *Herald* and all the rest of those who believed in his despatches, and whether he has ever seen Doctor Livingstone at all. The French Academy of Science—which within five years has twice refused to make Darwin a correspondent, has declared that Pascal imparted to Newton all the discoveries imputed to the latter, and that M. Michel Chasles may have owned autograph letters written by Julius Cæsar—is disposed to deny the authenticity of the despatches. So is Kiepert, the German cartographer, and other distinguished German *savans*. The English seem to acquiesce, though they are not yet without dubiety, and over here a long and circumstantial story is told—but in the *Sun*—to the effect that Stanley, as the writer knows and can prove, is an atrocious and crafty villain, who has committed plenty of worse crimes than forging despatches from lost travellers and hoaxing Europe and America. The Livingstone family, and various other persons to whom letters from the Doctor were brought by Stanley, give no sign of disbelief or dissatisfaction. True or false, the evidence will be sifted with rigid care.

—Apropos of a letter printed last week in which a correspondent spoke of rapidly "rotating the rascals," a Philadelphia correspondent writes as follows, giving a historical example of the benefits to be derived from the rotating out one set of officials—"a rapacious because a short-lived breed," as Burke calls them—and rotating a greedier set of rascals in: "Your 'Reader's' letter from New York recalls to mind an historical anecdote. The Emperor Tiberius was very dilatory in the performance of all his public duties, and would never rotate the governors or procurators of the provinces, however incompetent they proved. Josephus tells us that the Emperor pretended to act thus out of regard for his subjects, 'for that all governors are naturally disposed to get as much as they can, and that those who are not

fixtures, but are to stay a short time, and are uncertain when they shall be turned out, do the more severely hurry themselves on to fleece the people. But if their government be long continued, they are at last satiated with the spoils, and so become less sharp in their pillaging." He gave them an example to show his meaning. A great number of flies came about the cut places of a man that had been wounded, upon which one of the standers-by pitied the man's misfortune, and thinking he was not able to drive those flies away himself was going to drive them away for him, but he prayed him to let them alone. Being asked the reason of such a preposterous proceeding, in preventing relief from his present misery, he answered: 'If thou drivest these flies thou wilt hurt me worse, for as these are already full of my blood they do not crowd about me nor pain me so much as before, but are sometimes more remiss; while the fresh ones that come almost famished and find me quite tied down will be my destruction.' It is a serious question to the many voters who are satisfied neither with Grant nor Greeley, whether the principle of 'rotating the rascals' or the dread of the 'hungry flies' should have the greater weight in determining their choice."

—A short distance from the sculptures of Central Park, in the Metropolitan Museum, is the statue of "Napoleon Dying," by Vela, a work which we think in many respects the best paradigm or copy-text for our artists in the country. We may have alluded to it before, but it comes to our mind again, because, in the Art Department of the *Atlantic Monthly*, the editor remarks that he has seen the chief pieces of sculpture produced in the present age, and goes on to place them all in a position of inferiority to an interesting work of Mr. Ward's, the Indian Hunter. Sculpture, being little portable, is at a curious disadvantage with painting in the matter of celebrity. Travelled artists, however, may estimate it. They know of French statues whose author's names actually never reach American or English ears, yet who are the æsthetic equals of Couture and Gérôme; they know of German sculpture, intellectual and grandiose, the counterpart of plane work by such men as Kaulbach, Cornelius, and Piloty. The Napoleon Dying is a work from Italy, a country of less enviable reputation, its art having declined by marrying in and in since former days of greatness. And this production of Vela's is besides a perilous thing to choose for a model, because it is a hot partisan of the romantic school, and the romantic school is not at all recognized in the chaste and chilling material of white marble. Here is a great figure in the sentiment of Delaroche—a figure expiring, tormented, battling, rigid; intent, in fact, to reconquer Europe in phantasy. That is a grand theatrical idea; in the execution there are trivialities—the pores of the skin are imitated, as well as the curled nap of an old and well-saved blanket. The robes suggest Meissonier, the hands suggest Vandyke, the head is all over Delaroche. Something about the head, too, is behindhand with the seductive and dangerous perfections of the rest; the brow seems ill-balanced, and the artist, when he comes to the eyes, abruptly leaves the realism which has been his clever recreation elsewhere; he depicts eyes that are not the eyes of an elderly man, but the firm, full-lidded eyes of youth; and their expressive look of dream and introversion is produced with the reckless *chic* of the romantic school, instead of being wrought out of the resources of realistic sculpture. We are thus careful to keep the rein taut on our approval of this work of art; indeed, it has many attributes that shock the schooled, fastidious taste; the romantic and the literal have not yet conquered a place in marble sculpture of the first class; an episodic treatment is full of danger when carried out on the scale and with the pretence of dignity characterizing this statue; Victor Hugo worshipping himself in white marble, and seeking the chair of Phidias, is a figure not to be applauded hastily. Yet we think a competent critic would place this figure, in relation to the best sculpture yet produced by an American artist, about where a literary critic would place *Hernani* in relation to the best drama produced by an American playwright. American sculpture, in fact, will improve but slowly until it sees itself in its true light. It is in the rank of a schoolboy preparing themes. In scope, in technic, in necessary study, it has the frank deficiency of youth, and a work like Vela's has only to be placed beside any home work to make the difference felt between thorough training and buoyant ambition.

—As our readers probably know, the Pennsylvania protectionists are taking steps to counteract the influence of the free-traders upon the young men in our colleges. "To-day," they say in a circular now before us, "there is not a single doctrine of political economy which is universally acknowledged as true, and yet in the colleges certain systems of it are taught as though they were unquestionably so, while opposing systems are in few, if any, cases allowed to be presented by a friendly hand." They, therefore, offer to the libraries of all our higher seminaries of learning the works named below: Sir John Byles's "Sophisms of Free Trade and Popular Political Economy Examined"; Mr. Henry C. Carey's "Manual of Social Science," "Miscellaneous Works," "Past, Present, and Future," and "Slave Trade, Domestic and Foreign"; Dr. William Elder's "Questions of the Day, Economic and Social"; Hon. William D. Kelley's "Speeches, Letters, and Addresses on Industrial and Financial Questions"; E. P. Smith's "Manual of Political Economy"; Mr. A. Stewart's "Speeches on the Tariff Question and Our Internal Improvements"; Sir Edward Sullivan's "Protection to Native Industry." Here are ten volumes which the Free-Trade League will probably be willing to accompany with an equal number of others, and among the twenty there will be some on each side which will be instructive to the young men, while on the free-trade side there might be some which would be as entertaining as a novel. The whole subject ought to be fruitful of society debates during the next ten years, and these well might be such as would indeed go far towards giving the debaters some preparation both as regards their brains and their tongues for "entering public life" after leaving college. Men in public life are going to be much occupied during the coming decade by politico-economical questions, and, as the "Industrial League" says, "the advantage of this study to them in enabling them to advocate sound systems of legislation can hardly be overstated."

—We see that Mr. William Whiting of Massachusetts is mentioned as a candidate for a place as Congressman, a place which he is perfectly well qualified to fill. But one of the arguments to which resort is had for strengthening his claim opens a door for an interesting question in ethics which seems to us not a little important, and which we do not believe the popular voice would at first settle correctly. At all events, it was not correctly settled, if we remember right, by any of the journals which some years since commented on that action of Mr. Whiting's from which the question takes its rise. During the war that gentleman, who was a lawyer of distinction, was asked to take the post of Solicitor to the Treasury Department—we think that was the position—to which was attached a salary of some twenty-five hundred a year. He accepted the invitation at some sacrifice, and it was by-and-by announced that Mr. Whiting declined to receive his salary, and had assigned it, by an instrument duly executed, to the Treasury. In time there appeared a further statement that Mr. Whiting had made such provision that if his death should occur during any quarter while he should be in office, no part of his quarter's salary could, by any accident, go to the use of his family. As we say, this course received the commendation of many journals, and thinking people were too busy with greater matters to give attention to the principle and consequences involved. A few asked the question: If Mr. Whiting is rich and does not need the $2,500 a year, why does he not give it away to the purposes of the war, and as much more as he pleases? Why should he alone, of the hundreds of thousands of us who are receiving pay for our services, civil or military, from $13 a month to $25,000 a year, refuse his salary? Of these hundred of thousands, most of us are obliged to take our pay to support ourselves and our families. Many of us who are rich take our pay as of course, and give away as much as we can or wish. Why should wealth put the poor to shame? Why should the public be put under an apparent obligation to the rich man? These it strikes us are questions which give a sufficient answer to the question with which we set out. And we have known it answered by a practical example, and answered with the same deference to what seems to us good sense and the dictates of sound policy for a Republican government, where rich and poor should hold office on absolutely the same terms and seek it under the same conditions. The case to which we refer was that of a clergyman of great wealth who in like manner with Mr. Whiting thought it his duty to refuse to take any salary for his services. He was accordingly made pastor over a large congregation on those terms. He was much respected and even beloved, but that did not prevent the upshot which both he and his parishioners ought to have foreseen. By-and-by the congregation began to feel an uneasy sense of dependence; his brethren in the ministry felt a more or less uneasy sense of inferiority; everybody else wondered why if he did not need his salary he should not quietly give it away in charity, and, to the relief of all parties, the arrangement very soon came to an end.

—Mr. Robert Buchanan, a somewhat ill-conditioned and bumptious young man of letters, who has had numerous half-successes in poetry, some time since made an attack on what he called "the fleshly school of poets," meaning thereby Dante Rossetti, Swinburne, and others of less account. This he effected under the name of "Thomas Maitland," and, apparently to ward off suspicion from himself as the author, he gave some mild blame to the works of his own pen. The secret came out, however, and there has ever since been a fearful commotion. Now it is Swinburne who tears up a tall mountain by the roots, nodding forests and all, and hurls it at Buchanan; now Buchanan flings at Swinburne an entire peat bog; now it is the Scotch giant who is borne to earth amid the far-piercing shriek of the English Titan; and now, "on the contrary, quite the reverse" takes place, and the earth shakes beneath the downfall of Swinburne. In other words, both of these gentlemen have been kicking up a great dust by means of letters, poems, and pamphlets, each of which makes them both look more and more ridiculous—

the one no more so than the other, though Swinburne has greater literary skill than his foe, while Buchanan, on the other hand, if he is duller-witted than Swinburne, does not screech nearly so loud, nor make so many faces, and has far less Greek, Latin, French, and dirtiness to fling about. Swinburne's last assault was in a pamphlet which he calls "Under the Microscope," in which, with an affectation of indifference which would have killed him if he had kept it up for any more than eighty-eight pages, duodecimo, he examines the insect Buchanan. We have not space to describe this precious production, and mention it only to say that those who are panting after the combatants, and wish to follow each passage of arms with their own eyes, may find in the last number of the *Saint Paul's Magazine* Buchanan's rejoinder to the parlous thrust made by Swinburne in "Under the Microscope." It is some lines called "A Monkey with a Microscope," and the character of this death-struggle may be seen from the following verses:

"A clever Monkey—he can squeak,
Scream, bite, munch, mumble, all but speak;
Studies not merely monkey-sport
But vices of a human sort;
Is petulant to most, but sweet
To those who pat him, give him meat;
Can imitate to admiration
Man's gestures, gait, gesticulation;
Is amorous, and takes no pain
To hide his aphrodital vein;
And altogether, trimly drest
In human breeches, coat, and vest,
Looks human, and upon the whole
Lacks nothing, save perchance a Soul.

We would suggest that both of these warriors have now disgraced themselves enough, and caused their friends to blush enough, and made plenty of disturbance, and may be satisfied to stop. Mr. Swinburne may well enough leave the last word to an antagonist who took the first word in the manner in which Mr. Buchanan took it; and Mr. Buchanan must now have had glory enough and sufficiently exalted his character for purity, good sense, good nature, good taste, good manners, and probity.

—*Nature*, for August 1, contains a letter to the editor, in which is related what the correspondent calls an extraordinary case of "hereditary instinct." Some years since, when in Skye, the writer bought a terrier, to which he proceeded to teach the accomplishment known as sitting up. This was acquired only after great difficulty, for although naturally possessed of talent, the dog had never been under instruction; afterwards his education proceeded rapidly, and he became an animal of many tricks, all of which he learned with ease and contentment. But he has never forgot the labors which he went through in acquiring his first accomplishment; he still relies upon it as a last resource to save himself from a beating, or to induce his master to take him out. He even has supposed that it could be depended upon to soften the heart of an India-rubber ball, for when, on account of his racket, that means of amusement has been taken away from him and placed on a mantelpiece, he has been seen sitting up to it, "evidently hoping that it would jump down and play with him; perhaps he looks upon this ball as animated by a 'living essence,' vide C. 2, Darwin's 'Descent of Man.'" This dog became the head of a family, and one of his daughters, who has never so much as seen her father, is in the constant habit of sitting up, although she has never seen others sit up. She is particularly given to this performance when any other dog is getting a scolding, and the correspondent remarks: "Whether this is an instance of helping a fellow-animal, of which Mr. Darwin gives such curious examples, or whether the dog simply hopes to avert the passing storm from her own head, the fact appears to me patent that this dog has inherited the impression that sitting up has some special virtue for turning away wrath." For the use of practical people like ourselves, who will not move the ancient landmarks, and who know that dogs are governed by instinct, and that Mr. Darwin is revolutionary, we present with this dog story a method of utilizing the cat. It is the invention of a correspondent of *Land and Water*. He says that people in general are ignorant of the fact that the family cat can give us invaluable help in protecting the fruit garden and flower beds from the depredations of birds. "To keep them off," he says, "how simple, how certain! How small is the cost of keeping a cat on a small chain sliding on a wire, and giving the animal the walk up and down the whole length of the strawberry beds! A knot at each end of the wire readily prevents the cat from twisting around the post which supports the wire. For large gardens, a second cat is required. For more than thirty years, I have used and seen used with perfect success this easy method of preserving fruit." To say nothing of the satisfaction of keeping the cat in chains all day. The kittens, also, this correspondent has found very valuable as gardeners' assistants, and he says that they labor steadily and industriously, giving the best of satisfaction. Nor does the cat object when called upon, in addition to his regular day's work, to catch rabbits and hares in the flower-beds.

—The civil list pensions which the British premier gives away, and which are commonly thought of as pensions bestowed for services in literature, are really given for very miscellaneous services, though literary merit—to call it so—secures the larger number of pensions. For 1872, twelve hundred pounds were given away in 18 pensions, of which 10 were given on account of the recipients' direct or indirect connection with literature. Indirect enough the connection was in some instances. Three granddaughters of an obsolescent historian, Robertson, received fifty pounds apiece in consideration of the literary merits of the historian, this fifty being in addition to fifty previously enjoyed. Other beneficiaries are the widow of the late Professor De Morgan; the widow of the late Mark Lemon; Mr. Thomas Wright, who receives £35 in addition to £65 now paid to him; Mrs. Thorpe, widow of Mr. Benjamin Thorpe, for his researches in Anglo-Saxon literature; Mr. Joseph Stevenson (historical literature), £100; Rev. F. H. A. Scrivener (Biblical criticism), £100. For other services than to literature, eight persons were pensioned: the daughter of Field-Marshal Sir John Burgoyne, and widow of Major Stopford, receives £150; Miss S. Burgoyne, the same amount; Sir William Fothergill Cooke, for services to the telegraphic system, £100; Mrs. Meyer, for the services of her husband in the hospital at Smyrna during the Crimean war, £60; Miss S. F. Mayne, daughter of Sir Richard the police official, £90; Mrs. J. E. Wood, for her husband's improvements in carpet weaving, £70; Mrs. R. Gray, widow of one of the projectors of railroads, £80. Literature receives £470 of the whole fund, and £730 goes in other directions.

TAINE'S "ON INTELLIGENCE."

"DIEU! ça n'a pas d'actualité," said a French review editor, as he returned an article on the Notion of God which a metaphysical contributor had offered him. Our tardiness in noticing M. Taine's important work might be excused in somewhat similar words. Any time is opportune for metaphysics. Its treatises are continually being read, no matter how long ago they were written. They hardly depend on fashion; and if the present book has met with an unusually prompt success, it is due less to the fact that the pure psychology, of which it partly consists, is beginning to enjoy the honors and penalties of being a positive science—rapid recognition of new contributions on the one hand with their speedy obsolescence on the other—than to the great reputation of the author in other paths of writing. We suppose that many a reader of his translated works feels a certain scepticism as to his competency in a strictly scientific research. He is so eminently an artist, his profession of scientific deduction remains so palpably a mere accompaniment in his works on literature and art, his historical developments are so shallow, his explanations of ethnic peculiarities so plainly trumped up after the facts, that we know more than one of his admirers who would let the whole pretension to scientific rigor in him pass for one of those pleasant foibles in which a bright mind must be allowed to indulge itself if it finds a pleasure therein. But the present treatise is of stricter stuff, and had its author written nothing else, it would give him an honorable name and place in the brotherhood of thinkers, properly so called. It falls asunder roughly into three divisions: one psychological, being an analysis of cognitions into their simplest elements, based largely on the researches of Mill, Bain, and Spencer; one logical, being a theory of reasoning and an account of the manner in which the simpler and more general elements of thought and reality involve and produce the more particular and complex; and an intermediate one, which we may call metaphysical, since it is an attempt to define the quality of the deepest phenomenon, which, lying at the core, may be termed the reality of all the others.

What are M. Taine's opinions on all these matters? The question is easier asked than answered, for the first impression the book makes on a reader is, that one-half of it flatly contradicts the other. In what we have called the psychological portion a nominalism as uncompromising as that of James Mill is professed. "We have, strictly speaking, no general ideas, only tendencies to name and names." Sensations have substitutes in mental images; and these have substitutes in names; but general names cover no peculiar mental modification. A general idea, considered apart, is a nonentity. It has no substantive *quale*, but only a function; it exists but as a *tendency* of certain determinate images to arise. It helps us lighten the baggage of thought, as circular notes enable us to travel without bullion. But the true value of both comes out only when they are converted. In the latter chapters of the book, however, we find a doctrine of reasoning which seems to admit to the fullest possible extent the reality of general qualities as such, and to carry us deep into a world of intelligibles, as they

* "On Intelligence. By H. Taine, D.C.L., Oxon. Translated from the French by T. D. Hare, and revised, with additions, by the author." New York: Holt & Williams. 1871.

used to be called, of *eternæ veritates*, or, as Taine says, of fixed and simple laws which we perceive beneath the flow of transient and complex events.

A more careful examination mitigates, though but partially, the glaringness of the contradiction. One perceives that he means to allow reality only to certain classes of abstractions, and to deny it to others. The latter are distinguished in his mind from the former by their barrenness. They are that prior world of vain substances (we are trying to interpret now, and not to criticise), or causes brought forward as explanations of phenomena, which do but repeat the phenomena under more sounding names—*virtutes dormitivæ*, in short; while the abstractions to which he allows validity are all predicative or adjective qualities, as white, straight, heavy. To these he pretends not to ascribe a transcendent existence, independent of particular events; they exist only *in* facts, and are merely a broader kind of facts. To them as *constituents* of phenomena, even though general, reality may be ascribed; while the other class of abstract beings conceived to stand *behind* phenomena as noumenal substances, are mere figments.

Every *real* abstraction is an extract (to use his happy terminology) from a multitude of particular things or events which may differ as to their other details. The British school says the things are "similar" as to this character, but Taine affirms the common character to be literally the "*same*" in all, thus giving it a sort of ontologic status, a real existence differing from that of individuals and events only in possessing superior stability and permanence. The beauty and value of these abstract characters, or generalized extracts, is that they are fertile, for they contain wrapped up in them—sometimes obvious, sometimes latent, and to be discovered only by a keen analytic eye—further properties, other abstractions. Thus the general concept *parallelogram* involves as part of its essence that of two juxtaposed triangles, and we learn from experience that the concept *cold* involves that of diminution of molecular motion and approximation of molecules. An individual fact possessing one general character, perforce possesses also as attributes the further general characters which that one involves. Hence a basis for necessary reasoning; the two triangles, for instance, into which we have analyzed our parallelogram, with their one side in common and the others parallel, possess the further property of being equal-sided each to each; so that having its opposite sides equal is seen to be a necessary attribute of a parallelogram; in like manner, the approximation of molecules involves the further property of diminished mobility; and diminished mobility in a vapor soon involves liquefaction—so we see how cold must necessarily, after a certain point, make vapors liquid.

It is, we repeat, the pregnancy of this class of general qualities that makes M. Taine so partial to them. Whatever they contain they contain universally, because independently of particular circumstances, and necessarily, because analytically involved in them, or as part of their definition. [This latter point, as we shall presently see, marks his deepest divergence from the British empirical school.] The class of abstractions to which he is not thus indulgent differs from the former chiefly in its infecundity. It is that of *substances*, such as matter, the ego, the faculties of the mind, and what may be called the dynamic entities, as power, necessity, cause, force, etc. Here his nominalism stands firm. These are phantoms, products of "metaphysical illusion," void acts, verbal entities, whose appearance of spirituality is but the tumidity of their emptiness. The ego is nothing but the sum of its events. We can extract nothing new by analyzing our idea of it. So to posit a general faculty, as perception, explains nothing of its particular acts, but is a mere barren reduplication of the concrete appearance it professes to explain. So again with force. A particular horse has force enough to draw a given cart, but not force enough to draw a heavier cart. This means that when his muscles are contracted the one cart will be moved, but the other will not be moved. "Here we have a connection only, that between the muscular contractions and the movement of the cart. A particular force exists when a particular connection exists; it ceases when this connection ceases. The force of the muscular contraction is double if the cart moved weighs 10,000 pounds instead of 5,000. In general, if we are given two facts, one antecedent and the other consequent, connected by a constant link, we term the particularity of the antecedent to be always followed by the consequent, *force*, and we measure this force by the magnitude of the consequent. . . . Unfortunately of this particularity which is a relation, we construct by a mental fiction, a substance; we describe it by a substantive name, attribute qualities to it; say it is greater or less; employ it in language as a subject, forgetting that its existence is wholly verbal, that it is in itself nothing more than a character, a property, a particularity of a fact, the particularity of being always followed by another fact, a particularity detached from the fact by abstraction, set apart by fiction, kept in a distinct state by means of a distinct substantive name, till the mind, forgetting its origin, believes it to be independent, and becomes the dupe of an illusion of its own effecting."

We imagine that when M. Taine was a young man with a strong sensibility for facts, and rather for their hard, brutal, concrete aspects than otherwise, with a good deal of iconoclastic passion and conceit, he fell foul of the hypostatized abstractions which abounded in the armory of the then reigning spiritualism of France—"little spiritual beings hidden under the facts as under garments"—as he once called them, and that that youthful animosity has persisted to the present day. But almost as early as this he was vividly and originally impressed by that conception of what we may call the encapsulation of qualities in the universe, of which we have briefly tried above to convey an idea. His thought thus starts from two independent foci to overrun the philosophic field, and where the territories are conterminous, the nominalistic impetus often carries him over the barrier; the old wrath mounts to his eyes, and without being aware of it he tramples down his own grain as if it were his enemies'. Hence a large amount of real confusion and contradiction. Thus, as we have tried to show, his best and deepest reason for rejecting a certain class of abstractions is that they really explain nothing. To explain a thing is to show it to be a case of something else more general already admitted or taken for granted by us. The *reason why* planets keep in their orbits is that they are masses of matter, and *all* such attract each other. To affirm a "centripetal force" *sui generis* we explain nothing, just as, when Adam Smith accounts for the institution of commerce by an inborn tendency in men to exchange, he explains nothing. Nevertheless we find M. Taine constantly forgetting this point of view, and talking as if he found fault with the illicit class of abstractions less for their barrenness than for the isolation and independent entity which their votaries ascribe to them—for their appearing "behind" the phenomenon, not in it. But the abstract characters whose reality he admits must also be taken as independent of the concrete phenomena in which they appear; being "the same" in all, they are independent of each, and require M. Taine to provide a separate plane of being for them to subsist in anterior to their taking on the divers adventitious particularities which determine their appearance in their diverse concrete shapes. This he often ostensibly denies, but virtually admits in many places, and this admitted, his contempt for the phantoms of metaphysical illusion, the illegitimate children of abstraction, is unjustifiable except on the mere ground of their uselessness. By his own showing in many places they are generated by the same process as that which extracts and isolates the more valid general characters: for instance, force and necessity are "particularities extracted from the events"; in the line of our *subjective* experiences "all the elements present a constant character, which, being continually repeated, seems persistent, *i.e.*, the particularity of being a *within*, in opposition to the without; and this later on will offer to reflection and language the temptation to isolate it under the name of subject and ego."

If the character is in the elements, common to all, why is it not as fair to extract it and call it Ego and real, as to do the same by the "character common to all the elements" of a line straight or curved, which we express by its equation and which M. Taine rightly deems so important? This blowing hot and cold is amusingly exemplified on p. 205, where the Ego in the same sentence is defined to be *nothing more* than its series of events placed in succession, and yet *not merely* this series. A questionable shape, indeed! Only our bifocal theory of his speculation can well account for such inconsistencies. Take the notions of power, force, etc. He praises Bain everywhere, yet flies in the face of his teaching as regards activity. Bain admits that our experiences of activity as such contain a peculiar generic *quale* of consciousness which distinguishes them from all merely passive impressions. If this be a true portion of certain sensations, Taine should consent to its extraction and use. He nevertheless out-Humes Hume in his declaration that all notions of activity are pure nonentities. We can only account for it by supposing his old habit of animosity to M. de Biran to have led him astray.

M. Taine's relation to the English school constantly challenges criticism, showing everywhere superficial adhesion with unconscious deep-lying dissent. The most signal instance of this occurs in his treatment of Mill's "Psychological Theory of an External World," which he quotes with entire approval, and then proceeds to make what he calls an "addition" which is nothing less than a cool and flat contradiction or begging of the whole question again. Mill in his resolution of matter into permanent possibilities of sensation is a thorough-going idealist. The argument either disproves any purely objective form of being, or it does nothing it all. The point of view is wholly subjective. When we say that matter exists independently of our actual sensations, all Mill understands is that we firmly expect other sensations, or are certain of them. After accepting all Mill's premises, for the word *certainty* in the conclusion M. Taine simply substitutes *necessity* (p. 279), and then naïvely says he has corrected the theory, and vindicated a noumenal existence. This noumenal existence he afterwards explains to be a mode of motion; thereby falling back on the old theory of primary and secondary qualities, and seeming to forget his previous adoption of the ma-

lysis of Spencer and Bain, which explains space away into muscular sensations.

He is too apt to graze the deepest problems without seeming to become aware of them. His account of sensuous perception, for instance, is admirable, considered as mere psycho-physiology, but very unsatisfactory philosophy. Relying on the "law of specific energies" of the organs of sense, he makes hallucination to be the type of the entire process. Perception he defines as "veracious hallucination," and the useful word, "reductive," is introduced to denote the circumstance, usually the contradictory testimony of another sense (or, we may add, the antagonism of past experience), by which an incipient hallucination of one sense is repressed and recognized as subjective. An hallucination of one sense becomes veracious, or in M. Taine's words, "corresponds" to an objective reality when other senses corroborate it; but what warrant he has for postulating this objective against the complex of subjective states, or how out of a conspiracy of hallucinations anything real can be hatched, does not appear. Logically, he should only ascribe to sensible perceptions a harmony, or veracity relatively to each other, but not relatively to the external object. This problem Bain and Mill solve by their idealism, recent German psychologists by their several devices. But M. Taine seems unaware of its existence.

Another of his unsatisfactory evasions of difficulties touches the very core of metaphysics. He simply *assumes* his doctrine that axioms are identical propositions, that general characters contain others *analytically* involved in them, that attributes enter into subjects only as portions of wider sets of attributes, not *per se* or directly—with all that flows from it, as that syntheses of data exist intrinsic and essential, absolute and universal; so that the second one must exist in any possible universe where the first is to be found; and that we may at last reach an universal concept from which the "whole remediless flow of existence" may be proved to spring. The doctrine may be true or false, but the opposite ones of Kant and Mill deserve deeper consideration than the mere contradiction he accords to them.

But with all its shortcomings the book is a valuable one. The early chapters contain the clearest and best account of the psychology of cognition with which we are acquainted, and the best adapted to the general reader. The latter ones are full of ingenious original and permanently valuable suggestions. It is almost a marvel that the hand which wrote the "Voyage aux Pyrénées" should also have produced this book. We are sure that it will play a vital part in the revival of philosophy on an empirical basis which is about to begin in France. And we know no work which advanced students in our own language may better employ to exercise their critical acumen.

THE MAGAZINES FOR SEPTEMBER.

LIPPINCOTT'S MAGAZINE for September is as good a number as we recollect, the reader being provided with several articles which are very seasonable if we think of the summer, and one that is very seasonable as regards the political campaign. This latter, which is anonymous, is vigorously, not to say slashingly, written, is savage upon the political morality, the political sense, and the mental ability of the Republicans who framed the Cincinnati platform, and the Democrats who adopted that document, which the writer holds to be ungrammatical, impudent, and dishonest. We are not far from being in sympathy with most that he says, but there are one or two passages in his production which remove all wonder that he should prefer to remain anonymous. Mr. Sumner's tirade against General Grant was petty in spirit, as pretentious and dictatorial and quarrelsome as ever any words or acts of the accused President could be; but even were it permitted to reply to one "railing accusation" by another, as Saint Michael would not though it was the devil himself who made it, there are some things here urged against the senator which it is disgraceful to have brought forward. The writer is able, however, and well-informed, and his article worth reading.

"The Strange Adventures of a Phaeton" has reached its twenty-fourth chapter, and evidently is to be a novel which the readers of *Lippincott* will put upon their book-shelves as well as read in these instalments, for parts of it at least will wear and repay more than one perusal. We have not found any easier reading in a long time. We believe, however, we could spare some of Madam Tita's remarks at the ends of the chapters, they being now and again rather forced in point of humor and making a spot of stupidity almost, as at the end of the twenty-fourth chapter. But the novel as a whole is much to be liked and not a little to be praised. We see that Mr. Black makes mention here of an essay the recovery of which ought to be attempted by the learned, as is plain from its title: "The septuagenarian was not a nice person for ladies to listen to. Indeed, in one direction he was amply qualified to have written 'A Dialogue between a Man and a Cat: being a Discussion which would like to use the most bad language when the tail of the latter is trodden upon.'"

Good, too, and unexpectedly good, considering the woful threadbareness of the subject, is the "Wanderings in Palestine," which is by a traveller who, discarding revolvers, dragomans, and suites, donned the Turkish dress and struck out to make the journey by himself, or with no companion but a mule. This article is illustrated. "E. S.'s" account of Mr. Thomas Scott's Picture Gallery in Philadelphia is instructive as usual, and discriminating; but the machinery of young lady and artist which the writer uses will not strike many people as very felicitous. "Through William Penn's Low Countries" takes us down into the fat land along the Lower Delaware and to the south of the Quaker capital—a land fat with butter, and cheese, and rich soil, and reed-birds, and rail, and partridge, and deep meadows, but where now the landscape gardener and the "park city," like Mr. Robert Morris Copeland's Ridley Park, is invading the sleepy old town and the village of stone farmhouses. "The Black Pearl" is a translation from the French of M. Victorien Sardou—a puzzle not without cleverness, and light enough to defy the thermometer. And if quite that cannot be said about Mrs. Wistar's "Summer Between the Four Seas," there can, at any rate, be said of this latter that it contains as good a description of the peculiar character of English scenery as can often be had. "No. 25," on the other hand, is a love story that would wring anybody's heart. It is of Paul the artist and Miss Leslie Howard, a heartless coquette.

In the *Galaxy*, an ex-Congressman, "T. N. P.," begins some "Desultory Sketches," which have a faint interest. The writer's memory appears to have, like amber, an attractive force for bits of floating rubbish, and to enclose dead flies, and, in general, to be not much worth consulting. Still, his articles will be read through, and will be of some service as lending a little of human existence to men who have in great part become newspaper names. As good as anything in this first set of reminiscences is one which relates that, in 1856, the writer and the late John Van Buren being on the stump together in Ohio, and Van Buren being too sick one night to speak, but well enough to be as jocose as usual, played his friend the trick of putting him forward as the orator of the evening. The intellectual labor of the campaign had not been very exhausting, the reporter not then existing in his present perfection, and Mr. P. had heard Van Buren's speech till he knew it by heart, anecdotes and all; so when he was pushed forward, he proceeded to deliver it word for word, with Van Buren behind him, on the platform, cursing semi-audibly throughout the oration. For the rest, T. N. P. seems to be one of those good-natured friends who are the worst enemies of a wit deceased, the merry jests of the Rev. Mr. Hugh Peters himself not being flatter than most of these related of Prince John. However, he practised before a court very indulgent and not very well-informed.

Mr. Froude is Mr. Justin McCarthy's subject this month, and gets more lenity of treatment than is altogether his due, though his faults are, perhaps, sufficiently indicated, whether or not sufficiently reprehended. "No Playing Tricks with Love" is a translation from the Spanish, made by Mr. John Hay, and well worth making for its wit and pleasantry. A transposition of the preposition in the first line of the eighth stanza would have the effect of making the Latin quantities seem a little straighter. Other articles in this September number are a second paper on "The French at Home," by Mr. Albert Rhodes; "A Sabbath among the Orthodox Jews," by W. M. R.; five interminable chapters of the interminable "Eustace Diamonds"; an article on "Our Household Servants," by a lady who is inclined to think that we educate our young people out of their sphere, and thus spoil them for good servants; and some more of General Custer's "Life on the Plains," together with critical, scientific, and other matter. General Custer describes the massacre of a party of sixty or seventy United States troops by Indians, and gives us an illustration—not infrequently paralleled, we believe—of the ferocity of this sort of warfare; the last shot in his revolver the officer saves for himself or his friend: "Only six men of the command were killed by balls, and two of these, Colonel Fetterman and Captain Brown, no doubt inflicted this death upon themselves or each other by their own hands, for both were shot through the left temple, and powder was burnt into the skin and flesh above the wound."

The servant-girl question comes up again in *Old and New*, and is there handled in a better spirit, as it seems to us, than that shown by the writer in the *Galaxy*; or rather, let us say, with a clearer perception of the difficulty. That either writer has an effective remedy to propose is more than can be said, for, indeed, when the solver of this general riddle makes her appearance, all but a miracle will have been performed, though that there are not many solutions of it in particular cases nobody will be swift to assert who reads the paper in *Old and New*. That mistresses are careless, untrained, unwilling to teach their servants, and inconsiderate in their treatment of those under them, is the burden of the writer's lament, and she demands for the servant a fuller and franker recognition of the fact that she, too, is a woman and a sister, with some rights as to "followers," and the

gratification of vanity and affection and other feminine traits. The essay, without being so specific, is a good deal in the line of Mrs. Craik's volume. We fear it is too soon or too late to hope that it will be of much more effect as a remedy than the Catholic Church's remedy for labor strikes—which is, that the capitalist and the laborer should alike begin to love God, and then the whole evil would disappear as by magic. However, it may call the attention of some mistresses to the fact that they are habitually tyrannical and exacting and fond of hating other women, and making them slave as much as possible, and so may do some sporadic good.

"Person and President" is the title of an article by a gentleman who has a lively contempt for the late editor of the *Tribune*, and has convinced himself that Grant for President is worth fifty or a hundred or an indefinite number of any sort of Greeleys. Apparently he is of the opinion of an English critic, that thirty years spent in editing a wrong-headed newspaper is not the best preparation for the Presidency. "It does seem," he remarks at the close, "as if the 'National Executive' would be the better for having some executive qualities." As for Mr. Greeley's work, of which there has been plenty, it has been of a kind of which "the more one does of it, the further does one go from executive usefulness." The candidate has not the requisite strength of character, or courage, or wisdom, or cool self-command and deliberation in deciding between opposite sets of reasons, or ability to choose men and command them, or experience, or steadiness, or responsibility, or courtesy, or habits of business. But then, as Mr. Sumner says, he has "historical knowledge"—though we suppose our *Old and New* critic would assert that when the Sage has got to the end of his knowledge of county returns in spring and fall elections, and what he knows about what Barnburner was "slaughtered" in such and such a convention, he has gone a long way towards getting to the verge and bound of any heaps of historic lore which he may have laid up. The writer is far more cool and measured than the writer in *Lippincott's*, and makes some very good points in favor of General Grant as against his antagonist. We commend it to reformers who have been away from contact with the people and packed close together in Washington; and to representatives of the press who have been shut up in the hot air of newspaper offices, whether heated by the great prairie fire or not. It will show them, we fancy, a pretty fair average view of Grant's character and career from a comparatively unpartisan standpoint.

In the *Catholic World* "On the Misty Mountain" takes us to the Plains again and among Indians on the war-path, and another good article for the lay reader is about the Stage, which institution gets more civil treatment than the religious press commonly gives it. "Fleurange" also may be read by the exoteric and the alien; but everything else, we think, is for the faithful believer. "Intellectual Centres" treats of Geneva, of Rome, of Munich, of Oxford, and of Boston—all with respect, but not with what one would call weight. In Boston "infidelity and cynicism make their home in the midst of a luxuriant growth of intellect."

The *Atlantic* opens with a curious description of a Japanese theatre, in which Mr. E. H. House recently spent a day watching the long-drawn out performance. It is such as will quicken the reader's interest in the remarkable race with whom we Americans seem destined to come into relations so close, and is besides very entertaining. A better specimen of true magazine reading we have not lately seen. "Half an Hour before Supper," the second article, consists of verses by Mr. Bret Harte, and would seem to teach that nowadays the young wives of elderly men behave improperly in railroad cars, flirting heavily with young men of indifferent breeding and more or less power of intellect; it is of great profit and poetical value, but probably to most readers somewhat obscure till it is studied carefully—the study being directed to ascertain if the first impression produced can possibly be the one intended. Other poetry is by Mr. Whittier, Mr. Paul H. Hayne, Miss C. F. Bates, and Doctor Holmes, Miss Bates's being good and Mr. Hayne's also having merit, though the pretty ending is hardly worthy of the rest of the poem, which has a sombre impressiveness and melancholy.

"A Western View of Inter-State Transportation" will attract the attention of business men in these days of expensive and dictatorial railroads whose owners have discovered the art of combination and the art of watering stock. Its author, Mr. Charles Seymour, maintains that what the West must have is water communication with the East instead of communication by rail, and he pleads for Federal aid in opening for freight travel a river and canal system which shall bring the Chesapeake Bay and the Gulf nearer to the West and the Northwest. We observe that discussions of his plan are frequent in the newspapers, and that one proposed substitute for it is cheap *freight* railroads as preferable, because they deliver grain and other produce at the seaboard in better condition and more rapidly than if sent by water. It may well be that both means of transportation will in the near future be imperatively demanded; and stranger things might happen than that our politics should once again, and before long, turn in great part on the question of internal improvements, made by the help of Federal credit lent to the States.

Mr. Parton's article on Jefferson points out that Washington and Jefferson strongly desired the construction of a canal which should connect the Potomac with the Western rivers, just as the projected James River Canal will, if ever completed, connect them with the head-waters of the James, and so with the port of Norfolk. He quotes Washington as writing to Jefferson and foreboding our Erie Canal: "I am satisfied," he says, "that not a moment ought to be lost in recommencing this business, as I know the Yorkers will delay no time to remove every obstacle in the way of the other communication so soon as the ports of Oswego and Niagara are surrendered; and I shall be mistaken if they do not build vessels for the navigation of the lakes which will supersede the necessity of coasting." Again, he writes to Benjamin Harrison, that "no person who knows the temper, genius, and policy of these people as well as I do can harbor the smallest doubt of their connecting New York and the lakes by a canal." De Witt Clinton was then a school-boy, and the Yorkers were indeed soon to construct the canal and make their State the Empire State. Mr. Parton is as commendably readable as usual; and though he had better overhaul his international law a little and make notes of it, is instructive; but he is to be blamed, let us remark, for introducing into literature of the better sort the most disgusting word with which political newspapers have recently made us familiar; the title of his article is discreditable to his taste.

"Aunt Rosy's Chest" is a taking sketch by a writer new to us, Mrs. or Miss Olive A. Wadsworth; and "Nuremberg," also by a new writer, Clara Barnes Martin, deserves praise; but the gem of the number is "The Favorite of the Harem," by Mrs. Leonowens, once the English governess of the present King of Siam. Literature, so far as it is known to us, might long be searched in vain for a story so impressive as that of Choy and the slave girl Boon. It would be worth the while of some poet to make the journey to Siam and secure the local framework in which to set this beautiful and tragic picture of devotion, for more poets have had worse themes than this than have had better, and not many have had so good. A fitting companion to Boon as a tragic figure is that of Choy in her surviving misery and remorse. It is strange, and yet not strange either, that from the barbarous and forgotten ends of the earth should come so profound and perfect a poem. But it is of simple human emotions; yet of these in great strength and exaltation and with artistically fortunate accessories.

The critical notes on art, music, science, and politics, and the reviews, are full and readable. The musical critic condemns the Peace Jubilee; Lamon's Life of Lincoln is spoken of at length; the mixed condition of politics is touched upon with an appropriately uncertain hand, and there are some remarks in which we find ourselves particularly interested upon Mr. Ward's Central Park statue of Shakespeare. The writer is mistaken in supposing that he has anywhere else than in the *Nation* found an estimate of the Shakespeare Statue from the same hand that made our notice. And it is right to inform him that the particular method chosen by us for saying that the *pose* of the "Indian Hunter" is perhaps borrowed was chosen because we have been given to understand that a certain art journal was at the moment proposing to show from what two ancient statues the pose in question is borrowed, and we were unwilling to use the language of original discovery of the fact. We may say, too, should the journal above mentioned make its case good, that we for our part should attach less importance to the point made than might probably be attached by the critic making it. The Hunter's attitude is his own, it is safe enough to say; as much so as if there had never been any ancient art in existence.

We think the statue one of the most spirited and striking productions of the country. It is now, as all bronzes must be, a mere *silhouette*, and its modelling is lost. What we have said about the character of its flesh, to the dissatisfaction of the *Atlantic's* critic, was principally from our remembrance of how it compared, in 1867, with a crowd of the best modern statues of Europe. We discussed in that year with an artist out of one of the foremost ateliers in Paris the peculiar adipose look of its flesh, each muscle being well enough defined, but indicating in its separate body corpulence rather than fibre, a distinction plain enough to a student of anatomy. The treatment seemed to forbid the supposition that the flesh had been studied from an Indian model at all. The skin of Indians, as we believe, very much hides the play of the muscles, suggesting to sculpture a treatment like that of the Dying Gladiator, where the heavy cuticle covers the muscular system like canvas; the limbs, too, are surprisingly slender in every case that we have examined.

We can hardly be dissatisfied with the *Atlantic* critic's estimate of the conception in Mr. Ward's Shakespeare, for it appears to us that our own estimate had the good fortune to be in exact coincidence with his own. When he says that the statue looks too much as a designated actor does in *Hamlet*,

reading, he utters a stricture so precisely in the color of our own remarks, and so cleverly resuming the illustrations we used, that there is plainly nothing but harmony between us. The excellent points and general superiority of the Shakespeare have given us a pleasure which we have freely expressed. The misproportion of the head, however, is a glaring oversight impossible to defend. It is not to confuse the *Atlantic* critic, but to save the public from a needless piece of puzzlement, that we recall the variations of measure in ancient sculpture as variations in very small and very delicate points. We could easily prepare a list of all the Greek sculptors' names that have survived, and admit that their scale of proportions varied; this may be safely stated, since no two marble statues are alike. But the extremes of these variations, brought up to a gross eccentricity like that of the Shakespeare statue, may be said to resolve into unity.

The law, in its broad expression, is simple enough. An ideal figure is seven and a half or eight heads high. The never-satisfied seekers of perfection would try of old to add a little or pare a little, but their excursions were very restricted and timid, and their liberties are only evident to an eye in training. Such an eye—an eye that can measure the vibrating nothings that exist between the graceful ideal of Calamides and the square ideal of Polycletus, the Vatican Apollo and the Vatican Antinous—is shocked as by a triphammer at the head of the Shakespeare, a head miles outside of all permitted license. These rules are known, in sum, to all educated artists. Michael Angelo was a lifelong experimenter, fluctuating from the David, with its head and feet enlarged like a boy's, to his stalking little-footed figures nine heads high, that trembled on the border of the absurd. The other, the large-headed excess, is as well known to artists, and it is useful among their purposes. It is employed, for examples, by Assi and Pelegrini in *Vanity Fair* for some of their figures of toppling statesmen, and by André Gill, in his caricatures for *La Lune*, to which class of burlesques Mr. Ward has attached his figure of "le divin Villiams" by the scale he has seen fit to adopt.

The peculiarity of a work is its own misfortune, and its harm stops there. But it is a larger evil when critics get to saying in print that it is of no account; that a sculptor of talent has a right to form his own rules. Why does not the literary man, then, show us what he can do in introducing freedom among the restrictions of grammar and orthography? The artist, indeed, has these rights as a citizen, but as a sculptor, or painter, or architect, he is of no use to anybody after he ceases to be a slave. It is just this sort of good nature which is the bane of Anglo-Saxon art criticism in general, and keeps that criticism in the unfortunate place it occupies among other more tractable and studious nations—turning hand-springs and exhibiting its heels at the windows of the judgment-hall, where the legislation of art is going on by a patient study of old codes and comparison of lasting truths.

Porte Crayon has begun again in *Harper's Monthly* his papers descriptive of rambles in the Virginia back country, which he illustrates about as well with his pencil as with his pen, and has now reached his fifth paper. He always makes a sketch that is readable enough, and the reader who has never been in the regions of which Porte Crayon likes to write may really learn something of his own country by following in the artist's track. There is some little exaggeration, but not enough to convey a false impression if one will bear it in mind that it is the more grotesque phases of back-country life that General Strother presents for inspection. But, indeed, he deals with a pretty rude people—these voters for Governor Jacob and Mr. Camden Johnson. Preceding this article is another, likewise illustrated, and which talks well enough about Venice, and preceding it is one entitled "Round by Propeller," which with gaiety and an inexpensive humor narrates the story of a trip through the Lakes from Buffalo to Chicago—a pleasant vacation voyage for July or August. "The Political Characteristics of the Modern Greeks" tells us that neither a New York victim of the ring nor a member of parliament who has been through a British election need abuse the corruption of Greek politics. Mr. Trollope, Mr. Charles Reade, and Miss Thackeray assist to spread a bountiful feast of fiction before the readers of *Harper's;* any one who chooses may read the fourth of Señor Emilio Castelar's discourses upon "The Republican Movement in Europe"; there is the familiar article on Edgar Allan Poe; some love-stories, and some interesting "Recollections of An Old Stager," which reviews Clay, and Benton, and Jackson, and John Quincy Adams, and their contemporaries. This is the second of the series, which bids fair to be interesting. Some stories are told in this one which have peculiar fitness for a magazine of which Mr. G. W. Curtis is one of the editors; and such of our 53,000 office-holders as are trembling in view of the 4th of March next should read it, and bemoan their fate that they were not born before Marcy's days. The spectacle of John Quincy Adams appointing postmasters on the recommendation of his Postmaster General, MacLean, who at the moment was earnest in favor of the election of Jackson, must make them think of Utopia and the Fortunate Isles.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*

LEISURE HOUR SERIES.

PALGRAVE'S NEW BOOK,

HERMANN AGHA,

AN EASTERN NARRATIVE.

BY W. GIFFORD PALGRAVE. 16mo. $1 25.

"Reads like a tale of life, with all its incidents; the young will take to it for its love portions, the older for its descriptions, some in this day for its Arab philosophy."—London Athenæum.

"The cardinal merit, however, of the story is, to our thinking, the exquisite simplicity and purity of the love portion."—London Observer.

The unexpectedly large demand having put all the volumes (with a single exception) out of print for some days past, the publishers are now happy to state that they are again ready to fill orders.

I. MY LITTLE LADY. $1 25.
II. SMOKE. By I. S. Turgenef. $1 25.
III. FATHERS AND SONS. By I. S. Turgenef. $1 25.
IV. FLY LEAVES. By C. S. C. $1 25.
V. THE MAN WITH THE BROKEN EAR. By E. About. $1 25.

HOLT & WILLIAMS, PUBLISHERS,
25 BOND STREET, NEW YORK.

WORKS ON BRIDGE-BUILDING.

DESCRIPTION OF THE IRON RAILWAY Bridge across the Mississippi, at Quincy, Illinois. By Thomas C. Clarke, Engineer in-Chief. Illustrated by twenty-one lithographic plates. 4to, cloth, $7 50.

AN ELEMENTARY AND PRACTICAL Treatise on Bridge Building. An enlarged and improved edition of the author's original work. By S. Whipple, C.E. 8vo, cloth, $4.

IRON TRUSS BRIDGES FOR RAILROADS. Methods of calculating strains, with a comparison of the most prominent Truss Bridges, and new formulæ for bridge computations. By W. E. Merrill, U. S. E. Illustrated with nine lithographed plates. 4to, cloth, $5.

THE KANSAS CITY BRIDGE, with an account of the regimen of the Missouri River, and a description of the methods used for founding in that river. By O. Chanute, Chief Engineer, and G. S. Morrison, Assistant Engineer. Illustrated by five lithographic views of the work, and twelve engraved plans. 4to, $6.

LONG AND SHORT SPAN RAILWAY Bridges. By John A. Roebling. Illustrated with sixteen large, finely executed copperplate engravings of Views and Plans, together with an engraved steel portrait of the late Mr. Roebling. 1 vol. folio, cloth, $25.

D. VAN NOSTRAND, PUBLISHER,
23 Murray Street and 27 Warren Street.

DR. LIVINGSTONE.

MESSRS. SCRIBNER, ARMSTRONG & CO.

Beg leave to announce that they have arranged with Mr. Stanley for the publication, in book form, of his account of the successful Herald Search Expedition after Dr. Livingstone, the great African Explorer. This work will not be a rearrangement of the letters already published. It will be a complete narration, entirely rewritten, of Mr. Stanley's expedition, and will describe, with the fullest details, all his thrilling adventures and his long sojourn with Dr. Livingstone in the wilds of Africa. The volume will contain Five Hundred pages of letterpress, numerous woodcut illustrations from Mr. Stanley's own drawings, a map of his route, etc., etc. Other particulars, as regards time of publication, etc., etc., will be duly given.

SCRIBNER, ARMSTRONG & CO.,

MACMILLAN & CO.'S

NEW PUBLICATIONS.

THE NEW NOVEL.

MARJORY. By Milly Deane. Crown 8vo, cloth, $1 50.

"It is the most unambitious tale of the sufferings of a charming young girl who falls in love with a young man, and who then is tortured by the familiar passion—jealousy. More serious troubles, too, befall her, and the result is that we have a very good story. . . . Once more we recommend 'Marjory' to writers as well as to readers who would like a pretty tale."—The Nation.——"When we say that it is impossible to put down the pretty story by Milly Deane without regretting that one has not two more volumes to get through, we have said enough to indicate the superiority of her little book to the average commodity in the fiction market."—Athenæum.——"The whole spirit of the tale is brave and cheerful, and the very catastrophe leaves us not so much depressed as merely sorry that things would not have been better. On the whole it is a pretty, readable, and charming little book."—Saturday Review.

MICHAEL FARADAY. By J. H. Gladstone, Ph.D., F.R.S. Crown 8vo, cloth, $1 50.

"There will scarcely, it would seem, be any likelihood of failure or stint within the limits of the present generation, at least, in the affectionate interest which lingers round the scientific labors and personal worth of Faraday."—Saturday Review.——"Although Prof. Faraday's distinguished career has received many appropriate tributes at the hands of De la Rive, Tyndall, Bence Jones, and other admirers of his genius and character, the personal biography is by no means a superfluous work, and will be gratefully welcomed as a lucid record of one of the ablest and most interesting self-taught men of the nineteenth century."—New York Tribune.

BERNERS'S FIRST LESSONS IN HEALTH. By J. Berners. 18mo, cloth, 50 cents.

MACMILLAN & CO.,
38 Bleecker Street, New York.

Canon Liddon's New Work.

SOME ELEMENTS OF RELIGION. Lectures. By H. P. Liddon, D.D., Canon of St. Paul's. 12mo, cloth. English edition. Price $1 50.

Contents: The Idea of Religion.—The Subject of Religion, The Soul.—The Obstacle of Religion, Sin.—Prayer, the Characteristic Action for Religion.—The Mediator, the Guarantee of Religious Life.

LIVES OF THE SAINTS. By the Rev. T. Baring-Gou'd, author of "Origin and Development of Religious Belief." The work will be complete in Twelve Vols., each containing one month of the Calendar, and will be issued in Quarterly Vols.

Vol. I., January, and Vol. II., February, now ready. Price, $2 50 each.

Either of the above post free on receipt of price.

POTT, YOUNG & CO.,
Cooper Union, New York.

Just issued, and will be sent free of charge to any address,

GAZZAM'S TREATISE
ON THE
BANKRUPT LAW.
FOURTH EDITION NOW IN PRESS.
W. C. LITTLE & CO., Publishers,
Albany, N. Y.

SPECIAL NOTICES.

[TERMS: In advance, one insertion, three cents per word; five insertions, two cents per word each. The enclosure of an addressed and stamped envelope will secure a numbered box to which communications may be addressed.]

A GRADUATE of Harvard College, Class of 1870, desires a limited number of private pupils during the coming year. Boys fitting for college preferred. Refers by permission to A. P Peabody, D.D., Professor in Harvard College; Henry W. Bellows, D.D., and Rev O. B. Frothingham, New York City. School Committee, Concord, Mass. Address H. K. S., *University Building, Washington Square, New York City.*

A YALE GRADUATE, lately Principal of a classical School, desires private pupils in New York City or vicinity in English or classical studies. Testimonials from Ex-Pres. Woolsey, Pres. Porter, Professors Thacher, Hadley, and Northrop of Yale College and others. Address G. C. *Box 752, Portland, Maine.*

A YOUNG MAN, now in Berlin, desires one or two pupils, or would travel with young persons as tutor. He speaks French and German, has had several years' experience in teaching, and is a Classical Fellow of the College of New Jersey. References exchanged. Address LOCK BOX 648, *Yonkers, N. Y.*

A GRADUATE of Michigan University desires a situation as teacher—prefers teaching Greek and Latin. Best references. Address Drawer 1, *Grass Lake, Mich.*

TWO LADIES desirous of residing in London for a season, with the intention of following a course of studies, can find a comfortable home with an American family, with Lessons (if desired) in French, Italian, German Drawing, and Music. Terms, £200 per annum, including lessons and conversations in the languages. References exchanged. Address, Publisher of the Nation.

A POSITION as Housekeeper or Matron is desired by a Lady having all the necessary qualifications. Address, YOUNG LADIES' CHRISTIAN ASSOCIATION, 64 *Irving Place.*

WISCONSIN FEMALE COLLEGE, Fox Lake.—Tenth Year opens Sept. 5. *On Mt.-Holyoke arrangement.* REV. JOHN P. HAIRE, *Principal.*

NESHANIC INSTITUTE for Boys, Neshanic, Somerset Co., N. J., will reopen Sept. 18. *Send for Circular.* REV. P. D. OAKEY, *Principal.*

"SCHOOL in the Mountains," at Bellefonte, Pa., a Classical School for Boys and Young Men. For circulars address REV. J. P. HUGHES, *Principal.*

TEACHERS desiring engagements in Schools or Academies can have special advantages for introductions by addressing AMERICAN EDUCATIONAL UNION, 737 *Broadway, New York.*

MRS. WILLIAMS'S English and French Boarding and Day School for young ladies and children, No. 26 *West Thirty-ninth Street, will reopen Thursday, September* 26, 1872. *Address as above.*

THE GERMANTOWN ACADEMY, at Germantown, City of Philadelphia, will open for Boys in all the Departments, on Monday, Sept. 9, 1872. WILLIAM TRAVIS, A.M., *Principal.*

BOSTON UNIVERSITY.—College of Music.—Post-Graduate Instruction, in all departments of a Musical Education, for advanced students, with power under its charter to confer Musical Degrees on those who complete the prescribed course. College year begins Sept. 16. *Circulars, giving full information, may be had upon application to* E. TOURJÉE, *Dean, Boston Music Hall.*

"AMER. SCHOOL INST," founded 1855, *is a reliable and practical Educational Bureau to aid those who want well qualified Teachers; to represent Teachers who seek positions; to give Parents information of good Schools; to sell, rent, and exchange School Properties. Seventeen years have proved it efficient in securing "the right teacher for the right place."* J. W. SCHERMERHORN, A.M., *Actuary,* 14 *Bond Street, New York.*

W. C. WILCOX'S Family School, Stamford, Ct. Twenty-third Year begins Sept. 11. *Employs only teachers of education and experience. Fits for Yale College, Sheffield Scientific School, West Point, or Commercial Life. A safe, healthy, and happy home for boys, with faithful instruction and salutary discipline. Military drill, gymnastics, and boating, under a master of established reputation. Send for Catalogue.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 5, 1872.

The Week.

THE chief event of the week has been the Vermont election, which resulted in a very decisive Republican victory, the majority against the Greeley men and Democrats being greater than the Administration organs had been predicting, and apparently all but equal to the corresponding majority in 1868. Of less apparent significance is the meeting of the Louisville Convention, which, as we go to press, is meditating a letter from Mr. O'Conor. It is a curious production—honest, wise in places, and in other parts only too sadly impracticable and futile.

Apart from the Vermont election there is nothing that is new to be said about the contest between the Republicans and the supporters of Greeley. With each week it has become plainer that all thought of reform of any kind must for the present be postponed, and that the question which the country has to answer this autumn is whether it will keep the Republican party with all its faults and shortcomings in control of the Government, or will turn the conduct of affairs over to the Democracy, and the Democracy unreformed, so far as can be judged. Mr. Sumner says it is not unreformed, and the Liberal Republican papers say the same thing; but, on the other hand, Mr. Black, who is in as good a position to know about the party as Mr. Sumner or Mr. Banks, says that the recent Amendments will not do, and virtually promises us a few more years of Congressional wrangling and strife in case the "party of hate" shall be defeated and his own party shall succeed in electing Greeley and Brown. "This is the sum of all our woes and misfortunes in the South," says one of Mr. Greeley's ablest supporters in Virginia, "this is the incurable cancer which is eating out our young life"—negro suffrage, namely; and such utterances must be held to indicate what will be the character of our politics for the next four years, unless the nail that was driven by the Amendments is clinched definitely and once for all by the success of the party whose policy is embodied in the Constitution as amended. At the North this is everywhere seen to be the main issue of the campaign; and while others are touched upon—as the reduction of the debt, the general prosperity, the services of Grant, Greeley's unfitness, the cheat and pretence by which he was made a candidate—the point most insisted upon is, that it is not yet time to allow the Democracy to return to power. From every stump and platform and in every party paper this doctrine is preached. It appears to meet with sufficient acceptance.

We believe there is no doubt that the letter alleged to have been written by Mr. Wilson to certain Germans, denying point-blank that he had ever been a member of the Know-Nothing party, was not written by him. It is now in order, therefore, for numbers of Liberal Republican editors to wipe away the tears from their eyes and forego to mourn over Wilson as a Liar. Their grief is a credit to them, but it appears not to be required. It would be well to know if it was the friends of Senator Wilson who invented this device, or if it was his enemies. It could hardly have been his friends, one would suppose, for nothing could be less wise than for them to deny that Mr. Wilson once was so short-sightedly politic, or so sincerely mistaken, that he did go for a short time into a movement which, if it had something of honest apprehension at the bottom of it, nevertheless had more of ignorant bigotry and blindness, and still more of political sharp practice and rascality, and as much, perhaps, of jocoseness. It used to be a huge joke to astound Whigs and Democrats on election morning by showing them some obscure person at the head of the poll, while the unterrified or the eminently respectable was at the foot. It is a folly now long dead, and recognized as being dead and dusty by everybody, and to resuscitate the recollection of it hurts nobody and helps nobody to any material extent. If it was Mr. Wilson's enemies who invented the letter, the invention would appear to be still more foolish. It is neither to their credit nor advantage to have tried to foist on a man in his position a very clumsy falsehood.

Some of our friends think that nobody but a "tepid Laodicean" would object to that peculiar species of political warfare which consists in reminding candidates when they are old that "the tomb" is waiting for them, advising them to occupy their minds with the contemplation of "death" instead of the questions of the day, and accusing those who nominate them of having "robbed the grave." Nothing is more certain, however, than that all improvements in political warfare were treated when first proposed as the suggestions of weakness and effeminacy. When it was the custom of each party to eat as many of its enemies as it could get hold of, and a slice of a "champion" or "standard-bearer" was esteemed a delicacy, it was, we are sure, thought very mawkish and a waste of good meat to insist on the bodies being buried uncooked. After that, torture at the stake, the cutting off of heads or scalping became manly and legitimate expressions of a decided difference of opinion, but the "Laodiceans" finally did away with them all, and got us down gradually to the harmless and humdrum process of voting against each other with loud yells and mutual abuse. The abuse, we suppose, must last, but it can be improved. Taunting an old man with his age and bidding him prepare for death is a relic of savagery. Any man who does it in broadcloth and a white shirt is anachronous, and ought to receive a coat of red ochre, or have his breast and thighs handsomely tatooed. It is not only barbarous, however, but absurd. A man's age indicates little as to the state of his faculties, and it is the state of his faculties which is the important point for voters. When a man of seventy can command an army as Moltke has done, or a man of seventy-four can administer as Thiers is doing, or a man of eighty as Palmerston did, and a man of seventy-two judge as Sir Alexander Cockburn is doing, to taunt General Dix with being old and bid him prepare for death is silly as well as brutal.

We have commented elsewhere on one portion of the Massachusetts Republican platform, in which one always expects to find the most advanced Republican doctrine. It contained, indeed, little that was remarkable beyond the usual platitudes. We were, however, a good deal entertained by the dextrous way in which "the soldiers and sailors" were dealt with. Platforms usually contain a frantic declaration that no earthly power shall prevent the soldiers and sailors from having their pensions punctually paid. This has, however, been of late getting very flat and unprofitable, and it must, therefore, have been a great relief to the Committee on Resolutions at Worcester to be able to work Greeley into this resolution, and give the old rascal a "dig" while easing the minds of the soldiers and sailors. This was cleverly done by drawing attention to the fact that if the Sage should be elected, the "national bounty" would probably have to be divided between both them and their late enemies of the rebel army. The boldest thing in the platform is an open declaration in favor of woman suffrage, which will produce sobs of delight in the office of the *Woman's Journal*. General Butler did not attempt to contest the governorship with Mr. Washburn, though it is not reported that there has been any abatement in his ambition. He has been handsomely and thoroughly "exposed" by the Liberal Republican press for supporting Grant now, after having heartily abused him in 1867. We may imagine how the General will writhe under this revelation of his inconsistency.

A passenger who on the 22d of last month was on board the steamer *New England*, which plies between Boston and St. John,

N. B., tells a story which goes far towards explaining the wreck of the unfortunate *Metis*. He says that, leaving St. John about nine o'clock in the morning, the boat struck a fog-bank when twenty miles out of port, and that being accustomed to the method of running vessels in Canadian waters, he was surprised to see that the *New England*, although the weather had shut in very thick, was kept running at full speed. At about a quarter after eleven in the forenoon, he heard the bell ring sharply, apparently signalling danger, but before the boat's headway could be sensibly diminished she struck with a heavy shock, and then, gradually careening as she went, she slid up the rock for about a third of her length, with a hard, grinding rub, and hung there with her stern in twenty fathoms of water, with the prospect of breaking up if the sea grew rough, and of sinking if she slipped off, to say nothing of the danger of an explosion. The sea remained smooth, and the passengers, assisted by fishermen—for luckily the wreck was near an island—were all got off safely. The narrator goes on to say that though he had paid his fare through to Boston, the boat's agent at Eastport refused to forward him and his companions, or to feed them; and, says he, "such is the willingness of American travellers to put up with imposition from railroad and steamboat men, that this was quietly accepted as if we considered ourselves lucky to escape drowning at the hands of the International Steamship Company." We should say the International Steamship Company might probably be more amenable to reason than its Eastport agent, and that if not, a suit, of which the expenses might be paid jointly by several of the Boston passengers, would, in all probability, be enough to bring the Company to reason, and to establish a comfortable precedent for a long time to come. In the case of the *Metis*, it seems clear that there must have been similar carelessness on the part of the steamer's officers. At all events, we are bound to make ourselves believe so till the investigation, now going on, asserts the contrary, for it will never do to think that absolute wreck and the drowning of thirty-odd persons are to be set down as among the ordinary and unpreventible contingencies of travel in Long Island Sound. Carelessness in the equipment of the vessel appears to be already evident, the boats being inadequate in number. And aboard these steamers—each one of which almost every day for months carries passengers enough to populate a small town—it is usual that the crew are 'longshoremen and freight-handlers rather than able seamen. It is not said that they did not behave reasonably well individually in this instance, but there appears to have been almost no organized good behavior. The passengers, both men and women, seem to have been creditably courageous and unselfish; but there is little that can be done to light up so dark and sad a story.

The *Tribune* has lately endeavored to get at the true state of affairs in the Bloomingdale Asylum by employing a reporter to feign madness, and have himself committed to it, after the example of the "Amateur Casual" in London, and the legitimacy of the device has been the subject of a good deal of question. It has even been likened to "sneak-thieving." It is, of course, always doubtful how far it is lawful to use deception for any end, however laudable; but as long as the community not only pardons but encourages detectives, whose whole career is a succession of tricks and frauds, it will hardly do to condemn absolutely the same mode of exposing the abuses of prison-houses and asylums. Moreover, it will not do, in judging it, to overlook the fact that there is, as regards honorableness and dishonorableness, a marked distinction between prying into things which the public has no right to know and things which the public has every right to know. If there be no other good way of getting at the condition of jails, hospitals, and asylums, by all means let us use detectives; and let us not forget that it is not the state in which committees and commissions find these institutions, but the state in which patients and prisoners find them day by day, that it concerns us to know. We believe, for instance, that a reporter who had broken his leg or burnt his breast six months ago, and had himself conveyed to Bellevue Hospital, and had told exactly what he there saw, would have deserved well of his country. Think of a public hospital, for instance, supported by the revenues of a wealthy city, in which no soap was used in the laundry! But then an editor who uses this means incurs a heavy responsibility in choosing the man for the work. If he employs a light-headed blatherskite, fond of florid description, he ought to go to jail himself.

Too much, we think, has been said about the disgraceful facility with which the *Tribune's* madman for the nonce effected his incarceration in Bloomingdale Asylum. The theory appears to be that doctors know asylums to be horrible habitations of cruelty, and that the thing to do when a young man feigns violent mania for two or three days, to the avowed grief and fear of his uncle and his intimate friends who have had him in the hands of other physicians, is to keep him as far as possible from Bloomingdale. An opposite theory is not wholly unworthy of consideration, and that is that an honest doctor, anxious for the welfare of his patient, may, when he cannot make out the condition of a man who behaves as much like a maniac as is possible for him, be very glad to entrust him to the influences of an asylum with its presumably skilled alienists and its careful means and appliances. We must not forget, either, the extreme difficulty of saying absolutely that a given person is sane—especially if he is dumb, and makes attempts to jump from three-story windows, and generally devotes himself to hullabaloo and silliness for no assignable reason. Even a satisfactory definition of insanity is not yet agreed upon. As for asylums and their government and attendants, we must recollect that not everybody will go into an asylum as an attendant, that maniacs are the reverse of agreeable patients or companions, and that the proper treatment of them is a matter of much dispute. We think the present law defective; we strongly suspect that our American asylums are one and all behind the best foreign asylums so far as concerns methods and theories; we hope there will be rigid investigation in this case and in others. But we must recollect that in all this lunatic business we have a very sensational subject.

That the human mind has a readiness for discovering the marvellous has long been known. Last week a member of the police force was discovered in the act of committing a burglary, and on being arrested informed his captain that he had been engaged in seventeen other offences of the same grade, his object being to supply himself with money to be used in gambling, and his method consisting of robbery and the pawning of the goods stolen. Upon this an enormous deal of surprise is expressed. Yet, so far as known, Mr. Tweed is still at large; Mr. Hall has never been under arrest; Mr. Connolly politely but firmly declines to be subpœnaed; Mr. Cardozo in his retirement enjoys a very large income; some of Mr. Fisk's effects at the house of Miss Mansfield have just been sold after inspection by some five or six thousand persons; Mr. Jay Gould is among the richest of Christians the whole world round; Mr. O'Brien's and Mr. Brennan's deputies, many of whom have filched more hundreds than Aiken got dollars from the "fences," are still industrious in their calling, virtuous, and at peace; Mr. Barnard receives "sympathy" from judges of the Court of Appeals and the editors of incorruptible journals; perfectly well-known gambling-houses are open by the score, and the keeper of one of them is a member of Congress. Plenty of similar sights there are to be seen which might serve all of us as aids to virtue and incitements to the right conduct of police and other life. Considering the case of Mr. Dorman Eaton and those of Mr. Stokes and Mr. Foster, we get off fairly well if our policemen stop short of murdering and set up their rest at burglary. The marvellous thing really is that the police force, and the entry clerks, and cashiers, and shopboys are anything like as honest and respectable as they are. The spectacle of Police Commissioner Henry Smith investigating the grand larcenies of Officer Aiken makes wonder at their occasional rascalities seem superfluous.

The question of the genuineness of Livingstone's letters to the *Herald* still continues to be discussed by that paper and the unbelievers—very absurdly on the part of the latter, some of whom still deny that Stanley has seen Livingstone at all. This "incident," however, as they say in the French Assembly, is absolutely closed, and there is little use in talking about it any longer. It remains to supply a motive for Stanley's forging the letters to the *Herald* when all else that he brought with him has been proved genuine. This has not been done; but the letters have been attacked on two grounds—first, for those passages which are perfectly characteristic of Livingstone, and then for certain Americanisms which, it was thought, must either have been interpolated, or else were proof of forgery throughout. That the public did not recognize the natural, colloquial style of Livingstone is not surprising; for only a very small portion of them have read his works with any attention, and the general idea of him was quite as false in one direction as Stanley's prejudices were in another. The Americanisms were certainly more suspicious in a man who is popularly supposed to have passed his entire life in the wilds of Africa. They have, however, been satisfactorily accounted for. Mr. W. F. Stearns, of this city, who, in India, became the host and intimate friend and benefactor of Dr. Livingstone, and who identifies both his handwriting and his style, states that he is an ardent admirer of this country, and that one of his sons fell while fighting in the Union army. But, besides this, his brother, John Livingstone, has been living in Canada for more than thirty years, and he, too, pronounces the letters genuine in all respects; and, finally, another brother, the Rev. Charles Livingstone, the Doctor's companion in the exploration of the Zambesi, spent seventeen years in the United States, was educated and married here, and, says the Canadian brother, "so far as you could tell, he was an American in his speech and manners." The *Sun*, which has been endeavoring to prove the whole affair a humbug by showing that Stanley was a bad fellow when younger, and no American, but a Welshman, now cites two Welsh papers in support of its assertion that his real name is John Rowland. But this, in the present state of linguistics, can hardly be called dealing openly with its readers, the Welsh tongue, though said to have been familiar in Eden, not being a common accomplishment in modern times, and statements in Welsh being difficult of verification.

The Agricultural Laborers' Union in England has made a report, which Canon Girdlestone, the benevolent clergyman who began the movement, may read with pride and satisfaction. There are now 150,000 laborers enrolled in the Union, there are few counties in which it has not obtained a foothold, and after paying all expenses, and sending delegates to carry on the agitation in every direction, there is a balance of £2,500 in the treasury. The general result of the agitation has been that wages have risen at least a shilling a week all over the country, and in many cases four shillings. Forty dollars is now paid for the harvest month, where twenty-five dollars used to be paid, and it is expected that sixteen shillings a week, instead of nine or ten, will be the general rule of wages next summer. The melancholy feature of the movement is, that nothing, or next to nothing, has been won without a strike, the farmers fighting to the last, and the landlords standing by them. The men are very anxious to have a plot of ground assigned to them with their houses, to be cultivated for themselves, but this reasonable demand the Duke of Marlborough, one of the greatest proprietors in the country, has met by a haughty and defiant letter, in which he lays it down that a laborer's cottage on his estates shall hereafter be vacated whenever the laborer is dismissed by his employer, and the Bishop of Ripon has been foolish enough to denounce the Union in a speech, and recommend the laborers to put its delegates and all lecturers and agitators under the parish pump. This is brave talk, but it will not do, and the immediate effect of it has been to raise a cry for the electoral franchise as the only way of making landlords and farmers treat the laborer with ordinary consideration. The movement has, however, been marked by extraordinary sobriety of language and behavior. There has not been a trace of Communism in it. At one of the meetings the letter of the correspondent of a French paper, *le Bien Public*, in which he said that the object of the Union was to take away the land from the proprietors, and that one Archer, the leading man, was at the head of an armed force 150,000 strong, was read amidst great laughter.

Poor Jules Favre has just had a most unpleasant reminder of the odium which now surrounds his name. The revelations that were made about his private life over a year ago drove him out of politics, and it was generally supposed would have driven him into total retirement. But he held that nothing had happened to preclude him from practising his profession, so he still appeared in court; and the other day, for a woman accused of "holding communication with the enemy." He had, however, no sooner risen in court than the jury announced that such was their repugnance to the counsel, that they could not try the case fairly if he appeared in it, and the judge accordingly postponed the case. Their aversion, however, was political, not personal. Most Frenchmen now dislike Favre for one of two reasons—either because he did not make peace in September, 1870, or because he did make peace in 1871; that is, they are disgusted with him for declaring he would never yield "an inch of soil, or a stone of a fortress," and six months later yielding whole fortresses and whole provinces.

The German press is agreed in assigning to the meeting of the three Emperors some grave political significance, and the rumors and conjectures to which the first announcement of it gave rise have finally settled down into a semi-official statement, the purport of which is as follows: The visit of the Crown-Prince of Italy to Berlin last June gave umbrage at Vienna, by reviving the memories of the alliance of 1866. To smooth this away, to further the policy of conciliation which Bismarck avowed in 1870, and to make patent the good understanding restored between Prussia and Austria, the Emperor of Austria was invited to Berlin, and his intended visit was openly proclaimed at Vienna. But for many years Bismarck has sedulously cultivated the friendship of Russia, and care must be taken in attracting Vienna not to repel Petersburg. Besides, many interests in common would render a consultation of the three Emperors most opportune. Accordingly, the Emperor of Russia was invited to Berlin at the time fixed for the reception of Francis Joseph; and information of this is said to have been communicated to the latter by an autograph letter from the King of Prussia. This news, however, produced a little friction at Vienna, which is now to be reduced by a preliminary interview between the heads of Austria and Germany, at Ischl. The questions likely to occupy the three Emperors are these four: First, the peace of Europe in view of the threatened revenge of France upon Germany. Unless crazed by the success of her loan, France is not likely to go to war with Germany unsupported; and so, by a good understanding with Italy, Austria, and Russia, Germany may hope to keep her choleric neighbor in longer durance, and thus to maintain the peace of the Continent. A second point will be so to influence affairs at Rome as to keep the next Pope out of politics. This is as important to the domestic peace of Russia and the internal development of Austria as to the unity and concord of Germany. The third point will be an adjustment of the Eastern question, as between Russia and Austria, upon a basis which will enable Germany to stand as the guarantee of both without prejudice to either party. The Danish press urges also the settlement of the North-Schleswig question, and the Poles threaten the Imperial table with the ghost of Banquo. Last of all, the social question—which now agitates the people of each empire, and threatens Europe with revolution—will occupy the deliberations of the Imperial Council—more, however, in the line of repression than of solution. The Emperor of Russia appears at Berlin in great state, with two sons, a brother, and a large military staff; and the days from the 5th of September on will be given to parades, reviews, illuminations, and the most brilliant festivities.

THE DANGER OF PLAYING TRICKS WITH THE LABOR QUESTION.

As our readers know, nothing has hitherto proved sufficient to induce the gentlemen who compose party platforms and deliver harangues about "the rights of labor" to embody in a debatable proposition their opinions as to what the Government of this country, whether State or Federal, ought to do, which it does not now do, for the laborer. We hear a great deal of "the wrongs of the workingman," but those who talk about them, resolutely and persistently refuse to say in what way they ought to be and can be redressed by legislation. We are told that the workingman ought to have more leisure, but how he is to get more leisure without its costing him anything nobody reveals. We are told that he ought to have higher wages, but all the orators and writers refuse to give us a draft of the bill by which more wages are to be supplied. Instead of this, we are treated month after month to vapid declamation, insinuating and hinting and suggesting, rather than openly asserting, that there is some sort of legislation called for by justice and humanity which would give the workingman his rightful social position, but which the Government withholds. The worst of it is that it is not solitary raving orators or irresponsible editors only who do this. It has become within a few years a regular practice of the various party conventions. A "labor plank" is now an essential portion of every party platform, whether State or national; the laborers, or the "servants of civilization," as the Philadelphia platform called them, gradually taking the place of the "soldiers and sailors" as objects of the enthusiastic homage of politicians.

When we took up the Massachusetts Republican platform, adopted the other day at Worcester, we thought we had at last lighted on a distinct definition of the duty of the Government to the workingmen, but we were more thoroughly cheated than ever. The "labor plank" declares that the Republican party is in favor of "improving the condition, increasing the wages, and lightening the toil of laboring men," which is a safe and harmless statement. A man of any party who denied that these things were "objects of his desire" would in our day be very hard to find. One is not deeply moved either, or greatly surprised, to hear that the Republican party in Massachusetts intends "to do all in its power to collect information" that may be "useful in the solution of the problems which concern the existence of the American laborer." When, however, we got to the affirmation that the party not only approves of the "legislative restrictions on the hours of labor of women and children, but recognizes the desirableness of reducing the hours of all wage labor," we thought we had at last lighted on the grand plan by which poverty and hard work were to be robbed of their bitterness. What was our disappointment, therefore, to find that the Republican party of Massachusetts had no plan at all for the regeneration of society, and that it only recognized the desirableness of "reducing the hours of all wage labor" in so far as could be done without so diminishing production as to affect injuriously the best interests of the laborer himself, and "so far as should be demanded by his intelligent and considerate sense of his own welfare." In other words, the Massachusetts Republican Convention thinks the workingman ought to reduce his hours of labor if he can afford it, and if he himself thinks it would suit him, which would be one of the most harmless propositions ever uttered, if we did not know that it was intended to deceive the discontented and ignorant, and excite false hopes in their minds. Reduced to plain English, it amounts to saying that in the matter of the hours of labor, the workingman ought to do as he thinks best; but by making the announcement in pompous and windy phrases that this is the opinion of "the Republican party," the expectation is aroused among the unreflecting and excitable, that by voting for the Republican party some legislation restricting the hours of labor without any diminution of wages will eventually be secured. Apart from the probability of its resulting in legislation, the opinion of the gentlemen composing the Worcester Convention on the labor question is of no more value than their opinions on the utilitarian philosophy or the origin of species.

Now, we do not pretend to know how long the intelligent voters of the country will allow political conventions to carry on this little game of fraud and deception. We know that a great many honest and well-meaning men wink at it, in the belief that the labor question is not a serious or pressing one, and cannot become so in this country, and that if by the use of a few meaningless phrases the workingman's ears can be tickled, and he can be induced to support the party in some great work, there is no harm in it. We beg leave to remind those who think in this way, however, that no phrases used in party platforms are meaningless for everybody. It takes some acuteness and intelligence to detect the absence of meaning in any phrase. The ignorant and stupid put into every party "plank" such meanings as are agreeable to them, and such planks as this of the Worcester platform are manufactured with the distinct intention that they shall be construed by the ignorant and stupid in a way which will "help the party," and which the "managers" can show afterwards was not warranted. Moreover, it has to be remembered by those who think such performances innocent that the number of voters without any political education or experience, or any clear views as to the proper functions of Government, or the relations of the individual to the community, increases every day. The immigration into the country of laborers of this kind is going on on a great scale, and they are concentrating in large masses in the principal seats of industry. To diffuse amongst them sound economical ideas, to give them an adequate sense of the conditions under which free and progressive society exists in America, and train them in the substitution of intelligence for brute force, in the protection of property, and accumulation of capital, would be no easy task under the most favorable circumstances; but if it is to become a part of the regular business of native politicians to play on their worst passions and prejudices, and if this business is to be carried on with the sanction or connivance of the intelligent portion of society, it will be a task which there will be no use in attempting.

Republicans in all parts of the country would do well to remember that all the questions which occupy the public mind at this moment, grave and important as they are, are mere passing trifles compared to the labor question. They will all probably be well-nigh forgotten in ten years; but the labor question will remain, and will be, ten or twenty years hence as it is now, the most tremendous problem with which the modern world has had to deal. We cannot afford to trifle or play tricks with it in America any more than anywhere else. There are plenty of men, and sober and sensible men too, who believe that it contains the disease of which this Christian civilization of ours is to perish; that the passionate pursuit of equality of conditions on which the multitude seems now entering, and the elevation of equality of conditions into the rank of the highest political good, will eventually prove fatal to art, to science, to literature, and to law; and that, after having gone down into barbarism, and witnessed the decay and destruction of all the great monuments of our epoch, we shall have to begin again the old and toilsome ascent made by our forefathers under the lash of hunger and the rule of brute force. This is a pretty dark view. It has not perhaps enough support in actual social phenomena to make us melancholy, but it certainly has enough to make us sober and careful.

THE CONTINUOUS INFLUENCE OF PUBLIC MEN AND NEWSPAPERS.

It is common in our politics to find considerable importance attached to the names of certain persons and the influence of certain newspapers. It appears to be thought that these politicians and periodicals possess a following in their own right, that each of them has a particular constituency, and strongly influences or modifies its action. We talk loosely about the weight of such and such a name with the public, and the valuable support of this and that newspaper, as if they were unchangeable and of themselves formidable factors in any political problem. It is quite worth while enquiring how much strength may really inhere in a particular journal or in the character of any public man.

It seems quite plain that the luckiest, ablest, and most successful man never has a following which a little unsteadiness of his own may not easily shake off. A few of the statesmen of the last generation—Henry Clay, Jackson, and Webster—had perhaps as passionate and devoted adherents as any public men in history. Clay and Jackson, especially, were ardently loved by great numbers of their fellow-citizens. But these men retained to the last the affection of their followers, not because the people did not leave them, but because they did not leave the people. Their course was unwavering; in essentials at least they were the same men to the end. To suppose that these men held the people to them by their talent for leadership, or their "magnetism," or by virtue of any other quality entirely their own, would be absurd on the face of it. Had Jackson and Clay changed sides on the Bank question, nobody supposes that they would have taken their constituencies over with them. Ardently loved as these men were, had either of them lost his head, it is certain that his warmest admirers would have needed a very short education to be cured of their enthusiasm. They would first have "wondered," then "doubted," then "grieved and regretted," and at last have thrown him contemptuously aside. No doubt, in case of an apparently slight divergence in the course of a public leader, people not accustomed to exact thinking might be carried along for a while by the long habit of belief in him; but these divergences would have to be slight and the vagaries few in number. Every man who has gained public confidence may do one, two, or three foolish things. The fewer the better, however; it will be far easier for him to run himself down hill than it was to draw himself up.

But there is not at present a single public leader who can be compared with these men of the last generation in popularity and eminence. Trumbull, Schurz, Morton, Sumner, not one among them possesses a following which is very enthusiastic or very indulgent. Nor is this surprising; it would be strange if it were otherwise. If a citizen cares nothing for politics, it will have been impossible for him to have formed a passionate attachment to any public man. If, on the contrary, he is interested in politics, would it not be surprising if he were willing to give an unconditional adherence to a man he does not personally know and has perhaps never seen? Interest in politics is apt to imply intelligence, while a man who did invariably as Sumner or Morton or Trumbull told him would be a fool.

There are four men now in retirement, quite forgotten and neglected, each of whom has had, in the last ten years, far more of popularity and the national confidence than any of the men now before the country. It took but a few months to degrade McClellan, whom the people really loved and were determined to make into a hero, to a staff-officer at Washington, and again to a derided and defeated candidate for the Presidency. Chase, who was believed by Greeley, Winter Davis, and other people to be our greatest statesman, consented to be a candidate before the New York Convention, and was at once and for ever put aside. Andrew Johnson was another man whom the people at one time had made up their minds to believe in, but he made a speech on the night of the 22d of February, 1866, and in twenty-four hours the country had turned its back upon him. Then there is Wm. H. Seward, who knows just how inalienable is the personal attachment of the people to any public leader.

What we have said of politicians we believe to be substantially true of newspapers. A newspaper may lose its identity and become something else even more easily and immediately than a public man. But, it must be remarked, it will not be thrown overboard so immediately as an erring public man. It contains many things besides politics—business articles, agricultural articles, articles on the fashions, stories for children, the news of all the world. Richard Cobden said that, after all, the real function of a newspaper was the furnishing of news; and the enterprise of a journal in obtaining fresh, full, and various information will go far to atone for its political failings and vagaries. Then its old subscribers know just where to look for what they want to read; they feel entirely at home with the size and appearance of its page. The name goes for a great deal, and the picture under the heading with a steamboat or a thrashing machine or a little boy with a torch, seems just the sort of magnificent device a great journal should have. Then, before a change is made, the women and children of the household must be consulted. In short, a paper, like a locomotive, will run a good way after the engine is reversed.

But it is no more in the power of a newspaper than of a public man to carry its public suddenly round sharp corners and up unknown byways. The work of creating convictions and habits of thought in other minds is necessarily a slow one. An able man or an able paper may do it by the labor of long years; but what it has taken years to do it will take years to undo. To attempt to induce even the most loyal and devoted constituency to change an old political creed or to take up a new political standpoint in a few weeks or few months, is to undertake one of the most difficult of tasks; and yet on this task, or something like it, two of our great newspapers have entered. Unless American society has undergone some radical change, and human nature itself a very marked one, we can hardly doubt what the result will be. The *World* is trying to persuade Democrats that Horace Greeley is a wise and noble man, and the *Tribune* is trying to persuade Republicans that the Democratic party is an honest, upright, and thoroughly enlightened organization. Both may be right; but if they succeed in persuading the public that they are, and wholly escape the indignation of their supporters, they will fare better than any of those who have entered on the same path hitherto. If the Pope were to go into partnership with Garibaldi as a stock-broker, and try to convince the faithful that he was helped in his transactions by the dogma of infallibility, and that Garibaldi was really a dutiful son of the Church, he might possibly get a considerable number of orders, but he could not long retain the confidence of the faithful, nor ever win it back.

THE SOUTH CAROLINA PHOSPHATES.

CHARLESTON, S. C., July, 1872.

THE late Edmund Ruffin, Esq., acting under an appointment by the Governor of South Carolina as agricultural surveyor of the State, made his first report in the year 1843, and in his prefatory remarks announced that, "from a very wide and diversified field of important subjects," he had chosen for investigation what he termed the "Great Carolinian Marl Bed." That rich deposits of what Mr. Ruffin called "marls and marl-stones" formed a portion of the geological structure of the State had been surmised, and some investigation had previously taken place, but only to a limited extent, and no definite action had been taken to utilize any knowledge which may have been possessed, or to direct to it the public attention. The Report of the Agricultural Survey for 1843 thus gave to the public the only authentic and, up to the present time, the fullest information upon the subject. The investigations of Mr. Ruffin were chiefly directed towards the discovery and location of deposits of marl and similar substances in which might be found a high percentage of *carbonate of lime*, and his success in this line of research was exceedingly satisfactory. His labors have since been supplemented by various chemists and geologists. Tuomey, Lieber, Agassiz, Lyell, Holmes, Ravenel, Shepard, and others have thrown additional light upon the subject, and it is now a recognized fact that a few feet beneath the surface of the earth commences a bed of marl over 600 feet in depth, and extending for many miles along the coast and through the "low country" of South Carolina. It is of a better quality than the New Jersey marl, and is easily prepared for use either as a cement or as a fertilizer by the application of heat. Many of the analyses of Mr. Ruffin show a percentage of over 90 parts of *carbonate of lime*, as well as from 10 to 12 per cent. of *phosphate of lime*. Dr. St. Julian Ravenel, a well-known chemist of Charleston, has added largely to the general fund of knowledge upon the subject, and both before and since the war has done much for its development. He is now engaged in mining and preparing the marl for market along the line of the South Carolina Railroad, sixteen miles from the city. But in order to compete successfully in the market, the lime must be sold at low rates, and to an outside observer it would seem that much of the success of the enterprise must depend upon the action of the principal railroads of this State, whose present high rates of transportation, if continued, will effectually choke off the development of the country along their lines.

But while the time is coming when these inexhaustible resources will be more fully brought forward, they are overshadowed and for the present held in abeyance by the more wonderful developments of what Mr. Ruffin called "marl-stone"—better known, however, at the present day as "phosphate rocks." This phosphate rock is found in the form of a stratum or upper crust overlying the bed of marl, in some places cropping out on the surface, and again falling to a considerable depth. Its chief characteristics are best given by a writer upon the subject in 1868. "The bed," he says, "varies from four to eighteen inches in thickness, sometimes, though rarely, increasing to two or three feet, and in some places thins out to a few scattering nodules on or near the surface. It consists essentially of indurated, irregularly rounded nodules, buried in an adhesive and tenacious blue clay and sand. Sometimes, however, it exists in continuous beds or large lumps, or conglomerates of soft chalk consistency, as if it were originally a soft pasty mass of phosphatic mud that has since become semi-consolidated. Associated with these are a most wonderful assortment of animal remains—among which bones of marine animals are so abundant as to have induced Prof. Agassiz, twenty years ago, to call it the 'Fish bed of the Charleston Basin.' Bones also of land and fresh-water animals, even those of man, and relics of his workmanship, are abundant. These bones, especially those of now extinct animals, retain in great measure their peculiar cellular structure, but seem in some cases to have materially increased in compactness and weight by a kind of internal 'segregation' or condensation of phosphate of lime, though no trace of animal phosphate of lime has ever been observed in them."

From the foregoing it will have been gathered that the value of these rocks or nodules lies in the high percentage of phosphate of lime which they contain, and the reader may or may not know that phosphate of lime is the basis of all fertilizing manures, and that there is a yearly consumption of this article in the United States of 75,000 tons and in Great Britain of 200,000. When it is also remembered that the article previously brought to market to supply this "basis," commonly known as Peruvian guano, is now being exhausted, that the supply of phosphate rock is practically inexhaustible, that it is a cheaper article and more satisfactory than any other, some idea may be gained of the importance of the discovery.

The question as to how these rocks came to be thus laid away in layers underground charged with the precious phosphate, is not less difficult to answer than the question as to how their *value* remained undiscovered up to the year 1867. Upon the first question the doctors as usual disagree; nearly every one entertains a theory of his own, and no recognized explanation seems to have been agreed upon by all. One writer refers their "probable origin to the excrementitious deposits of various animals, among them birds." Another "ascribes" the formation to the deposition of bird guano, as it is now going on upon the Mosquito coast of the Caribbean Sea! A third attributes "their origin to the change of the carbonate of lime of the eocene marl into phosphate of lime by a process of 'phosphatization' similar in all respects to the process of silification of shelly masses as exhibited in the buhrstone formation."

Why the value of these deposits should have remained so long undiscovered may be due to the fact that all the analyses made were with a view to the discovery of carbonate of lime, and, although ten or even sixteen per cent. of the phosphate had been found in the rocks, no further research or practical utilization seems to have been developed. This would appear all the more strange because of the attention attracted to the stratum on account of its geological value.

Intermingled with these nodules, and forming a part of them, are found the bones and teeth of the mastodon, megatherium, dinotherium, elephant, horse, together with the remnants of whales, sharks, seals, and other marine animals. It was of these same relics that Prof. Agassiz wrote in 1858, when he declared that "nothing impressed me so deeply for many years past as the sight of these bones. I consider their careful study in all their relations as of the utmost importance for the progress of our science. How does it happen that horses, sheep, bulls, and hogs, not distinguishable from our domestic species, existed upon this continent together with the deer, the musk-rat, the beaver, the hare, the opossum, the tapir, which in our days are peculiar to this continent, and not found in the countries where our domesticated animals originated?"

Large quantities of sharks' teeth of enormous size have been collected, together with bones of all sizes from the mastodon down, and many of these have found their way into public and private collections all over the country. Those living in New York will do well to view the specimens recently placed upon exhibition by Prof. F. S. Holmes, of Charleston, in the Museum of Natural History in Central Park. Whatever may have been the cause of the non-discovery of the commercial value of these deposits, it is certain that up to 1867 the opinion of Prof. Tuomey that they were "unavailable for agricultural purposes" was universal. But in that year, Dr. N. A. Pratt—during the war in charge of the chemical department of the C. S. Nitre and Mining Bureau, and lately called to a professorship of the University of Virginia—while engaged in the attempt to organize a company for the manufacture of acids and fertilizers in Charleston, came in contact with specimens of this phosphate rock, and was induced to give them a careful analysis. The result was that what had previously been supposed to contain 10, or at the outside 15, per cent. of phosphate of lime, was found actually to hold 60 odd per cent. The following table will convey some idea of the composition of phosphate rock; the alkalies, magnesia, sulphates, chlorides, fluorides, and water not being estimated:

	1st Analysis.	2d Analysis.
Phosphate of Lime,	63.30	68.03
Phosphate of Iron and Alumina,	1.32	5.02
Carbonate of Lime and Magnesia,	8.20	8.03
Organic Matter,	—	7.59
Sand,	9.01	9.91

Such a percentage of phosphate of lime was more than sufficient to ensure its commercial value, and the new branch of industry thus opened up and brought before the public by Dr. Pratt has fallen little short of being a god-send to the people of South Carolina. Company after company has been formed, some for mining and shipping the rock in its crude state to foreign countries, and others still for its manufacture here at home into excellent fertilizers. Millions of dollars have thus been brought into the State, millions more are being introduced yearly in a constantly increasing ratio, land comparatively worthless has increased to six or seven times its original value, and a means of livelihood has been furnished to thousands. At a time when the supply from South America is being rapidly exhausted, the Carolina phosphate rock finds its way into the market, and is destined, so far as can now be foreseen, to supply the demands of the world. England has not been slow to appreciate the merits of the article; her demand has been greater than that of our own country, and it is constantly increasing. There has thus grown up a direct trade between South Carolina and England, the great difficulty being to find freights for the former sufficient for the ships required to transport the rock. Besides the export of the crude material, large quantities are manufactured in Charleston, and the competition between different companies has very largely reduced the price of fertilizers. The direct gain to the Southern planter from this reduction, added to the increased ease with which fertilizers may be obtained, will be seen at a glance, and, from a combination of this with other causes, there is a manifest effort upon the part of many planters to reduce their area of cultivation and increase the productive power of the remainder.

At the present time the yearly product of all the companies may be estimated at 100,000 tons. Several hundred square miles are underlain by rock with a minimum yield of 650 tons per acre; nor are they confined to the land. They form a solid bottom to almost every river in the State—the Ashley, Cooper, Edisto, Bull, Coosaw, Stono, and others. The Legislature in 1870 conferred upon certain persons the right to mine the navigable waters of the State—a privilege for which they pay a dollar a ton royalty, and which at present prices amounts to one-sixth or one-seventh of the entire income of the river companies.

I regret being unable to furnish an exact statistical statement of the whole subject, but the only authentic document giving reliable data is in process of preparation by a member of the Charleston Board of Trade, and as yet is incomplete, but so much that is new and striking is found in the *modus operandi* of both land and river mining companies as to warrant a description of each.

MORLEY'S VOLTAIRE.

PARIS, August 10, 1872.

I HAVE been for some time desirous of reviewing Morley's Voltaire, but on this occasion I was imprudent enough to follow the advice given by our great critic, Sainte-Beuve, "You must always read an author again whenever you wish to review a book written on him." Now, the collection of Voltaire's works is not one which can ever be read from beginning to end, but nothing is more delightful and more absorbing than to go through it, taking sometimes one volume and sometimes another. It is like walking in a beautiful park where all sorts of trees have been planted, with flowers of all countries, undulations of the ground, and *points de vue* of great variety. What a subtle and delicate and prolific genius was that of Voltaire! How much variety, from the light pieces of poetry to the tragedies, from the "Essai sur les mœurs" to the light and fluent correspondence with his friends, from the "Contes" to the eloquent and almost tragic denunciations of the tyrants and torturers of the eighteenth century. And still, it seems to me that you never lose a fine and invisible thread which connects all the parts of this stupendous work. There is a hidden unity in all this variety.

If we attempt to look for what Montaigne called the *master* faculty of Voltaire, how shall we define it? It is somewhat imprudent to condense the work of any great genius in one word, but if the word is well found it will form a convenient basis for the work of the critic. How could Voltaire be best defined? He was not essentially a tragedian, though he wrote many tragedies. Mr. Morley does more than justice to his tragical merit, but nobody has, to use a trivial French expression, *plus d'esprit que tout le monde*, even Voltaire; and *tout le monde*, that is, the public, has decidedly not accepted the tragical merit of Voltaire. Corneille's and Racine's tragedies will be played in France as long as Shakespeare's in England. Even now, there is a revival of Racinian worship, owing to the merit of a young actor. I go very often, and have for years been going, to the Théâtre Français, where the old traditions are kept up, and I don't remember having ever seen one of Voltaire's tragedies played, not even *Mérope* or *Zaire*. We can, therefore, hardly call Voltaire a tragedian. Was he a poet? This seems almost an impertinent question, as I suppose few French writers wrote more verses, or had a more easy, graceful system of versification. But verses are not poetry. Voltaire lacked the poetical genius—that is, the almost morbid sensitiveness, the longing for something unearthly, unknown, unknowable, the tension of the mind towards an ideal, which constitutes a poet. Voltaire was in fact unpoetical. In the midst of the greatest troubles he was buoyant; he preserved an inexhaustible stock of gaiety; he was fond of the good things of the world, of money, of greatness, of acknowledged greatness. He was practical, and knew how to turn everything to advantage.

Was he a philosopher? This also is a singular question to ask of a man who was considered, and who really was, the initiator of the philosophical movement in France in the eighteenth century. But if you read all his philosophical pamphlets, his "Philosophical Dictionary," and so on, you will easily perceive that he never even attempted any great philosophical construction, that his genius was not of the same order with those of Descartes, of Spinoza, of Kant, of Leibnitz. There is not a more interesting chapter in Mr. Morley's book than the one entitled "English Influences." It is true, the English mind had more influence on Voltaire from a philosophical point of view than from any other. Locke and Newton are the Alpha and the Omega of Voltaire's philosophy and of his metaphysics. "After all," wrote Voltaire, "we must admit that anybody who has read Locke must find the Platos mere fine talkers, and nothing more. In point of philosophy, a chapter of Locke or Clarke is, compared with the babble of antiquity, what Newton's optics are compared with those of Descartes." The astronomical discoveries of Newton furnished Voltaire a scientific foundation for his deism, which was essentially what may be called the mechanical deism. All the bodies of the universe are regulated by the law of attraction; the centrifugal force and the attraction combined keep them in their orbits. There is nothing wanted in the system but the first impetus, and there comes in the idea and the power of God. Voltaire's God is the great spring of the cosmic machine, a spring which never needs winding; there are few other uses for him; we know how the great satirist ridiculed in *Candide* the notion of the final cause and of providence. Mr. Morley remarks how severe Voltaire is upon Pascal, who had a religious mind; he would hardly recognize his genius. I can hardly sympathize with Mr. Morley's remarks when he says that the criticisms of Voltaire on Pascal "were in truth the protest of a lively common sense against a strained, morbid, and often sophistical misrepresentation of human nature and human circumstance." The "Pensées" of Pascal will ever be read with profit, while the philosophical essays of Voltaire seem even now empty and vain, and are only going down to posterity as an encumbrance. Lively common sense is truly the merit of Voltaire; mere lively common sense has never built a philosophical faith.

It would seem rather an odd question to many to ask if Voltaire was a theologian?—he, the man whom Catholic *bigots* often compare to the devil himself, who seems to them the very personification of contempt for theology; and yet I do not hesitate to say that Voltaire had a decidedly theological turn of mind. I doubt if, outside of the great schools of learning of the Church, there was anybody in the eighteenth century more familiar with the subjects of theological discussion, more thoroughly versed in the knowledge of the Old and New Testament, of the works of the Fathers of the Church, of the history of the Church. His erudition on all these points is really marvellous. We have seen in our day a new school of exegesis arise in Germany, the doctrines of which have been made popular in France by Renan and some others. Certainly the spirit of the modern exegesis is very different from the Voltairian spirit. Strauss and his followers have really a religious spirit, though they are looked upon as infidels by so many. Voltaire's erudition could not be of so severe an order, but it was really very great. He is never tired of throwing contempt and ridicule on the ceremonies, the traditions, the miracles, the saints, all the objects of veneration of the Christian world; looking on the Church as the great enemy not only of the people but of all sovereigns, as the arch-persecutor of thought, the enemy of freedom, the poison of happiness, he stops at nothing—"*écrasons l'infâme.*" His attacks are as unfair as would be those of an Englishman in India who should tear the Vedas in pieces, throw odium on Brahma and Vishnu, ridicule the transformations, the incarnations, the miracles of the Hindoo mythology. Modern criticism has risen to a higher sphere. We can afford now to judge with more precision; we see the truths, or half-truths, the ideas, which are hidden in all religions under the veil, more or less thick, of the dogmas and the rites. Voltaire, when he faced the Catholic Church, was no longer a critic; he was an enemy, a gladiator. He used the sword and the dagger, and, when he felt weakest, even poison. Priests and doctors were his chief enemies. He would not have understood the feeling of your great Emerson: "I like a priest, I like a cowl, I love a prophet of the soul." But for the very reason that he was a hater of theology and of the Church, he had something in him of the *rabies theologica*.

Voltaire had some of the first and most important attributes of the historian. The "History of Charles XII.," the "Siècle of Louis XIV.," are some of his most readable works, and to this day have remained classic. His style has a curious agility, an unparalleled clearness. His narration is almost perfect. But whoever would now form his opinion of Louis XIV. and his century merely on the work of Voltaire would have a very one-sided view of history. Voltaire was dazzled by the literary halo of the *grand siècle*, and he did not sufficiently note the spots on the glory of the Grand Roi. We find him even severe upon the Protestants, though he had compassion on their misfortunes. In his eyes they were enemies of the state, almost rebels. His supreme idea in history is a great and powerful monarch, who courts occasionally Mars and Venus, to use the jargon of our forefathers, who protects the fine arts, is a patron of literature, appreciates wit, and despises priests of all sects.

How, then, can we best represent, in one word, the special qualifications of Voltaire's mind? He was not essentially a poet, a tragedian, or a historian, in so far as he was biassed in his judgment of history, or a philosopher, or a theologian. He was essentially a journalist; he was a journalist before there was any organized journalism. He was a living journal in an aristocratic age; he did not inaugurate any great movement of opinion, but he made himself the expositor of all the new ideas, of the dominant aspirations of the day. The true journalist is more objective than subjective—so was Voltaire; he was like a parabolic mirror, which throws in a given direction the rays which arrive at it from all sides. He did not write what we call to-day *leaders;* his leaders took the shape of novels, of small poems, of letters which were handed from hand to hand, of articles in the "Philosophical Dictionary," of tragedies sometimes. I do not agree with Mr. Morley when he thinks that there is no pamphleteering tendency, no theological object, in the tragedy of "Mohammed." "If, for instance," says Mr. Morley, "it had been produced in the time of Louis XIV., the exposure of Mohammed would have been counted a glorification of the rival creed." To which I will simply answer, that it was not produced in the time of Louis XIV., and that all those who heard the piece when it was produced understood clearly that Voltaire meant to denounce, in the person of Mohammed, *all* the founders of new religions. Mr. Morley remarks that Pope Benedict XIV. accepted by-and-by the dedication of the play; but surely no irony could be bitterer than this very dedication, and the Pope's acceptance only shows that the Voltairian irony had found echoes even on the Papal throne. Voltaire did not originate infidelity in France; he was the expression of this infidelity; he remained, as such, a demigod for almost all the *émigrés* of our great Revolution. Louis XVIII. was a Voltairian; the last Duke of Bourbon was a Voltairian.

Voltaire, like all born journalists, was fond of power, fond of success. What he admires in Louis XIV. is the greatest personification of human power that modern history has ever seen—a king, himself a conqueror, surrounded with heroes, courted by genius, a God on earth, handsome, the fountain of honor, of glory, of elegance! Why is he drawn so powerfully towards the great Frederic? Because he feels that Frederic is one of the new and great powers of the world. He does not curse the robber of Silesia, as he was then called; he would willingly see him rob many more provinces; he fights with him, quarrels with him, but he always admires him. His admiration for Catherine is of the same nature; Voltaire is a born courtier of kings, as modern journalists are born courtiers of the sovereign called the people. He hates the Church because the Church sets above the royal power a higher power; he constantly denounces the Pope as the enemy of all earthly monarchs. At a time when there was no journalism, imagine the situation of a man who corresponded with the princes and rulers of all countries, who kept the polite society of his time informed of all that was of interest in it, who did it not in a dry and what to-

day may be called a telegraphic manner, but who colored every fact with the brilliant rays of his incomparable wit—a man so active that he seems to have lived a hundred lives. Voltaire was, in fact, the great informer of a century; he taught a whole generation of kings, of ministers, of noblemen, art, history, geography, theology, literature. Mr. Morley does full justice to this extraordinary activity; and I will end by saying that it is much to the credit of Mr. Morley that his biography of Voltaire is written in a catholic and sympathetic spirit; he sees well the limits of Voltaire's genius; he can judge him, though he is his biographer; but still he likes him.

A French biographer would probably have been more severe; and there are many in France who often repeat the famous curse of Musset in *Rolla*:

> "Dors-tu content, Voltaire, et ton hideux sourire
> Voltige-t-il encore sur les os décharnés ?" etc.

I hope that Mr. Morley will treat Rousseau in the same spirit as he has Voltaire, and give us his biography, conceived in the same broad, philosophical manner.

Correspondence.

"DIFFERENT TO" AND "DIFFERENT FROM."

To the Editor of the Nation:

Sir: In your issue of July 25, I find, at p. 59, the following enquiry by "Carl Benson": "Can any of your correspondents tell me where the singular neologism 'different *to*' originated, and with what writer? I believe it is entirely English, and has not been adopted here even by our loosest writers. The earliest example I know is in Thackeray's 'Rebecca and Rowena,' date 1850."

James Hayward, in "The Banish'd Virgin," 1635, writes, at p. 78: "For the rest, shee was endued with peculiar pure spirits, and inclinations quite *different to* those of other girles." Also see p. 35 for another instance. Joseph Glanvill, in "Plus Ultra," 1668, p. 146, has the same phrase. Even Steele uses "different *to*," *Guardian*, No. 144. In the last century it was also used by Shenstone, Letter 23; by the novelist Richardson, in "Clarissa Harlowe" and in "Pamela"; by Colman and Thornton, in the *Connoisseur*, Nos. 71, 106; by Cambridge, in the *World*, No. 102; by Foote, in the "Devil upon Two Sticks," Act I., Scene 3; by Miss Burney, in "Evelina," thrice; by Lady Hesketh; and by Jones of Nayland. Among writers of the first half of this century, "different *to*" is used habitually by Charles Lloyd in his translation of Alfieri, and by Dr. Stebbing in his "Lives of the Italian Poets."

During upwards of a quarter of a century that I have lived among Englishmen, I have certainly heard ten use "different *to*" where I have heard one use "different *from*." From the mouth of an English lady I have rarely, if ever, heard the latter. Moreover, "different *to*" is just as usual with the vulgar English as with the educated, from whom it has descended to them. Finally, it is pretty safe to predict that, in time, it will be regarded as equally correct with "different *from*," if, indeed, it does not supersede it altogether. We have long tolerated "averse *to*."

"Difference *to*" occurs in the pages of Richardson and Miss Burney. "To differ *to*" I do not remember to have seen.

In a work now in preparation, I treat at length of many expressions which, like "different *to*," are erroneously considered to be of recent origin.

Your obedient servant, Fitzedward Hall.

Marlesford, Suffolk (England), Aug. 16, 1872.

[It appears, then, that Thackeray has justification for the use of this phrase in "Esmond," the novel for which he made so careful a study of the period of Anne. Charged once when in this country with having made at least one slip in his English by attributing the use of this "neologism" to one of his characters, he admitted that he had made a blunder.—Ed. Nation.]

Notes.

Messrs. Scribner, Armstrong & Co. announce a new work by Prof. W. D. Whitney, made up of thirteen essays in linguistics which the professor has contributed to various periodical publications, to the *Nation* among others. "Oriental and Linguistic Studies" is the title of the volume, and the sub-title is "The Veda; The Avesta; The Science of Language."——Miss Mary L. Booth, of this city, well-known as the editor of Harper's *Bazar*, is the author of a "History of the City of New York," which we are glad to say is likely to have a wider circulation than it has been having. It was originally published, as we are informed by a circular now before us, in 1859, and was then in one volume, which afterwards, in 1867, was enlarged to two volumes, in which the history of the city was brought down from the discovery of Manhattan Island to the year of publication. The work was never in the trade, having been sold only to subscribers, and soon after the appearance of the second edition its publishers retired from business. They now offer the stereotype plates for sale, and will finally dispose of them on the 10th instant, at the rooms of Messrs. George A. Leavitt & Co., Astor Hall. There are 892 stereotype pages, octavo size, a steel plate of Irving, another of Peter Stuyvesant, 102 original woodcuts, accompanied by a set of electrotypes. The author will, if desired to do so, add a supplementary chapter. Until very lately this has been the only history of New York City, and we hazard nothing in saying that it is still the best, though another has within a few months come into existence.——Mr. T. Ellwood Zell announces a translation, from the French of Dr. G. Le Bon, of "La Vie: Physiologie Humaine appliquée à l'Hygiène et à la Médecine."

—Messrs. James R. Osgood and Co. announce that during this month, October, and November they will publish the following works: "The Pennsylvania Pilgrim," by Mr. Whittier; "A Treatise on Trout Culture," by Mr. Livingston Stone; a translation of the "Æneid," by Mr. C. P. Cranch; "Christus," by Mr. Longfellow, which is a work made up of "The Golden Legends," "The Divine Tragedy," and "The New England Tragedies," with the connecting interludes; the eleventh and twelfth volumes of the "Kensington Thackeray," which will then be complete; "Oriental Religions, and their Relation to Universal Religion," by Mr. Samuel Johnson; "Palmetto Leaves," a volume of sketches by Mrs. H. B. Stowe; a new volume of sketches by Mr. Bret Harte; "Camping Out: A Book for Boys," by Mr. C. A. Stephens; "Keel and Saddle: A Retrospect of Forty Years' Military and Naval Service," by General J. W. Revere; "Drawing Copies for American Schools," designed or selected by Mr. Walter Smith, who is the Massachusetts State Director of Art Education; Dr. Holmes's "Poet at the Breakfast Table;" Mr. Charles L. Eastlake's "Hints on Household Taste," edited by Mr. Charles C. Perkins as American editor; "Old Landmarks and Historic Personages of Boston," by Mr. S. G. Drake, the genealogist and antiquary; "Marjorie's Quest: A Book for Girls," by Miss Jeanie T. Gould; "The Woods and Byways of New England," by Mr. Wilson Flagg; "The Romance of the Harem," by Mrs. A. H. Leonowens; "Left on Salvador," by Mr. C. A. Stephens; "Essays and Sketches," by the late Mr. George B. Woods, well known to journalists as formerly of the Boston *Advertiser*; "Treasure Trove: a Romantic and Humorous Poem," illustrated by Mr. S. Eytinge; "Coupon Bonds and Other Stories," by Mr. J. T. Trowbridge; "A Chance for Himself," by the same author; Mr. De Mille's "Comedy of Terrors"; "The *Atlantic* Almanac"; "A Russian Journey," by Edna Dean Proctor; "Myths and Myth-Makers," by Mr. John Fiske; Mr. Lowell's "Courtin'," illustrated by Mr. Winslow Homer, Mr. Lowell having had the good luck to escape Mr. Hoppin, who is employed to illustrate Mr. C. D. Warner's "Backlog Studies"; a "Household Whittier" in one volume uniform with the "Household Tennyson."

—Messrs. Osgood & Co. ask for subscriptions to a work which, if it is anything like what its author asserts it to be, will be worth having, in monthly parts or otherwise. Mr. George Henry Felt, who writes it, says in his prospectus that he believes himself the true rediscoverer of the "Kaballah" of the Egyptians—that "perfect system of proportions" which, "if rediscovered, would furnish us with a complete key to all the works of art in antiquity and of nature itself; would elucidate the origin of language, written or spoken, hieroglyphic or figurative, thus showing the hidden and true meaning of the Old and New Testaments." All this, surely, should make a book that would be cheap at two dollars a part, profusely illustrated, the parts not to number more than ten. One would say that a twenty-dollar subscriber, able to enter on a career of true progress by means of his Complete Key to all art and nature, the origin of language, written or spoken, and the hidden meaning of the Old and New Testament, might well be content with his outlay. Or one might say that Mr. Felt has either made a mistake in the wording of his prospectus, or else that he is aware that a certain class of people, whom Heine said he used to like to meet, are not all dead yet, and are as easily parted from their two dollars a month as they ever were. Or more probably it would be true to say that enthusiasm over something that he really has found out has led Mr. Felt, like many ingenious discoverers before him, into an extremely wild and ill-regulated estimate of the extent of his discovery. That there may be something in what he says about the Greek canons of art having been derived from Egyptian sources, and their

being plainly referable to these sources, it might be unsafe to deny. Mr. Page, the President of the National Academy of Design, who is himself a man of much research in the matter of the proportions of ancient art, gives a guarded approval of a part of Mr. Felt's work. Mr. E. Wood Perry, the Corresponding Secretary of the Academy, says that he thinks "Mr. Felt has found out something more than even the old Egyptians knew," an opinion in which most people will agree with Mr. Perry, we suppose. The Pope of Rome, let alone the heathen magicians of the Pharaohs, would not care to assert that infallibility itself requires any of us to know more than a subscriber who is possessed of a complete key to everything—nature, art, the esoteric meaning of the Hebrew Scriptures, modern Freemasonry, and the Eleusinian and other mysteries. But, as we say, while the prospectus is in one view a document nothing less than ridiculous, there need be little doubt that the treatise itself will have both merit and interest. It has been examined by Mr. Page and Mr. J. Q. A. Ward, and while neither of these gentlemen would say that his examination has been such as qualifies him to speak without reserve, they have each seen enough to make them think that the book will interest the intelligent, and that its discoveries have value. Nature and art will no doubt still afford some problems after Mr. Felt has unlocked all that the Complete Key opens; but his work will evidently teach something new and true, or corroborate truths before known.

—The *Springfield* (Mass.) *Republican* of last Saturday has a word with its readers in regard to its circulation. Some of its friends, it says, have watched its recent course with anxiety; some of its enemies have looked on with sinister hope; and many of its contemporaries with much curiosity. This because of its having declined to support the Presidential and State candidate acceptable to a majority of its readers, and having gone into independent journalism, so-called. It is now supporting Greeley for the Presidency, but not in the headlong and fervent manner in which papers like the *Tribune* of this city support him. It leaves no one in doubt that it wishes the defeat of President Grant and the overthrow of the Republican party as at present constituted; but then, it tells what stories make against its candidate, and even has published, with editorial comments of a good deal of severity, the accounts of Mr. Gratz Brown's bad behavior at New Haven. It now informs us that this course has not been injurious to its subscription-list, which, on the contrary, shows an increase in length. In January last, when it was criticising the Administration Republicans, but not criticising them with more harshness than a majority of the intelligent members of the party were showing, its daily edition had a circulation averaging 9,491. In the first week of February the average was 10,166; in the first week of March, 10,225; in the first week of April, 10,383; in the first week of May, when the Cincinnati Convention was held, 10,366; in the first week of June—by which time, we suppose, the *Republican* had made up its mind that it would support Greeley to the end—the circulation was 10,125, a slight falling-off having taken place; in the first week of July the loss had been pretty much regained, and it stood at 10,160; in the first week of last month it was 10,216, and, in the last week, 10,516. Compared with the average circulation of last year, this shows a gain of about a thousand, which we suppose to be fairly representative of an increase in the population of the *Republican's* subscription region, and also of an increase in the interest with which newspapers are read during a Presidential canvass. On the whole, then, the editors and proprietors feel well content, and think that their paper has gained in character by becoming more unpartisan, and has not lost in purse. We do not see ourselves that it has gained particularly in character, its tone being just about what it has always been since we have had the pleasure of acquaintance with its columns, but it must be said to have experimented successfully in "independent journalism" so far as pecuniary success is concerned. As in the case of the centenarian who used strong liquors and tobacco, and who might, perhaps, have been two hundred years old if he had abstained from those indulgences, there is no telling how many more thousands the *Republican* might have had on its lists if it had never been dazzled by the White Hat, nor gone astray after the Woodchopper of Chappaqua and Chautauqua; but certainly when its present estate is compared with its prosperity a year ago, a gain is visible, and that it has been able to indulge in its excursive pleasure is due to its being an excellent newspaper, full of well-arranged news of all sorts—domestic, foreign, literary, political, all of which is commented on with intelligence, and with a spice of personality which is very acceptable to its local readers, whether or not it is consistent with the best ideal of independent and reputable journalism. There are papers in New England which may occasionally show abler articles on important subjects; but there is none which so well combines general and varied interest of topic with intelligence and cleverness of comment and criticism. Other Massachusetts newspapers may handle a question of international law, or similar subjects, with more ability; or may possess a more desirable degree of dignity, not to say of becoming civility and decorum of deportment; but we shall never find the *Republican*, on the morning after the October elections have settled the fate of parties for the succeeding two years, printing for its leading article some reflections on the 374th anniversary of the discovery of Guanahani or Cat Island by Christopher Columbus. Which is not saying, either, that making "spicy" journals is a very worthy employment for adult men having discourse of reason.

—In one of the September magazines Mr. Bryant called attention to the works of John Oldham, and expressed some surprise that they are found in so few private libraries, whereupon Mr. E. P. Whipple, of Boston, remarks, as quoted by the *Golden Age* of this city, that the reason why is because they are full of "foulness," and represent the worst period of English literature, so that it is no wonder if they are excluded from decent people's bookshelves. As a matter of fact there is somewhat less need of Mr. Bryant's surprise than there might be, and there is a good deal less need for Mr. Whipple's finding it comical that Mr. Bryant should call attention to the poet. It is true that copies of Oldham are not very plenty, but so recently as 1854 they formed a portion of Bell's well-known edition of the British poets, and they are not infrequently seen among the books of those who habitually read poetry. But although they are very vigorously satirical and not so very unworthy precursors of Dryden's satires, or, at the least, of Churchill's energetic and telling diatribes, they are nevertheless interesting reading to no one but the student of literary history or the practitioner of poetry or verse-making. Ephemeral in point of subject and destitute of any of the higher graces or beauties of poetry, they had their day, and now gather dust—but deservedly they gather less dust than the works of nine writers out of every ten from the beginning of the world till the present day who have produced verses. As for their "foulness," to apply such a term to their coarse invective is as truly to misuse language and mislead the uninformed as to call them religious—even more so, for they had a sort of religious partisanship and zeal in their blustering violence. Oldham was a robust-minded and right-living man, who lived in industrious poverty till he was thirty, when he died, after having produced a small volume of verses not very choicely worded and carelessly polished; but he is not to be charged with "foulness."

—We do not know what to say to the man who seriously entertains the notion that this generation of Americans, or the next, or the next, or any generation for a long time to come, is going to set on foot or to tolerate an imperial form of government, or is in danger of letting popular institutions go to pieces in any way or for any reason. To what in the history of this country, or of the race from which its people are for the most part sprung, shall we point as proving a tendency to yield its liberties to arbitrary power? Not to much assuredly; yet there are always some prophets of empire and despotism, and for various reasons there never were more in the country than within the past decade. Perhaps there are not too many to keep in check the self-confident carelessness with which we take our own way; but nevertheless it is no harm, either, to recollect that

> "If hopes were dupes, fears may be liars,"

and that Mr. Caleb Cushing's "man on horseback" has not yet appeared, and that there is every probability that when he does appear and strikes for the kingly crown he will have what is known as "a good time" getting it. The Rev. B. M. Palmer, of Virginia, has suggested to us these reflections by an address which he recently delivered at Lexington before the literary societies of Washington and Lee University, and in which he told them that "the sword that carves this Republic into an Empire will be the sword of her execution, and the tyrant who wields it will prove the author of her doom." But little as one can sympathize with the spirit of such utterances, the greater portion of this address of Dr. Palmer's is to be praised, though we suspect it may be better adapted to do good in our Northern colleges than in the South. We do not know that the Southern youth have in the past been distinguished for a cool-headed perception and acceptance of facts, and are not sure that closer attention to science, even the despised science which "bakes and brews, stitches and weaves," would not be better for them than "guarding with the jealousy of genuine alarm against that despicable spirit of materialism" which does so many bad things when theoretically considered, but no single one of the practical results of which would any sensible man or woman, taking the good and the bad together, be for a moment willing to forego. Still it is not in vain nor for evil that words like these are addressed to a body of young Americans:

> "It would be an immense protection against these debasing tendencies if, amid the exactions of our new position, we could carry over those gentlemanly instincts which have hitherto characterized our people. In employing this unusual term, I do not mean that dainty mannerism which puts on the air, without the quality, of the gentleman. But I refer to that exquisite education of the conscience which makes duty and benevolence the habit of the soul; that fastidious honor which cannot, even in thought, condescend

to meanness; that lofty self-respect which will observe the proprieties and practise the virtues of life with the readiness of impulse; that nobleness of principle which makes it as easy to be brave and true as it is to breathe; that instinct of rectitude which shrinks from the false and the base as from the contamination of the plague. It would be a rare combination this, of courtly honor with the hardness of toil. But if labor is ennobled when wrought by the hands of a freeman, how much more when associated with the dignity of the gentleman!

"Let us guard, then, with the jealousy of genuine alarm, against that despicable spirit of Utilitarianism which, like a huckster in the shambles, is always haggling with truth about her price. She is immeasurably more precious in herself than in all the uses to which men may put her. Truth, integrity, and honor are the highest attributes of any people, and the enjoyment of regulated freedom, under a wise and constitutional government, is its noblest privilege and reward."

—G. Jaquet has gathered some curious statistics, showing that the month of August has been the most prolific in great names of German literature. Without copying the entire list, we give a few examples of its richness: In poetry and the drama, Goethe, Herder, Philip Nicolai, Conrad Eckhof, Nicolaus Lenau, Valentin Andrea, Adolph Overbeck, Schlegel (?), Von Kleist, Körner, Immermann; in science and philosophy, Bouterwek, Gall, Ottfried Müller, August Eberhard, Anton Bauer, Hegel, and Carl Ritter. Jaquet's little memoir gives the day of the month and the year for each of these distinguished sons of August, with a brief characterization of the man.

—Luther is brought out again for the new conflict of Germany with Rome; and not with Rome only, but with that churchly power which, in its insistance upon dogma and its assertion of authority, is but a trifle less infallible than the Pope. A layman, who for the present withholds his name, proposes to publish for the use of laymen the doctrinal and controversial writings ("Lehr- und Streitschriften") of the great Reformer, from the original unadulterated editions. The object of the editor is to reform the Reformation, and to bring German Protestantism back to the free, bold, broad spirit of its father. The need of this he sets forth in a strong and homely rhetoric worthy of Luther himself. "Would that the Lord and Master whose name we bear would stand by our side full of compassion, repeat for us his miracle, and bid our Lazarus, Martin Luther, awake from the dead. He, too, hath lain in the grave already four days (nigh four centuries), and he stinketh; yea, and his own household and the executors of his will have made him to stink! Oh! that Christ, in his pity, would stand beside us, and cry, Martin, come forth!" This new edition is published in Wiesbaden by H. Kissinger & Co.

DR. RICHARD MORRIS'S "HISTORICAL ACCIDENCE."

DR. MORRIS begins his "Historical Outlines" with a good general survey of the languages of the world. It has some of the usual slips of first editions. Irregular spelling occurs; on page 7 we find *Keltic*, for the common form *Celtic*, followed in the next line with *Cymric; Sclavonic* on page 8, for the better *Slavonic*, page 13. On page 9 we read that "parts of the 'Zend Avesta' are at least a thousand years old"; they were as old as that at the birth of Christ. On page 12, the aboriginal tongues of *South* America are mentioned to the exclusion of *North* America. His definition of *words* puzzles us: "words are articulate sounds used to express perception and thought." What philosophy arranges all nameable and predicable objects under the heads *perception* and *thought*? Are they meant to correspond to Locke's sensation and reflection? Webster, in his definition, says *conceptions* and *ideas*; Worcester says, *emotions* and *conceptions*. Let any one who thinks it easy to define a *word*, try it, and meantime weigh this attempt in Worcester taken from Sir J. Stoddard: "An articulate sound, or combination of such sounds, consisting of a root, either alone or combined with one or more particles, or with one or more other words, and expressing an emotion or conception, either solely or together with other words as part of a phrase or sentence." *Comparative* Grammar, page 1, is not a very good expression for the antithesis of Descriptive Grammar.

The second chapter is also introductory. It treats of Grimm's law and other phonology, and it is not very thorough work. Mr. Morris uses *flat* and *sharp* as names of sonant and surd mutes; having no fear of Max Müller before his eyes, or perhaps not having used the last edition of his lectures. The remarks on Grimm's law not only show that he does not understand it, which might well be; but suggest that he does not understand where the difficulty about it lies. Three sets of changes are included in the law—surd mutes change to aspirates, aspirates to sonants, sonants to surds. The two first are common changes, found in many languages, and well understood. The trouble is with the last. To give a few examples in the English dialects something like the two first, by way of letting light into the mystery of the law, is skimming things badly. The treatment of what he calls euphonic changes is also far from thorough. He counts changes as like which are alike only as all babies are alike to the old bachelor, or Carlyle and Emerson alike to one who has devoted his days and nights to the study of Addison, or all the Boston writers alike to the true New York cosmopolitan. In such a sense only is Lat. (*sic*) *hest* from *hâtan*, like *must* from *motte*; It. *otto* from *octo*, like *might* from *magan*, and *wept* from *weeped*, and much more of like sort on pages 25, 26.

With Chapter Third we enter on the history of the English language, and proceed in the two following chapters with a general sketch of the English dialects, and of five periods into which Mr. Morris divides the language. With Chapter Sixth he begins on English grammar, and goes forward in the common order through orthography and etymology. Syntax and prosody are not taken up. All the grammatical forms in modern English are treated of historically. For example, all the different ways of denoting gender are traced to their origin, often as far back as Sanskrit, and illustrative examples given from the older writers in English; so of our case-endings and signs of number. The pronouns are all treated of with special fulness, and so are the numerals and prepositions, the inflection-endings, and auxiliary verbs. Dr. Morris makes a scholarly free use of the German and American comparative and historical grammars of Anglo-Saxon and English; but he must allow us to say that of one American work—March's "Comparative Grammar"—his book shows a frequent use which might well have been acknowledged either by avowed quotation or by special mention in the preface. Both would have been no more than fair. Besides his judicious employment of the researches of others, our author contributes a most valuable store of illustrations from his own reading and study. There is hardly a form to the discussion of which he does not bring something noteworthy. His style is perspicuous, and his use of the printer's art to display his topics, and to help the eye and mind, is admirable. Now and then he would have been clearer even to general readers if he had used precise technical terms instead of indefinite popular expressions. In explaining letter changes, for example, letters "creep in," "disappear," "fall away," "intrude," "pass into," "are lost," "make their appearance," "become," and "represent," in a way very provoking and little satisfactory. Scientific treatment which abjures technicalities cannot be very exact or vivid. Even our novel writers know better than to translate the technicalities of their characters. The stupidest land-lubber gets more from the sailor's technical slang than from any explanatory circumlocutions for it.

One very serious defect runs through the whole book—the dropping of the word Anglo-Saxon, and every other special name, for that language, and confounding all the obsolete speech of our ancestors, from Beda downwards, under the name of Old English. The speech of the West-Saxons, in which what is called the Anglo-Saxon literature is written, is a cultivated classic speech, carefully written, competent to translate the Latin classics, and having original works of importance both as to extent and kind. It is a German speech, perfectly parallel with the other Teutonic tongues, so that its grammatical forms can be clearly traced, and a correct historical orthography established, extending even to the quantity of its vowels and the place of the accent. Even the pronunciation is well known. With the political convulsions which preceded and followed the Norman Conquest, this classic or ideal speech ceased to be written. It weathered its niceties of form and disintegrated into mere dialectical writing. The dialects mixed with Norman-French, and from this mixed speech, after written Anglo-Saxon had been forgotten, a new speech was formed more different from the old than Italian or French is from Latin.

Perhaps no book of any scientific merit has before failed to distinguish the early Synthetic language from the dialects of the intermediate chaos and from modern English. The failure to do it is, as we have said, a serious defect. The mere leaving out useful information is something. Then the relations of the different periods to modern English are very different. Conclusions which may be safely drawn from a word if it is in Caedmon, may fail altogether if it is no earlier than Piers Plowman. Then the inflection endings are so different in the different periods that you cannot be sure what a form of unknown age is intended to represent. Then the Anglo-Saxon is printed with long vowels marked, while the later English is without marks. One may not be able to tell in Morris, when a word that might be Anglo-Saxon has unmarked vowels, whether it is because he thinks they are short, or because he takes the word from some author of a period later than Anglo-Saxon, or whether it is a blunder. Where there are different spellings of the same word we cannot tell whether they are mere irregular spellings of the same period, or regular spellings of different ages, or blunders in the book.

An underestimate of the importance of Anglo-Saxon appears perhaps in

* "Historical Outlines of English Accidence, comprising Chapters on the History and Development of the Language and on Word-formation. By the Rev. Richard Morris, LL.D., editor of Hampole's 'Pricke of Conscience,'" etc. London and New York: Macmillan & Co. 1872.

some of the not wholly accurate statements about it. On page 48 it says, "Pronouns had a dual number"; but only two of them had a dual. "The passive participle was preceded by the prefix *ge*" (page 49), sometimes. On the same page, "*shall* and *will* were not usually *tense* auxiliaries." They are not usually pure tense auxiliaries, but they are in abundant use, as in English, to express future time with some added idea of duty, will, or the like. On page 66 we find, "*s* is closely allied to *r*, and even in the oldest English we have traces of the interchange." *S* and *r* do not *interchange*: *s* shifts to *r*. And instead of saying *even* we have *traces*, he might have given it as a rule in Anglo-Saxon in the inflection of verbs that when *s* comes between two vowels it is vocalized to *r*: *was, were*. Page 115, "The indefinite article is a new development after the Conquest of the numeral *one* (*án*)." It was already developed in the classic Anglo-Saxon. In translations from Latin we find *án* used where there is nothing for it to render, simply as a sign of the singular use of a generic term, which is the most indefinite use to which our article weakens, as in Luke iii. 22: The Holy Ghost descended in bodily shape *like a dove*, has in Anglo-Saxon *swa án culfre*, Latin *sicut columba*, Greek *hoseì peristeràn*. On page 130, in speaking of the relative there is a misprint of *interrogatives* for *relatives*, and in an enumeration of the Anglo-Saxon relatives there are several omissions. On page 134, "It is a vulgarism to use *what* with an antecedent." True, but it occurs in Anglo-Saxon.

The principle of Dr. Morris's classification of the strong verbs is not clearly set forth. Class IV. of the second division does not appear to belong in the division, and the subdivisions are cross divisions; they ought to be made on the ground of the root vowel, the umlauts and breakings not being counted. Of the weak verbs quite a number are counted anomalous on page 172, which really belong to the first class described on page 171; *say, bring, buy, think, work* are like in their inflection to *tell, seek*, and the like.

The book has more than 100 pages of appendixes on the "Keltic Element," "Old English Accidence," chiefly from Koch, and "Words of Norman-French origin in the English language before 1300," valuable material for future workers. And last, not least, there is a good index of some twenty pages.

DE GASPARIN'S FRANCE.*

WE all know how few in France were the friends of the American Union in the day of trial. Among her notable men you might have counted those friends on the fingers of your two hands. With some effort, we can only recall the names of Count Agénor de Gasparin, Count Charles de Montalembert, Edouard Laboulayè, Augustin Cochin, and Henri Martin. We need not recapitulate the great services these distinguished men rendered the good cause by their example and their eloquence. Their names were everywhere known, and their writings penetrated all Europe. Laboulaye's "Histoire des Etats-Unis," Gasparin's "Un Grand Peuple qui se relève," and Montalembert's "La Victoire du Nord aux Etats-Unis" had a marked influence on public opinion, and Montalembert celebrated the Northern victory as "the triumph of legitimate power over an inexcusable revolt, of justice over iniquity, of truth over falsehood, of liberty over slavery" ("l'heureuse victoire du pouvoir légitime sur une révolte inexcusable, de la justice sur l'iniquité, de la vérité sur le mensonge, de la liberté sur l'esclavage"). So unpopular was the cause of the United States in France that the most respectable representatives of its press were not able to raise themselves above the dead level of popular ignorance concerning the true merits of the great transatlantic struggle. The *Journal des Débats*, at the outbreak of the rebellion, refused to insert Gasparin's letter denouncing the Southern insurrection as "a criminal folly"; and even the *Revue des Deux Mondes*, after formally accepting an article from the same writer entitled "Un Grand Peuple qui se relève," declined to publish it. Gasparin then sent the manuscript to the publisher, Lévy, who issued it in book form.

This was not the first occasion on which Gasparin found himself in open opposition to, and far in advance of, public sentiment. As a member of the Chamber of Peers, he condemned the naval expedition to Otaheite and the cruelties of the French army in Algiers. From his parliamentary seat and in his book "L'Amérique devant l'Europe" he denounced the invasion of Mexico by Louis Napoleon. So warm a friend of the United States, he says, naturally passed "aux yeux de certains gens pour mauvais patriote français." But his critics and enemies must now look at these offences as venial beside his latest manifestation, a work in which, with steady and unsparing scalpel, he lays bare the faults, sins, calamities, sufferings, and dangers of his country. He does it, he says, in sorrow. And he says so truly, for grief's saddest tones are echoed in his every page.

"Sorrow for the past, where our defeats originated; sorrow for the future, where we hear the muttering of the socialistic menace; sorrow to find my country guilty of injustice; sorrow to see character lowered and convictions weakened; sorrow to see the advance of evils unsurpassed; sorrow to behold liberty, progress, happiness, moral life in all its forms compromised, and perhaps lost—these are the sorrows that agonize and pursue me."

For its effect upon those to whom it is mainly addressed, we fear that a work in two volumes, making together some seven hundred pages, will be found too long and diffuse. The matter is all excellent and eloquently expressed, but spread over too wide a surface. A pamphlet embodying its salient features in compact and telling paragraphs, would have been better adapted to affect the average French mind.

Like all philosophical observers, our author does not fail to find in the so-called glories of the First Empire the seeds of the calamities which now afflict France, and, with Laufrey, he says: "Au dessous du mot *gloire*, vous verrez le mot *crime*."—"Under the word 'glory' you will see this other word —'crime.'" Reviewing at length the negotiations and incidents which preceded the declaration of war, he logically finds France in the wrong, and, making light of the imperial excuse that the Emperor was carried away by the current, shows him careful to present the young Prince to the army, take him through the camp, exhibit him to the soldiers, prepare the transmission of the crown, keep up, in short, his trade of a Bonaparte by depending on what has always made the strength of the Bonapartes—army, victories, territorial aggrandizement—in short, what we call *our prestige*. "And then," our author tells his countrymen, "we have the pretension to set ourselves up as a nation apart and superior. What we inflict upon others, they must not dare inflict upon us under penalty of sacrilege. In the intoxication of her victories of the empire, France naïvely posed herself as queen of Europe. To her everything was permissible. She calmly levied war contributions on every country, but when they were imposed on her it was a crime. She had stripped all the capitals of Europe of their pictures and their statues, and when the countries thus robbed took back their statues and pictures, it was called 'spoliation of the museums.' In 1814 invasion revolted France as an inexpressible insult, and yet France had just passed ten years in invading every country in Europe. That others should be defeated and undergo the consequences of defeat, is natural—it is their business; but we must not be defeated, and the adversary who beats us is utterly wanting in the respect which is our due. Never has it been said or thought so naïvely:

"'Oh! moi c'est autre chose!'"

Imploring his countrymen to use but one set of weights and measures for justice, the author goes on to discuss the question from this standpoint: "We intended and expected to invade Germany, to make her soil our battle-ground, to turn the tide of war's calamities upon German, not upon French, provinces; to defeat her, and to make her pay the penalty of defeat. But the *rôles* are inverted. We are the vanquished, not the victors, and even as we would have imposed, we must accept, the consequences.

M. Gasparin says plainly, we have been conquered by the moral superiority of the Germans, but in making this admission, he wishes it distinctly understood that he is carried away by no illusion. "Hegel," he says, "does not enchant me. Germany has contributed her full share in creating a science opposed to the Gospel. Prussian politics are not impregnated with virtue. The discourses of certain German theologians who declare that we are Gomorrha, and that Germany represents the race of the elect, too closely resemble the prayer of the Pharisee, 'I thank thee that I am not as other men,' etc. Vanity has been our ruin, let Germany beware of pride." But, admitting this, he proceeds to insist on the superior discipline, regularity, sobriety, modesty, intelligence, acquirements, and admirable order of the German soldier.

The second volume opens with an energetic chapter on the enervating vices of the literature, theatre, education, manners, and morals of France. "Meanwhile a stupid display of luxury spreads itself in the broad sunlight. It was truly the period of the Benoitons." Then comes a declaration which we should not regret to hear frequently proclaimed here in the United States, from press and from pulpit:

"Nous périssons par la mollesse"

"We perish from enervation!"

Count Gasparin might with advantage have omitted the long and numerous chapters, comprising the greater part of the second volume, which he exclusively devotes to religious controversy. He can with much less effort and far greater effect reach the sympathies and convictions of his countrymen by addressing them as Frenchmen rather than as Catholics or as Protestants.

* "La France, Nos Fautes, Nos Perils, Notre Avenir. Par Le Comte A. De Gasparin." Paris: Michel Lévy Frères, Editeurs. New York: F. W. Christern. 1872.

ALEXANDER STEPHENS'S SCHOOL HISTORY OF THE UNITED STATES.*

WE are not of those who have taken offence at the retirement of the late Confederate leaders to positions in Southern colleges. It was, no doubt, in many cases, the best use their community could make of able and cultivated men, and it is not by any means those who took the most active part in the Rebellion who are now the least willing to be reconciled to its results. We certainly should not choose a disciple of Calhoun for professor of history and political science; but the students of the University of Georgia would hardly listen with docility to the views of men like Dr. Lieber and Prof. Greene, and if Mr. Stephens is fair and undogmatic in dealing with them, it is not unlikely that they will really get more good from his instruction than they would from one who believed with us. His "History of the United States" has certainly few marks of prejudice. Of course the whole series of events which led to the Rebellion, from the debates in the Constitutional Convention to the Emancipation Proclamation, is treated from a Southern point of view, and this we should expect. But we have not met with one word in defence of slavery, and the results of the war are frankly accepted, though there may lurk some of the old leaven in sentences like these: "Now that the chief cause which led to the late war between them [the States] is for ever removed, if they shall adhere to the principle of the sovereign right of local self-government, on the part of the States respectively, which lies at the foundation of the whole fabric, then there is no perceived reason why they should not go on in a still higher career in all that constitutes true greatness in human development and achievement" (p. 479).

It is only in the events immediately preceding the war, for instance, in the constant use of the term "agitators," as if it were the accepted title of the radical party, and as if there were no "agitators" on the other side, that there is any animus visible against the North. The colonial period is treated with great fairness; the Puritans are even vindicated against Macaulay's censures; their persecutions are lightly passed over, and the story of the witchcraft delusion is related without any unnecessary heat; this delusion is not even treated as a natural outgrowth of the New England character and institutions. Nullification is, to be sure, spoken of as "the doctrine which Mr. Hayne sustained with so much ability and which Mr. Webster assailed with so much eloquence" (p. 343)—not the terms in which a New Englander would have summed up the characteristics of those speeches. Mr. Lincoln's calling out the militia is described (p. 429) as "without authority of law," and the Eleventh Amendment is said (p. 252) to have been occasioned by "the action of the Federal judiciary in assuming, by a construction of their powers, jurisdiction of a suit brought against one of the States." Surely it can hardly be pronounced a "construction of powers" to deduce this right of jurisdiction from the expression "controversies between a State and citizens of another State."

It will be seen at a glance that this book does not belong to the class of Southern text-books which flourished before the war—such, for instance, as the Primer in which we have read the story of the Good Centurion paraphrased, with the comforting comment, "He was a good man and a slaveholder."

We have spoken of Mr. Stephens's book from the point of view of sectionalism; it remains to say a few words of its intrinsic qualities. It is relatively very full in the colonial period, and contains here much interesting information which one will hardly find in any other work of its class. It is, by the way, hardly a *school* history, but adapted, at lowest, for the use of high schools and academies, and a young politician would find it in some respects more interesting and useful than most freshmen would. Its special value here is in the history of the Southern colonies, especially Georgia, where there is a very interesting account of the Salzburg colonists. The Northern colonies, too, are treated of with great fulness, although there is sometimes a lack of clearness. A second point is that the military history, in all periods, is much less full than the political. This latter is elaborately worked out, and quite valuable. We miss, however, a distinct analysis of the various colonial governments, one of the most important topics under this head. It is a mistake, moreover, in all parts of the work, to give so many bare names and dates; they are convenient for reference, but out of place in a text-book. It is with good judgment that the author has skipped the date list of discoverers and discoveries in the sixteenth century, and passed at once from Columbus and his contemporaries to the English colonization. An excellent and readable chapter contains the history of the discovery of the Mississippi, from De Soto to La Salle.

It must be said that the arrangement of the colonial period is very bad. No work of this class with which we are acquainted has the arrangement of this period entirely satisfactory, although Scott's is far the best in this respect. We should say that it was self-evident that the several colonies should be grouped, and each group treated by itself without interruption; but here we have first Virginia, then New York, then Massachusetts, then Virginia again, then other New England colonies, and so on in such a way as to miss all connection or sequence of anything but time.

We have noticed a few trifling errors. Plymouth is constantly spoken of as a part of Massachusetts; the isle of Rhodes is placed in Greece; Gen. Scott is called "commander-in-chief"; the islands of St. Thomas and St. John are said to have been "acquired during Mr. Johnson's administration"; the names of the French ministers who made so much trouble in Washington's administration are spelt with an accent—Genêt, Fanchêt, and Adêt; the "General Court" of Massachusetts is said to have been established when the Government became representative—if we are not mistaken, the name belonged to the original council in England, before the transfer of the government to this country. Indeed, Mr. Stephens seems not to appreciate the historical importance of this transfer.

A good many famous and important documents and resolutions are given in text and notes—for instance, Mr. Atherton's "gag" resolutions, the "Wilmot proviso," etc.; these will be found very convenient. Mr. Stephens's style is far from elegant, but is often vigorous and readable. We would remark that the book contains an index, but no table of contents.

The White Rose. By G. J. Whyte-Melville, author of "Cerise," "Sarchedon," etc. (New York: D. Appleton & Co. 1872.)—This is a novel which is neither ill-written nor uninteresting, which is not technically immoral, and in which all the bad characters come in the end to a modified grief, and the good ones to a triumphant success. It shows plenty of worldly wisdom of a not very profound kind—if, indeed, that sort of wisdom can ever be called profound, and hits off its characters with a good deal of cleverness. Yet it is not a book which we should care to put into the hands of young persons in whom we wished to see preserved any delicate sense of morality. Its story is briefly this: The "White Rose," its heroine, is a very good and beautiful young woman, the daughter of a country parson, who has two admirers—Gerard Ainslie, a boy of nineteen, whose passion she returns, and John Vandeleur, an old *roué*, very wealthy, in the past very wicked, and in the present very determined to secure the "White Rose" at whatever cost of intrigue may be necessary. He buys a commission in the army for Gerard, contrives that he shall be at once ordered to duty, and employs a pretty miller's daughter—Fanny Draper—with whom he appears to have had some previous intrigue, to entice him if possible into marriage with her, and at all events into some compromising love affair. His plans succeed beyond his hopes. Gerard is entrapped against his will into a marriage with Fanny Draper, who has conceived a violent passion for him, and the "White Rose," Norah Welby, marries Vandeleur. Her husband's retribution at once begins since he finds that nothing will make his wife love him. He grows frantically jealous of her old lover, who turns up with his wife at some German watering-place, and after attempting to kill her, jumps out of a hotel window and is picked up a hopeless imbecile, who drags out a dozen years or so of life for no perceptible reason except to give a novelist's reason for causing his wife to labor under damaging suspicions as to her personal virtue. Meanwhile the domestic affairs of the Ainslies thrive no better. Fanny discovers that the task of making her husband love her is a hopeless one, and having not only a true wifely love for him but a more practical turn of mind than the husband of the "White Rose," she determines to make things easy for her Gerard" by eloping from him in company with a French Count. If Mr. Melville were not so rigidly moral, the obstacles to the happiness of his pair of lovers would now be all removed; but having an eye to the Ten Commandments and to certain social requirements, he makes them both languish for some years. Fanny finally reappears as a great American actress, to take the principal part in her husband's first play. Gerard and the "White Rose," the latter well aware of the identity of the actress with Gerard's wife, but the former not so, occupy the same box. The appearance of his wife staggers the successful playwright—he bids the "White Rose" an eternal farewell, and both of them rush from the box. Fanny, however, is very conveniently roasted alive before the evening's performance terminates. She is carried to Mrs. Vandeleur's house, and tenderly cared for by her, and dies recommending a speedy marriage between Gerard and his old love as the proper termination of their troubles.

We have sketched here the outlines of a novel which is sure to be popular at the circulating libraries, and, as we think, equally sure to do its little part in obliterating in the minds of such of its readers as are still capable of de-

* "A Compendium of the History of the United States from the Earliest Settlements to 1872. Designed to answer the purpose of a Text-Book in Schools and Colleges as well as to meet the wants of general readers. By Alexander H. Stephens, author of the 'Constitutional View of the late War between the States,' and Professor Elect of History and Political Science in the University of Georgia." New York: E. J. Hale & Son. 1872. 12mo, pp. 513.

terioration all delicate moral distinctions. But how many novels of the day do not do the same in a more openly objectionable way?

Handbuch für Kupferstichsammler, etc. Handbook for the Collector of Prints, a Dictionary of the Engravers on Metal, Etchers, and Wood-engravers of all nations and schools, grounded on the second edition of Heller's Handbook; newly edited and nearly doubled in size by Dr. Andreas Andresen, and, after the editor's death, continued and brought to an end by I. E. Wesserly. Second volume, Part I. (Leipzig: T. O. Weigel. 1872.)—The subject of this elegantly printed (*more Germanico*) volume is so extensive a one that it would be rash to conclude from a cursory examination whether the editors have succeeded well or ill in their task. An English reader will find mistakes not a few in the spelling and printing of the English names and titles, such as would not perhaps surprise him in a French publication, but which he will think, with reason, ought not to be found in a book printed in Germany. On the other hand, he will find such accurate information about the works of well-known engravers, and perhaps such unexpected help when seeking to learn something about some obscure person, or person unknown to him, that he will think mistakes of the kind we have mentioned hardly worth mentioning. They are nevertheless worth mentioning and worth correcting, and the value of the work would be not a little increased, if before the publication of a second edition all the English names and titles were read and corrected by some English-spelling person. It is hardly worth while to mention omissions, because the work does not set out to be an exhaustive catalogue: it only promises to give the principal works of each engraver. In looking over the English names we do not miss any with which we are acquainted, and we have found ample information about one or two for which we had sought in vain elsewhere. Now and then we have found a difference between the editor's appreciation and that of the general public. Thus he does not mention the late I. H. Robinson's engraving of Mulready's "The Wolf and the Lamb," though it was published as long ago as 1828, and generally reckoned his best work. It certainly is the work by which he is best known. The late Baron Henry Leys, of Antwerp, made so few essays in engraving that it would have been well to add to the small list here given the etchings made by him for the *Gazette des Beaux Arts*. A book of this nature is one in which complete accuracy is almost impossible, and it seems to us that by far the safer plan would have been for the editor to have confined himself strictly to the names of his countrymen. It is true that if this suggestion were adopted by every compiler, we should have many more books of reference, but, on the other hand, we should be much more sure of getting the information we might be in search of.

The Little Moorland Princess. Translated from the German of E. Marlitt by Mrs. A. L. Wister. (Philadelphia: J. B. Lippincott & Co. 1872.)—Neither Miss Marlitt nor her readers appear to tire of the pretty stories in which low-born virtue triumphs over aristocratic pride and prejudice, and in which German Lutheranism is always held up to open scorn. For our own part, we confess to sharing in the pleasure which the rest of her public doubtless get from her performances, and to finding her last story, despite its similarity to its predecessors, as entertaining as the first one. There is an innocent freshness about them in despite, as it were, of their author, for she seems to have an ever-present sense of her responsibilities as a social reformer. She succeeds better as a story-teller, however, than as a preacher of sermons. Her present novel seems to us to bear evidence, in certain of its scenes, to an admiring study of Freytag's great novel, "The Lost Manuscript." It would not be easy to find a better model.

Fine Arts.

THE YELLOWSTONE LANDSCAPE AT WASHINGTON.

MR. THOMAS MORAN has delivered to Congress his picture of the Yellowstone Valley, the instance being the first in our history where a work of art that is neither heroic art nor historical art has been chosen for national purchase. The painting obtained from Mr. Moran is a landscape; or, to do more justice to its scope and multiplication of points of sight, a diorama; or, to rise with the occasion in qualifying a picture that explains the marvels of geological formation and natural chemistry, it is a chart of physical geography. The circumstances under which we gain this acquisition open out new horizons to the mind. It is reassuring to perceive the ease with which an immense nation may acquit itself in the formation of a kind of running Versailles to illustrate its history, not in conquest, but in a more elegant career of landscape gardening. We have much territory still unexplored, and we may at any time go off on a hobby of annexing, so that there is no end to our possibilities in future "Parks" if even no scenery but national property shall be allowed representation in the nation's pantheon. There is thus every chance for employment possible to artists whose strength consists less in the ability to paint than in the ability to travel roughly and report promptly: and perhaps no better counsel can be offered to the National Academy, or other art-schools, than that the pupils should give over their studies in drawing, perspective, atmosphere, and the like, and that the faculty make haste to introduce the elements of mustang-riding, hampering mules, conversing with half-breeds and voyageurs, and breaking through dogwood swamp. In fact, if the national patronage were to be in future dispensed according to this precedent, and our Capitol to be adorned with the pictorial bulletins of our civil engineers, the public as well as the academician would be obliged to change ideas with an alacrity quite characteristic of the period. Heretofore, from the day when the Acropolis was in its glory until now, nations have adorned their legislative chambers with those scenes or events, those well-known deeds of heroism, which the public had long pondered over and come to assume as a part of their glory; or, forums were encircled with effigies of people distinguished by achievement and thoroughly estimated. It is something entirely novel in civic statue-raising to rear the image of things that the public has never judged, and which it is told to judge on the representation of the image. It is confusing to be asked to displace the verdicts of history by the sketches of the reporter. The day may come when engineers, architects, and people with schemes will be hanging their finest diagrams between the "Surrender of Cornwallis" and the "Declaration of Independence." The schemes will pass on the demonstration of the diagrams, and the passage of the schemes will involve the purchase of the diagrams and the fixing of them in place as trophies. The vulgar, therefore, to keep up, must mend its pace, and demand frescoes of the events that have not yet happened, or whose happening is interestingly problematical. And the public art-patronage will be conferred on the runners of the illustrated journals.

Mr. Moran's picture was painted at a pace which asseverated the artist's very great capability during last winter, at the close of a fatiguing journey along the Yellowstone. Posterity, however, will not take into its estimate of a national picture the really modifying fact that it was the work of a painter-tourist—the result of a single visit—sketched, for anything we know, from the back of a kicking mule. These considerations, which undoubtedly increase the wonder that the painting is as clever as it is, are not what will affect it with future judges. That it was produced so readily, and finished in time to be sent to Washington during the discussion of the Park project, to form a document for the promoters of that praiseworthy scheme, neither helps nor harms it as a picture for the Capitol. The first landscape-subject admitted there, and lying in a walk of art which American painting regards as particularly its own, the fact of its being an opportune or an acrobatic feat can have no effect but to enhance our gratification if it shall prove to be a work worthy of praise on its own technical merit. Mr. Moran's picture, for a panorama picture, has an unusual degree of directness in what we may call its plot. The perspective up the broad buff-colored gorge is a simple and manageable vista, the chimney-rocks and colored strata and geological bric-a-brac being only protruded so as to individualize and not confuse it, and the whole arrangement being so plain that the eye gets a fair chance to measure it from distance to distance. The cataract on the horizon gives emphasis to the point of sight, and the lines lead up to it easily. The fore-

ground is occupied with the usual "business" of trough-shaped slopes in shadow and aggressive bronze-like trees. But the striking fact, of course, is the dominant breadth of yellowish-colored rock; and here the painter has the cruel advantage over his critics that he has seen the formation he represents, and they have not. From chance descriptions, these natural yellows must be outlandishly impressive, affecting the stranger as if he had got into a world touched with color-motives outside the usual octaves, or perhaps as if he had entered a Chinese theatre, where universal emotions are displayed in extraordinary silks. But Mr. Moran does not make us feel that a landscape dressed in yellow would be a very delicious boon, and we cannot help feeling that our irresponsive mood is partly of his creating. In looking at works of the great colorists, it is pleasant to see that they were always desiring a world with more gold in it than nature afforded them, and that Giorgione, for example, would have exulted in an architecture with arcades and pilasters formed of rock very like this, the whole to be fused and rectified of course in the brazier of warm afternoon light, which was the only light he and his compeers chose to be aware of. In fact, we are told by Couture, of Titian, that he painted his groups first in hearty, approximate yellows and browns, and then suffused them with the glazes that ripened them. Mr. Moran's yellows do not fascinate, and we cannot but suspect that he has unkindly omitted the magic which converts crudity into splendor. Are we to think that nature, possessed in these regions of so rare a material, does not sometimes give them a studio-light—does not, that is to say, in some crisis of an incandescent sunset, or some refinement of pinkish dawn, strike wonderful effects across these huge draperies of damasked stone? Such seasons, of course, the faithful painter loves to watch for; but they are hardly in the control of the artist of an expedition, and that is why we have misgivings of the quality that will be assumed by our pictures in the Capitol when they completely take the form of current illustrations. Natural curiosities, however, no matter how piquant, are but shyly approached by the greater painters; and possibly Yellowstone, as a museum of geysers and craters, with glassy deposits of silica and saffron-colored solfataras and ochreous rocks, is more edifying to science than to art. We may notice as a steady rule that the further a landscape-painter is advanced in his craft, the more tendency does he show towards plain, handy subjects. The color of a turf-bank and the temper of a growing tree are either of them ineffable, and so he finds at last his most attractive challenge in the look of the green tree and the crisp turf. How many oak-trees of Fontainebleau, may we imagine, did Théodore Rousseau draw and color before he achieved the oak-tree of his prime, which seems to embody for the whole species its principle of growth and leafage? Was it a hundred? Was it a thousand? We may doubt if all the sulphurous and nacreous facts of Yellowstone Park would have drawn Rousseau from his patient sessions under the Fontainebleau oaks. Now the painter who is good enough to represent for us outlandishly-colored minerals alongside of grass and trees, will find one consistent habit of treatment among experienced critics. The strange mineral will be put aside from the estimate as a thing that is not, and judgment will be concentrated on his ability to paint a tree, a patch of grass, and a sky. Nothing relieves a large panorama-picture of its illusions like this obvious and wholesome process, and it is gratifying to be able to state, in the case of Mr. Moran, that his denudation leaves him still the author of a very creditable picture, in the style of Calame. The pine-tree studded over the foreground is Calame's well-known and imposing pine-tree, thrown off in dozens of lithographs; it is a fine stage brigand, with harsh foliage, truculent limbs, and unexpected twists and accents in its fibre; it is apt to be sunbaked, like the Giaour, or lightning-scathed, like Lara. We had some right, in place of this tree too fine for us by half, to have asked for a true, humble, studious bit of Montana pine. That, however, is not the kind of favor that can be afforded by a tourist. He does a good deal for us when he prepares a quantity of outlines and broad sketches and brings them home, afterwards throwing in a Calame tree where he had written the word "*pine*," and drawing the fissures and texture of Calame over the cliffs—rather generous, if he yields so far to the local color as to yellow-wash them. It is, at worst, the old Johnsonese reporting where we should be willing to have stenographic reporting. Many an artist who might have befallen us would not have been half so clever.

We wish to show our really high estimate of Mr. Moran in specifying a series of water-color drawings from the Yellowstone region which we have seen, and which include in parcels the principal features of the Capitol landscape, with many other studies. They will amount, we learn, when complete to nearly twoscore, and have been obtained by an English purchaser for ultimate presentation to the Queen. They are abundantly finer works than the painting we have been admiring. They are rapid, racy, powerful, romantic specimens of water-color sketching, showing in each example faculties that any artist ought to glory in.

LEISURE HOUR SERIES.

PALGRAVE'S NEW BOOK,

HERMANN AGHA,

AN EASTERN NARRATIVE.

BY W. GIFFORD PALGRAVE. 16mo. $1 25.

"Reads like a tale of life, with all its incidents; the young will take to it for its love portions, the older for its descriptions, some in this day for its Arab philosophy."—London Athenæum.

"The cardinal merit, however, of the story is, to our thinking, the exquisite simplicity and purity of the love portion."—London Observer.

The unexpectedly large demand having put all the volumes (with a single exception) out of print for some days past, the publishers are now happy to state that they are again ready to fill orders.

I. MY LITTLE LADY. $1 25.
II. SMOKE. By I. S. Turgenef. $1 25.
III. FATHERS AND SONS. By I. S. Turgenef. $1 25.
IV. FLY LEAVES. By C. S. C. $1 25.
V. THE MAN WITH THE BROKEN EAR. By E. About. $1 25.

ON THE
BANKRUPT LAW.
FOURTH EDITION NOW IN PRESS.
W. C. LITTLE & CO., Publishers,
Albany, N. Y.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from birth to maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." A separate volume for Boys and for Girls. Price $1. Sent, post-paid, on receipt of price, by the
PUBLISHER OF THE "NATION."

PUBLISHED THIS DAY:

THE LIVES OF THE NOVELISTS.

BY

SIR WALTER SCOTT.

WITH NOTES.

12mo, 430 pp., neatly printed on toned paper, cloth extra, gilt top.

Will be sent free, by mail, on receipt of price. $2.

This volume contains the Lives, with Criticisms upon the Writings, of Richardson, Fielding, Smollett, Mrs. Radcliffe, Henry Bage, Cumberland, Goldsmith, Dr. Johnson, Le Sage, Mackenzie, Sterne, Horace Walpole, Clara Reeve, Charles Johnstone.

The Notes, which are numerous, contain many interesting particulars of literary history and anecdote.

"These essays are among the most agreeable specimens of biographical composition we are acquainted with."—London Quarterly Review.

A. DENHAM & CO., Importers and Publishers, 17 Murray Street (near Broadway), New York.

14 Bond St., New York.

MACMILLAN & CO.'S
NEW PUBLICATIONS.

MICHAEL FARADAY. By J. H. Gladstone, Ph.D., F.R.S. Crown 8vo, cloth, $1 50.

"There will scarcely, it would seem, be any likelihood of failure or stint within the limits of the present generation, at least, in the affectionate interest which lingers round the scientific labors and personal worth of Faraday."—Saturday Review.—"Although Prof. Faraday's distinguished career has received many appropriate tributes at the hands of De la Rive, Tyndall, Bence Jones, and other admirers of his genius and character, the personal biography is by no means a superfluous work, and will be gratefully welcomed as a lucid record of one of the ablest and most interesting self-taught men of the nineteenth century."—New York Tribune.

BERNERS'S FIRST LESSONS IN HEALTH. By J. Berners. 18mo, cloth, 50 cents.

MACMILLAN & CO.,
38 Bleecker Street, New York.

Canon Liddon's New Work.

LATE PUBLICATIONS OF LITTLE, BROWN & CO., BOSTON.

LAW.

BIGELOW ON THE LAW OF ESTOPPEL. A Treatise on the Law of Estoppel and its Application in Practice. By Melville M. Bigelow. 8vo, law sheep. $7 50.

The plan of this work is to state the facts, issue, and judgment in the leading cases, and in all other authoritative decisions which present shades of distinction from them, with an abstract of the grounds of ruling; and from these and other recognized sources to deduce the governing principle and rule of law.

MORSE ON ARBITRATION AND AWARD. The Law of Arbitration and Award. By John T. Morse, Jr., author of "Law of Banks and Banking." 8vo, law sheep, $7 50.

BISHOP'S COMMENTARIES ON CRIMINAL Law. Fifth edition. 2 vols. 8vo.

LANGDELL'S CASES ON SALES. A Selection of Cases on Sales of Personal Property. With References and Citations. By C. C. Langdell, Dane Professor of Law in Harvard University. Vol. I. 8vo, law sheep, $7 50.

LOWELL'S DECISIONS. Judgments delivered in the Courts of the United States for the District of Massachusetts. By John Lowell, LL.D., District Judge. Law sheep, $6.

PERRY ON TRUSTS. A Treatise on the Law of Trusts and Trustees. By J. W. Perry, Esq. 8vo, law sheep, $7 50.

BISHOP'S CRIMINAL PROCEDURE. Commentaries on Criminal Procedure. By Joel P. Bishop. Second edition. 2 vols. 8vo, law sheep, $15.

HILLIARD ON MORTGAGES. A Treatise on the Law of Mortgages of Real and Personal Property. Fourth edition, revised and enlarged. 2 vols. 8vo, law sheep, $15.

STORY ON THE CONFLICT OF LAWS. Seventh edition. Edited by E. H. Bennett, Esq. 8vo, law sheep, $7 50.

KERR ON INJUNCTIONS. The Law and Practice of Injunctions in Equity. With Extensive Notes and Additions from American Cases, by W. A. Herrick, Esq. 8vo, law sheep, $7 50.

LANGDELL'S LEADING CASES IN CONTRACTS. A Selection of Cases on the Law of Contracts, With References and Citations. By C. C. Langdell. Dane Professor of Law at Harvard University. 8vo, law sheep, $7 50.

REDFIELD AND BIGELOW'S BILLS AND Notes. Leading and Select American Cases in the Law of Bills of Exchange, Promissory Notes, and Checks, arranged according to subjects, with Notes and References. By Isaac T. Redfield and Melville M. Bigelow. 8vo, law sheep, $7 50.

MASSACHUSETTS DIGEST. Being a Digest of the Decisions of the Supreme Judicial Court of Massachusetts, from the year 1857 to the year 1869; or from the 9th Gray to the 102d Mass., inclusive. By Edmund H. Bennett and Henry W. Holland. Vol. 3. Royal 8vo, law sheep, $8.

UNITED STATES DIGEST. New Series. Vol. 1. The United States Digest; containing a Digest of the Decisions of the various Courts within the United States. By Benjamin Vaughan Abbott. New series. Vol. 1. Annual Digest for 1870. Royal 8vo, law sheep, $7 50.

AMERICAN LAW REVIEW, Vol. 6. 1871-2. 8vo, law sheep, $6.

NEARLY READY.

BISHOP'S COMMENTARIES ON THE LAW of Statutory Crimes. 8vo.

MISCELLANEOUS.

PARKMAN'S OREGON TRAIL. The Oregon Trail; Sketches of Prairie and Rocky Mountain Life. By Francis Parkman. New edition, revised. Small 8vo, cloth, $2 50.

PARKMAN'S WORKS. The Oregon Trail—Pioneers of France—Jesuits in North America—Discovery of the Great West—Conspiracy of Pontiac. 2 vols. Six vols. small 8vo, cloth, in box, $15; half-calf, $27; calf, $33.

DIVINITY OF CHRIST. The Divinity of Our Lord and Saviour, Jesus Christ: an Examination of Liddon's Bampton Lectures. By a Clergyman of the Church of England. Crown 8vo, cloth, $2.

IN PREPARATION.

THE BIRDS OF NORTH AMERICA. Giving a complete account of the birds of the whole of North America north of Mexico, arranged according to the most approved system of modern classification, and with descriptions embodying whatever is necessary to the proper definition of the species. Prepared by Prof. Spencer F. Baird, Assistant Secretary of the Smithsonian Institution, with the co-operation of Dr. T. M. Brewer and Mr. Robert Ridgway.

The illustrations consist, first, of a series of outlines exhibiting the peculiarities of the wing, tail, bill, and feet of each genus, supplemented by a second series, including a full-length figure of one species of each genus. In addition to the above, a series of plates is furnished, containing one or more figures of the head, in most cases of life-size, of every species of North American Birds, including the different sexes and the ages, where these are necessary for the proper illustration of the subject. This will be furnished in two editions—one plain and the other carefully colored by hand. The greatest care has been exercised in drawing these heads, so as to render them perfectly accurate representations of the subject; and it is believed that by their aid a better idea of the species will be gained than from the examination of most of the published full-length colored plates of birds.

The work is in an advanced stage of progress, and the portion relating to the land birds will be published in the course of the coming winter, in 3 volumes royal 8vo.

THE RISE OF THE REPUBLIC OF THE United States. By Richard Frothingham. 8vo.

THE HISTORY OF THE SIEGE OF BOSTON. By Richard Frothingham. New edition. 8vo.

MONARCHY IN AMERICA UNDER LOUIS XIV. By Francis Parkman. Small 8vo.

BANCROFT'S HISTORY OF THE UNITED States. Vol. X. A History of the United States from the Discovery of the American Continent. By George Bancroft. Vol. X. completing the work. 8vo.

LATE IMPORTATIONS OF LITTLE, BROWN & CO., BOSTON.

GROTE'S ARISTOTLE. Edited by Alexander Bain and G. Croom Robertson. 2 vols. 8vo, cloth, $11; half calf, $15.

BY THE SAME AUTHOR.

THALHEIMER'S ANCIENT HISTORY.

"The most serviceable work of its class within the reach of our schools. It has, indeed, no rival worth mentioning."—The Nation.

"The best American book of its kind."—N. Y. Independent.

"Whether viewed with reference to its substance or its form—the selection and arrangement of its matter, the style of its composition, or the mechanical dress in which all is presented to the public, it is a genuine book. It may be fearlessly accepted at its own valuation, and more."—Christian Union.

"Take it altogether, it must be pronounced as so far surpassing all books partially intended to answer the same end, that comparison is impossible." Boston Traveller.

A MANUAL OF ANCIENT HISTORY, from the earliest times to the fall of the Western Empire. By M. E. Thalheimer, formerly teacher of History and Composition in Packer Collegiate Institute, Brooklyn. 8vo, 378 pp., including complete Index and Pronouncing Vocabulary. Elegantly illustrated with full-page engravings, charts of principal cities, and double-page Maps. Price $2 50.

MADAME D'HERVILLY, Principal.

IN imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,
A DICTIONARY OF ENGLISH ETYMOLOGY.
BY HENSLEIGH WEDGWOOD.
Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).
With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 12, 1872.

The Week.

THE Maine election has proved, as far as "Liberal Republicanism" is concerned, a most melancholy business. It was conceded on all hands that the issues of the canvass were almost wholly national, and that therefore the election was likely to prove a better test of the real strength of the Greeley movement than any other which has yet occurred. It was conceded, too, that the liquor question—that is, the addition of cider to the list of prohibited drinks, for which Perham, the Republican candidate, was in some degree responsible—was likely to exert an unfavorable influence on the Republican vote, or, in other words, to reduce the Republican majority. It was conceded, too, that the result in Maine, if it did not clearly indicate the result of the Presidential election, would make a deep impression on the public mind, and decide thousands of the lukewarm and doubtful. On these data, both sides went into the canvass, and did their mortal best in the way of electioneering, the Greeleyites being at first by far the more sanguine, menacing, and prophetic of the two, and not relaxing effort till the hour of voting had come. They predicted, through the *Tribune*, that they would reduce the Republican gubernatorial majority of 1868 (20,403) to 8,000 or 10,000. Last year it was only 10,000. The sanguine and mercurial even brought it down to 5,000, though this exuberance was rebuked and discountenanced by the more prudent. Mr. Kimball, the "Reform" candidate for the governorship, publicly announced his belief on Monday, in a letter addressed to Mr. Schell in this city, that it would not go higher than from 6,000 to 10,000, which he said would "show a change sufficient to carry one-third more States than they need to elect Mr. Greeley." Moreover, Mr. Blaine, the Speaker of the House, the "pertinacious young man" who ventured to write a letter to the great Mr. Sumner, was to be put to his trumps, if indeed he were not actually beaten out of sight, and so was Hale, another obnoxious Administration member of Congress, just to punish them for their want of faith in the star of the great and good Greeley.

On Tuesday morning, however, a most disheartening tale was laid before the too confiding "Liberals." We then learnt "that the Cincinnati movement was a revolution, and that revolutions do not begin in populations like that of Maine," in spite of the historical fact that the changes of sentiment in that State have been more sudden and surprising than in any other, as witness the case of Harrison and the case of Fremont; that Perham, in spite of the liquor difficulty, had actually received 16,000 majority on a smaller vote than in 1868; that Blaine was rewarded for his impudence by being re-elected by a majority considerably larger than his last, and the same fate had overtaken Hale. The Liberals and Democrats have failed to secure a single member of Congress; they have lost all their State senators, and twenty of their forty-two State representatives—in other words, have suffered an overwhelming defeat, which seems to make the State sure for Grant by the old majority or a larger one in November, and promises to take all heart out of the Liberal canvass all over the country. We congratulate the friends of real reform and honest politics most heartily on this result. We think it becomes daily more certain that when another "reform convention" meets, there will be less "hat-swinging" and more deliberation, and the honest men who attend it will not allow themselves to be persuaded by charlatans that the American people can be led by the nose into transparent follies. We said three months ago that what Greeley had to dread was the "sober second thought" and the accompanying discussion, and we think his managers must begin to feel that he is not exactly the man "to beat Grant" after all, and that "the people," besides a "great beating heart," has a very shrewd, sensible head, which has to be taken note of when starting "a movement."

Maine having been carried by the Republicans, as were North Carolina and Vermont, the list of three States which Mr. Gratz Brown conceded to the Administration men has now been exhausted, and the rest are to go for the Greeleyites. Yet some of them will be close, and among the others this State may certainly be counted in case the October elections go as the August and September elections have indicated. In New York, Greeley has no more Republican strength—we believe he has less—than he has outside the State limits, but of course there are a certain number of Fentonites, and the most of these mean mischief; they are not Greeley men for nothing. But even with the aid of these disaffected office-seekers and their immediate following, the Democrats have a very hard task before them. Without false counting in this city, the State has long been reasonably sure for honest Republican nominees, and this year the Democratic majority in New York County will not be a Tweed majority. Liberal Republicans are asked to support the Democratic Mr. Kernan, an honest man; but he is not so much honester than plenty of other men that the rank and file of the Liberal Republican party, outside the straight Fentonites, who would support the devil, will support eagerly a known "Copperhead" of the true strain. General Dix, just as honest as Mr. Kernan, is in several other respects a much stronger candidate before Republicans, Protestants, and local "Reformers." And the Depew of the Census must to a certain extent be "crow" of the unsavoriest kind with Democrats. Finally, the city Democracy here will not vote as a unit. It will be seen, then, that with the October elections going as they seem likely to go, Mr. Kernan may or may not be able to beat General Dix. It will not be all one way, at any rate. In general, we may say that everywhere what is seen is Republican energy and hopefulness, and Democratic apathy. But how could it be otherwise with Greeley for a candidate? We suppose Mr. Jerry Black, when he said that "this world and the two adjacent" might be searched in vain for so bad a candidate, was nearer right than when he afterwards thought Greeley might do.

The official returns of the Vermont election are not now in, but when they are they will prove very encouraging to the Administration and a striking comment on the power of party organization. Vermont is undergoing the change which is taking place in New England generally; the rural communities are to some extent being altered into manufacturing communities, and the operatives are largely Democratic. Then, the rural Vermonter was a great *Tribune* reader, and although reading the *Tribune* has been a good deal less efficacious in making men Greeleyites than in making them into Republicans, the rural Vermonter in his wool-raising State was naturally a protectionist, and a certain number of these two classes might have been expected to go over to their old tutor. Moreover, in this canvass the element of uncertain and boundless hope in the future of General Grant of necessity plays a less part than it did four years ago, as also does the feeling of gratitude to him for his services. We must here admit, however, that the sense of gratitude and of national property in his fame has been quickened by the course of his accusers. Even were General Grant a man whom the people strongly suspected of several bad habits, they would resolutely refuse to believe it of a man who, as they perfectly know, has elevated the American name in the eyes of foreign nations. The average American carries his own personal head higher for every battle out of which Grant came victorious, and he knows it, and would not be disabused even were there need. Add, however, to the reasons for expecting a decrease in the Republican vote the further reason that an Administration, if it has pleased many by its

distribution of patronage, has also offended many, and that the men who want to be postmasters are just precisely as active in politics as the men who are postmasters, and that there are more of them, and it is surprising that the Republican majority came within about 1,300 of reaching the majority of 1868. In November next the Democrats, who will probably be more demoralized than they were in 1868, may be expected to stay away from the polls both in Vermont and Maine, as they did four years ago, and to an extent that will give Grant his former majority.

The violence and excitement of "the champions" seemed to increase steadily up to the day of the Maine election, and their opinion of their enemies to sink lower and lower. The *Times* has recently described the editor of the *World* as a person who could only save himself from being "infamous" by pleading "constitutional incapacity to act as an honorable man." Hearing, however, that he was probably suffering from fatal disease, it charitably said "that as his last days were embittered by the recollection of his own follies, perhaps a little pity might be mingled with its contempt for him." The *Times* will be sorry to learn that the disgusting monster is on his legs again, as well as ever, and probably can now only be got rid of by the knife or the bludgeon. The editor of the *Tribune* it denounces as "a vulgar rowdy" and an unscrupulous slanderer, and describes the editor of the Chicago *Tribune* as a noted liar—that is, as a man notoriously addicted to the invention of falsehoods. The *Tribune*, on the other hand, describes General Dix as mercenary, old, and cowardly; Speaker Blaine as a "pertinacious young man"; Mr. Richard H. Dana, jun., of the Boston bar, as a "jackdaw"; and Peter Cooper as a dotard, unworthy of notice. We may mention, before passing away from these "journalistic amenities," that the *Tribune's* story that Mr. Dana took a $2,500 fee for his professional services in the Boston fugitive-slave cases, many years ago, is, in the language of the present solemn and edifying struggle, "a lie," which we hereby "nail to the counter." He took no fee, though he would have been perfectly justified in doing so, and, had he done so, his opinion of Mr. Greeley recently published would have been none the less forcible, pointed, and correct. It was hard to bear, we know, but the lofty and pacific character of Mr. Greeley's mission forbids all these attempts to defend him by the use of acrimonious and unseemly language.

A Washington despatch has declared that in "a letter written to a member of his family, Mr. Charles Francis Adams has stated that he regards the election of Grant essential to the best interests of the country." This has a look of probability; and a look, too, of having been manufactured by some gentleman in Washington who knows what he thinks Mr. Adams ought to think, rather than of having been written down by Mr. Adams, and despatched across the Atlantic. According to the best information to be had, the truth of the matter is as follows: The Liberal Republicans in Massachusetts would have liked to get for themselves and the Democrats the support of the name of Mr. Adams as a gubernatorial candidate. Mr. Adams, however, had to be consulted, and he has said in reply that he would not allow his name to be used to the prejudice of Governor Washburn, with whose administration he sees no occasion to find fault. For that matter, we have never known of a Massachusetts Governor with whom less fault has been found than with Governor Washburn, and Liberal Republican talk has in no case been idler than when it has discoursed of his defeat as among the possibilities. The faith which supporters of Greeley and Brown place in assertions which are either instantly confutable, or which, for other reasons, they should by all means suppress rather than circulate, we find past understanding. They play directly into the hands of their adversaries. Why, for example, advertise the fact that they cannot secure Mr. Adams? And what is the effect in Massachusetts or anywhere else of saying, as the Chicago *Tribune* said the other day, that "one more prominent citizen of Massachusetts has come out for Horace Greeley," the prominent citizen in question being the Reverend and Honorable Mr. James M. Usher?

We do not suppose that all or most of the "tall talk" which has marked the Greeleyite canvass ever since May has been simple, downright fabrication. Vagarious elderly men, with bees in their bonnets, underdone young men, enthusiasts of all ages and sizes and sexes, with imperfect control over their mental processes, have always had a natural fondness for the Sage. Evidently it is these taking counsel of their judgments, but not distrusting the answer when it came, who have been making honest prophecies of enormous hosts of Liberal Republicans East and West, and deceiving Liberal Republican editors into printing them. The Springfield *Republican*, which usually shows judgment, had a correspondent who beguiled it into printing that the majority of Governor Perham might be cut down to 5,000, and would probably be about 8,000, and almost certainly not more than 10,000. So did the Chicago *Tribune* put itself in a needlessly wrong position when it predicted as probable the diminution of the Republican majority in Vermont to 17,000. And this unwise freedom of prophesying necessitates, or seems to the Greeley papers to necessitate, subsequent unwisdom. Vermont and Maine hold their elections; the foolishness of the prophets is made manifest; and then we are told that postmasters are using their influence against the Liberal ticket, and that custom-house employees are taxed to pay the expenses of the Grant canvass. And what else was to have been expected? Is not all this a part of the game, and to have been counted on from the first? Whereabouts in the country do the Greeley managers expect to find postmasters and custom-house collectors resolutely refusing labor or money to the Grant managers, or insisting on dividing their time and cash with impartial justice between the two parties? The fight is nowise different from what it has always been.

Mr. Doolittle has at last produced his defence to the charges made against him by the *Times*, based on the correspondence which it published between him and Connatty. The charge was in substance that Mr. Doolittle had used his official position as senator to procure for Connatty a permit to trade in cotton during the war, in consideration of an interest in the profits, and it produced as proof the letters written or drafted by Mr. Doolittle in which Connatty promised him this share. Mr. Doolittle now says that he did nothing whatever to procure the permit for Connatty—that no written application from him is on file; and he shows by a comparison of dates that he could not have made personal application for it, as he was absent in the West during the whole period in which, according to Connatty's account, the application must have been made to produce any effect. He declares, too, that Connatty offered him the share after he had obtained the permit, and that the letters were in the nature of private memoranda, intended solely for the use of the parties to the transaction. Of course, whatever one may think of the propriety or delicacy of a Senator's going into such a business, if he had nothing to do with obtaining the permit it is impossible to base on the affair a charge of corruption, though to make the defence complete he ought to show that he did not use his official influence afterwards to help Connatty in his enterprise. But probably not ten persons in the community will believe that Connatty's beautiful tribute to Doolittle's character was given gratuitously, and as a stump orator Doolittle is ruined for this canvass. He certainly did give Connatty a warm letter of introduction to General Banks. The affair ought not, however, to be dismissed from the public mind, or even weighed as a political phenomenon, without remembering that Mr. J. M. Ashley did, while a member of the Committee on Public Lands, enter into a formal partnership under seal with a land speculator, Ashley supplying the information necessary to enable him to "locate," and the other the labor and money. He was "exposed" by Congressional investigation and by the *Times*, but was nevertheless subsequently appointed Governor of Montana by General Grant under pressure from Mr. Sumner.

The Democratic Convention at Louisville has adjourned after nominating Mr. O'Conor in spite of a refusal which not improbably will be withdrawn. We need hardly say that in

the opinion of the Greelcyites it was composed of a very disreputable crowd, while in the opinion of the Grantites it was a "stately parliamentary body," though of course possessing little influence. It must be admitted that it had certain claims to respect which nominating conventions do not nowadays generally possess. One is that it was composed of men whose object was simply to "testify," and who knew well they could not win. Now a person who takes pains to "testify," and would as soon "testify" as win, may be a foolish person, but he will always be a person to be respected as long as a regard for principle continues to be considered a human virtue. The other is that it nominated the man who was generally considered by all sober-minded people in and out of the convention as the fittest, and not some other and utterly unknown or unexpected person. If, for instance, it had gone the way of the Cincinnati Convention, it would, after talking a good deal about O'Conor, have suddenly nominated Mr. Wendell Phillips as the only true representative of the "straight-out" idea, and have then urged his high rank as an astronomer as a reason why all Old Democrats should "fall into line" for him, and the "organs" would have begun pointing to the disturbances in the sun as a reason why Phillips should be elected as the only man competent to arrest them, and have dwelt on his frequent and very violent changes of opinion as constituting a strong claim on the support of all lovers of consistency.

Mr. Wilson's letter to the Brooklyn Germans has at last been explained, and turns out not to have been written by him, nor authorized by him to tell what would have been the stupidest and indeed most idiotic of falsehoods. It appears that eleven Germans wrote a note to a Mr. Askenassy, a compatriot of theirs, living in Boston, and known as a "worker" in the Republican party. They wished to know the facts about Mr. Wilson's connection with the Know-Nothing party. For reply, Mr. Wilson gave to Askenassy some selections from his speeches, which would have made it plain enough that he had been a Know-Nothing, and then went off to Maine campaigning. Mr. Wilson, who is so very politic a politician that his prudence often merits a harsher name, and so old a politician that we doubt if any in the country can give him lessons in any art of politics, says that he never gave Askenassy or any other man living any authority to write for him a letter on a political subject, and that certainly now is not the time he would choose to begin, and says that Askenassy made an enormous blunder in making a statement so palpably untrue that, we should say, the eleven Germans must have been very late arrivals if any one expected them to believe it. So much for superserviceable friends. Meantime, the anguish of the Liberal Republican editors, their resolute determination to have this thing—painful as the task must be—sifted to the bottom, their concern fo the character of candidates for the Vice-Presidency, is one of the most elevating sights of the campaign. Of course, Mr. Wilson was a Know-Nothing, and it is perfectly well-known that he was not a Know-Nothing from conviction, but, like many more of the so-called "Americans," in order that the Whig party might be broken up. However, it is not a very live issue to-day, and seeing it above the surface suggests a low state of the Rising Liberal Tide.

The Geneva Tribunal has at last reached the termination of its labors, and according to rumor, which is probably true, has awarded in or about $15,000,000 to the United States, holding England guilty of want of due diligence, and saddling her with the responsibility of three or four of the Confederate crusiers. The award of a gross sum, the distribution of which is to be left to this Government, is a peculiarly fortunate decision, for obvious reasons; but, as the *World* very properly points out, the definition of due diligence, which we have asked for, and which the Tribunal has made, is of very great importance, and will be looked for anxiously by the public. If the doctrines of Mr. Caleb Cushing, who is an eager, able, sharp lawyer, but not in the least a statesman, have been adopted in their full extent, we may find ourselves saddled with responsibilities towards belligerents which may prove in the highest degree burdensome, considering the long line of coast we have and the feebleness of our navy.

Public attention in France has been fixed during the last two or three weeks on the meetings of the Councils-General which are now in session all over the country, and which, though prohibited by the organic law from discussing politics, will, it is nevertheless expected, do much by their proceedings to influence public opinion. They are composed of local notables, and contain a very strong infusion of the Legitimist element. Our French correspondent, last year, described one of their meetings, and those who recollect his account will understand what a very feeble assistance these bodies render, or are likely to render, in developing a spirit of local independence and activity, owing to their want of business experience, want of initiative, and traditional awe of the prefect and the central government. The opening addresses of the presidents have been mainly composed of commonplaces, but all seemed to indicate a desire that the existing régime should have a fair trial. The boldest utterance was the expression of a wish that the National Assembly should be dissolved. One great fact, however, the importance of which Frenchmen are at last beginning to perceive, and which the Paris papers are discussing, and which certainly reflects no great credit on the Thiers Administration, to use our own phrase, is this: in the estimates submitted to the Assembly for the appropriations of the current year, the army gets twelve times, the navy four times, and public works four times as much money as is accorded to popular education. In other words, only one and a half per cent. of the French revenue goes to the removal of that curse of popular ignorance to which all parties, Legitimists as well as Communists, agree that France owes her misfortunes.

The German Government is absorbed at present in the war with the Jesuits, who find "the secular arm" a little too much for them. The Redemptorists, Lazarists, Christian Brothers, and the Sisters of St. Vincent de Paul and of the Sacred Heart, as having relations more or less intimate with the Society of Jesus, are also said to be threatened. The Jesuits of Mayence as well as of Bonn have been ordered to close their churches, and stop preaching and teaching, saying mass and confessing, and have signed a solemn protest, declaring that the only authority competent to prohibit the exercise of their functions is that of the bishop of the diocese. In Rome, preparations for breaking up the great religious orders, or, at all events, depriving them of their great accumulations of real estate, are also going on. The present law of suppression will be applied throughout the Papal provinces; but in Rome itself the communities will be simply deprived of their corporate character, and compelled to convert their property into Government bonds.

The new censorship law in Russia is apparently not intended to be a dead letter by any means. The announcement has been issued from the central office that an official gazette will be issued every week containing a list of the permitted and prohibited native and foreign works, so that a glance at it will show anybody what he had better read and what avoid. The censors have begun operations by prohibiting the sale of a novel of M. Korneff's, and all copies of a Russian translation of Mr. Lecky's "History of European Morals" have been seized at the printer's and confiscated. A correspondent of *Le Temps*, writing from St. Petersburg, mentions in illustration of the value of this censure, that when it was not only forbidden to read Hertzen's works in Russia, but even to mention his name, his books were in nearly everybody's hands. No sooner, however, was the prohibition removed than his popularity began to decline, and his paper, the *Bell*, which had attained great success, as soon as it was allowed to circulate freely fell off rapidly and soon died. Besides attacking literature through the censure, the Government has raised the postage on printed matter.

THE PROBLEM OF THE NATIONAL APATHY.

THE moral apathy of the public mind of America presents this curious question: Why is it that a people, moral, decent, respectable, possessing, as they believe, more than the average honesty of mankind and much more than the average intelligence of nations—why is it that such a people tolerate in public men the widest departure from their own code of private-life morality, and at the same time are sensitively jealous of the slightest departure from the political pathway which they expect their "leaders" to tread? How comes it that if our professional politicians are "sound on the main question" they can not only get drunk and cheat in their own social sets, but may bring their drunkenness on to the floor of Congress and exercise their knavery against the Treasury itself? If it were only the veiled debauchery of strictly private life, the problem were easier of solution. Men give a certain acceptancy to the dual life of other men, and believe or try to believe that private vices are sometimes embodied in the same man with public virtues. There is a tendency to say that so long as a man serves his country faithfully, it is nobody's business how he lives in secret. At this time in England there are men holding high offices of public trust whose private lives are believed to be stained with immoralities which, when established, society cannot wink at but must condemn; yet no one will insinuate that they have ever failed to serve the state with strict integrity. The bluntness of the English character sees in them faithful public servants, and refuses to see more. It says gruffly that we all have our faults, and every man had better look after his own instead of prying into his neighbor's. In America, we may turn back to some of our greatest men, whose private lives were supposed to be grovelling and debased, and see a record of public services which seem certainly to have been actuated only by a patriotism lofty, scrupulous, and disinterested. Society looks on such men and discerns in them *some* scrupulousness, and that it was not diluted and distributed through their whole lives, but concentrated on the public part. Society then says in practical effect: "All the scrupulosity which they possessed they gave to their country, that is to say, to us: their lack of it concerned themselves, their wives, their families, their social relations; it is no concern of ours. Let us applaud their patriotic lives, and drop a tear on their private faults." In the matter of money, too, society sees that there may be an acknowledged personal departure from rectitude with an unquestioned official integrity. All men are agreed that all men ought to pay their washerwoman; but Mr. Pitt did not. Society commiserates the unpaid laundress, and scorns Tom, Dick, and Harry for like neglect; yet nevertheless thinks it better that she should have been wronged and Mr. Pitt should have died poor, than that he should have wronged his country and died rich in plundered wealth. In brief, society perceives that the duties of a statesman constitute a trust. So long as the trust is faithfully, scrupulously, disinterestedly administered, so long society will look away from a statesman's personal shortcomings and relegate their condemnation to his personal associates or family or friends. We do not now affirm the propriety of such a course, we merely state what right-minded people, loving virtue and upholding morality, have done before, are doing now, and probably will do again.

But our present national problem is more troublesome. It is not the private life of our patriots that American society censures, but their whole character which it despises. The offences are official. The men have not the redeeming faithfulness called public virtue. The vices affect their official lives and contaminate all that comes under their official touch. The orgies of Mr. Consul-General Butler have not been his private affair; but the American consulate has been their field, and it moreover has been used to obtain them. Of the really private life of General Butler the American people, notwithstanding his notoriety, know little, and all the scandal that attaches to his name has been gathered since he began to serve his country. Barnard did not play the part of a dignified judge by day and restrain his brutality into fighting policemen or carousing with ruffians at night. Cardozo did not confine his pilferings to cheating his friends when off the bench. Indeed, many of our official knaves seem to have thought that honesty was the best policy in private life, and to have built up tolerable characters for themselves before they made party-politics their trade. Yet so lax has been the public sentiment respecting public men, that when these same sharp-sighted knaves have stepped into official life they have reversed the old maxim, and held among themselves that honesty doesn't pay. It is an interesting question how far our looseness of allowing public depravity causes it: how far the old-time strictness of exacting public virtue secured it. If men whose respected names we do not care to use here—men of gross tastes and expensive habits who still left honorable public records—if they lived nowadays, would they not be as debauched and faithless as our worst? If Arnold and Burr were actors on the present stage, would they not be high in office and millionaires in wealth? If Barnard had climbed on the bench *then*, would he not have maintained a certain dignity and fairness, such as in his first judicial years he could and did assume, and have continued through life to play the same part? If Cardozo had been made a judge a century ago, would he not have grown into a distinguished jurist, or at least have preserved the good name that the New York bar gave him when they repeatedly chose him as a rapid, industrious, fair-minded referee? Are not the American people now saying substantially to all such men something like this: "In all ordinary occupations we exact of you decency, honesty, fair dealing, a fulfilment of your promises, a performance of your obligations, something of care and prudence, much of industry and skill. In all public employments you may cheat us, lie to us, steal our money, neglect our work, debase our good name, insult us, tyrannize over us, and grow rich by all dishonest means, without being kicked out of society or even being turned out of office." It is a disheartening prospect, look where one will, under the Federal Government, among the State governments, in the Democratic party, in the Republican party; and he who looks much at it will find himself becoming morbid, and his hopes of man and free government growing less.

Moreover, it must be confessed that another cheat and pest of free governments, the demagogue, has obtained no weak foothold on our political soil. Banks and Butler started in public life as men of practical ability, distinguished indeed for shrewdness and sense, but they have sunk down either involuntarily to their natural level, or voluntarily to what they believe to be the natural level of their supporters, a respectable portion of the American people. They represent not remote districts in Texas or Oregon, but that State which is believed to stand the highest in our social scale for general education and well-diffused intelligence among its voting classes, and especially for morality and integrity and a liking for what is practical and rational. Their districts, too, when reckoned by voters are larger than eight of the largest parliamentary districts in England, and these two districts of sensible, honest New England these two men apparently control. General Butler, moreover, in his campaign a year ago travelled out of his own district and up and down the State, was heard in many places, and successful almost wherever heard, carrying Adams, the former residence of Mr. Dawes, and still part of his district, despite Mr. Dawes; carrying Springfield despite the Springfield *Republican;* and doing it all by the shallowest arts of the demagogue—by promising in one breath the most opposite things to the most opposite people, and abusing all that was most respectable and honest and good in the State.

We all know that with respect to party fealty the case is different; that there these same political mariners trim their sails with the nicest discretion, and never long indulge in any honest independence of thought, speech, or action. It is apparent enough there that the American people can still exact compliance of their public servants, that they still have the power of being obeyed. In other words, it is apparent that, so far as party is concerned—the means by which we seek the end of good government—the people will have integrity; but that so far as their country is concerned, their

laws, their taxes, their national reputation, and the general welfare of society, they are in a state of apathetic indifference, knowing that things are endurable, trusting that they will grow no worse.

One would suppose that when it came to dollars and cents, a people so sensitive to taxation as to have once rebelled against its unlawful imposition, and who laid the foundations of their national existence on the right to that particular part of self-government, would see in needless, exorbitant taxation so many fines and penalties for their neglect of their own political duties, and be quickly aroused into activity. But our taxpayers are the apathetic class. The vagabond portion of the community, which has the least to lose, and through government very little to gain, votes with commendable regularity, actuated occasionally by patriotic instinct, but more frequently by that petty rivalry which reigns in the lower strata of human nature, and finds pleasure not so much in elevating its own side as in prostrating the other. America is now in the taxed condition that England was in half a century ago, which Sydney Smith pungently ridiculed in a celebrated piece of wit and wisdom once to be found in nearly every school reader and speaker, whereat the heart of many a budding Demosthenes has exulted over the wronged, taxed Englishman, but which somehow or other has entirely disappeared from such works since the internal revenue bills and endless tariffs have come into our daily reading. No people ever needed to study the principles of taxation more, and no people with such advantages for study study them less. The Englishman of to-day is taxed but little. The imposts fall upon only half a dozen of his imported articles of consumption. His internal industries go nearly free. His land tax is trivial compared with ours. Yet he has read the reports of Mr. Wells, and is thrusting them, as a young member of Parliament recently said, into every corner and hamlet of the kingdom. The Cobden Club alone has distributed more than 200,000 copies of this American contribution to the social welfare of mankind. But the American mind has been little interested, and the American taxpayer has been so indifferent that our professional politicians have not thought it worth while to study up the subject or weave it into the staple of their discourses. At this time, when national topics are supposed to pass under national review, our political speakers are not discussing before intelligent constituencies what can be done and what ought to be done in the future; but are treating the people of the United States as though the future action of the Government were matter altogether beyond their comprehension, and are amusing them with a debate as to whether the Johnson or Grant Administration (both using precisely the same means) blundered into a greater reduction of the public debt than the other.

And yet under all the apathy there is a real interest in the public mind; a faith and not a hopelessness; a sense of security and not of despair; a belief in latent strength which can become active whenever the real occasion comes; a sense of great sacrifices freely made for great purposes in the recent war; a firm conviction that whenever necessity requires it the nation will be true to itself, and the body of the people true to their country and to each other. As to the causes which have produced this strange combination of fortunate and unfortunate qualities, we may hereafter speak of them.

THE TRANSMISSION OF PUBLIC OBLIGATIONS.

MR. CHARLES O'CONOR, whatever else he may be, is a strong writer, and his letter to the Louisville Convention must be read with genuine pleasure by anybody who likes to hear an able man thinking aloud, particularly at a season when the land is deluged with platitudes and commonplaces, and when several hundred of the feeblest or most dishonest men in the community are trying in every direction to put on an air of mingled wisdom and virtue. The letter is sprinkled thickly with very telling epigrams and very pregnant suggestions, as when he says that the contest between Grant and Greeley offers us "a blank Olympiad on one hand and four years of undefinable activity on the other," and elsewhere, as when he says that "if the support of our home industry against foreign competition is to be regarded as sound policy, it can be afforded as far as needful by a much simpler and less expensive and a far less demoralizing process than our overgrown customs establishment. The true policy is national regeneration. It is far more comprehensive than mere free-trade; its aim is to break the sceptre of the trading politician and emancipate the masses." But long brooding over the principles of Jeffersonian Democracy, combined with the not unnatural repugnance excited in the mind of a thoughtful professional man by the spectacle of great governmental powers wielded by knaves or wrested to their base uses, has made an entrance into Mr. O'Conor's powerful mind for several of the political notions which that undefined and undefinable force called "the force of circumstances" has degraded to the rank of crotchets. Foremost among these is the notion that no national debt should ever be contracted, and that the expenses even of just and necessary wars should be defrayed by the generation engaging in them, as the only safe ground against the wicked and reckless use of the public credit and the lavish waste of the public money, and against the gigantic crime of war.

There is nothing perhaps better calculated to rouse philosophic indignation—if this be not a contradiction in terms—than an examination of the manner in which the greater part of the national debts of the world have been contracted, and any prudent man may well feel alarmed at the recklessness with which loans are now made for peaceful enterprises; but it will do a great deal to reconcile us to existing national debts if we remember, as we are bound to remember, that most great wars have not been killing matches, but effectual modes of settling controversies which did not admit of settlement in any other way—or, in other words, steps in the process of human education. The thing to be lamented is, that men have not been open to other modes of persuasion. But to lament over this is after all only lamenting over the fact that mankind has not been civilized more rapidly. Who is responsible for the exceeding slowness with which the human race has approached the point of intelligence at which international differences can be settled by the submission of written briefs to a court, or by oral debate in a council chamber, is something on which no publicist of any school has managed to throw much light. The fact, however, remains, and a very distinct fact it is, that the condition of the human mind has been such, for countless ages, that differences of opinion between great bodies of men which had in some way to be reconciled, could only be reconciled by the sword; and this may be applied to dynastic wars as well as national wars, for the truth is that in the ages in which dynastic wars were possible they were apt to be national wars as well. The theory in which Sentimentalists delight, that the world in past ages was filled with raging lunatics, who never saw things as Frederic Harrison or Karl Marx or Wendell Phillips now sees them, is one which Mr. O'Conor will hardly have much sympathy with, and yet it is one to which his views with regard to war not unnaturally lead up. The truth is, that the men who fought out great wars in bygone days were men of their time, doing as much for the world as the state of the human mind would permit, and seeking the solution of great social and political problems in the only way open to them. The national debts of the world may indeed be not unfairly regarded as law costs. They are very heavy bills to pay, but considering the magnitude of the interests affected by the decisions which they were incurred in procuring, we doubt very much whether they are not fully as moderate as those of the various suits in which Mr. O'Conor has borne a professional part.

Moreover, we doubt if there be a doctrine which does more, and has done more, to produce that pulverization of society in independent, self-considering atoms, and that consequent corruption of the public conscience and degradation of "politics," which in the opinion of many are an accompaniment of democracy, than the Jeffersonian doctrine that each generation must take care of itself, and owes nothing either to the one which has gone before or to the one which is to come after. We can never have a national conscience without a strong sense of national continuity, and we cannot have a

strong sense of national continuity if we grow up with the notion that it was not in the power of our fathers to bind us, and is not in our power to bind our sons. We may fairly treat as absurd Mr. Jefferson's plan of dividing a nation into generations, each lasting nineteen years. A real generation in possession of any country has never been seen, and never will be seen. In reality, three or four generations are always on the soil together, and run into each other by gradations which no man can trace, and are bound together by ties as numerous and indefinable as the sand on the sea-shore.

But even if the fathers and mothers of the community handed its affairs over to the children every nineteen years, the doctrine that their engagements ought not to bind their successors would still be one of the most demoralizing doctrines ever set up. It would exert, if adopted, somewhat the same influence on human character as the doctrine that, inasmuch as a man's physical composition changes every seven years, his promises should only bind him for that period, and would introduce an uncertainty into public affairs which would render contracts or arrangements of any kind between nations or between nations and individuals impossible, and would surround the transmission of property with so much doubt and insecurity as to interfere seriously with the work of accumulation, or, in other words, with the habit of industry and the habit of saving which lie at the basis of civilization. Indeed, it may be said, without exaggeration, that it is the application, to all classes of public obligations, of the rule which Mr. O'Conor only applies to one, which now most seriously threatens civilization. In the ideal society of the Communists, the legislation and judicature will be supplied each day, and for a day only, by the people in the market-place; the law of December will supply no guide for a man's conduct in April, and the father will owe nothing to the child, nor the child to the father. There will be neither bequest nor inheritance, lending nor borrowing, promising nor performing; and each community will consist of a large crowd, seeking, like a herd of buffaloes, a scanty but equally divided subsistence.

The great political lesson to be inculcated in our day, and the one whose successful inculcation will bring nearly all political blessings in its train, is that each generation should exercise its honest judgment in the management of the national affairs, and should rest well assured that what is best for us will be best for those who come after us. If it is desirable that a nation should last, it is right to borrow money to maintain and defend it; and we may be certain that posterity will thank those who did it, even if it has to shoulder part of the debt. A great deal of the piling up of public debts which is going on in Europe to-day, is the result of great plethora of capital in the hands of timid or inexperienced investors, and this plethora is the result of the wonderful productiveness of steam and machinery since 1840. Governments get it easily because they offer the best security; they no doubt waste much of it; but we question whether the waste is not amply compensated for by the moral discipline which lies in the concurrence of great bodies of men in making contracts which they need not keep if they do not choose, but which they *do* keep, and transmit inviolable to their descendants. This is, rightly considered, perhaps the greatest triumph of morality ever seen.

THE ITALIAN PROSPECT.

FLORENCE, August 14.

THE telegraph will ere this have brought you the news of the decided victory which the Liberal, *i.e.*, National Conservative, party has obtained in the municipal elections of the 4th inst. You are also undoubtedly aware of the fact that this victory signifies not merely a defeat of the Clerical party, but a complete *déroute* of the Radicals also. It has demonstrated, what I have always hinted at in my letters, that the fear of the red as well as the black spectre is as yet utterly without foundation in Italy, and that it is an easy matter for the moderate Liberals to rid themselves of their noisy opponents as soon as they muster up patriotism enough to overcome their apathy, sacrifice a Sunday, and go to the poll *en masse*. This they could never make up their minds to do until the danger grew imminent, and thus it happened that, in important cities, like Naples and Palermo for instance, they allowed an imperceptible, albeit clamorous, minority to get the upper hand in all the elections. The participation of the Catholics forced them this time, however, to shake off their usual sluggishness, and, as I had foreseen, the Radicals, who for the last twelve years have filled the municipal councils of those towns, and thereby paralyzed their administration, have had unmistakably the worst of it. If I may be allowed to express the proportions in approximate ciphers, I should say that fifty out of a hundred electors took part (the usual average being no more than ten per cent. of electors who so far conquered their laziness as to do their duty as citizens), and that, out of these fifty per cent., thirty-five belonged to the National-Liberal or Moderate party, ten to the Catholics, and about five to the Radicals.

This result, as you may well suppose, has singularly strengthened the ministry, or, to speak more correctly, the minister, Signor Sella, who actually presides over the destinies of Italy. It has had an excellent effect upon the whole Moderate party, so united in 1859 and 1860, and which, thanks to this unity, had made the creation of the kingdom possible, but which ever since Count Cavour's death (1861), and more particularly since the Convention of the 15th September (1864), has been most unfortunately divided. The Piedmontese *Permanente* and the Tuscan *Consorteria* waged constant though hidden warfare with each other, and personal animosity had taken the place of public interest and political conviction in the war which raged within what ought to have been one compact party. Things had already begun to improve from the end of last year, shortly after the transfer of the capital to Rome, when both Turin and Florence were forced to admit that there was no longer any chance of either of them regaining or retaining the supremacy as the seat of the court, the parliament, and the Government. On the other hand, Signor Sella's continually increasing authority was not without influence upon this reconciliation of the divers factions of the great Liberal and National party. The present administration came into office in 1869 through the support of the Radical party, and though all its members were Moderates, still they belonged for the greater part to the Left wing of the party, and were at any rate neither Tuscans, Consortisti, nor members of the high Piedmontese aristocracy, but simple northern citizens—one a doctor, another a manufacturer and scholar, a third a professor. In taking Rome, they achieved what had been the main point of the Radical programme, and by this means wrested their best weapon out of the hands of the opposition, while by bringing in a bill of guarantees for the independence of the Holy See, and following a wise financial policy, they have succeeded in disarming the right wing of the Moderate party. Thus it happens that they have achieved what no one before had achieved in the new kingdom, *i.e.*, they have held office for more than two years. It is now nearly three years indeed since Signori Sella, Lanza, and Visconti-Venosta formed their ministry, and it is as probable as it is desirable that the former at any rate will remain still a long time at the head of affairs. For, although he has not the actual presidency of the cabinet, he is in reality by general consent the soul and vital principle of the ministry. It is moreover highly probable that Signor Scialoja, one of the ablest men of the Italian Senate, and former Minister of the Finances, will consent to take the modest but highly important post of Minister of Public Instruction, in which case he would give additional strength to the ministry.

So much as to the interior and personal side of the situation; but there is another far more important face to the question, and one which is certainly of higher interest for the distant spectator. Italy is and remains the spoilt child of Dame Fortune. She owes her very birth to the discord existing among European powers; she will owe her consolidation and security to their concord. Without the four great wars which have in latter years changed the balance of power in Europe, she would not even exist; nor could any patriotism and courage have sufficed to call her into existence. It was in the Crimean war that the seed of Italian independence was sown to which the Franco-Austrian war of 1859 gave a powerful beginning of reality. The Austro-Prussian war of 1866 procured for Italy the longed-for possession of Venice and definitive expulsion of the foreigners from the Peninsula; and, lastly, the Franco-German war of 1870 has conquered for her the last bulwark of her internal enemy, Rome. She could but lose by any new war, for the smallest warlike commotion in Europe might place her on the verge of bankruptcy; one victory of the French arms might lead to the restoration of the temporal power of the Pope. Peace, on the contrary, peace alone can suffice to bring order into her very precarious financial condition. The quiet but rapid increase of the public wealth, as the last six years have proved, will do what no financial genius, however powerful, could ever achieve; it will, within a few years, nearly double the revenue from the existing taxes, rendering them at the same time proportionately easier to bear. And on this head I might give you the most interesting and convincing statistics, for there is not a doubt that if things continue as they are at present, the Italian 5 per cents will be at par in ten or twelve years. On the

other hand, prolonged peace and a persistent though unacknowledged alliance with the German Empire against the Clerical party within and the French without will, with the death of the present Pope and the consolidation of the "usurpation" in the Pontifical States, bring about in time the recognition of the kingdom by the Church, and then Italy will be able really to consider herself in a safe haven.

Now, it is just at this moment, when peace is a question of life or death for Italy, that peace is secured for many a long year by the solemn revival of the Holy Alliance, sealed by the meeting of the three Emperors in Berlin —a Holy Alliance no longer destined to crush the national and unitary aspirations of Germany and Italy, but, on the contrary, to sanction and protect them; and directed, as in 1815, against that universal *trouble-paix*, France—not against the France which then represented modern legislation and liberty, but against the France which now represents Jesuitism and its pretensions, albeit under a republican form; a Holy Alliance between the same powers which concluded the league of despotism, but which have since become the champions of progress, to which they owe their new prosperity and strength; between powers which have become mightier than they were after [illegible]oo; the first, because it has grasped its dispersed powerless memb[illegible]th one hand; the second, because it has been liberated from the absor[illegible]nd exhausting duty of subduing rebellious subjects without the limit[illegible] natural frontiers; the third, because it has broken the fetters of milli[illegible] poor slaves whose chains at the same time fettered the nation[illegible]elopment. Whilst these three giants thus keep a tight hold over the [illegible]enemy Italy has to fear, the young kingdom can quietly bide its time[illegible]wait until it is strong enough to defend itself single-handed against any[illegible], however powerful, that may assail it in future.

Correspondence.

THE NEW YORK *TIMES* AND THE EFFECTS OF MUSICAL VIBRATION.

To the Editor of the Nation:

Sir: The *Times*, having disposed of the scholars to its satisfaction, is now undertaking to "laugh away" the scientific men. A Cambridge professor having stated at a recent scientific meeting that a bridge might be destroyed to ruins by sounding its key-note on a violin, our Thunderer makes some facetious merry over this proposition, and illustrates it by an allusion of more than Titcombian infelicity. If the *Times* was in absolute need of a historical illustration, it might have taken the walls of Jericho. True, there is a strong probability (to use the mildest term) that every regular building or structure has its key-note, the repetition of which, if persevered in, will bring it down. Cambridge (England) tradition tells us that the key-note to the magnificent chapel of King's College is found in the "Dead March in Saul"; that when the passage is played once, all the windows rattle, and, on its repetition, the massive walls tremble perceptibly. For obvious reasons the experiment has never been carried out to its probable result, and such practical difficulties will always afford an opening for small wits and sceptics. Some of the illustrative experiments, indeed, may be tried at small expense, such as breaking a tumbler by singing at it, which is stated in various books to be possible—for the subject is not a new mare's nest, as the *Times* seems to think, but has been talked and written about for at least fifty years. But it is evident that we cannot destroy a cathedral, or even a bridge, for the sake of proving a scientific probability. Such experiments must be left to a particular class of reformers.

I cannot see the wisdom or wit of the *Times's* attacks on learning and science and their votaries. Surely we have not too much of these things, too many of these men, among us. We are not as a people disposed to neglect the purely practical side of life. And if we are to interest ourselves in nothing but what is obvious to the vulgar mind, nothing but what can be weighed in the balance of trade, and tried by the tangible test of dollars, either we shall soon slide into the "let us eat and drink" theory of life, or we can only be saved from it by some reaction of the fiercest religious or ascetic fanaticism. The Tweeds and Fisks on one side, the Prohibitionists on the other, are examples in point.

C. A. Bristed.

Lenox, Mass., Sept. 4.

Notes.

In addition to the fall announcements mentioned in our last issue, we must now name the following. Lippincott & Co. will publish "The Issues of American Politics," by Orrin Skinner; "Work and Wages Practically Illustrated," by Thomas Brassey, M.P.; "Theology for Children," by Mark Evans; "Memoir of Dr. Norman Macleod," by Alexander Strahan; "A Journey to Egypt and the Holy Land," by Henry M. Harmon, D.D.; "Dickens as a Reader," by Charles Kent; "The Evolution of Life," by Henry C. Chapman, M.D.; and a large number of novels.——Lindsay & Blakiston announce Chavasse's "Aphorisms on the Mental Culture and Training of Children."——From Scribner, Armstrong & Co. we may expect a new poem by Dr. Holland, "The Marble Prophecy"; Prof. Conington's "Prose Translation of Virgil"; the first volume of Froude's "History of Ireland"; the third and last of Dr. Hodge's "Systematic Theology"; "Sermons on Living Subjects," by Dr. Bushnell; a volume of sermons by Archbishop Trench; Prof. Blackie's "Four Phases of Morals" (Socrates, Aristotle, Christianity, Utilitarianism); and "The Reformation," by Prof. Geo. P. Fisher.——Macmillan & Co.'s list embraces Amédée Guillemin's "Forces of Nature"; Sir William Thomson's "Papers on Electrostatics and Magnetism"; "Elementary Lessons in Anatomy," by St. George Mivart; "History of Holland House," by the Princess Marie de Lichtenstein; the second volume of Lanfrey's "History of Napoleon I."; "Historical Course for Schools," edited by Edward A. Freeman; and "Essays on Eastern Questions," by W. Gifford Palgrave.——Messrs. G. P. Putnam & Sons announce as their autumn list of publications the following: A new work by the author of the well-known romance of "Kaloolah; or, The Adventures of Jonathan Romer, of Nantucket"; a new edition of Kaloolah itself, which has for years been out of print; "The Memoirs of a Huguenot Family"—"a veritable history," translated from the original autobiography of the Rev. James Fontaine, by Ann Maury; "A Manual of Pottery and Porcelain," for the American collector, by Mr. J. H. Treadwell; "The Greeks of To-day," by the Hon. Charles K. Tuckerman, late United States Minister at Athens; "The Romance of American History," by Professor M. Schele De Vere; "The Mother's Work with Sick Children," written by Prof. J. B. Fonssagrives, M.D., and translated by Dr. F. S. Foster; "The Higher Ministry of Nature, Viewed in the Light of Modern Science, and as an aid to Advanced Christian Philosophy," by J. R. Leifchild, A.M.; "More Worlds than One," by Sir David Brewster; a new edition, with its statistics brought down to date, of Mr. Charles Astor Bristed's "Five Years in an English University," this being the fourth edition, and the work having for some time been out of print; "Henry Delaware; or, An American in Germany"; a new edition, edited by Professor John Nichol, of the works of George Herbert; "How to Educate Yourself: A Complete Guide to Students, showing How to Study, What to Study, and How and What to Read," by Mr. George Cary Eggleston; "Social Economy," by Professor E. Thorold Rogers of Oxford, revised and edited for American students; "Hints on Dress," by an American Woman; "The Home, Where it Should be, and What to Put Into it," by Mr. F. R. Stockton.——Mr. Edward Eggleston, the author of "A Hoosier Schoolmaster," has written, and Messrs. Orange Judd & Co. will publish, a novel of the same general character as that of his other venture; the title is "The End of the World: A Love Story," and points to something Millerite. Mr. Eggleston has become a popular writer of this kind of fiction.——Messrs. Lee & Shepard and Mr. Sumner have discovered that ten volumes are not going to hold the Senator's speeches; the work grows upon their hands, as might readily have been predicted, and there are to be two or more additional volumes. It may be questioned if any man who has been in public life in this country within the last twenty years has made twelve octavo volumes full of speeches which it is worth while to preserve.

—The book by Mr. G. H. Felt, to which we made reference last week in one of these notes, is not a book without value, nor did we at all intend to convey that impression, although the prospectus on which we commented might well enough lead its reader to suspect that he had come upon another work like Mr. Stephen Pearl Andrews's great "Alwato." That also was a book which had "testimonials" from some eminent citizens, though more extraordinary and heaven-defying nonsense has seldom got into print. It simply baffled the human understanding; it bore very well that final test of out-and-out nonsense which consists in the reader's laying down the book and searching his consciousness to know whether it is he himself or the author who has probably become a maniac, and then calling in the aid of friends to determine the point. Mr. Felt's book, as we pointed out, has the approval of Mr. William Page, Mr. Quincy Ward, and Mr. E. W. Perry, who speak of it as being valuable to students of art and instructive to themselves personally as artists. This they say after close investigation, and it would require General Schenck or a committee of Congressmen to dispute the conclusions of these gentlemen on a matter of this kind. So, too, as Mr. Felt informs us, Mr. Felt's work has been found interesting and is believed to be valuable by a number of leading Swedenborgians; by some of the professors of the Episcopal General Theological Seminary in this city, who are disposed to think that the English revisers of the Scriptures would do

well to consult with Mr. Felt; by many members of the Masonic fraternity, who are so well pleased with his exposition of the mysteries of their order that he has recently been advanced to the thirty-second degree—if that is the right phrase—he having previously taken but three degrees; by several Egyptologists, who have expressed in writing their gratification at the result of his labors; by some of our philological scholars, and by other persons entitled to express an opinion on one or another point to which his attention has been given. As we say, there need be no doubt that the work will be interesting from several points of view, and little doubt that from several points of view it will be regarded as valuable; so that whether or not it traces the golden reed of Ezekiel backwards to its origin in the "wisdom of the Egyptians" and forward through the measurements of ancient and modern architectures, and does other still more remarkable things, there is no harm in wishing its author success with his subscription list, and this we believe he is having.

—Mr. Superintendent Winsor, of the Boston Public Library, is a man to be envied. He is able to issue in abundance those guides to the books under his charge which other librarians have neither the time to prepare nor the money to print. Some libraries cannot make, others cannot print their catalogues; some confine themselves to lists of authors, though this, happily, is becoming rare. But the Boston Public Library had its subject catalogues long ago, and for the Prince Library, its bibliographical catalogue; it is now to have its *catalogues raisonnés*. To the second edition of the finding-list of History, Biography, and Travels for the lower hall—the more popular department of the library—Mr. Winsor has added concise notes, characterizing the chief of the books previously enumerated, and referring, where necessary, to other books on the same subject in the Bates Hall. Under Cortez, for instance, Cowper, Crimea, Dare (Jeanne), Europe (literary history), there are remarks which even one familiar with books might find useful, and certainly will think interesting. Under Cromwell, in a note of only twenty-five lines, fourteen writers are characterized. It is as if a manual on "What to Read" or "The Best Reading," such as have been lately published by Dr. Porter, by C. H. Moore, by G. P. Putnam, were combined in a condensed form with an ordinary library catalogue. Mr. Winsor has also introduced some other improvements not new in cataloguing, but new to the Public Library catalogues—such as giving dates of the birth and death of those whose biographies are mentioned, and adding a brief label, so to speak, ("American poetess," "English physician," and the like), and uniformly stating the dates of voyages. These trifles, as they may seem, have no doubt cost much labor. They will have a value for a class of persons for whom they were not intended, whose wants librarians have never sufficiently considered. To a person with a strong imagination, capable of covering with flesh the driest of bones, a catalogue is never dull. Reading the title of a book of travels carries him into the countries traversed; the title of a biography brings before him the subject of the life, if he has ever heard of him; the title of a volume of sermons produces a gentle shudder without the lasting fatigue of reading them; a metaphysical title puzzles, a mathematical title strengthens, and a licentious title shocks. The only drawback is the rapid transition from one subject to another. "The stories are so short," as the Scotchman said of the dictionary, that a sort of mental indigestion may be produced. Anything that induces the reader to dwell upon the separate items, anything which causes the title to call up a more vivid and more correct picture, greatly enhances the value of the catalogue to our imaginative, shall we say imaginary, reader. We fear, however, that it is not for this that Mr. Winsor has prepared his notes and additions. His purpose is strictly utilitarian. He wishes that every person who comes to his library seeking information on any subject should get not merely some book, but the very best book about it that the library contains; and this he will effect by the publication of a series of "classed lists" of all parts of the library, to be corrected and improved in successive editions. The present list deserves the title "How to Choose Books" much better than the chapter so entitled in the Library's lately published "Handbook for Readers," which is little more than a list of bibliographical helps, and should rather be called "Where to find out how to choose books."

—The "Universal-Bibliothek," published in Leipzig by Philipp Reclamm, jr., is a collection which contains a great many celebrated works—as Voss's "Iliad," Ossian, Goethe, Schiller, Kotzebue, Hauff, most of Shakespeare, some of Pushkin, Goldsmith's "Vicar of Wakefield," and many other authors, whose works are reproduced in very cheap little volumes, printed in excellent type. The price is about that of a glass of beer; each of them may be had for two silver groschen, or about six cents. The latest addition to the list is, so far as we are aware, the first American work to be placed on it—Mr. Longfellow's "Evangeline." The general merits of translations from other languages into the German are well known to the readers of that tongue. The vexed question of the suitability of the hexameter, too, is settled not only by *a priori* proof, which rests upon the variety of termination and the range of position of words in German, but also by the number of excellent and literal translations of Greek and Latin poems, as well as by original works in that measure. On the whole, no English translator from the Greek has done so well as Voss, and Goethe's "Hermann and Dorothea" lacks the crudeness and unsatisfactoriness which make most English hexameters a stumbling-block to the reader and a joy to the keen-eared critic intent on evil. Hence, in commending Mr. Karl Knortz for this translation of Mr. Longfellow's poem, which he calls an "American idyl," it is not extravagant praise to say that the German hexameters are better than the English. In other respects, the writer has done his work with great exactness as well as smoothness, so that his version is very readable.

—M. Paul Leroy-Beaulieu has republished with additions the articles contributed by him to the *Revue des Deux Mondes* in 1870 on "La Question Ouvrière au XIXe siècle." The work is a study of socialism, the remedies proposed for it, and includes a review of the various mo[illegible] which the workingman's lot has been sought to be improved, either by [illegible]lf or his friends. The special problem of France is considered in "L'[illegible]ns Dieu, mal social de la France," by M. Auguste Nicolas. Theolo[illegible] views in sympathy with Voltaire's did not prevent Charles Juste de L[illegible]u, Marshal of France in the last century, from being a model of don[illegible] fidelity and of administrative integrity. His memoirs, written at the r[illegible] of his widow by his intimate friend, Saint-Lambert, have just been [illegible]hed in the same volume with "Souvenirs de la Maréchale Princesse d[illegible]avau," of which Madame Standish, their great-granddaughter, is the ed[illegible] Mlle. Clarisse Bader, who has already composed works on "The Wom[illegible]f Ancient India" and "Woman in the Bible," now publishes "L[illegible]mme Grecque"—the Greek woman of antiquity, legendary and his[illegible]l, in Homer and the tragic poets. A special study, "historique et m[illegible]," of Aspasia has been made by M. Becq de Fouquières, who def[illegible] his heroine against her traducers, and almost makes of her, as on[illegible] his reviewers has said, a saint of the ancient world. He gives her the [illegible]or of being the first to open in Athens, at the house of Pericles, a *salon* [illegible]hich women were permitted to take part in the conversation. Mme. Len[illegible]and is engaged upon a companion work to her "Souvenirs de Madame Réca[illegible]r," which will bear the title of "Madame Récamier, les amis de sa jeune[illegible] et sa correspondance intime." Count Tolstoi's remarkable historical ron[illegible]e of "Ivan the Terrible" is now accessible in a French translation, as[illegible]ll shortly be the first part of the Prussian Staff's "Report of the Wa[illegible]f 1870–71." The[illegible] nactivity of the French fleet in the Baltic during the [illegible]r is justified by Lieut. Félix Julien in "L'Admiral Bouët-Willaumez et l'[illegible]pédition dans la Baltique." A work containing much original matter, c[illegible]scientiously prepared, is said to be M. Edmond Hugues's "Antoine Court l'Histoire de la Restauration du Protestantisme en France au XVII. siècle."

—Switzerland has made more liberal provision for defraying the expense of her exhibitors in the Exposition of Vienna than even England has done, though thus far only the Chancellor of Exchequer, and not Parliament, has made an appropriation of this kind. The sum voted by the national and state councils is 400,000 francs, which is expected to pay for the architectural arrangement and fitting; the ground-rent and care of articles exhibited; ordinary carriage and insurance; housing, feeding, and care of cattle; the salaries of commissioners and prize-jurymen. Other expenses will also be temporarily assumed, which will ultimately fall on the exhibitors or their cantons. Objects destined for the Exposition will be first judged by home commissioners, and when approved will be free of all custom-house charges in going and coming. Finally, the Confederation adds 50,000 francs to whatever the cantons may contribute towards sending Swiss artisans to the Exposition. In all respects, the Government seems to have understood its duty, and performed it. The example should not be lost on our own Government, which is unsystematically liberal in so many ways.

—The *North China Herald* makes a suggestion, of which some impecunious and untheological sinologue might avail himself to the advantage of both himself and those of us who read fiction, though the *Herald* appears to be hardly aware that Frenchmen and Germans, as well as Englishmen, have already done not a little of what it wishes to see done. In the interest of *blasé* novel-readers it recommends the translation of some of the myriads of romances and tales in which Chinese literature abounds. Many of these, the writer says, are described to him as being of consummate merit, and there can be little doubt, he thinks, that the poverty of invention in Western fiction

and the extreme familiarity of incident so much lamented, might be benefitted by an infiltration of the fresh complications of plot, new situations, and unfamiliar characters of the Chinese romancers and novelists. As for the grossness which disfigures many of the popular Chinese stories, the pruning-knife would easily remove them, he thinks, without detriment to the integrity of the story. About "the complications of plot," as to which he is hopeful, it probably is easy to be too hopeful; differences of "manners," rather than new situations, are the contributions which an unexplored literature is apt to offer, and beyond certain limits these differences detract from the interest of novels as novels merely, while substituting another but a weaker source of interest, and transferring the work into the class of books of travel. The translator and adapter who shall begin to give the Chinese novel a place on our shelves beside the French, the German, the Russian, the Norwegian, the Spanish, the Arabian, the Dutch, the great American, and the various other novels of the different tribes and kindreds and nations which now compete for our amusement, may dismiss from his soul one fear which clings to the adapter and conveyancer who works in other fields; the rascally original author will let him alone. After he has gone to the trouble of making his play or his romance, no Chinese Trollope will write any indignant protests from the antipodes, as the English Trollope has recently been obliged to write from Australia in the matter of Mr. Charles Reade's "Shilly Shally." By one of those laudable customs in which civilized nations have been so slow to follow them, the Chinese, about the time that they invented gunpowder and the printing-press, invented the plan of regarding novel-writers as disreputable scoundrels. We call the attention of Dr. Alonzo Miner to this fact. A Chinese literary gentleman may get a promotion in the custom-house of his port by writing that "sincerity crowns all virtues" in the "Just Medium," or may become an official with a better colored button or an additional peacock's feather by producing a book of excerpts from Mencius, or an ode to the effect that "when the mind is clear by examining things vices stink and virtues gladden us," or by a comment on "The Revered Book of the Highest Reason," or by censuring the wicked in some neat verses; but to write a novel and be discovered as the author is as if he should vote the wrong ticket or be caught in the wrong caucus. He feels the force of power immediately; he is "rotated" once for all, and his career is ruined. So any of our American or English men of letters who will take the trouble to learn to read the Chinese language and to write our own as well as Mr. Reade writes it, or better, may make Shilly Shallies and similar plays, unmolested by the person originally responsible for them. The mandarin who has had the luck to hit upon our fine things before we ourselves had come up with them, may privately be inflamed with a great deal of natural feeling at watching us making off with his inventions; but our man of letters will have "got him," as we may say; his post-office, or assessorship, may be securely depended upon to keep him quiet; neither unseemly display of his infirmities of temper is open to him, nor an opportunity to take legal proceedings. Unless he wishes to see his official head cut off, the mendacious heathen rages in vain, and the Christian novelist may go on his way rejoicing.

—The London *Spectator* is evidently ignorant of the character of the American "local editor" and his habits in time of Presidential campaigning. The ignorance is of the nature of bliss, we can assure the *Spectator*, and it need be at no pains to regret it, still less to remove it by making the gentleman's acquaintance. We the other day found in some country paper an absurd story, evidently concocted by a humorous editor, to the effect that as soon as Stanley —in giving Livingstone the news of the past six years—told him (in November, 1871, be it noted) that Greeley was nominated for the Presidency (in May, 1872, let it be noted again), Livingstone grew profane and swore that if that was the case he would unpack his trunk again, and stay in Africa; at that rate, civilization was a little too much for any decent man accustomed to respectable savages. This the *Spectator* actually told as having been written by Stanley to the *Herald*, and gravely commented on it, saying that the Livingstone of '66 would not have used such language; and Stanley has written to the *Times*, wondering, as well he might, that anybody could imagine him writing such stuff to the *Herald*. This is a great triumph for the "local," who will now be in better spirits and glibber of tongue than before. To do him justice, "the local," or "our local," will always lie a little; but with every fourth year, as soon as the first candidate is in the field, he hungers and thirsts for lies, and manufactures them and circulates them, both those of his own make and those of his neighbor's or friend's or enemy's, with great energy, impartiality, and enjoyment. Add to his disregard for truth an entire disregard of the face of man; an absence of reverence in general; a total lack of any looking for of judgment; an enterprising spirit of business activity; an absence of party feeling unless "the office" or "the paper" has some political leaning, and not always then; a greedy but sincere wish to hoax everybody; a talent for finding the joints in the harness of his opponent; a devotion to slang and a love of horse-play; an open and extreme fondness for lowness of all kinds; an entire freedom from religious superstition or dogmatism; liberal views in regard to prison discipline, prohibitory legislation, and similar problems; a sense of humor constantly at work; an inability to believe that anybody believes anything, his own lies included; charity towards all, malice towards none, with firmness in the wrong so long as he knows it and there are no "stamps" on the other side, and sometimes when there are—these and a few other traits of geniality make "our local" a citizen in whom we dare say the *Spectator* would not delight.

FREEMAN'S GROWTH OF THE ENGLISH CONSTITUTION.*

I.

MR. FREEMAN'S lectures suggest two enquiries which have always had a speculative interest, and are certain within the next thirty years to possess considerable practical importance.

What, in the first place, is meant by "the growth of the English constitution"? or, to put the same thing in different words, what is the meaning of the boast, often repeated and rarely understood, that the constitution has grown and has not been made?

One reply to this enquiry, and a true one as far as it goes, is that the constitution of England differs from the constitutions of other countries in not being reduced to writing. If you want to know what is the constitution of Switzerland or Italy, you may learn what you seek for by reading through the "articles of confederation" or the "statuto." But no statute or series of statutes contains the constitution of the United Kingdom; yet though it is perfectly true that the mass of institutions known as the English constitution have never been reduced to writing, and though this fact is one of considerable importance, and affects more than most people believe the practical working of the constitution, still it would be ridiculous to suppose that the essential character of any institution depended mainly upon the way in which its characteristics were recorded, or that the English constitution differed essentially say from the constitution of the kingdom of Italy, simply because the one was recorded in a definite charter, whereas the provisions of the other had to be collected from a mass of different authorities. The truth is, that students who conceive the essential peculiarity of the constitution to lie in its being unwritten, fall into the error of mistaking effect for cause. The constitution has never been reduced to writing because of its possessing certain peculiar characteristics, but it does not possess these characteristics simply because it has never been reduced to writing.

Mr. Freeman, who is both an historian and a politician, though most unfortunately he is nothing of a lawyer, affords a reply to our enquiry which, subject to certain reservations, is on the whole the most satisfactory with which we have ever met. His answer, which ought to be read at full length in his own pages, is in substance, and when much curtailed, as follows. What is called the English constitution is in fact a body partly of real laws, partly of customs and habits having in practice nearly, if not quite, the force of laws, and any one who wishes really to understand the working of the English system of government must distinguish with great care the legal from the conventional or constitutional part of the constitution. If, for example, Mr. Gladstone were in a time of excitement to proclaim martial law and to hang without form of trial Mr. Disraeli or other political opponents, he would, even though receiving the direct sanction of the Queen, commit an act as directly illegal and as directly punishable by the courts of law as though he were to pick Mr. Disraeli's pocket. In fact, all the numerous acts of indemnity to be found far too frequently in the statute-book are distinct recognitions of the fact that there exist certain definite legal rules which the ministers of the Crown cannot break without exposing themselves to punishments enforceable by law. But suppose, on the other hand, that Mr. Gladstone finding himself in a minority were to dissolve Parliament, and finding himself in a still greater minority in the newly elected Parliament were to keep office by means of a new dissolution, or were to hold power in defiance of constant votes of censure, he would certainly be held by most persons to have done an unconstitutional act, but he would not have exposed himself to any legal penalty. In other words, he would have broken a conventional rule but not have violated any law. It is further worthy of notice that the English constitution, though never recorded in any one statute or charter, consisted originally wholly, according to Mr. Freeman, of distinct legal rules, and that the conventional part of it is of later growth than the legal portion.

* "The Growth of the English Constitution, from the Earliest Times. By Edward A. Freeman, M.A., Hon. D.C.L., late Fellow of Trinity College, Oxford." London and New York: Macmillan. 1872.

"Up to the end of the seventeenth century no distinction could be drawn between the constitution and the law. The prerogative of the Crown, the privilege of Parliament, the liberty of the subject, might not always be clearly defined on every point. . . . But all three were supposed to rest, if not on the direct words of the statute law, yet at least on that somewhat shadowy, yet very practical creation, that mixture of genuine ancient traditions and of recent devices of lawyers, . . . the common law. Any breach, either of the rights of the sovereign or of the rights of the subject, was a legal defence, capable of legal definition, and subjecting the offender to legal penalties. An act which could not be brought within the letter either of the statute or the common law would not then have been looked upon as an offence at all."

But "since the seventeenth century things have greatly altered; there has been a series of changes, of no less moment than those which are recorded in the statute-book, which have been made without any legislative enactment whatever. A whole code of political maxims, universally acknowledged in theory, universally carried out in practice, has grown up without leaving among the formal acts of our legislature any trace of the steps by which it grew." . . . . "We have now a whole system of political morality, a whole code of precepts for the guidance of public men, which will not be found in any page of either the statute or the common law, but which are in practice held hardly less sacred than any principle embodied in the Great Charter or in the Petition of Right. In short, by the side of our written law there has grown up an unwritten or conventional constitution."

Two points are specially noteworthy. The first is that of the rules which, to the minds of ordinary Englishmen, make up the constitution, by far the greater, and in some respects the more important, portion rests upon practice or habit and not upon law. The second is that conventional constitutional rules are in fact nearly as strictly obeyed as rules of positive law. To use the language of a certain class of jurists, rules of political morality exert in England nearly the same force as is exerted there by positive laws sanctioned by the strictest legal penalties.

Mr. Freeman is, as we have said, an historian, but he is not, though he himself seems scarcely aware of the fact, a jurist or even a competent lawyer. As far, therefore, as the guidance of great historical knowledge and sound common sense can lead him, he has been singularly successful in describing the nature of the English constitution. He is perfectly right in distinguishing its legal from its conventional portion, and he is to our mind right in holding the distinction to be one of first-rate importance. But a want of subtlety, combined with an ignorance of the nature of law, makes him apparently incapable of fully working out the distinction which he has seized. Most of what he says is true, but it is by no means the whole truth, and it is occasionally mixed up with dangerous error. He fails, in the first place, clearly to see, or at any rate to make plain to his readers, that the constitution consisted, from the very earliest times, in common with most institutions of the Middle Ages, to a great extent of fictions. No one, for example, can read Professor Stubbs's excellent work on documents illustrating constitutional history, without perceiving that a great number of forms, such, for example, as the alleged "consent" of Parliament, covered at all periods something fictitious. They meant more at one time than another, but they never really expressed the plain facts of the case. Mr. Freeman himself is in one instance imposed upon by what really is little more than a fiction. "Each step," he writes, "in our progress took the shape not of the creation of a new right but of the firmer establishment of an old." If he means by "taking the shape" simply "was alleged to be," we make no objection to his doctrine, but in reality he intends to assert or imply that the establishment of free institutions was in some sense a restoration of old rights, and in fact seems to be under the amiable delusion that at some unknown period Englishmen possessed the freedom which in fact has only been the prize of centuries of long contest with arbitrary power. The source of this delusion almost certainly is that Mr. Freeman himself has been influenced by the fiction, which was very useful in its day, but nevertheless a fiction, that whenever the Commons obtained a new right, they were in reality asserting an ancient privilege. He further hardly perceives that at bottom even the conventional portion of the constitution rests upon the fact that its rules could be enforced by something very near akin to legal proceedings. It is, for example, perfectly true that the Crown could legally keep in power a minister utterly noxious to the House of Commons, and that neither the Queen nor the minister himself will incur any legal penalty. But it is not true that such conduct would only be visited by moral censure. The House of Commons always could, and no doubt in an extreme case would, refuse to pass the Mutiny Act or to grant the supplies, and such a refusal would put the minister in this dilemma: he must, to carry on the government, either resign, in which case the constitutional rule is enforced, or commit some distinctly unlawful act, in which case he becomes exposed to legal penalties. It may no doubt be said that in 1783 exactly the state of matters we have supposed arose, and any one who wishes to understand the real principles as contrasted with the mere forms of constitutional government can, we fully admit, do nothing better than examine into the causes which enabled George III. to keep Pitt in power in face of a tremendous majority of the House of Commons, led by the ablest statesmen of the day. The cause we take to have been simply this, that Pitt, though not supported by Parliament, was enthusiastically supported by the nation, and that the nation held then, as they hold now, that the power of Parliament was derived from the electors, and was not a power meant to be used in opposition to the will of the persons who gave it. This theoretical view came in practice to this, that Pitt could keep in power simply because by dissolving the existing Parliament he could obtain a large majority in his favor. George III. would have been horrified by the idea that he recognized the doctrine of the sovereignty of the people. Nevertheless, he obtained his triumph by acknowledging this sovereignty in the most decisive manner. Up to 1783, it was the theory no less of the King's opponents than of the King that Parliament had a power quite independent of the electors, who, indeed, according to the views of that day, which you may still find expounded with the utmost ingenuity and eloquence by Burke, had little other duty than to elect good men as representatives, and then to allow their elected members to mould the policy of the country. Now, on this view the conduct both of the King and of Pitt was unconstitutional from beginning to end. The King ought never to have dismissed Lord North, and Pitt ought never to have come into office, but both the King and Pitt, forced by the exigencies of the moment, took a more correct measure of constitutional principles than Burke and his associates, for the King and his minister perceived for once that the object of the constitution was to enable the electors to carry out the policy which they preferred, and, by defying the coalition, established decisively what we take to be now an admitted principle, that a minister is justified in retaining power in opposition to the House of Commons if he can count on the support of the constituencies.

We have dwelt on this point because Mr. Freeman seems to consider Pitt's conduct as unconstitutional, and in so doing seems to us to betray both a tendency to look rather to the forms than to the essence of constitutional government, and to consider conventional constitutional rules as being much more definite, much more strictly obeyed, and much more generally admitted, than they are in reality. To perceive the fluctuating and uncertain character of these rules is of absolutely first-rate importance if you wish to appreciate either the merits or demerits of the English mode of government. There are many courses of conduct which one man would call constitutional and another violations of the constitution. Suppose for example that the Queen had passed a veto on the bill for disestablishing the Irish Church, Mr. Freeman and his friends would without doubt have denounced her conduct as unconstitutional, but a large conservative minority would have seen in this act a righteous exercise of the prerogative of the Crown, and they could have appealed to the fact that the Queen was exercising a power which had undoubtedly been exercised without blame by some of her most distinguished predecessors. Mr. Freeman and his friends would, we conceive, have been in this case in the right, simply because under the supposed circumstances the spirit of the constitution would have been sacrificed to its forms, and because the understanding on which in modern times the government of England is carried on would have been violated. And this in fact brings us to what is at bottom the fundamental characteristic of English constitutionalism. The whole system depends on a body of understandings. It is understood that the Crown shall not employ the veto. It is understood, though by no means so distinctly, that a minister must go out of office under an adverse vote of the House of Commons. It is understood, and still less distinctly, that the House of Lords must yield even against their own convictions to the clearly expressed will of the House of Commons. But each and all of these understandings have varied at different times, and will greatly vary in future. They are not understood in exactly the same sense by all persons and all parties, and are, it must be added, extremely likely to be misunderstood. The British constitution, in short, consists of a certain number of laws and of an infinite number of conventional rules which have not the certainty, the clearness, or definiteness of laws, but are rather customs or understandings which, like the law of honor, to which they bear some resemblance, are liable to fluctuate from time to time.

SPECIMENS OF EARLY ENGLISH.*

WE are glad to see that "Morris's Specimens" has come to a second edition. It was the best book of the kind. The new edition will be better yet. Part II., which makes a volume of four hundred and sixty pages, is first to appear, and is made up mostly of matter which was in

* "Specimens of Early English. A new and revised edition with introduction, notes, and glossarial index. By the Rev. Richard Morris, LL.D., and the Rev. Walter W. Skeat, M.A. Part II. from Robert of Gloucester to Gower, A.D. 1298-1393." London and New York: Macmillan & Co.

the first edition. There are, however, some changes in the "Specimens," and the notes and vocabulary have been rewritten, and a large body of etymological matter accumulated in the last; references to the passages where the words occur are also added. And now with its grammatical introduction, its judiciously chosen and carefully edited selections, historical and philological notes, and copious glossarial index, it presents our students of the mother-tongue with a very desirable apparatus for the study of the English of Chaucer and his times. It ought to be used in our high schools and academies. It is a great advance on the old books. But to satisfy thoroughly our classical teachers, and they are the ones who must be satisfied before it can be generally used, it really needs a good deal of. additional matter. There is enough given to enable good scholars to guess out the meaning pretty surely. But the Latin masters want rules or some notation by which the student can tell exactly how to pronounce every word; they want a vocabulary so full that even a dull boy can find out the meaning of every word, if he tries; they want paradigms and rules so that the boys can parse it all out, look up their accusatives, genitives, and datives, and their subjunctive moods with reasonable certainty; and they want prosody enough to handle the metres of the poetry.

It must be admitted that there is no very near approach made to the supply of these wants. For pronunciation and metre we are referred to the work of A. J. Ellis on "Early English Pronunciation," and an essay on "Alliterative Poetry" in the "Percy Folio MS.," which ought to be in the hands of teachers, but which are surely inaccessible to school classes of students, and unmanageable by them. The selection from Chaucer, however, has the metre described pretty well so far as the division into syllables goes; where letters now silent are pronounced, a diæresis is printed over them, and there are some notes. This help is so important that a few errors are worth noting:

> "I prey to god in honour hir susteene,
> And wolde she were of al Europe the queene"
> —(Lines 160, 161),

should read *susteenë;* the infinitive regularly has its final *en* or *e* sounded; and the rhyme demands *queenë*, to which the fact that the Anglo-Saxon *cwên* is a monosyllable is no objection, as such words are abundantly found to carry the *e* of the other cases into the nominative. The same rhyme is found in lines 391, 392:

> "And preyde hir for to ryde agayn the queenë,
> The honour of his regnë to susteenë."

Lines 692, 693:

> "This holy mayden, that is so bright and sheene,
> And thus hath Crist ymaad Custance a queene,"

where we should read *sheenë*, since the Anglo-Saxon adjective is *scéne,* and the final *e* is a part of the stem, and regularly sounded in Chaucer. Lines 230, 231 read:

> "To getten hir that hath my lyf in cure,
> For in this wo I may not longe endure,"

where we should read *curë*, as a derivative from Latin *cura,* like *creaturë* (lines 463, 615), *causë* (line 252), *tirannyë* (line 165), etc.; and *endurë* as an infinitive. So in lines 188, 189 we should read *curë, durë.*

> "Now woldë som men waiten, as I gessë
> That I shuide tellen al the purveiancë
> That themperour, of his gret noblessë
> Hath shapen for his doughter dame Custancë"
> —(Lines 246-249).

In the third line we are told that *of* constitutes a whole foot; but really the *our* of *emperour* serves as two syllables, as frequently occurs in somewhat similar cases in Shakespeare and elsewhere:

> "but if mine, then yours,
> And so all yours: O! these naughty times
> Put bars between the owners and their rights,
> And so though yours, not yours.—Prove it so."
> —Merchant of Venice, iii. 2.

Lines 400–406 read:

> "Nought trowe I the triumphe of Iulius,
> Of which that Lucan maketh swich a bost,
> Was rolailer, pe morë curious
> Than was thassemblee of this hlisful host.
> But this scorpioun, this wikked gost,
> The sowdanesse, for al hir flaterynge,
> Caste vnder this ful mortally to stynge—"

in the fifth line of which we are told that *But* constitutes a whole foot, *this scorp* being the second foot, and so on. To our metrical sense such a prolongation of *But* in this connection is not Chaucerian, and we would suggest that the *scorp* furnishes two places, as so frequently in French. As Diez says, the combination *sc,* which the Latin often has, seems to be too hard for the daughter-speeches, especially at the beginning of a word, where they divide it by putting an *e* before it, whence modern French *école* for old *escole* from *schola, écriture* for *scripture,* and the like. In this line the preceding *this* promotes a prolonged utterance of the *s* in *scorpioun:*

> *But this ẽscorpioun, this wikked gost.*

The fulness of the glossary may be judged from the following trial of it upon a few lines in Barbour, page 204, beginning at the top:

> "Quhar throu the vod a vattir ran,
> Thiddir in gret hy went he than,
> And begouth to rest hym thair,
> And said ne mycht no forthirmar."

Quhar, throu, thiddir, hym, thair, mycht, forthirmar, are not in the glossary at all; *hy* and *no* are there, but not with the meaning required here, or anything like it. The spelling *thiddir* ought to be given under *thider, hy* under *hye, thair* under *thar.* These variations and omissions would puzzle a beginner. As for niceties of case-endings and syntax he would be all at sea.

To future editions of this work we may look with confidence for such improvements as advancing scholarship shall suggest. Meantime, we may well be glad that we have so much.

RECENT NOVELS.*

DR. GEO. MACDONALD is hardly to be congratulated upon his success in his last novel, "The Vicar's Daughter," unless, indeed, an artful concealment, or rather attempted concealment, of his own personality, and his masquerading in petticoats, with a perpetual harping upon the joys of maternity, and the discomforts of pregnancy and the terrors of confinement alleviated by chloroform, can be considered an admirable intellectual feat. To be sure, it must be said that Dr. Macdonald's aim being what it was, he has come very near reaching it. Reading the volume one would be very strongly of the opinion that it was actually written, as it pretends to be, by a young woman who was as silly and empty-headed as the tamest vision of the misogynist's dreams. That the author found any difficulty in wearing this disguise is not apparent. He seems to feel sincerely the joy that young unmarried women exhibit, in the sight of men, over their friends' babies. He is at home in the nursery, in fact, he shows a proficiency in the care of young children that must make mothers, tormented by careless and ignorant nurses, sigh with envy. He imitates admirably, if the process by which he produces it can be called imitation, the platitudes of his heroine, who is for ever showing a temper of her own, then rushing up to her "big brown bear of a husband," and gushing, and kissing him to make all smooth again. He sees far enough into the intricacies of the feminine mind to give utterance now and then to the cheap and familiar philosophy which is shown by its profound contempt for the stupidity of men, its firm belief in the necessity o marriage for all mankind, and its crude so-called religious enthusiasm. If almost any other writer were to draw such a character for a heroine, as if under the opinion that women were nothing but producers and caressers of babies, and semi-hysterical housekeepers for their husbands, we feel confident that the women themselves would be the first to raise an outcry against the narrow-minded cynicism of such a view. They would naturally demand that some credit should be given to the higher feminine virtues, to their grace, their dignity, their purity, to the real loftiness of their minds. But Dr. Macdonald contents himself with the more ignoble side of women, and strives to make his book palatable by his usual device of employing a sentimental religious view of life, which to many minds will seem highly irreverent. In some of his earlier novels there was a warm devotional feeling which pleased a great many of his readers, but in this he seems to imagine religious content to be a state of mind not very unlike the feeling one has after enjoying a good dinner or receiving a pleasant and long-expected letter. It is always a delicate matter to treat of another man's religious principles, and if Dr. Macdonald finds his soul set at rest by his easy view of the direct interference of Providence in the affairs of men, no one would care to disturb his peace of mind, but he will find it quite as difficult to give his novels mere worldly success, as do avowed writers of tracts with their labored mixture of profane and sacred subjects. As a thinker we would place him in

"The House of Yorke. By M. A. T." New York: Catholic Publication Society. 1872.

about the same rank as the once notorious A. K. H. B., the "Country Parson." The two writers have the same egotism, the same fondness for sordid, petty detail, and about the same explanations for the mysteries of existence. Dr. Macdonald, to be sure, has shown in some of his writings more imagination than the Country Parson ever thought of anybody's having, but in this volume there is no trace of it, unless, perhaps, in his plan, as exemplified by the work of Miss Clare, of reforming the vicious by means of music. Those who object to our view as prejudiced we would respectfully urge to read the last chapter of the story and then to say frankly whether or not it approaches inanity.

While "The Vicar's Daughter" deserves harsh treatment, it should not be forgotten, indeed, it only makes such a failure as this worse, that Dr. Macdonald in his other novels has produced some meritorious studies of character, and has written some really imaginative stories, though many of them are spoiled by the strange lack of training that prevents the author, apparently, from discriminating the relative value of his different ideas. He is like a frank person who wearies a perfect stranger by an outpouring of all his favorite tastes in food, dress, religion, and art, who openly states what he had for breakfast that morning, and whom he hopes to marry next year, where he met her, how old she is, the wealth of her father and mother, etc., etc. Honesty is a virtue, but it has its limits as a means of social intercourse. In all of Dr. Macdonald's works there is a lack of dignity, and in none is this more clearly shown than in "The Vicar's Daughter."

As a sort of contradiction to what we said the other day about German novels, although we still hold that it was true in the main, we have a novel translated from the German which is by no means uninteresting. Its title is "At the Altar." There is no very profound study of character in it, but it is tolerably well composed, with a carefully drawn and rather exciting plot. It is not a story that would have been chosen for publication by the editors of the *Catholic World*, but yet it is written without any abuse of the Roman Church. Some monks appear in it in no flattering way, but so do other secular persons. As a whole, it is rather melodramatic, but far from unreadable. The translation is a good one.

Mrs. Mühlbach having come to the end of her historical novels, which threw a dark veil of romance over the dry records of history, has written a social novel. "The Story of a Millionaire." Its merit is about that of the works of Mrs. Caroline Lee Hentz, Mrs. Holmes, etc., in this country; so we may suppose it will be one of the most popular works of the year. In Germany Mrs. Mühlbach holds almost the same position as a writer that these ladies do here. This may serve as a specimen of the author's style:

"And now, as Camilla, absorbed in her reading, sat there in inimitable gracefulness, Leonore was as if fascinated by the appearance of her sister, so saintlike as she sat there surrounded with an effulgent halo by the bright rays of the setting sun.

"'Look, mamma,' she whispered, 'look at Camilla! She is beautiful as a dream and delicate as an elf.'"

Readers of German, and especially admirers of Turgenef, who, we hope, are an ever-increasing number, will be glad to hear of the appearance of the German translation of another of his novels. For the benefit of those who only know him in a French or English dress it is to be hoped that a version will soon come out in one or both of these languages. The story is a simple one, the treatment of a problem which he has already discussed at various times, namely, the strange infidelity of a man to the woman whom he really loves, under the force of the temptation presented to him by a woman whom he does not respect, but whose influence he cannot withstand. In "A Correspondence," a story published in the *Galaxy* of October last, the conditions were not exactly the same. Alexis, the hero, was, perhaps, not actually in love with Maria Petrowna, but to his own ruin and the despair of Maria he fell an easy prey to a woman whom he madly loved, whom he yet despised, and who was thoroughly indifferent to him. In "Smoke" we see the suffering and the conscious, inevitable degradation of a man whose unholy passion benumbs him to the endurance of seeing his honor in the dust at the feet of the woman who has completely fascinated him. This novel, as we have said, bears some resemblance to them. Its title is "Frühlingsfluthen."

The story is as follows. Dimitri Sanin, a young man twenty-two years old, is at Frankfort-on-the-Main, on his return to Russia after a year or two of journeyings. On the very day of his proposed departure he goes by chance into a conditorei or café, just in time to help a family in great distress over a prolonged fainting-fit of their boy. They are grateful for his assistance, which is successful, and invite him to spend that evening with them. Since he does not start until eleven, and especially because he is invited by a very charming young woman, he accepts. He lingers, however, too late and finds that he has to postpone his departure. He is easily reconciled to this, notwithstanding the fact that he finds the charming girl, Gemma, is engaged to another man. He accepts an invitation to a picnic from her betrothed, but, while they are all enjoying themselves in the country, Gemma is insulted by a drunken officer. Her lover contents himself with a denunciation of military insolence, but Sanin fights a duel with the officer. To be as brief as possible, they love one another, the betrothed is thrown over, and the two, Sanin and Gemma, are engaged. Nothing could be more charming than this account of their love, of its growth, so sudden with both, of her delicate reserve and his youthful joy. He is of course anxious to marry her at once, and for that purpose goes to Wiesbaden in order to sell, if possible, his estate in Russia to the wife of one of his old school-friends. Gemma lets him depart with timid, repressed fears, and he goes away, only anxious to finish his business and return. Readers of Turgenef can readily think for themselves how well he tells this story, of which we give merely the meagrest outline. No one can tell a love-story with greater delicacy than he, and here he is telling the story of a first love.

Sanin meets his friend's wife in Wiesbaden, but finds that his visit will have to be one of three days, before all arrangements of the sale can be made. During these three days this lady, Mme. Polosoff, is charmed by him, flirts with him out of curiosity, indifference to her husband, and satiety of the easy conquest of most of her suitors' hearts. He is first indifferent, then disgusted, then in spite of himself, involuntarily interested; she is bold, and he falls a ready victim. He becomes an infatuated lover, and never sees Gemma again. Her heart is not broken; within a few years she marries another man; but as for Sanin, he—as is told us in a few lines, for with his treachery the novel really ends—leads a wasted life, and in his riper years

"Returns to his native land; a poisoned, aimless existence; petty toil; insignificant occupation; bitter, fruitless repentance, and equally fruitless and bitter forgetting; no evident, but a persistent, unrelenting punishment, like a trifling but uncurable wound; like paying in pence a debt too great to be reckoned."

This is but a small part of the story; let those read it who care to read a charming love-tale and a sad tragedy. For obvious reasons it may not be properly recommended to inexperienced readers, but for them it was not written. Nothing of Turgenef's does harm, but not everything he has written is to be recommended in regard of conventional taste. This novel is not written *pueris virginibusque*, though we hardly know a novel with a healthier moral.

"Three Generations" is an incredibly monotonous, uninteresting record of a woman's life, told apparently at extreme old age. The dulness is interspersed, not broken, here and there by accounts of fires in the village, tornadoes, death-bed scenes, drownings, funerals, and tooth-pullings. The exaggerated fidelity of the description of American life of fifty or seventy-five years ago gives the reader so strong an impression of the dulness of that time that he cannot help calling the picture accurate, and his bosom is thrilled anew with patriotic respect for his forefathers who were able to endure so much. Any page that may be opened will give the curious reader an exact idea of the merits of the book, without tempting him to neglect any important business, even on a hot day, for the frivolities of fiction. After all, there are other qualities besides simplicity. The illustrations match the book admirably.

"Aytoun" is much better written than the novel we have just mentioned, and indicates far more power than one often finds in new stories. But it must be said this is a conjecture more from certain qualities that the author seems to possess, than from their use in this novel, which is far from being noteworthy for its interest. It is, to a certain extent, an American imitation of an English novel. That is to say, the *mise en scène*, the manner of life of the characters, is, to our minds at least, very far from what one finds on this side of the Atlantic. All the people are aristocratic idlers, who hunt after the orthodox English fashion, and who, in their aristocratic idleness, despise the sordid money-maker in a way that would make them very obnoxious to most of us Americans. The plot of the tale is very painful, needlessly so; and a story cannot be liked which contains nothing but unredeemed misery, especially when the characters are thrust into their sufferings as dolls into their raiment, at the caprice of the author, and not as the result of their own actions. We feel inclined to speak thus strongly because it seems to us as if the writer could do much better than this. She is careful, writes well, with dignity and a respect for her task. In a tragic ending there may yet be a victory of true dignity—in fact, that is what makes true tragedy—but this story seems to us a failure, because, while it undertakes to represent the superiority of the sense of duty which binds a girl to an unfortunate brother, to the love which she feels for her lover, we do not receive any impression of doubt, of struggle, but rather of a cheerful acceptance of an excuse to be rid of the calm importunities of a sluggish, almost unwelcome suitor.

"Unclaimed" may be recommended to young ladies for the hour they

may take for lying down after bathing to let their hair dry, or for the equivalent leisure of those at the mountains. The story has no merits except an amiable desire of the narrator to tell a pleasant love-tale. They all marry at the end of the book, rejected lovers are caught in the rebound, so to speak, by some other equally charming person, and all is joy and happiness. We quote a few lines for the benefit of maturer readers:

"'Florence Moore! Florence Moore!' muttered Sir Henry Trevor, as he almost staggered into the open air. Immediately after the departure of the ladies he had complained to his host of a violent headache and left the room.

"'Florence Moore, my own, my darling! am I dreaming? It is not an uncommon name. I must get over this;' and with an unsteady hand he lit a cigar."

We decline to solve the mystery.

The rather curious story, "The House of Yorke," has in it much good feeling, much good thinking, some pretty poetry in prose, some clever but slight sketching of character, some very unreal and clumsily constructed simulacra of living human beings, some humor, much refinement, which seems to have been at one time pained, but which attracts. As a novel, the "House of Yorke" is not at all or very little skilful or interesting, though there are some good scenes and situations. Notably there is a love scene between Miss Clara and her lover which a very old novel-reader will enjoy, as, indeed, he will enjoy most which that young lady is and does and says, as well as most which is said and done and been by her father before her. These two figures stand out quite likelife, especially when the young lady's notion of a "Dick" is about, or the hero Carl—a most virginal conception, who being alive would be meritorious of instant death. All the Yorke family in fact are apparently taken from the life, and if they are hardly a well-composed and well-painted group, they make a very good photographic group, well colored. We must praise also for its interest some portions of the story which seem to us very good as transcripts of the thoughts and feelings of a child under certain circumstances. Fresh, sincere, and interesting this part of the book seems to us, though here and there marked by a crudeness and want of reserve which speak of youth in the artist, and of an untrained hand, but which will not prevent her conciliating the good-will of those who make her acquaintance.

The out-and-out novel-reader and the critic who declines to call a novel good which has not characters well wrought out and a main action logically developed to its end, will not call this a good novel. It is not a developing of characters to say of them for some pages together that they became more and more thoughtful, and better and better, and that the better they got, the more they found Protestantism a very incomplete and unsatisfying form of religion and by-and-by became good Catholics. This may be true; we have never tried the process except to the point of getting better and better; but it is not writing a good novel to make this averment, even though the truth, if the truth it be, is presented from behind the stalking-horse of a "Carl," a "Dick," and some other figures.

There is, however, good reading in this poor novel. One may read it with great pleasure if one is an enthusiastic Roman Catholic; or even if one's self is not an enthusiastic Roman Catholic, but likes to observe the "flame of sacred vehemence" and little sense in other people; and one may read it with a pleasant and laudable triumph and indignation, if one is a well-grounded Protestant, and either thinks the Pope of Rome a very designing personage or a much misguided old man. And if one is a descendant of the men who some forty-odd years ago burned the nunnery and school-building at Charlestown, Massachusetts, or of the sound Know-Nothing blockheads or rascals who still later tarred and feathered a certain Father Bapst in Maine, one may take a personal interest in the book and be pleased to read it. However, all these indicated questions are as little fitted for discussion in a notice of a novel as in the novel itself; so we choose rather to say to our readers that in "The House of Yorke" they will find beside these things some things which are good and pleasant, and that for the sake of these they will readily forgive the writer her violence of anti-Protestantism. As she would perhaps tell us in like case—she may very well be forgiven, because she evidently must have personally experienced a very poor sort of Protestantism or she would never have turned Papist. With which piece of abuse in return for all that we have endured from her in going through her book, and with an invocation of the glorious and immortal memory of the last King William but one, the Dutch traitor, namely, who won the battle of the Boyne, we take leave of our agreeable author.

Scrambles in the Alps. By Edward Whymper. (Philadelphia: J. B. Lippincott & Co. 1872.)—It may be doubted whether Mr. Whymper's book will find a very general or sympathetic recognition among readers on this side the Atlantic. Its pervading spirit is as foreign to our national character as its material, and in some sense its scene of action is unfamiliar to our experience. The average American, we know, is pre-eminently utilitarian. Daring, energetic, and persevering above almost all others where there is any demonstrable good to be gained, he is not prone to the outlay of either physical or moral power merely for the pleasure of its exercise. Given a North Passage to discover, a mine to sink, or a trading colony to found in the midst of a howling wilderness, and he is ready to endure almost any amount of toil and danger in view of the tangible gain he foresees as its result. It may be doubted, however, whether in the scale of comparative value the problematic advantage to science of a little more or less barometric or geologic observation would seem a fair equivalent for the very appreciable risk of being knocked on the head by flying débris, hurled over a precipice, or congealed in an avalanche or a crevasse. Nor with the best of inclinations has he generally within easy reach the means of cultivating the form of adventure which lends such a charm to the work before us. The only heights in our country worth scaling, in the true Alpine sense, are at some thousands of miles distance, and the journey thither long, fatiguing, and expensive. To reach Mt. Rainier or Monte Rosa requires for the inhabitant of Boston or New York about an equal outlay of time and expense, but in either case too much to render it probable that glacier climbing will, for a long time, if ever, take prominent place among our natural forms of recreation.

A good many readers, however, those who love personal adventure and those who love nature, will find "Scrambles in the Alps" both instructive and fascinating. The ineradicable sympathy with pluck and manliness which clings in all our souls will inspire a certain almost unceasing admiration for men who, like the author and his friends, welcome danger for the inspiring exercise of all the physical and mental powers which it brings with it, and in our unclambering enjoyment of grandeur in natural scenery will lead us, on the *omne ignotum* principle, to envy the exceptional glories which lie open to the mountaineer in the culminating moments of his glacier life.

The book is, as its title indicates, the record of sundry Alpine expeditions in the years 1860–1869, which in general, as suggested in the preface, fall into two groups, those directly or indirectly connected with the Mont Pelvoux in Dauphiné, and those which cluster about the Matterhorn. The author's descriptions are clear, direct, and succinct, sometimes fragmentary and epigrammatic, but always bright and picturesque, and occasionally lightened by a gleam of almost unconscious humor. The reader will find in the perusal the difficulty incident to all works of mountain travel, that the author, absorbed in his description, and with the minutest features of the scene clearly before his own mental eye, tries to describe too much, and expatiates on details of event or locality which the imagination of the reader, unaided by accurate maps or models, refuses to grasp. One feature of difference with such books of the same class, as for example Prof. Tyndall's, will hardly escape notice: that while these subordinate scrambling to science, Mr. Whymper treats the scrambling as the main point, and makes his observations collateral and infrequent. The book, however, is full of useful, practical hints to those who may in future wish to dare the dangers of glacier work, or to look back with the eye of comparative criticism on dangers past. The remarks on the use of the rope, ice-axe, and on tent building will commend themselves to tourists who have ever ventured above the snow line. On the actual danger involved in his favorite pursuit, Mr. Whymper philosophizes with considerable point in an account of a solitary ramble on the Col du Lion, and concludes that "that which is within a man's power varies of course according to time, place, and circumstance, but as a rule he can tell pretty well when he is arriving at the end of his tether, and it seems to me, although it is difficult to determine for another, even approximately, the limits to which it is prudent for him to go, that it is tolerably easy to do so for one's self." Mr. Whymper, however, overlooks the fact that, as appears in almost every chapter of his book, the worst risk does not usually lie at, or outside, these limits of extreme difficulty, but rather far inside; and that the worst accidents have usually happened not when the victims were doing their utter best, with every nerve at strain and every faculty alert, but when they were jogging easily along in the temporary repose of an at least comparative security. He naïvely invalidates the force—as encouragement—of his own argument by the minute care he takes to show that in the two worst cases cited in the book (his own terrific tumble on the Tête du Lion, and the Matterhorn catastrophe of '65), the tumble came at points of by no means exceptional danger or difficulty.

In contemplation of this last-mentioned accident which so shocked all Europe and America at the time, which has done more than almost any other to bring mountain climbing into disrepute, Mr. Whymper's book assumes almost tragic outlines and proportion. As it is the last and most prominent event in the history, so everything which goes before seems to bear upon it or lead up to it. Through all the previous descriptions we are oppressed with a certain sense of coming catastrophe, and the most cheerful scenes and pictures

are clouded by the pathetic interest of the last sad event in which the author was to figure, and for which he was, in no very indirect sense, responsible. For in very truth it is clear that to the shrewd and thoughtful observation of Mr. Whymper it is due that the ill-fated party of July 13, 1865, ever got to the top of the Matterhorn at all, and thence, it might be maintained, in such melancholy fashion to the bottom. Of all the various attempts to climb the mountain, in some half-dozen of which our author has taken part, all or nearly all had been made on the apparently more accessible faces and ridges to the southeast and southwest. Mr. Whymper was almost the first to discover that the terrible east face which fronts the traveller in his way over the St. Théodule pass, so far from being as it seems nearly perpendicular, in reality presents a very accessible slope, aided furthermore by the dip of the strata, which presents something like a series of natural galleries or stairways. Up this face the ascension was made, with comparative, almost exceptional ease, till a few hundred feet of rock a short distance below the summit offered the first real difficulty of the trip. It was after the ascension had been happily completed and when the party were redescending this same portion of the way, confident and good-humored, that an unexpected and unexplained slip on the part of the youngest and least experienced—Mr. Hadow—dragged four of the company to swift destruction.

It would not do to take leave of this attractive volume without allusion to the remarkable excellence of the illustrations, which are, with few exceptions, taken from the author's own sketches or memoranda. The portraits, as every Swiss tourist will recognize, are admirable for lifelike truth and character, and the mountain views equally good. Out of many, we might draw attention to the view of the Col du Lion, and that of the Col Dolent, as really imaginative in the skill with which they suggest the awful loneliness, the shuddering horror of the heights. The view of the author's tumble at page 54 is amazingly spirited, and that of the Matterhorn from the Riffelberg, at page 121, is almost worthy of the burin of Calame.

Beeton's Great Book of Poetry. Edited by S. O. Beeton. 2 vols. (London: Ward, Lock & Tyler; Philadelphia: George Gebbie. 1872.)—This work contains a very great many pieces of poetry, including some of King Alfred's and some by Mr. Bayard Taylor and by the author of "Rock Me to Sleep, Mother"; and it is in two well-bound volumes of a reasonable cheapness. We may add that they are not unreasonably ill-printed, though they contain plenty of misprints. But it cannot be said that the editor's taste has been of much service to the reader, unless, indeed, it is due to his idiosyncratic taste that he happens to be fond of the poems that everybody has agreed to call good. This, however, is a presumption not without violence, for of the poems that very few people of any discrimination have thought good he has included in his collection an inordinate number. We cannot say that we think this to be much of a fault. Its worst effect will be that years from now, in many a farm-house, the literary young lady of the family will see by Mrs. Akers's poem

> "How much the heart may bear and yet not break,"

and, perceiving that this and other similar poems are not on heights inaccessible to her also, and feeling that "some things can be done as well as others," will set herself to being a poetess, and will measurably succeed; perhaps succeed altogether, and be a worse farmer's daughter than she might otherwise have been. Still, we do not know that we need concern ourselves much with this particular trouble of our posterity. And Mr. Beeton's collection will no doubt do a quantity of good far outmeasuring all the harm it could do were poetizing to become universal in the next generation. Its weakest spot is the American part at the end of the second volume. Who is Mr. St. John Honeywood? Why is Mr. William Clifton set down as an American poet? or Mr. Willis G. Clark, or Col. David Humphreys, or Mr. Schoolcraft, or Mr. Thomas Dunn English? Mr. Beeton could have made his two volumes into twenty-two if he had felt himself bound to this degree of comprehensiveness and minuteness in the performance of the rest of his task. It is a little late in the day to read biographical and critical remarks such as these in a book of poetry bearing the imprint of any American publisher: "The principal poems of Colonel Humphreys are, 'An Address to the Armies of the United States,' written in 1772; 'A Poem on the Happiness of America,' written during his residence in London and Paris as Secretary of Legation; 'The Widow of Malabar, or the Tyranny of Custom, a Tragedy, imitated from the French of M. le Mierre,' written at Mount Vernon; and 'A Poem on Agriculture,' written while he was Minister at the Court of Lisbon." Colonel Humphreys did the state some service, and it is a sort of unpatriotic cruelty to revive the knowledge that, in his devotion to his native land, he sought poetic garlands for her. It was the less necessary, as Mr. Beeton does not, so far as we can discover, print a line of the Colonel's poetry. But he prints this:

> "To what strange lands must Chequi take his way!
> Groves of the dead departed mortals trace:
> No deer along these gloomy forests stray,
> No huntsmen there take pleasure in the chase,
> But all are empty, unsubstantial shades,
> That ramble through these visionary glades;
> No spongy fruits from verdant trees depend,
> But sickly orchards there
> Do fruits as sickly bear,
> And apples a consumptive visage show,
> And withered hangs the whortleberry blue."

This is by Philip Freneau, who would have been better represented by poems, not better perhaps, strictly speaking, but having an historic interest. But the fact is, all this part of the book has very much the look of very decided bookmaking. And of the work, in general, the principal merit is that it contains a great multitude of the best and best-known English poems.

Thermic Fever, or Sunstroke. By H. C. Wood, jun., M.D. Boylston Prize Essay. (Philadelphia: J. B. Lippincott & Co. 1872.)—This subject is timely and the essay excellent, even though it does not give us any very novel advice for warding off an attack of the evil, or curing it when it has come upon us. It is merely a research into the pathology of the disease, and the manner in which, in fatal cases, death is produced. The author examines very carefully the observations and theories of preceding writers, repeats their experiments, and makes what seems to us a very judicious summing up. We know no account of the subject at once so clear and so free from onesidedness. Dr. Wood rejects as unimportant the division of cases into those produced by more direct exposure of the head, and those where the general overheating of the whole body seemed the exciting cause. In all cases he thinks the complaint is a fever, brought on by the overstimulant action of external heat upon those as yet obscure portions of the nervous system by which the animal heat is developed. That is to say, the body itself, under the spur of excessive external heat, produces more instead of less heat than at normal times; and this heat directly overwhelms the functions of the brain, in most cases producing the coma and convulsive phenomena, and finally death. In a certain small number of other cases the fatal end is brought on by the direct effects of heat on the muscle-tissue of the heart, which it causes rigidly and permanently to contract. This has been alleged as the essential cause by some authors, but Dr. Wood establishes very clearly, that in the great majority of cases it follows death by cessation of respiration and does not precede it. Lastly, the deterioration of the blood is to be considered a result of the febrile process, and not a cause of the nervous symptoms. The treatment suggested is, on the whole, to shun bleedings, to refrigerate guardedly, and this by ice-rubbings rather than by douche, and to use morphia when the convulsive symptoms are prominent. The essay, we repeat, is excellent, and we cordially recommend it to the student, or to any layman who cares to see illustrated by a simple and easily-intelligible case how modern physiological medicine is engaged in unravelling the processes that disease sets up in our organism.

LEISURE HOUR SERIES.

PALGRAVE'S NEW BOOK,

HERMANN AGHA,

AN EASTERN NARRATIVE.

BY W. GIFFORD PALGRAVE. 16mo. $1 25.

"Reads like a tale of life, with all its incidents; the young will take to it for its love portions, the older for its descriptions, some in this day for its Arab philosophy."—London Athenæum.

"The cardinal merit, however, of the story is, to our thinking, the exquisite simplicity and purity of the love portion."—London Observer.

The unexpectedly large demand having put all the volumes (with a single exception) out of print for some days past, the publishers are now happy to state that they are again ready to fill orders.

I. MY LITTLE LADY. $1 25.
II. SMOKE. By I. S. Turgenef. $1 25.
III. FATHERS AND SONS. By I. S. Turgenef. $1 25.
IV. FLY LEAVES. By C. S. C. $1 25.
V. THE MAN WITH THE BROKEN EAR. By E. About. $1 25.

HOLT & WILLIAMS, PUBLISHERS,
25 BOND STREET, NEW YORK.

"MESSRS. A. DENHAM & CO. deserve the thanks of every lover of our elder Novelists, of every lover of Sir Walter Scott and of entertaining Biography, for having reprinted

THE LIVES OF THE NOVELISTS,

BY SIR WALTER SCOTT,

WITH NOTES.

There are fourteen lives contained in this beautiful and compact volume of 436 pages. They appear in the following order: Richardson, Fielding, Smollett, Cumberland, Goldsmith, Dr. Johnson, Sterne, Horace Walpole, Clara Reeve, Mrs. Radcliffe, Le Sage, Chas. Johnstone, Robert Boge, and Mackenzie. Half of these names are known wherever the English language is spoken, and some of them, including the author of "Gil Blas," are famous from one end of the field of letters to the other. Sir Walter Scott's criticisms are always genial. . . . This edition will doubtless be welcomed by those who were unable to procure the work hitherto."—New York World.

12mo, neatly printed on toned paper, cloth extra, gilt top.

Will be sent free by mail on receipt of price, $2.

TO TEACHERS.

CAMBRIDGE, MASS., September, 1872.

It is proposed to publish, early in December, a volume of about 300 pages 8vo, which shall contain a large amount of information concerning the colleges and prominent higher schools of the country.

It is designed to present lists of the officers of all such institutions, and as clear an idea as is possible of the general policy pursued, of the courses of study, of the expenses, and of special advantages offered by each to the student.

It is felt by many teachers that such a book will be of particular value to parents in their search for trustworthy and condensed information with regard to schools and colleges.

Your aid to the work of the editors is earnestly solicited. Catalogues will be gratefully received; and special written information will be felt to be of the highest value. Specimens of recent examination papers for admission to colleges are also very desirable.

Address
C. W. SEVER,
University Bookstore, Harvard Square,
Cambridge, Mass.

READY SEPTEMBER 21.

A New Poem by Dr. Holland.

THE MARBLE PROPHECY,

AND OTHER POEMS.

BY J. G. HOLLAND,

Author of "Bitter-Sweet," "Kathrina," etc., etc.

One vol. 12mo, with a full-page illustration, cloth, $1 50.

"The Marble Prophecy," from which this volume takes its name, is the first poem of any length which Dr. Holland has published since the appearance of "Kathrina." The shorter pieces which accompany it comprise a number of lyrics which long ago became such general favorites that the public will be eager to possess them in this permanent form.

NOW READY.

FIFTEEN YEARS OF PRAYER

IN THE

FULTON STREET MEETING.

BY DR. S. IRENÆUS PRIME,

Author of "Power of Prayer," etc.

1 vol. 12mo, $1 50.

The history of the Fulton Street Prayer-Meeting is one of the most remarkable records in the annals of Christian effort. Dr. Prime's previous work, the "Power of Prayer," gathered up some of the more striking incidents during its earlier days. This volume brings down the record to the present year—the fifteenth anniversary—and is full of interest and value. The wide circulation of the work must result in perpetuating and extending the power of the remarkable institution which it describes.

SOMETHING NEW!

ZELL'S ILLUSTRATED MONTHLY MAGAZINE.

CONDUCTED BY L. DE COLANGE, LL.D.,

Editor of Zell's Encyclopedia, etc., etc.

The first number of this new serial is now ready. It will be especially the magazine for the cultured home, always up to the practical as well as the scientific spirit of the times.

It will be largely devoted to information concerning foreign and home countries, especially with those places remote from the general rush of travel. This information will be profusely illustrated by fine engravings from original sketches. The recent discoveries in science, relating to explorations and journeyings of travellers, inventions of painstaking laborers in the field of the practical arts, the discoveries of celebrated chemists, physicians, botanists, and mineralogists will be noted as they occur.

An original illustrated article on Naples will be published, besides other original tales, sketches of life and character, and various literary papers from the pens of writers of the first talent.

The editorial staff will be under the direction of L. De Colange, LL.D., so well and favorably known as the editor of "Zell's Encyclopedia."

The publisher will spare no pains or expense to make this magazine well worthy the reading public, and has placed the subscription place so low as to be within the reach of all.

Subscription price, $2 per annum.

Single numbers, 20 cents.

A specimen copy will be sent to any part of the United States on receipt of 10 cents in postage stamps.

LOOKING GLASSES,

No. 82 BOWERY.
Above Canal Street, NEW YORK.

DONALDSON BROTHERS,

Steam Lithographic Printers, 56, 58 and 60 Park Street (One Block from Centre Street), New York.
Orders for Bonds, Certificates of Stock, Insurance Policies, Checks, Drafts, Letter and Note Headings, and Commercial Blanks of every description, promptly executed, in the highest style of the Art, at reasonable prices. Designs and Estimates furnished. P. O. Box 2791.

CASSELL'S PRACTICAL DRAWING BOOKS.

1. LINEAR DRAWING. 150 Engravings. Price $1.
2. PROJECTION. The Development of Surfaces and Penetration of Solids. 40 Engravings. Price, $1.
3. SYSTEMATIC DRAWING AND SHADING. 38 Engravings. Price, $1.
4. BUILDING CONSTRUCTION AND ARCHITECTURAL DRAWING. 130 Engravings. Price, $1.
5. DRAWING FOR CARPENTERS AND JOINERS. 250 Engravings. Price, $1 75.
6. PRACTICAL PERSPECTIVE. 64 Engravings. Price, $1 50.
7. DRAWING FOR MACHINISTS. 140 Engravings. Double and Treble-page size. Price, $2.
8. DRAWING FOR STONEMASONS. Price, $1 50.
9. MODEL DRAWING. Price, $1 50.
10. GOTHIC STONEWORK. Price, $1 50.

CASSELL, PETTER & GALPIN,
596 Broadway, New York.

HARVARD UNIVERSITY,

CAMBRIDGE, MASS.

The next term begins in all departments on Thursday, Sept. 26, 1872.

The examination for admission to Harvard College begins on Thursday, Sept. 26, at 8 A.M. The examinations for admission to the Engineering Department of the Lawrence Scientific School, to the Mining School, and the Bussey Institution, begin on Thursday, Sept. 26, at 9 A.M.

For Catalogues, circulars, or information about any department of the University, address

JAMES W. HARRIS, Sec.

YALE COLLEGE.

THE SHEFFIELD SCIENTIFIC SCHOOL

Offers professional training to Civil and Dynamical Engineers, Chemists, Geologists, Naturalists, etc., and also courses preparatory to such pursuits as Mining, Medicine, Agriculture, Manufacturing, etc. Letters may be addressed to Prof. D. C. GILMAN, Secretary,
New Haven, Conn.

LIST OF PHOTOGRAPHS of the first quality for sale by the Publisher of the *Nation*, at prices affixed (post-paid). Unless otherwise stated, each title represents but a single copy on hand.

OLD MASTERS.

Chiefly from the Louvre Gallery. Size of plate, 12x18 to 7x8 in.

MOUNTED. Correggio: Jupiter and Antiope (2 copies), each $3; St. John in the Desert, $3.—Botticelli: Virgin and Child (2 copies), each $3.—Fra Giovanni di Fiesole: Coronation of the Virgin, $3 25.—Rubens: Henri de Vicq, $3.—Quentin Matsys: The Virgin Mary, $1 50.—Van der Weyden: Nativity, $3.—Greuze: The Broken Pitcher, $3 25.

UNMOUNTED. Correggio: Marriage of St. Catherine, $2 30.—Botticelli: Virgin and Child, 90 cts. —Bronzino: Cosimo I., 90 cts.—Raphael: La Belle Jardinière, $2 30; Holy Family (Francis I.), $2 30.—Titian: Joconda (2 copies), each $2 30.—Paul Veronese: Jupiter Punishing the Wicked, $2 30; the same, slightly damaged, $1 25.—Rembrandt: Portrait of a Lady (2 copies), each 90 cts.; Portrait of an Old Lady, 90 cts.—Velasquez: Full Length Portrait of Philip II., 90 cts.—Greuze: Female Head (2 copies), each 90 cts.

STATUARY.

From the British Museum, etc. Size of plate, 10½x14 and 21x28.

UNMOUNTED. Ceres and Proserpine, $1 75. Part of Torso of Neptune, $1 75; Bust of Clytie, $6; Bust of Homer, $6; Theseus, $6; Reclining Torso, $6.

MOUNTED. Apollo, $6.

ARCHITECTURE.

THE ACROPOLIS OF ATHENS. By W. J. Stillman, late U. S. Consul in Crete. Twenty-six autotype views of the Acropolis and its Monuments, many of them entirely novel, with brief explanatory letterpress, substantially bound in one volume; price $25, delivered at the *Nation* office. This elegant work especially recommends itself for the use of architects and instructors in the higher institutions of learning. A few copies of a strictly limited edition (100) remaining.

A certain number of the above views (size of plate 7x10 in.), to be had singly at $1 25 each, mounted, viz.: 1. Acropolis, from the Museum Hill. 3. Acropolis, from the N., with Turkish town and Mars Hill. 4. Acropolis from above the Ilissus. 5. Acropolis from the S. W. 6. Propylæa. 7. Temple of Victory. 8. Views from within the Propylæa, with Island and bay of Salamis. 9. Western façade of Parthenon. 10. Western portico, do. 11. Interior of Parthenon, from Western Gate. 12. Western portico, do., from above. 13. Another view from same point. 14. Interior of Parthenon, from eastern gate. 15. Eastern portico, do. 16. Eastern façade, do. 17. Profile of Eastern façade, showing curve of stylobate. 18. General view of top of the Acropolis. 19. Erectheum. 23. Tribune of the Caryatids.

NORMANDY. Twenty-five Picturesque Architectural Views of Renaissance buildings, and parts of buildings, recently taken by W. J. Stillman. (Size of plate 7½x9½ in., unmounted.) 1. Chateau of Fontaine Henri, near Caen, Lower Normandy (time, Francis I.) 2, 3, 4. Details of same. 5, 6, 7. Chateau of Lion-sur-Mer, same place and time. 8. Hotel de la Monnaie, Caen. 9. Old Timber House at Caen. 10. Towers of Hôtel de Valois. 11. Window of same. 12. Apse of St. Pierre, Caen, with detail of ornament. 13. General View of St. Pierre. 14. Façade of Palais de Justice, Rouen. 15. Tower and one line of windows of same. 16, 17, 18. Details of same. 19, 12, 21. Courtyard of Hotel Bourg-Théroüld, Rouen, with details of the two façades. 22. Great clock, Rouen. 23. Hôtel des Finances, Rouen. 24. Church of St. Laurent, Rouen. 25. Chateau de Pavilly, near Rouen. Price for the set, $12; singly, 75 cts.

LANDSCAPE.

ENGLAND. (Robinson & Cherrill's unrivalled compositions. Size of plate 11x15 in., unmounted.) Waiting for the Gaffer.—In the Gloaming.—Returning from School.—Outward Bound (beach view), etc., etc., nine in all, each $2.

FRANCE. See "Normandy," under "Architecture" above.

RHINE AND VICINITY. (W. England's Medalled Cabinet Pictures. Size of plate 6x8 in., unmounted.) Portal of Cologne Cathedral.—Ehrenbreitstein, as seen from Coblentz.—Bridge of Boats on the Rhine at Coblentz.—Old Bridge over the Moselle at Coblentz.—Coblentz and the Moselle.—Ehrenbreitstein and the Moselle.—The Moselle at Coblentz. —Cat Tower at St. Goarshausen.—Castle of Sonneck on the Rhine.—Castle of Rheinfels on the Rhine.—Panorama of Ems on the Lahn.—Cathedral of Limburg on the Lahn.—Castle of Runkel on the Lahn. Price 85 cents each, or $8 for the lot.

GREECE AND CRETE. (Taken by W. J. Stillman).—Upwards of sixty views in two sizes, printed to order, mounted or unmounted.
A list sent on application to the

PUBLISHER OF THE NATION,
Box 6732 New York City.

*** The price to accompany the order in all cases.

SPECIAL NOTICES.

[TERMS: In advance, one insertion, three cents per word; five insertions, two cents per word each. The enclosure of an addressed and stamped envelope will secure a numbered box to which communications may be addressed.]

A YALE GRADUATE, lately Principal of a classical School, desires private pupils in New York City or vicinity in English or classical studies. Testimonials from Ex-Pres. Woolsey, Pres. Porter, Professors Thacher, Hadley, and Northrop of Yale College and others. Address G. C. Box 752, Portland, Maine.

A YOUNG MAN, now in Berlin, desires one or two pupils, or would travel with young persons as tutor. He speaks French and German, has had several years' experience in teaching, and is a Classical Fellow of the College of New Jersey. References exchanged. Address LOCK BOX 648, *Yonkers, N. Y.*

A.—MISS WHITCOMB'S English and French Boarding and Day School for young ladies and children, No. 32 Pierrepont Street, Brooklyn Heights, N. Y., will reopen on Wednesday, September 18, 1872. Address as above.

PROFESSOR CHARLES CARROLL, of New York University, will fit young men for College or form classes for private instruction in French and German. Address at the University, or personally at No. 2 East Fifteenth Street.

S. A. FARRAND'S SCHOOL, 1400 Broadway, reopens September 25. Great pains are taken to teach boys how to study. This is done so thoroughly that they need no help at home. Among the patrons of the school are, Rev. Thos. S. Hastings, Rev. Isaac Ferris, Rev. Geo. L. Prentiss, Rev. E. H. Chapin, Rev. James O. Murray, Rev. Harvey D. Ganse, Rev. Prof. Henry B. Smith, Rev. J. F. Stearns, Rev J. Few Smith, Rev. D. W. Poor.

DUANE S. EVERSON'S School for Boys Reopens Sept. 23 at 1146 Broadway, above Twenty-sixth Street. Thorough instruction. Ancient and Modern Languages and the English branches.

MEDICAL INSTITUTION of Yale College—1872-73.—The Collegiate year of Medical study embraces a winter and spring term. In both terms the Faculty are fully engaged in the work of instruction, which is so divided among the Professors, ten in number, that all departments and specialties usual in the best medical schools are fully taught and illustrated. The next winter term, devoted to public lectures, begins October 17 and ends February 13. The next spring term, occupied chiefly with daily recitations from text-books, begins March 6, 1873, and ends June 26. Fees (paid in advance): Matriculation Fee, $5, payable once only. For both terms, in one payment, $100. For either term separately, $60. Tickets to the Hospital and Dispensary gratuitous. For further information and circulars, address the Dean of the Faculty, Prof. C. A. LINDSLEY, *New Haven, Conn.*

PROF. AND MRS. O. P. HUBBARD'S Boarding and Day School for Young Ladies, at Grove Hall, New Haven, Conn, will reopen September 25. Circulars sent on application.

CHARLIER Protestant French Institute, Boarding and Day School for Young Gentlemen only, Nos. 126, 128, 130 East Twenty-fourth Street, near Madison Park.—Eighteenth year begins Sept. 17. College, Business, West Point, Annapolis, German, Spanish, Primary Department, Gymnasium, Military Drill. Catalogues with full details. Home after Sept. 2. PROF. ELIE CHARLIER, *Director.*

COLUMBIA COLLEGE Law School.—The fifteenth annual term of this institution will commence at No. 37 Lafayette Place, New York, on Wednesday, Oct. 2, 1872, and will continue until May 14, 1873. By the laws of the State graduates of the Law School are admitted to the Bar without further examination. For Catalogues and other information apply by letter to THEODORE W. DWIGHT, *Professor, etc., No. 37 Lafayette Place, New York.*

WISCONSIN FEMALE COLLEGE, Fox Lake.—Tenth Year opens Sept. 5. On Mt.-Holyoke arrangement. REV. JOHN P. HAIRE, *Principal.*

NESHANIC INSTITUTE for Boys, Neshanic, Somerset Co., N. J., will reopen Sept. 18. Send for Circular. REV. P. D. OAKEY, *Principal.*

"SCHOOL in the Mountains," at Bellefonte, Pa., a Classical School for Boys and Young Men. For circulars address REV. J. P. HUGHES, *Principal.*

WOMAN'S Medical College of the New York Infirmary 128 Second Avenue, N. Y. Winter Session begins 1st October. For particulars, address the Secretary, EMILY BLACKWELL, M.D.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 19, 1872.

The Week.

THE Massachusetts Liberals have nominated Mr. Sumner for the governorship, which was on the whole a good thing for them, though if Mr. Sumner should accept it, and, indeed, whether he does or not, it will be a bad thing for him. There is no combination of circumstances which can make it possible for him to appear as the Democratic candidate in Massachusetts without loss of character. His election to the United States Senate by a similar coalition in 1851 is not a case in point, as he was not then the Mr. Sumner he now is. The last twenty years have made him a man who cannot take a Democratic nomination. Of course, however, the nomination is only a compliment, and, as there is no chance of his being elected, does not threaten his Senatorship. The platform on which he was nominated contained the usual sentiments, seasoned with denunciation of the Administration. It had one novel plank, and the first honest plank of its kind we have ever seen, and this, strange to say, was the labor plank, which stated distinctly that the workingman had no right to expect anything of the State except—

"To give him the utmost facility honestly to acquire capital by seeing that he is not unnecessarily or unjustly taxed, that he enjoys the best means of education, and has the benefit of well-managed financial and co-operative institutions, whereby his smallest savings of capital may earn the largest profit; and the doing of this we hold to be the highest duty of the State."

Whatever may be said of the morality of it, the nomination of Mr. Sumner was tolerably shrewd, and will perhaps do more for the Massachusetts Greeleyites than any other nomination they could have made.

The Democrats of that State have at last thrown Mr. John Quincy Adams aside, partly as a punishment for his coquetting with the Louisville Convention, which is severely characterized by the Greeley moralists as "Grant's side show." We suspect that a good many gentlemen who joined the Greeley movement in its early days are now envying him his fate, and praying that a kind providence would interfere in some manner for their deliverance from the concern also. The Louisville nomination has been tendered once more to Mr. O'Conor, but again refused by him in a letter such as Cato the Censor might have written; that is, it is full of the loftiest personal independence and self-respect, of repugnance for the ways of politicians, and of indifference to any honors they may have at their disposal. But he leaves it to be understood that although he will not accept a nomination from a convention, or place himself on a platform drawn up for him by others, he will not refuse to serve if elected. We presume Mr. Adams occupies substantially the same ground, and we are told they will have an electoral ticket in every State, so that those who feel they cannot vote for either Grant or Greeley will be able to relieve their feelings by voting for two men of the highest character, and of great ability, whom we might all be proud to see in the highest places of the government, but whom, owing to the arrangements of a handful of wretched hacks, there is no practical use in supporting.

Nothing else of moment has occurred in the canvass. The Greeleyites have very shrewdly put up ex-Governor Curtin in Pennsylvania as their delegate at large to the State Constitutional Convention, in order that the respect of the community for Mr. Curtin and its sense of his great fitness for the business of constitution-making may thus be adroitly turned to the benefit of Mr. Greeley. But it must be confessed the situation looks better for the Greeleyites in Pennsylvania than in any other Northern State. Not only have they this nomination of Curtin to help them, but they have that of Buckalew (also a man of high character) for the governorship, while the Grant State ticket is, from the most favorable point of view, of the poorest character. The person at the head of it, General Hartranft, is accused of the grossest personal dishonesty, and though vigorous, and we think successful, efforts are being made to clear him, it is rather too late to prevent his being a very heavy burden. So that, although there is little or no doubt that Grant has a good majority in the State, there is a chance, and not a small one, that the Greeleyites may carry it in October. This would not, we believe, prevent Grant's carrying it in November, but it would greatly encourage the Greeleyites all over the country, and have a very demoralizing effect on the feebler Grantites. Ohio is claimed for Grant by a handsome majority, Indiana by a small one; in both of these States there are elections next month. All the signs of the past week have been increasingly unfavorable to Greeley.

The *Evening Post* has been calling the *Tribune* to account, and rightfully, for quoting a portion of a speech of General Dix's in 1861, expressing readiness to have the South go, without quoting or mentioning the following paragraph, which qualified it to such a degree as to completely alter its sense; but as the *Post* has been always very calm and decorous during these exciting times, we were astounded to hear from it that it "did not remember ever to have seen a more shameless abuse of the columns of a newspaper, or a more unscrupulous falsification, base as a forgery, brutal, malicious, and clumsy as a lie." This really looks as if the *Post* was going to take off its coat and cravat, and join the young braves of Printing-house Square in those animated daily encounters in which they work off their superfluous vital energy, and has reminded us of an amusing passage in Lord Dufferin's "Letters from High Latitudes," describing a scene on board Prince Napoleon's ship, *La Reine Hortense*, when up in the Polar Sea. The sailors and officers were having a masquerade, to celebrate the fête of "Le Père Aretique," and were dancing the *Cancan* on deck. "At the commencement of the noisy festival," says Lord Dufferin, "I found myself standing on the hurricane deck, next to one of the grave savants attached to the expedition, who seemed to contemplate the antics which were being played at his feet with that sad smile of indulgence with which Wisdom sometimes deigns to commiserate the gaiety of Folly. Suddenly he disappeared from beside me, and the next that I saw or heard of him he was hard at work pirouetting on the deck below with a red-tailed demon, and exhibiting in his steps a 'verve' and a graceful audacity which at Paris would have certainly obtained for him the honors of expulsion at the hands of the municipal authorities."

The New York *Times* offered to wager, for the benefit of its Children's Fund, $10,000 that it is "a lie" that Mr. Russell Jones gave Grant a lot in Chicago as the price of his appointment to the Belgian Mission. It being acknowledged that Grant paid over $11,000 for the lot, the *Times* then offered to wager $5,000 that Russell Jones did not give the money back. The *Tribunes* of Chicago and New York have charge of "the story," but decline the bet. Does the Chicago *Tribune* not think, let us ask, that this story is on the whole a pretty bad failure? It first said that Russell Jones gave Grant a lot for the appointment and offered as proof that the deed only showed a nominal consideration of one dollar. This, however, has been explained. The deed was only a preliminary conveyance of part of the land. Before the transaction was closed, General Grant paid a consideration of over $11,000 for the whole. The Chicago *Tribune* does not deny this, but now says, without proof, that Jones gave the money back. Is not this, to put it mildly, something like trifling with the public intelligence?

A correspondent of the *Times* suggests that it should print a list of charges against the President and others, with sums annexed

which it will stake on their falsehood. It would be better still, and we should not wonder if it had to be done eventually, to compel all newspapers making "charges" against candidates for high offices to file them in the county clerk's office, and deposit a sum, fixed by regular legal tariff, to be forfeited in case of failure to make them good, and relieve all candidates from the necessity of answering any charges not so filed. The sum need not be large enough to repress scrutiny, and yet ought to be large enough to inspire caution, and the rates might be varied according to the rank of the candidate and the nature of the offence—so much for a president; so much for a governor or senator; so much for theft; so much for lying (habitual or occasional); so much for adultery; so much for fornication; and so much for drunkenness (habitual, convivial, or medicinal). A charge of entire want of conscience, which is occasionally made, and which includes all others, really predicates readiness for any villany, and ought, we think, to be accompanied by a declaration of readiness on the part of the maker to undergo sound corporal chastisement at the hands of a blacksmith in case of inability to prove it.

We have been called upon by Mr. J. M. Ashley for the purpose of convincing us that, in our recent comments on his case in connection with Mr. Doolittle's, we have done him injustice. Some of our readers may remember the facts of the charges against Mr. Ashley as set forth in these columns in April, 1869. In 1861, he, being a member of Congress from Ohio, sought the appointment of Surveyor-General of Colorado Territory for a person named Case. While seeking it, he wrote letters to Case, telling him that if he got it for him, he (Case) must appoint Ashley's brother his chief clerk —"salary, $2,500"; that "the surveyor-generalship was the best office in the gift of the President, in which from $50,000 to $100,000 could be made in the four years"; that "if Case got it, he (Ashley) wanted to unite with him as full partner in land speculations and town sites"; that "the Pacific Railroad would go through the Territory; and that it would be a fortune to both of them if they got the place." Finally, Mr. Ashley invited Case to write him a letter about the appointment to be shown to others, and then, "on a separate piece of paper, his (Case's) views about the town and city lots speculation." Then comes this remarkable passage:

> "I will probably be Chairman of the Committee on Territories, if we can carry out the programme to elect Grow Speaker, and your brother, Charley Case, of Indiana, clerk, and then I will know all the proposed expenditures in the Territories, and post you in advance. Write one letter for me, and the other to show. Damn your business in the Williams County Court! Write or telegraph."

The result of this correspondence was that Ashley and Case did actually enter into a partnership under seal, by which Case agreed to give Ashley half whatever lands he might purchase in Colorado, Ashley paying half their cost.

Having quarrelled with Ashley, Case afterwards published the correspondence, just as Connatty published Doolittle's, and the matter was investigated by a Committee of Congress, which found the remarkable verdict "that no condition precedent was demanded of F. M. Case for his appointment as Surveyor-General, or for the appointment of any of his subordinates, the evidence conclusively showing no illegal or corrupt acts on the part of the said Ashley with regard to the said appointment." The matter then dropped, and though twice brought up against Ashley when renominated for Congress, it did not hurt him. Better still, when he lost his seat in 1868, he was appointed Governor of Montana, 150 Republican senators and members of Congress signing his recommendation, and Mr. Sumner "working" hard for him in the Senate, where, however, the nomination was only confirmed by one vote. We do not need to point out to our readers how much worse all this is on the undisputed facts than anything which has been proved against Doolittle. Cotton-trading with the South was perfectly legitimate during the war, if *permitted*, and permits were freely given by Mr. Lincoln and Mr. Stanton to persons whom they wished to favor. The unproved charge against Doolittle is simply that he used his senatorial influence to get a permit for another man, with the view of going into partnership with him. Mr. Ashley now comes to us and says that he ought not to have written the letters to Case; that what he told Case in those letters was untrue; that he could not, and did not, give him any information about "expenditures in the Territories" which was not open to everybody; and that his reason for thus attempting to deceive him was that Case was a candidate for a United States marshalship which it was essential, in Ashley's eyes, that somebody else should have; and that he, therefore, sought to dazzle Case into taking the surveyor-generalship. In other words, he shammed corruption in order to impose upon an office-seeker. We do not need to offer any comment on this, but we hereby invite Doolittle to come out of his retirement and lift up his tuneful voice for the Sage of Chappaqua once more. With the Case correspondence, Ashley's commission as governor, and the recommendation of the 150 Congressmen in his hands, he may defy the Grantites to put him to shame. But we warn all honest and intelligent men who are going to vote for Grant (as we think they ought) not to be deceived by "the noise of the captains and the shouting" into the belief that the Grant party is a reform party. In supporting Grant they will be saving the nation from something worse, but they will not be carrying it forward to something better. The party of reform has still to be organized, and for that we trust they will keep their faith and zeal fresh and unsullied.

The decision of the Geneva Tribunal has at last been officially announced. It finds England responsible for the *Alabama*, *Florida*, and *Shenandoah* only, and awards a gross sum of fifteen millions and a half of dollars to the United States. The Tribunal appears to have been unanimous with regard to the *Alabama* only; on the case of the *Florida*, it stood four to one; and of the *Shenandoah*, three to two. Sir Alexander Cockburn dissented with regard to the two last-named vessels, and refused to sign the award, and will give his reasons in a separate opinion. The money is payable in gold within a year, and we trust we shall witness the prompt distribution of it among the claimants. The Tribunal declined to consider the claim of the United States for the expenses of pursuing the privateers as not properly distinguishable from the general expenses of the war, and declined, also, to consider any question of "prospective earnings." Under the head of "prospective earnings and freight," Mr. Bancroft Davis claimed $5,000,000; and under the head of expenses of pursuit he claimed $7,000,000. The news, or at all events a story, now comes from Washington that the expenses of pursuit were really only $1,000,000, and that the Government is going to retain this sum out of the award. Now we hold, and we think most honest men will agree with us, that if the Government retains anything out of the award for the expenses of pursuit, decency requires that it should retain all it claimed from Great Britain. But it seems plain enough, also, that as the Tribunal refused to recognize its claim to anything, it cannot, in fairness, make a deduction itself to be taken out of the pockets of the private citizens for whose compensation the award is really intended.

Father Hyacinthe has not only determined to marry, but has written a long letter to the *Independent*, giving his reasons. He denies stoutly that he left his convent with the desire or intention of marrying, and avers that he has rigidly kept his vow of celibacy ever since he took it at the age of eighteen. But he has come to the conclusion that "marriage is one of the laws of the moral world which cannot be set aside without overturning the fabric of life, and without running counter to the will of God," although celibacy may constitute "a holy and glorious exception." After reaching this conclusion, and being fully prepared to love and be loved, he met with some one to love him in the person of Mrs. Emily J. Meriman—an American lady who has had a very varied experience of life. She separated from her first husband, who is now dead; carried on a corset agency in Paris; was once a member of Henry Ward Beecher's church; and was converted to Catholicism

by Father Hyacinthe's preaching in Notre Dame, and is now, we presume, halfway back. Our readers may remember her also as the person who wished to go out as a deputation from the Woman's Suffrage Association in this country to persuade Bismarck and Jules Favre to stop fighting in 1870. Father Hyacinthe likewise maintains that celibacy is not an article of faith, and not even a rule of discipline of the whole Church, but only of the Latin Church; that the objection to it is a degrading prejudice; that celibacy, as "relating to what is most delicate, most personal, and most perilous in the relation of the soul to God," is not capable of being made the subject of a perpetual engagement. Besides fulfilling the great law of marriage, however, his object is to give France and the Church "an example" which he thinks they both need, and "of which the fruits, he believes, will be reaped by the future, even if they fail in the present." The letter is very eloquent, and curiously frank, and will be read with great delight by women and staunch Protestants; but we are, nevertheless, satisfied that it is the ruin of Father Hyacinthe as a reformer, or dissenter, or schismatic, or whatever you please to call him. He might have exercised great weight in the Old Catholic movement, or might, indeed, if of more heroic mould, have headed a religious revolution; but marriage is fatal to all this, because nothing will persuade the world that his desire for marriage had nothing to do with his leaving his convent. When a man is seen kissing a pretty girl, there is not the slightest use in his trying to persuade people that he does it *pro bono publico*. The world's incredulity on this point is old, deep, and ineradicable, and it grows out of a long and sorrowful experience of the influence of the sexual passion in perverting the judgment and clouding the reason; and the best as well as the worst of men have to be prepared, when they talk of gratifying this passion as a "duty," to be received with distrust, if not with scorn.

M. Thiers insisted that the French Assembly should tax raw materials, in defiance of their own better judgment and the opinion of almost the whole manufacturing interest of France, and threatened to resign and plunge the country into anarchy in case his wishes were not complied with. They were complied with, and he was armed with power to put the law in force, altogether or by piecemeal just as he pleased. He has now, after an interval of three months, begun to exercise this power, and has issued a decree at Trouville, applying the tax to certain specified articles; but, in view of all that has happened, it is impressing the public as something very ludicrous. M. Thiers fought the Assembly for two months, predicted the most wonderful results from the new tax, and even promised that it would balance the budget. But now, when he gets the weapon in his hands, the only use he makes of it is to clap a tax on rabbit, hare, and badger skins, pig and boar skins; fancy feathers; fresh fish caught by foreigners; rye and barley; fresh table fruits; exotic gums, copaiba, aloes, opium, cassia, and lichens; wood for cabinet-making, green vegetables, percussion caps, and worked furs. The *Journal des Débats* asks, with much merriment, whether "these are the articles from which the Government is to derive the $8,000,000, which were promised with so much solemnity to the National Assembly?" M. Thiers has also got into trouble with his new navigation laws, putting a differential duty on commodities brought into France in foreign vessels. This was no sooner put in force than the foreign vessels carried goods destined for the French market to Antwerp, to be forwarded by rail into France, which has necessitated the imposition of a "surtaxe" on all goods coming on in this way, which of course opens the door to endless fraud.

Mr. Stanley's discovery of Dr. Livingstone, the coal question, and the meat question, have been occupying the English mind during the last month, almost to the exclusion of everything else. Mr. Stanley has come victorious out of all assaults on his veracity, which of course, considering the nature of the documents he brought home with him, were from the first absurd, and has at least achieved the honor and certificate of good character known as the receipt of a gold snuff-box from the Queen, the snuff-box being the conventional but very comical royal gift. The latest point of interest about him is the place of his nativity. There are dark rumors that he is a Welshman by birth, which, however, he has publicly declined to refute, though challenged to do so, until his biography appears. The question has some importance, inasmuch as, if he is a Welshman, the honor of having produced him will be taken away from the United States, and will pass to Great Britain, in spite of the naturalization treaty. The interest in the Stanley exploit and in Livingstone's fate has been heightened by the return of Lieutenant Dawson, who was sent out by the Royal Geographical Society in charge of an expedition for Livingstone's relief. On arriving at Zanzibar, he found that Mr. Stanley had seen Livingstone and furnished him with supplies, and was on his way home with his despatches. He then consulted, according to his instructions, with Dr. Kirk, the British political agent at that place, and discovered that such were Livingstone's feelings towards the Geographical Society that, if he went on, he would probably, as its agent, not be welcomed by him, and therefore returned. It appears now that Dr. Livingstone holds the Society in a good deal of dislike and contempt, and has abused it in his despatches to the Government in such a way that passages in them referring to it had to be omitted for decency's sake in making up the Blue Book. He talks of them as a parcel of "insane geographers," and charges them with suppressing or mutilating his reports because they do not bear out the views of some of their leading members. Moreover, although the Society claims credit for employing Livingstone, and contains a great many wealthy men, and has a wealthy public at its back eager to do him honor, his family are left in straitened circumstances, and his son's education at college has had to be stopped for want of money. The noble old man writes home pathetically asking what has become of the lad, and regretfully recalling the fact that when Lord Palmerston, in 1866, sent to ask him what he could do for him, he never thought of himself, and asked only "that he would open the Portuguese ports in Africa to free trade."

The "ministerial crisis" through which Turkey has just passed forms a curious phase in its history. Ali Pasha, the Vizier who died last fall, was the last of the group of Turkish statesmen of note who had, during the last twenty-five or thirty years, upheld French and English influence, and endeavored to reform the state on Western ideas. He was succeeded by Mahmoud Pasha, an ignorant Turk of the old school, who was pushed in by General Ignatieff, the Russian Minister, and began forthwith to remove all traces of European influence. He dismissed the European engineers in the service of the Government and turned the European professors out of the college at Galata, and, under pretence of economy, made a new Government calendar, in which the official year was made to consist of nine months, and by this expedient cut down the salaries of the employees by one-fourth, and began sending all possible rivals into exile in the old Turkish fashion. He also suppressed newspapers and interfered in an unprecedented way in the affairs of the Bulgarian and Armenian Churches, and encouraged all the wilder extravagances of the harem. He has now been suddenly dismissed, though nobody knows why, to the great joy of the population of the capital, Midhat Pasha, late Governor of Bagdad, and a progressive man of the European school has been put in his place, and has begun to undo all Mahmoud's doings and restore things to their old condition, recalling the engineers and professors, and permitting the reappearance of the newspapers. It is generally believed that this will prove the last attempt of the old Turkish party to regain their ascendancy, though the London *Spectator* has recently had one of those curious speculations in which it delights, on the possibility of the Sultan's raising the standard of the Prophet, preaching a holy war, calling Islam about him, and perishing on a bloody field in a last and desperate effort to save Turkey from the fatal encroachment of Western policy and ideas.

THE VERDICT AT GENEVA.

THE result of the Geneva arbitration, no matter from what point of view we look at it, must be a source of solid satisfaction to everybody who has had a hand in bringing it about or in conducting it. In the first place, the pecuniary award is as large as any rational man in the United States has ever maintained, *in a private room*, we were fairly entitled to or had any reasonable chance of getting. The claims filed by United States citizens for losses sustained by the depredations of the *Alabama*, *Florida*, *Georgia*, and *Shenandoah* amounted in the whole to $12,838,384. It was calculated in the State Department that the claims for losses by other vessels would bring the gross amount up to $13,000,000. If the average date of these losses had been fixed at April, 1863, as Mr. Beaman has suggested in his history of the claims, and interest charged on the amount, it would have brought the total of damages demanded by the United States up to $20,000,000. But it must be remembered that this estimate is based on the statements of the individual claimants themselves, and everybody who knows anything of the way in which people foot up their losses in making a claim against a government, knows what enormous deductions have to be made on account of exaggeration, or even expert figuring. If an allowance of twenty-five per cent. were made for this source of error, we feel sure no lawyer or man of business would say it was too much, and this would bring the American claims, supposing England had been held liable for the damage done by every Confederate cruiser, down to $15,000,000, or half a million less than the sum actually awarded. We put aside, as not worth comment, the claim for "prospective earnings and freight," and also the claim for the expenses of pursuit. It was discreditable to our diplomacy ever to have made these claims. No American lawyer, we venture to assert, ever maintained, *in a private room*, that they could be made good. Prospective profits as an element of damages is unknown either to municipal or international law, and it was easy to see that it would be very difficult to separate the expense of pursuing the *Alabama* and her consorts from the other expenses of the war. Moreover, if allowed, it would enable any belligerent to saddle a neutral from whose ports a hostile cruiser escaped, with the expense of as many old tubs as he chose to keep at sea engaged in the simulacrum of a pursuit. In rejecting these two items, therefore, the Tribunal has only done what every intelligent man in the country expected it to do. We say nothing also of the claim for "the expenses of the war after Gettysburg"; that belonged from the very first to that pleasant field of fancy in which Artemus Ward and Josh Billings have won renown, and its effect as a contribution to humorous literature was heightened by Mr. Bancroft Davis's plea, that the merriment it caused and the trouble it created were due to the fact that several men of British origin commented on it unfavorably in the American press.

The Tribunal has, however, not held England liable for all the Confederate cruisers, but only for three of them. For the depredations of the *Georgia*, *Sumter*, *Nashville*, *Tallahassee*, *Chickamauga*, it has unanimously absolved her from all responsibility. As to those of the *Retribution*, it has acquitted her by a vote of three to two, but has condemned her for the *Tuscaloosa*, *Clarence*, and *Tacony*, the tenders of the *Alabama* and *Florida*. It will thus be seen that we have got as much compensation for the damage done by three of the cruisers as we could have had any reasonable expectation of having awarded us had all the claims made by us been allowed. Moreover, the fears which many persons entertained, and which we confess we ourselves shared, that the findings of the Court as to the lack of "due diligence" might create a precedent of which the United States would be the first to feel the burden and embarrassment, have been completely removed by the history of the three vessels on which the Court has based England's liability. No question is now raised by anybody anywhere as to the absence of due diligence or the practice of culpable and flagrant negligence, in the case of the *Alabama*. With regard to her, the representative of Great Britain in the Board concurred fully with his colleagues. No hardship or inconvenience can ever result to any Government from being held bound to prevent what England permitted to occur with regard to the fitting-out of that ship.

The case of the *Oreto*, afterwards the *Florida*, was nearly as bad. Her destination and military outfit were notorious in Liverpool, and Mr. Adams's repeated remonstrances were insufficient to have her stopped. She was seized and libelled at Nassau, the case against her being clear as noonday, but was released, took in supplies, and started on her career of plunder. The *Shenandoah* got away from Liverpool through similar obstinate blindness and indifference on the part of Earl Russell and connivance on the part of the local authorities; took in her armament at the Madeira Islands, plundered and burnt vessels all the way round Cape Horn to Australia, and was received at Melbourne with welcome and rejoicings which it is no exaggeration to call wild. The Governor held that he was bound to treat her as a lawful belligerent vessel, allowed her to be repaired and refitted on the Government slip, and to take on board fresh supplies of coal and men and provisions, while the law officers treated the remonstrances of the American Consul with the grossest insolence. The Tribunal imposes no new or heavy burden on neutrals in deciding that what occurred at Melbourne made the English Government liable for all the damage done by the *Shenandoah* afterwards, and makes a most valuable addition to international morality by this clear definition of neutral duty:

> "Whereas, the effects of a violation of neutrality, committed by means of the construction, equipment, and armament of a vessel, are not done away with by any commission which the Government of the belligerent power benefited by the violation of neutrality may afterwards grant that vessel, and the ultimate step by which the offence is completed cannot be admitted as a ground for the absolution of the offender, nor can the consummation of his fraud become the means of establishing his innocence."

The position maintained by English lawyers on this point has whatever its legal validity, been an outrage on decency and common sense, being, as the Tribunal puts it, neither more nor less than an assertion that the successful consummation of a fraud may, under certain circumstances, be made the means of establishing the innocence of the perpetrator. If any rule of international law was capable of that interpretation, the sooner it was abrogated the better.

And now, before passing away, we trust for ever, from this long and exciting controversy, it is perhaps due to those of our readers who have honored us with their confidence and forbearance, to call their attention to the fact that no doctrine the *Nation* has ever combated has received any countenance from the arbitrators, while every position it has ever maintained has been fully confirmed. We have for seven years scouted the notion that the concession of "belligerent rights" to the Confederates was of any importance in the controversy (except as a bit of evidence on the point of animus), in opposition to the popular and rhetorical view that it was the very head and front of England's offence. It has not been even mentioned before the Board. We argued that England was liable without reference to it; she has been held so to be. We insisted all along that she ought to apologize for the escape of the *Alabama*, and predicted that she would; she has done so. Finally, we derided "the indirect claims," and they have been for ever barred and extinguished amidst the laughter of the civilized world and the blushes of their authors.

THE CANVASS.

THE Chicago *Tribune* reproaches the *Nation* for not taking notice of the fact that political assessments are being levied in the old way on office-holders, by means of circulars from political committees, and lays before the public a copy of the one addressed to the American consuls abroad, soliciting contributions, and each containing a written notice mentioning the amount the recipient is expected to give. The *Tribune* says we were once "lynx-eyed for these violations of civil-service reform rules, but are now unable to discover any, since we condescended to electioneer for a candidate whom we openly despised four months ago, and secretly despise now"—*i. e.*, it finds fault with us for not continuing the criticisms of the course of the Administration in which we indulged six months ago.

It is perfectly true that we do not call attention to the President's shortcomings with regard to the civil service with anything like the zeal and watchfulness we displayed some time ago, and for two reasons: one is, that it would certainly do no good; and the other is, that it might do much harm. Our opinion of General Grant and his surroundings is exactly what it was a year ago; it is no better, but it is no worse. What that opinion was, most of our readers remember. For the benefit of those of them who may have forgotten it, we shall, however, take the liberty of recalling the fact that we never considered him a designing usurper, or a drunkard, or a receiver of bribes, and have never given currency to any of the charges made against him under these heads. There is, therefore, nothing wonderful in the fact that we should not now engage in the unnecessary business of discussing the various "campaign stories" of which he is personally the object. There is a sufficiently large proportion of the press engaged in it already to make it easy and natural for the *Nation* to keep out of it without exposing itself to the charge of "electioneering" for him. We must decline, therefore, to examine and inventory the contents of every barrel of campaign garbage that the various Greeley "workers" throughout the country choose to deposit at our door. But our refusal to do so is by no means an acknowledgment, either express or implied, that any of the objections we ever made to General Grant's Administration have lost their force. We do not, in saying this, however, mean to cast any reproach on those of our professional brethren who at this season pass so much of their time refuting "Grant lies" and circulating "Greeley lies," or refuting "Greeley lies" and circulating "Grant lies." As long as there is a fair probability that these "lies" will be believed, and will affect the popular vote, the business of inventing them will be carried on, and the business of refuting them will have to be undertaken by somebody. Moreover, we do not believe that we shall ever see this mode of affecting the fortunes of the Presidential canvass entirely abandoned. We have no doubt that a thorough reform of the civil service which would prevent the Government offices being treated as "spoils," would greatly reduce the number of "slanders," "lies," and "charges" for which every Presidential candidate is now the target, by greatly reducing the number of wretched adventurers who engage in the canvass as their last chance of even a seemingly honest livelihood. But, then, after everything that can be done by way of legislation to secure decency and fair play has been done, the Presidential contest will always be attended with an enormous amount of disgusting vituperation. Nothing but a change in human nature would make it a decorous contest, as long as the prize contended for is so valuable and so eagerly sought, the number of persons interested in the result so large, and the influences which shape the result so numerous and ill-defined. Every vote tells; and when the voters are numbered by millions, and are of all grades of character and intelligence, the temptation to fill the air with charges, in the hope that, however wild or absurd, some one of them will annoy somebody, will be irresistible.

In short, the probabilities are that as the country grows in population the Presidential canvass will become warmer and more bitter, and the ordeal of accepting a nomination harder to face. Anybody who accepts a nomination will have to be either a man of the loftiest philosophy or the coarsest fibre, and, what is worse and hardest to bear, will have to expose his family to trials such as have never before, in time of peace and in civilized countries, befallen women and children. The pursuit of Miss Grant through Europe by the reporters of the opposition press, disgraceful as it has been, gives but a faint idea of what ladies will have to go through hereafter whose fathers or husbands muster the courage to become candidates for the Presidency. The election of a ruler like the President once every four years by the popular vote is, it must be remembered, something absolutely novel. Such places as his have never until our time been acquired by anything but force or inheritance. Its peaceful transmission from hand to hand under universal suffrage is, therefore, even if attended by the tumult and folly and vituperation which we are now witnessing, an immense gain for civilization. It may help to save us from too great despondency as to the future, too, to remember that a comparatively small body of men have it in their power greatly to improve the manners of the Presidential canvass. Half a dozen editors, it is safe to say, could, by the exercise of a little restraint, by honestly trying how much decency the American people would tolerate, make a marked change for the better in the mode of conducting campaigns. The performances of the press on the present occasion certainly do not make the prospect seem very hopeful, for we doubt if it was ever more foul-mouthed and unscrupulous; but, then, its excesses now are, we believe, due to exceptional causes, for the disappearance of which we may reasonably hope.

If we are asked, however, why, even if we let the ordinary "campaign stories" alone, we do not continue to expose the abuses of the civil service, our reply is, that exposures of abuses of the civil service would at this juncture attract no attention. People take it for granted that the office-holders are "working" for the Administration, and are too much interested in the result of the election to care much about the means by which it is brought about. The time to reform the civil service is not during the canvass, but after it, when the country is quiet and the public sober and reasonable. Moreover, railing at Grant about the civil service during the canvass would, to ninety-nine persons out of a hundred, wear the appearance of "working" for Greeley, and "working" for Greeley on civil-service grounds, we honestly confess, seems to us the height of absurdity, and we honestly believe would seem to others the height of hypocrisy and humbug. The day on which the Cincinnati Convention nominated a wire-pulling, political partisan bred in the corruptions and abuses of the civil service, and as fond of them as anybody, and presented him to the world as a "reform candidate," and on which the Chicago *Tribune*, the Springfield *Republican*, the Cincinnati *Commercial*, and other papers of similar antecedents, began to laud Greeley as a fair representative of the ideas and aspirations which led to that Convention, all denunciation of the shortcomings of the Administration for civil-service abuses became, for some honest men at least, either impossible or inexpedient. It requires, to our mind, a good deal of brass—more, certainly, than we happen to be possessed of—to go before the public and criticise General Grant for not appointing all officers for merit, and for not retaining them during good behavior, at a moment when the effect of these criticisms, if they had any effect at all, would be to place Horace Greeley in the White House, surrounded by such political "brothers" as now do his stumping and as figured at his meeting in this city the other night, and are "helping him to raise his house." Whenever the time comes that we can ask our readers to oppose Grant, or anybody like him, because they can put a better man in his place, we shall joyfully do it. But as long as circumstances practically restrict the choice of the public to him and Greeley, we shall do whatever we can do, consistent with honesty and self-respect, to save the country from Greeley and his followers. If it be "electioneering" to be silent about the President's faults, when speaking would cause a worse thing than he to come upon us, then we are certainly "electioneering" for Grant; but, then, we understand the duty of a journalist to be not treatise-writing, or general disquisition, but discussion with a view to some practical result. When we talk about civil-service reform, it ought to be with a view to reform; to talk about it with the view of having Greeley put at the head of the civil service, or with the certainty that our talking about it would help to put him there, though in never so small a degree, would be a piece of self-stultification to which we may come eventually, but it is still a long way off.

A FRENCH WATERING-PLACE.

DIEPPE, August 29, 1872.

EITHER there must be taking place a slow change in the climate of Paris, which makes the city less supportable to inhabit during the summer months, or a considerable increase in the general wealth of the country, or both reasons may combine; but it is quite certain that the French capital is

now more deserted in July and August than it was twenty or even ten years ago. In those times there was a class of regular Parisians who hardly ever left Paris, and pronounced it to be the only habitable place in the world, even during the dog-days; but now, whoever can do so leaves the capital; the city empties itself as rapidly as London when the season is over. There are long streets, with the shutters of the windows shut, which look quite as forlorn as the great squares of the West End. The theatres are still open, at least some of them, but all the *stars* are gone, and the houses are full of foreigners and travellers. Where does the Parisian go during his absence? I mean by the Parisian the inhabitant of the capital who has no country-place of his own, no chateau, no distant estate where he could find a refuge. This Parisian proper who makes a sacrifice to fashion in abandoning for a while his beloved city, is very *routinier;* there are but few places which he condescends to patronize. Baden-Baden used to be one; during the summer months this pretty watering-place, or rather gambling-place, buried in one of the valleys of the Black Forest, was for a while converted into a little Paris. Hardly any other language but French was heard on the terrace before the *conversation;* the German officers, with their long swords dragging at their heels, seemed to be there on sufferance. The Russian princes and princesses had their tree, round which they sat all day, speaking French all the time. The Emperor of Germany, when he came to Baden-Baden, made polite compliments to the actors and actresses of the Théâtre Français, who played their *répertoire* in a miniature theatre. All was French; the German element was only represented by the waiters at the hotels. Alas! the times of this limited conquest of Baden are gone; no Frenchman would now willingly cross Lorraine and Alsace, conquered by the Germans, see the valleys of the Vosges, the spire of the Strasbourg Cathedral, and the Rhine. Baden is lost for the Parisian.

If he goes to Switzerland he will seldom be found among those enterprising travellers who penetrate the remotest valleys, cross the glaciers and the highest passes. He is not muscular; he considers the ascent of the Righi as an effort, and will use the railway which now brings travellers to the top of this famous mountain. When he has seen the bears of Berne, heard the organ of Fribourg, fed the ducks of Geneva from the old wooden bridge, seen the chapel of William Tell on the shore of the Lake of Lucerne, he thinks he has *done* Switzerland. He likes to stop at Interlaken, and makes this little place his headquarters, where he can have a peep at the Jungfrau, and can see the parties of Alpine Club Englishmen starting on their great expeditions. How much wiser is he!

"Suave, mari magno turbantibus æquora ventis," etc.

He is the wise man of Lucretius; he is contented with the vision of the almost inaccessible peaks, and with the inspection of the extraordinary gentlemen (whom he secretly considers as insane) who will attempt to climb these peaks at the risk of their lives. Our true Parisian ought not, however, to be confounded with the bourgeois type depicted in a charming vaudeville called "Le Voyage de M. Perrichon." M. Perrichon has taken an excursion ticket, and he is travelling with his family. Whenever he arrives before something grand, be it a mountain or a cathedral, he thinks he ought to be much moved and give utterance to some grand sentiment. He always attempts to do so before his admiring family, but he invariably fails.

Our true Parisian is very narrow-minded, but he is no fool, and he has an easy way of never being ridiculous: he ridicules everything and even himself. He has a habit of speaking slightly of the biggest mountains; he would not hesitate to call any great traveller, Livingstone included, a bore. He has a great deal in common with that Greek who was tired of hearing Aristides called the Just. His indifference to the habits, the manners, the ideas of foreign countries is one of his great defects. He has no curiosity and no sympathy. His mind, if I might say so, is dried up; it is wonderfully supple and elastic, but it has lost the power of growing, of assimilation. I attribute this narrowness chiefly to the theatre. From the earliest days of infancy, the Parisian mind has become familiar with all possible scenes, nationalities, epochs, races, characters, all represented in a very imperfect but very striking manner. Every country has been typified in the theatre. The Parisian prefers what I may call theatrical truth to the truth of nature. He has seen eruptions of Vesuvius, Fingal's Caves, catacombs, mountain ranges; he has seen shipwrecks, inundations, etc. The opera, his microcosm, has spoiled the macrocosm for him. The true Tyrolese will never be to him at forty, when he is worn and tired and no longer ardent, what the Tyrolese of the opera was to him at twenty, when his young soul was still receptive. What old cloister in Italy can compete with the cloister of Robert le Diable, illuminated by the rays of an artificial moon and made alive by the ballet-girls—the nuns emerged from their tombs? I remember the exclamation of a young painter who was travelling with me when we arrived in front of a mill on a torrent in a lonely valley, on a dark, rainy day. He stopped a moment, and said, "Why! this is a Ruysdaël!" Such is the Parisian; his artificial sensations have been so many, and so intense, that nature finds him rather insensible. She evokes in him memories, old forgotten sensations. He becomes a critic, and loses the faculty of forgetting himself; he is like the spectator of a drama who is always conscious that the drama is a fiction. He hardly believes in the reality of nature; like many readers of novels, he skips over all the descriptive portions.

In France there are many watering-places where invalids are sent, but there is no place like Baden-Baden, nor even Interlaken. Our Parisian makes no elaborate excursions in France, though there is, perhaps, no country in Europe, after Italy, which better deserves a close inspection. He takes a railway ticket, and, without stopping, goes right to the coast of Normandy or Brittany. There he can find a hundred little ports or villages; sometimes he goes to one and sometimes to another. He is really fond of the sea, of the monotonous sea. He dares not sneer at it, and, besides, our modern Parisian, though he has not been educated in the principles of muscular Christianity, excels in two sports: he is generally a very good fencer, spending an hour or two twice a week at the *salle d'armes*, and a very good swimmer. The Seine affords him from infancy the opportunity to learn the art of swimming. During the summer months you may see, all along the river, large establishments devoted to it; under the eye of experienced professionals a number of men are engaged from morning to night in aquatic sports of all descriptions. They jump, and dive, and play all sorts of capers. One of these establishments, the most fashionable, is next to the Pont de la Concorde; there you can see the most famous lawyers, the gravest statesmen, mixed up with priests, actors, literary men, walking about around the great rectangle devoted to swimming, in long *peignoirs*, looking like the Peripatetics of old, but discussing only the various modes of holding your head above the water. The French are not constantly boasting of their muscular accomplishments, but I think that the best swimmers I have ever seen have been Parisians, educated at the Deligny baths. Our Parisian at the seashore leads a very lazy life. I have been staying for some time at one of the most fashionable seaports, Dieppe. There are various hotels on the *plage*, but the Parisian, married or not married, generally prefers to hire an apartment for the season. He does not much like hotel-life. The population of Dieppe has provided lodgings for a vast number of people, rich and poor.

The first thing I did on my arrival was to buy a book now very rare, as it is out of print, the "History of Dieppe," by M. Vitet, a member of the French Academy. I had never read it, and it is quite a masterpiece in its way. Nothing can be more interesting in a historical and in an artistic point of view. For Dieppe, now fallen from its ancient grandeur, was quite an important town when ships were not so big as they are now, and when its port, only open to vessels of 400 tons, was thought deep enough. It was one of the strongholds of the Huguenots. Its glorious old castle still frowns on the top of a cliff, like Dover Castle; its old churches, though shattered by the bombardment of the English, are still curious specimens of Middle-Age piety; the Battle of Arques was fought in its neighborhood by Henri IV. You can hardly take a walk without falling on some curious spot. I visited a few days ago an immense farm, which was once the castle of a merchant-prince who employed the best sculptors of the Renaissance; a room where I admired the remains of an old chimney which would adorn even Fontainebleau, was full of rape seed; heavy carts were kept under the most charming arcades, covered with delicate chisellings. Dieppe was once famous for its ivory carvings; but the traditions of this art are lost, and in the various ivory shops of the town you can now find only useful articles, which are pretty enough, but which have no artistic character. I would give an old yellowish Christ sculptured three hundred years ago at Dieppe for all the contents of the modern shops. But these old relics are not to be found here; it is only in Paris that occasionally you may fall upon a piece of *vieux Dieppe*.

A huge Casino, built of cast-iron, is the paradise of the beach, and the Parisian spends there the whole day. He finds a reading-room where he can glance over all the newspapers and reviews; he takes his bath, and, when he has done so, he looks for hours on other people who take their baths. There are always sails on the horizon, fishermen's boats, English steamers coming in or going out; every afternoon all the ladies are sitting on the terrace holding their little courts in the most elegant dresses. The music begins at three and never ends till six; the huge sea adds its *basso profundo*, or what Rameau would have called its *basse fondamentale*, to the melodies of the orchestra. After dinner, everybody returns to the Casino, the ladies, of course, in new costumes; the gentlemen don't even take the pains to dress for dinner or for the evening. More music; sometimes a children's ball, which invariably ends towards ten in a ball of overgrown children of twenty. Sometimes the Casino is turned into a theatre, and the actors of Havre come and play some forgotten *opéra comique*, which people

only half listen to. At ten the gas is extinguished; only a few poetical gentlemen keep gazing on the black sea and the distant light-house.

Nothing could be more quiet, more monotonous than this life. Conversing, chattering on the beach is the only amusement, after the all-important amusement of bathing. There is no show of horses, of carriages; rich and poor lead almost the same life. The dresses are of the prettiest, but of the coarsest materials. The fashionable gown for the ladies is now what is called the workingmen's blouse; it is made of the same blue cotton stuff which makes the *blouse* the classic dress of every French peasant or *ouvrier*. Truth obliges me to confess that these democratic blue dresses are sometimes adorned with the handsomest lace or old *guipure;* but we must not be too severe nor too austere. On the whole, what I have seen here, in a very fashionable watering-place, is very creditable to the country. There is no affectation of wealth, no vulgar show of opulence, nor any apparent immorality of any sort.

A EUROPEAN SUMMER.

V. SWISS NOTES.

WITH Geneva for its metropolis, Switzerland may fairly pretend to possess something more than nature in the rough. A Swiss novelist of incomparable talent has indeed written a tale expressly to prove that frank nature is wofully out of favor there, and his heroine dies of a broken heart because her spontaneity passes for impropriety. I don't know whether M. Cherbuliez's novel is as veracious as it is clever; but the susceptible stranger certainly feels that the Swiss metropolis is a highly artificial compound. It makes little difference that the individuality of the place is a moral rather than an architectural one; for the streets and houses express it as clearly as if it were syllabled in their stones. The moral tone of Geneva, as I imagine it, is epigrammatically, but on the whole justly, indicated by a fact recently related to me by a discriminating friend—that meeting one day in the street a placard of the theatre, superscribed *Bouffes-Génevois*, he burst into irrepressible laughter. To appreciate the irony of the phrase, one must have lived long enough in Geneva to suffer from the want of humor in the local atmosphere, and the absence as well of that æsthetic history which belongs to a generous view of life. There is no Genevese architecture, nor museum, nor theatre, nor music, not even a worthy *promenade*—all prime requisites of a well-appointed foreign capital; and yet somehow Geneva manages to assert herself powerfully without them, and to leave the impression of a strongly-featured little city, which, if you don't enjoy, you may at least grudgingly respect. It was, perhaps, the absence of these frivolous attributes which caused it to be thought a proper place for the settlement of our solemn wrangle with England—though surely a community which could make a joke would have afforded worthier spectators to certain phases of the affair. But there is such a thing, after all, as drawing too sober-colored a picture of the Presbyterian mother-city, and I suddenly find myself wondering whether, if it were not the most respectable of capitals, it would not still be the prettiest; whether its main interest is not, possibly, the picturesque one—the admirable contrast of the dark, homely-featured mass of the town—relieved now, indeed, at the water's edge by a shining rim of white-walled hotels—and the incomparable vivacity of color of the blue lake and Rhone. This divinely cool-hued gush of the Rhone beneath the two elder bridges, is one of the loveliest things in Switzerland, and ought itself to make the fortune of innumbered generations of inn-keepers. As you linger and watch the shining tide, you make a rather vain effort to connect it with the two great human figures in the Genevese picture—Calvin and Rousseau. It seems to have no great affinity with either genius—one of which it might have brightened and the other have cleansed. There is indeed in Rousseau a sort of current-like volume of style which, if we choose, we may fancy an influence from the rushing stream he must so often have tarried in his boyish breeches to peep at between the bridge-rails; but I doubt that we can twist the Rhone into a channel for even the most diluted Calvinism. It must have seemed to the grim Doctor as one of the streams of the paradise he was making it so hard to enter. For ourselves, as it hurries undarkened past the gray theological city, we may liken it to the impetus of faith shooting in deep indifference past the doctrine of election. The genius that contains the clearest strain of this profane Geneva blue is decidedly that of Byron. He has versified the lake in the finest Byronic manner, and I have seen its color, of a bright day, as beautiful, as unreal, as romantic as the most classical passages of "Childe Harold." Its shores have not yet lost the echo of three other eminent names—those of Voltaire, of Gibbon, and of Madame de Staël. These great writers, however, were all such sturdy non-conductors of the modern tendency of landscape to make its way into literature, that the tourist hardly feels himself indebted to their works for a deeper relish of the lake—though, indeed, they have bequeathed him the opportunity for a charming threefold pilgrimage. About Ferney and Coppet I might say a dozen things which the want of space forbids. As for the author of that great chronicle which never is but always to be read, you may take your coffee of a morning in the little garden in which he wrote *finis* to his immortal work—and if the coffee is good enough to administer a fillip to your fancy, perhaps you may yet hear the faint reverberation among the trees of the long, long breath with which he must have laid down his pen. It is, to my taste, quite the reverse of a profanation to commemorate a classic site by a good inn, and the excellent Hôtel Gibbon at Lausanne, ministering to that larger perception which is almost identical with the aftertaste of a good *cuisine*, may fairly pretend to propagate the exemplary force of a great human effort. There is a charming Hôtel Byron at Villeneuve, the eastern end of the lake, of which I have retained a kindlier memory than of any of my Swiss resting-places. It has about it a kind of mellow gentility which is equally rare and delightful, and which perhaps rests partly on the fact that—owing, I suppose, to the absence just thereabouts of what is technically termed a "feature"—it is generally just thinly enough populated to make you wonder how it can pay, and whether the landlord isn't possibly entertaining you at a sacrifice. It has none of that look of heated prosperity which has come of late years to intermingle so sordid an element with the pure grandeur of Swiss scenery.

The crowd in Switzerland demands a chapter by itself, and when I pause in the anxious struggle for bed and board to take its prodigious measure—and, in especial, to comprehend its huge main factor, the terrible German element—mountains and men seem to resolve themselves into a single monstrous mass, darkening the clear heaven of rest and leisure. Crossing lately the lovely Scheideck pass, from Grindelwald to Meyringen, I needed to remember well that this is the great thoroughfare of Swiss travel, and that I might elsewhere find some lurking fragment of landscape without figures—or with fewer—not to be dismayed by its really grotesque appearance. It is hardly an exaggeration to say that the road was black with wayfarers. They darkened the slopes like the serried pine-forests, they dotted the crags and fretted the sky-line like far-browsing goats, and their great collective hum rose up to heaven like the uproar of a dozen torrents. More recently, I strolled down from Andermatt on the St. Gothard to look at that masterpiece of sternly romantic landscape, the Devil's Bridge. Huge walls of black granite enclose the scene, the road spans a tremendous yellow cataract which flings an icy mist all abroad, and a savage melancholy, in fine, marks the spot for her own. But half a dozen carriages, jingling cheerily up the ascent, had done their best to dispossess her. The parapet of the bridge was adorned with as many gazers as that of the Pont Neuf when one of its classic anglers has proclaimed a bite, and I was obliged to confess that I had missed the full force of a sensation. If the reader's sympathies are touched by my discomfiture, I may remind him that though, as a fastidious few, we laugh at Mr. Cook, the great *entrepreneur* of travel, with his *coupons* and his caravans of "personally-conducted" sight-seers, we have all pretty well come to belong to his party in one way or another. We complain of a hackneyed and cocknified Europe, but wherever, in desperate quest of the untrodden, we carry our much-labelled luggage, our bad French, our need for a sitz-bath and pale ale, we rub off the precious primal bloom of the picturesque and establish a precedent for unlimited intrusion. I have even fancied that it is a sadly ineffectual pride that prevents us from buying one of Mr. Cook's little bundles of tickets, and saving our percentage, whatever it is, of money and trouble, for I am sure that the poor bewildered and superannuated genius of the old Grand Tour, as it was taken forty years ago, wherever she may have buried her classic head, beyond hearing of the eternal telegraphic click bespeaking "rooms" on mountain tops, confounds us all alike in one sweeping reprobation.

I might, perhaps, have purchased exemption from her curse by idling the summer away in the garden of the Hôtel Byron, or by contenting myself with such wanderings as you may enjoy on the neighboring hillsides. The great beauty of detail in this region seems to me to have been insufficiently noted. People come hither, indeed, in swarms, but they talk more of places that are not half as lovely, and when, returning from a walk over the slopes above Montreux, I have ventured to hint at a few of the fine things I have seen, I have been treated as if I were jealous, forsooth, of a projected tour to Chamouni. These slopes climb the great hills in almost park-like stretches of verdure, studded with generous trees, among which the walnut abounds, and into which, as you look down, the lake seems to fling up a blue reflection which, by contrast, turns their green leaves to yellow. Here you may wander through wood and dell, by stream and meadow—streams that narrow as they wind ever upward, and meadows often so steep that the mowers, as they swing their scythes over them, remind you of insects on a wall brandishing long *antennæ*—and range through every possible phase of sweet sub-Alpine scenery. Nowhere, I imagine, can you

better taste the charm, as distinguished from the grandeur, of Swiss landscape; and as in Switzerland the grandeur and the charm are constantly interfused and harmonized, you have only to ramble far enough and high enough to get a hint of real mountain sternness—to overtake the topmost edge of the woods and emerge upon the cool, sunny places where the stillness is broken only by cattle-bells and the plash of streams, and the snow-patches, in the darker nooks, linger till midsummer. If this doesn't satisfy you, you may do a little mild mountaineering by climbing the Rochers de Noye or the Dent de Jaman—a miniature Matterhorn. But the most profitable paths, to my taste, are certain broad-flagged, grass-grown footways, which lead you through densely-fruited orchards to villages of a charming quaintness, nestling often in so close a verdure that from the road by the lake you hardly suspect them. The picturesqueness of Vaudois village life ought surely to have produced more sketchers and lyrists. The bit of country between Montreux and Vevay, though disfigured with an ugly fringe of vineyards near the lake, is a perfect nest of these compact little hamlets. The houses are, for the most part, a delightfully irregular combination of the *chalet* and the rustic *maison bourgeoise;* and—with their rugged stony foundations, pierced with a dusky stable-arch and topped with a random superstructure of balconies, outer stairways, and gables, weather-browned beams and sun-cracked stucco, their steep red roofs with knob-crowned turrets, their little cobble-paved courts, with the great stone fountain and its eternal plash—they are at once so fantastically pleasant and yet so sturdily well-conditioned, that their aspect seems a sort of influence from the blue glitter of the lake as it plays through the trees with genial *invraisemblance.* The little village of Veytaux, above Chillon, where it lurks unperceived among its foliage, is an admirable bit of this Vaudois picturesqueness. The little grassy main street of the village enters and passes bodily through a house—converting it into a vast dim, creaking, homely archway—with an audacity, a frank self-abandonment to local color, which is one of the finest strokes of the sort I ever encountered. And yet three English sisters whom I used to meet thereabouts had preferred one morning to station themselves at the parapet of the road by the lake, and, spreading their sketch-books there, to expend their precious little tablets of Windsor & Newton on those too, too familiar walls and towers where Byron's Bonivard languished. Even as I passed, the railway train whizzed by beneath their noses, and the *genius loci* seemed to flee howling in the shriek of its signal. Temple Bar itself witnesses a scarcely busier coming and going than, in these days, those hoary portals of Chillon. My own imagination, on experiment, proved too poor an alchemist, and such enjoyment as I got of the castle was mainly my distant daily view of it from the garden of the Hôtel Byron—a little, many-pinnacled, white promontory, shining against the blue lake. When I went, "Bädeker" in hand, to "do" the place, I found a huge concourse of visitors awaiting the reflux of an earlier wave. "Let us at least wait till there is no one else," I said to my companion. She smiled in compassion of my *naiveté.* "*There is never no one else,*" she answered. "We must treat it as a crush or leave it alone."

Any truly graceful picturesqueness here is the more carefully to be noted that the graceful in Switzerland—especially in the German cantons—is a very rare commodity, and that everything that is not rigorously a mountain or a valley is distinctly tainted with ugliness. The Swiss have apparently an insensibility to comeliness or purity of form—a partiality to the clumsy, coarse, and prosaic which one might almost interpret as a calculated offset to their great treasure of natural beauty, or at least as an instinctive protest of the national genius for frugality. Monte Rosa and the Jungfrau fill their pockets; why should they give double measure when single will serve? Even so solidly picturesque a town as Berne—a town full of massive Teutonic quaintness and sturdy individuality of feature—nowhere by a single happy accident of architecture even grazes the line of beauty. The place is so full of entertaining detail that the fancy warms to it, and you good-naturedly pronounce it charming. But when the sense of novelty subsides, and you notice the prosaic *scarp* of its arcades, the wanton angularity of its grotesque, umbrella-shaped roofs, the general plebeian stride and straddle of its architecture, you half take back your kindness, and declare that nature in Switzerland might surely afford to be a trifle less jealous of art. But wherever the German tone of things prevails, a certain rich and delectable homeliness goes with it, and I have of Berne this pleasant recollection: the vision of a long main street, looking dark, somehow, in spite of its breadth, and bordered with houses supported on deep arcades, whereof the short, thick pillars resemble queerly a succession of bandy legs, and overshaded by high-piled pagoda roofs. The dusky arcades are lined with duskier shops and bustling with traffic; the windows of the houses are open, and filled with charming flowers. They are invariably adorned, furthermore, with a bright red window cushion, which in its turn sustains a fair Bernese—a Bernese fair enough, at least, to complete the not especially delicate harmony of the turkey-red cushion and the vividly-blooming plants. These deep color-spots, scattered along the gray stretch of the houses, help to make the scene a picture; yet if it remains, somehow, at once so pleasant and so plain, you may almost find the explanation in the row of ancient fountains along the middle of the street—the peculiar glory of Berne—each a great stone basin with a pillar rising from the centre and supporting a sculptured figure, more or less heraldic and legendary. This richly-wrought chain of fountains is a precious civic possession, and has an admirably picturesque effect; but each of the images which presides at these sounding springs—sources of sylvan music in the ancient street—appears, when you examine it, a monster of awkwardness and ugliness.

I ought to add that I write these lines in a place so charming that it seems pure perversity to remember here anything but the perfect beauty of Switzerland. From my window I look straight through the gray-blue portals of the Via Mala. Gray-blue they are with an element of melancholy red—like the rust on an ancient sword; and they rise in magnificent rocky crags on either side of this old-time evil way, in which the waning afternoon is deepening the shadows against a splendid background of sheer gray rock, muffled here and there in clinging acres of pine-forest. The carriage road winds into it with an air of solemnity which suggests some almost metaphysical simile—the advance of a simple, credulous reader, say, into some dark-some romance. If you think me fantastic, come and feel the influence of this lovely little town of Thusis. I may well be fantastic, however, for I have fresh in my memory a journey in which the fancy finds as good an account as in any you may treat it to in Switzerland: a long two-days' drive through the western Grisons and the beautiful valley of the Vorder-Rhein. The scenery is perhaps less characteristically Swiss than that of many other regions, but it can hardly fail to deepen your admiration for a country which is able so liberally to overheap the measure of great impressions. It is a landscape rather of ruin-crowned cliff and crag than of more or less virginal snow peaks, but in its own gentler fashion it is as vast and bold and free as the Oberland. Coming down from the Oberalp which divides this valley from that of the St. Gothard, we entered a wondrous vista of graduated blue distances, along which the interlapping mountain spurs grew to seem like the pillars—if one can imagine reclining pillars—of a mighty avenue. The landscape was more than picturesque, it was consummately pictorial. I fancied that I had never seen in nature such a wealth of blue, deep and rich in the near distance and splendidly contrasted with the slopes of ripening grain, blocked out without hedge or fence in yellow parallelograms, and playing thence through every shade of color, dimmed by remotenesss but not by mist. Foreground and distance here have alike a strong historic tinge. The little towns which yet subsist as almost formless agglomerations of rugged stone, were members of the great Gray League of resistance to the baronial brigands whose crumbling towers and keeps still make the mountain-sides romantic. These little towns, Ilanz in especial, and Dissentis, overstared by the great plank façade of its useless monastery, are hardly more than rather putrid masses of mouldy masonry; but with their desolate air of having been and ceased to be, their rugged solidity of structure, their low black archways surmounted with stiffly hewn armorial shields, their lingering treasures in window-screen and gate of fantastically wrought iron, they are among the things which make the sentimental tourist lean forth eagerly from his carriage.

Correspondence.

"DIFFERENT TO."

To the Editor of the Nation:

Sir: I am a reasonably good boy, I believe, but I do not always read my *Nation,* and thus it happened that I did not see "Carl Benson's" enquiry as to when and with whom what he calls the singular neologism "different to" originated, until I met with it in Mr. Fitzedward Hall's interesting communication in your columns last week. Mr. Hall has shown that the phrase was used about a hundred and fifty years ago. But it is a neologism in so far as, I believe, it was used customarily by no great writer of either the Elizabethan or the Queen Anne period. But that its use by Thackeray in 1850 should be deemed early, surprised me, as in my first literary venture, "Shakespeare's Scholar," published in 1854, but written in 1852, I had discussed the phrase (p. 305) adversely, and the discussion, which I believe was the first of this subject, had attracted some attention in England, with a general conclusion against its use, and, what was very strange, a denial in some quarters that it was in vogue there. Indeed, the late distinguished Shakesperian critic, Mr. William Lettsom, so often quoted in Mr. Dyce's last

edition of Shakespeare, wrote on the margin of a copy of "Shakespeare's Scholar," annotated by him and which came into my possession after his death, that he had never heard this phrase; and the late Earl of Ellesmere, then President of the Shakespeare Society, in a letter to me expressed great satisfaction at the condemnation of such an absurd and vulgar usage. And yet, according to my observation, Mr. Hall is quite right in his assertion as to its general use at the present day by the best bred and most cultivated speakers and writers in England. Indeed, it might almost be safely adopted as a shibboleth of distinction between British-English and American-English. I have noticed "different from" in the speech and the writing of only the younger generation of Englishmen, and those who to travel had united some loving study of the great Elizabethan writers. But although the weight of reason and eminent usage are on the side of "different from," I should be inclined to modify my original sweeping condemnation of the British phrase, on the ground that in "different to" and "adverse to," *to* has somewhat the sense of *towards*, and implies relation, comparison. Compared *to* that, this is different; in relation *to* that, I am averse. Let me add to Mr. Hall's examples for use in his forthcoming book, which cannot fail to be an interesting one, the following singular use, by a distinguished dramatist of the beginning of the last century, of "different from" and "different to" in two "contagious" lines:

"*Aurelia*—Sir, you appear very different to me *from* what you were lately.

Truelove—Madam, you appear very indifferent to me *to* what you were lately."—*Farquhar's "Twin Rivals,"* iii. 3, *p.* 42, *Ed.* 1703.

It may have been by mere chance, but Farquhar made the lady say *from* and the gentleman *to*, which is contrary to Mr. Hall's observation of present British usage, as well as contrary to my own.

Your obedient servant,

RICHARD GRANT WHITE.

NEW YORK, Sept. 9, 1872.

THE END OF CRIMINAL JUSTICE.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of August 22 (No. 373) there is an article entitled "The Civil Service and the Jails," containing views from which the writer would respectfully, yet most earnestly, dissent. In order that the reader may better understand me, I will give a literal quotation of a few sentences occurring in said article.

The *Nation*, after referring to the humane designs of Dr. Harris respecting the reformation of criminals in the New York State Prison, continues as follows:

"We must, however, at the same time protest against the tendency which showed itself at the London conference, as it shows itself on all such occasions, and which the humanitarian view of crime, viz., that it is a disease simply, not unnaturally fosters—the tendency to treat the reformation of the criminal as the great end of criminal justice. With all due respect to penologists, this is not the great end of criminal justice. A criminal is seized and shut up, not for his own good, either primarily or secondarily, *but for the good of society*. We restrain him of his liberty not that we may improve him, *but that honest men may live in peace and security*. . . . *The only good reasons* we can give a thief for carrying him off to jail are two in number—first, that we may prevent him from stealing for a greater or less period; and, secondly, that we may so associate stealing in his mind and in that of spectators with disagreeable consequences, that they may dread to steal hereafter. In other words, in all our dealings with thieves *the security of the honest and industrious ought to be our first and great concern.*"

The italics in the above quotation, which are my own, may serve to mark the passages which embody, in the strongest form, the sentiments to which exception is taken.

I have no sympathy with that "humanitarian view of crime" which would lead us to regard thieves and murderers as a set of hospital patients, instead of felons. I agree most heartily with the *Nation*, that the good of the criminal is not the great end of punishment, since *punishment*, properly so-called, is *evil inflicted upon the guilty in satisfaction of justice*. But evil inflicted for the good of the sufferer is not, in any proper sense, punishment; it is *chastisement*, which all understand to be quite a different thing. The chosen people of Israel were sorely *chastised* of their loving Father, when he allowed them to "work in brick and mortar" under the Egyptian taskmasters; but the wicked inhabitants of Sodom and Gomorrah were awfully *punished* by a sin-hating God, when they were utterly overthrown, "suffering the *vengeance* of eternal fire." The theory of the humanitarians, which the *Nation* refutes, is certainly a false and dangerous one for any people to adopt; but I would, with becoming modesty, ask the *Nation* whether the theory it presents is very much better? I fear it is not.

The *Nation*, as I understand it, distinctly avows that the *welfare of society* is the grand design of punishment; and that the *only* reasons we may give a criminal for inflicting upon him the penalty of a broken law are two in number—first, that we may prevent his stealing for a time; and, secondly, that spectators may be reminded of the intimate connection between violating law and lying in jail. This is plain language, and is, if I mistake not, utilitarianism pure and simple. It is an old theory, and one which has generally found great favor with the lawyers. It was first introduced into the church, in the seventeenth century, by Grotius, the jurist and theologian, in connection with the great Christian doctrine of the atonement. It is best known among theologians as the governmental theory. According to one of the ablest of living writers, "it proceeds upon the assumption that all virtue consists in benevolence, which again rests upon the assumption that happiness is the highest good; which makes expediency the ground of moral obligation and the rule of moral conduct."

That the reformation of the criminal and the welfare of society at large may, in many cases, be incidental and secondary benefits of the infliction of punishment, I am free to admit; but that either or both of them can, in any case, be the great primary end of punishment, I am constrained to deny. The grand design of all punishment—the one which, in dignity and importance, towers infinitely above all others—is the *vindication of violated law*—the *satisfaction of justice*—the teaching of all men that crime is *deserving* of *punishment*, and held in utter abhorrence by God and all good men. Deny this fundamental truth, and then we have no other ground of moral obligation or rule of moral conduct than simple *expediency*. "It is indeed a solecism," says the writer quoted above, "to use the word *moral* in such connections, for, on this utilitarian theory, the word has no meaning. A thing may be wise or unwise, expedient or inexpedient, but in no sense *right* or *wrong*. Wrong becomes right and right becomes wrong as the greater amount of happiness flows from the one or the other." According to this view, which so unduly exalts the welfare of society, there would be no need or propriety in hanging the vilest wretch that ever murdered his fellow-man if it could be made to appear that society would not be benefited by his suffering death—yea, more, it would even justify us in visiting heavy penalties upon an innocent child for the crimes done by its father, provided such a course would prove more effectual in preventing crime than would the suffering of the guilty.

When we tell men that the criminal is punished simply out of respect to the interests of the law-abiding portion of the community, we thereby detract immeasurably from the good effect which punishment is intended to have. If the *ill-desert* of the guilty be made less prominent as a reason for visiting the vengeance of the law upon his head than the good of the innocent, we rob punishment of its legitimate moral effect. "The only moral effect which punishment can have is based on the assumption that it is suffered *because of ill-desert* and *not* for the good of others." I maintain that he who suffers solely or chiefly for the good of others is no felon, but a *martyr*, and we are without the shadow of a right to hang such a person. If it cannot be said, first of all, that *justice*—exact, immutable *justice*—*demands* his death, we dare not touch him, no matter how much real benefit his death might bring to society. And if it be so that justice *does* demand his death, we have not the shadow of a right to decline executing the law's just sentence, no matter if it could be demonstrated that no possible benefits could ever accrue to society by reason of his suffering. This view of the case proceeds upon the theory that the grand primary end of government is *not* the happiness, but the *holiness*, of the creature—that we are bound to have uppermost in our thoughts uprightness of character in the subject rather than his comfort in the administration of civil government. In so far as civil governments recognize this great principle by imposing right laws and distributing, impartially, just rewards and punishments, just that far do they subserve the ends of their creation by holding up before the eyes of men an ever-present spectacle calculated to teach them (1) that God is *holy*, abhorring crime, and (2) that he is *just*, by no means clearing the guilty.

The great objection to this utilitarian theory is that it flatly contradicts our *intuitive moral judgments*. If I wantonly murder my brother, the testimony of my own conscience will inevitably be that I *deserve* to suffer, not for the good of society, but because I am *guilty*. And this would be true were I the only man left living upon earth. I dare say, also, that the editor of the *Nation*, if standing by at the time I did the murder, would find his own sense of right and wrong testifying with my conscience that *death was my due*, no matter what might be the effect of my punishment upon society. And he might analyze his consciousness in vain to see if his natural sentiment of justice, in view of my wicked act, could be resolved into a conviction of his understanding that the best interests of society demanded my punishment. With all due respect, therefore, for the *Nation*, I would say the good of society is *not* the great end of punishment; and that the best possible reason we can give to the dying felon on the gallows or to the

spectators for his being executed, is that, having deliberately violated law, he *deserves* to pay the penalty. This reason comports with the instinctive judgment of every sound mind, and represents the criminal, not as a martyr for others, but what, in truth, he is—a guilty wretch whose life must be taken *in satisfaction of justice*.—Very respectfully,

N. M. W.

HAMPDEN SIDNEY, VA., Sept., 1872.

[We are much obliged to the writer for giving us an opportunity of saying one word on what we consider the fallaciousness of the theological view of the relation of the criminal to society. "N. M. W.'s" doctrines are in fact neither more nor less than the Calvinist form of the common Sentimentalist error. The God of the ordinary Sentimentalist is almost always a God of mercy and not a God of justice. The Sentimentalist exacts nothing of anybody, and would impose no obligation on anybody. The word "duty" has no place in his vocabulary, and, in trying "to look at the world with God's eyes," he naturally enough looks only with eyes of pity and sympathy. Criminal justice in his hands, therefore, would be a kind of nursing process. When he heard of a crime having been committed, he would indeed shut the murderer up, but only for the purpose of petting him and saving him from the annoyances or inconveniences to which the popular horror of murder would naturally subject him. When, however, a theologian of the Calvinistic school undertakes the administration of criminal justice, he, too, endeavors to see the world with God's eyes, but *his* God is a God of justice rather than of mercy, cherishing a deep hatred of iniquity as such, and requiring punishment as an expiation of sin, without regard to consequences. To him, therefore, it makes no sort of difference, as our correspondent points out, what the consequence of punishment to the criminal or society may be, as long as the demands of "immutable justice" are satisfied. If immutable justice required that a murderer should be hung, hang him he would, though it were plain as possible that the result of hanging him would be a great increase of murders.

Now the answer to all this is plain. Neither the Sentimentalist nor the theologian can see the world with God's eyes, and therefore all attempts on their part to embody divine justice in human legislation, or administer divine justice through human jurisprudence, are—with all respect be it spoken—pieces of mingled folly and presumption. The eyes with which they look at the criminal are ordinary human eyes; their vision is the ordinary human vision, clouded or distorted by prejudice, by passion, by bad education, by weakness of mind and of body. The reason why they ought not to try to make the criminal satisfy the demands of "immutable justice" is that they do not know what the demands of immutable justice in his case are, and nobody knows but God Almighty. For the work of administering divine justice, in short—which is the kind of justice which "N. M. W." has in mind, apparently, without being conscious of it—the Pope or the Archbishop of Canterbury or Dr. Hodge of Princeton, whom our correspondent quotes, is as well equipped as Wendell Phillips or Susan B. Anthony, but not a whit better. But how can this be? we shall be asked—the Pope, the Archbishop, and Dr. Hodge have revelation to guide them touching God's views of crime and of punishment, while Wendell Phillips and Susan B. Anthony have nothing but their own stormy bosoms to guide them about anything. Yes; but not one of the five has the least knowledge of what passes in the criminal's heart, either when he plans the crime or when he commits it. In other words, to administer divine justice, or "immutable justice," or "eternal justice," the secrets of all hearts must be open to you; you must be able to weigh with absolute precision the strength of the temptation before you can fix the degree of guilt or apply the appropriate penalty in the forum of absolute right. God can do this; God, it is to be presumed, does this; but who are we that we should even talk of doing it? It is with the utmost difficulty that we find out who has committed a crime; is there, therefore, not something absurd in our attempting to determine the exact extent to which the criminal has sinned in committing it? Do we know or pretend to know how hard he fought against his disposition to commit it—what agencies outside of himself contributed to the formation of his disposition to commit it, and by what remorse he was rent after he had committed it? Do we, in short, know anything whatever about his moral guilt, and is not his moral guilt—or, in other words, his responsibility at the bar of absolute justice—something with which we therefore have really nothing to do? Moreover, God does not need our assistance nor our legislative or judicial machinery in the work of exacting expiation. To hold that he depended on it in any way would be to hold that there are frequent failures of absolute justice owing to the imperfection of courts of police, which is preposterous. Absolute justice is never foiled or delayed. It would work though there were neither courts nor police nor government on earth.

In short, criminal justice must be based on utilitarian principles, because no other arrangement is possible. What persons of "N. M. W.'s" way of thinking mean when they talk of any other standard of criminal liability than the utilitarian standard, is simply contemporaneous public opinion or passion. At one time, and not very long ago, it was believed in the most civilized countries of the world that justice required that criminals should be executed for petty theft and tortured for murder or treason. We have got rid of all those horrors and absurdities by the adoption of the simple rule—which all can understand and apply—that punishment should be regulated, as regards motive, duration, and intensity, by its observed effects on the number and gravity of offences and on the manners of the community. In other words, criminals ought to be used for the good of society, and nothing else.—ED. NATION.]

Notes.

A TRANSLATION of Baron Hübner's "Life and Times of Sixtus V.," by James F. Meline, is in the press of the Catholic Publication Society. It will differ from the English translation by Mr. Jerningham, we understand, not only as an original rendering, but as being still more abridged for popular reading. The former omits altogether Hübner's third volume, consisting of *pièces justificatives*, while Col. Meline has omitted in addition the diplomatic correspondence, which is chiefly of interest to scholars. ——Mr. Charles Nordhoff, turning to account his late visit to the Pacific coast, will publish, through Harper & Bros., "California: for Health, Pleasure, and Residence." ——"A Biographical History of Lancaster County, Pennsylvania," by Alexander Harris, is announced by E. Barr & Co., of Lancaster.——Hurd & Houghton will issue as a small quarto "Songs from the Old Dramatists."——Ginn Brothers, Boston, announce "English of the XIVth Century," illustrated by notes, grammatical and etymological, on Chaucer's Prologue and Knight's Tale. by Professor Stephen H. Carpenter, of the University of Michigan.

—A correspondent writes us from Lexington, Va.: "In the interesting letter in regard to the South Carolina phosphates in your issue of September 5, the writer has fallen into error in casually alluding to Dr. N. A. Pratt as having been elected to a professorship in the University of Virginia. Dr. Pratt was elected to the chair of Applied Chemistry in Washington and Lee University at Lexington, Virginia, where he is about entering upon his duties. This chair was established a few years ago at the instance of Gen. R. E. Lee, when in the reorganization of that institution he provided in a liberal manner for the teaching of those sciences so necessary to the development of the resources of the South. In view of the great accuracy of the *Nation*, I will also take the liberty of mentioning another oversight in the same issue. You speak of Dr. B. M. Palmer as 'of Virginia.' This distinguished divine is a South Carolinian, but has been for years a resident of New Orleans."

—Mr. B. G. Northrop, of New Haven, Secretary of the State Board of Education in Connecticut, offers to the right sort of applicants a novel and easy missionary labor, in which any one might be glad to share. The Chinese Government, like the Japanese (though on a less liberal scale), is sending young men to this country to acquire the best education which our schools and colleges afford, and its agent, Yung Wing, a Yale graduate of '54, has just arrived in charge of some thirty Chinese lads averaging twelve years of age. These he is desirous of placing immediately in cultivated families in different parts of Connecticut and Massachusetts—not more than two in the same family, generally not more than two in the same town.

They are to remain fifteen years in the United States, so as to allow time for a thorough and complete course of study—academic, collegiate, and professional. The families which receive them will be expected for a fair remuneration not only to furnish them with board, washing, fuel, and lights, but also with private instruction in the language and in rudimentary branches. They have just begun the study of English. This party will be succeeded by others, to the number of 120 in all. It is to be hoped that the next census will not only enumerate these among the inhabitants of New England, but as many more of their countrymen as may come on a similar errand; and there ought to be no difficulty in finding suitable homes for them. Mr. Northrop should be addressed for further particulars.

—"Though Dubuque," writes a correspondent, "is by no means a central place of meeting, and the weather more than fulfilled its promise of being uncomfortably hot, there was yet a fair gathering to attend the twenty-first session of the American Association for the Advancement of Science. More than one hundred and fifty members were on hand, and about a hundred papers were read, their authors, however, not being invariably present. Perhaps the most important matter brought forward was the proposition urged by Professor Peirce, Superintendent of the United States Coast Survey, that the several States should co-operate with his bureau in making a topographical survey of each State, and thus of the whole country. The expense to each State would be nearly nominal, while such a survey would be of the utmost value in defining its boundaries, and in the construction of railways and county roads, obviating the necessity of private companies making such surveys. The usual good, we may trust, was effected on this occasion by the contact of scientific men with the public, whom it is so desirable to persuade that our methods of instruction in the physical and mental sciences stand in pressing need of reform, and to rid of that undefinable distrust of the tendencies of modern scientific speculation which is a real hindrance to the better education. The members of the Association were very hospitably entertained by the citizens of Dubuque during the entire week, and were also favored with excursions and free passes by the various railroad and steamboat officials."

—Everybody agrees that the country has been sick, the only difference is as to the remedy. The doctors who met at Philadelphia prescribed the Republican party pure and simple. The Cincinnati doctors, on the other hand, advised a mixture. The Republican party, they said, was no longer "pure and simple"; it had lost its virtue—had run out, in short. The case was not without a precedent. We find it thus related in the *Japan Gazette:*

"Certain British merchant vessels, which do not carry 'an experienced surgeon,' are supplied with medicine chests, with suitable books of direction. A sailor on board one of these—she is not in harbor *now*—once applied to his captain for relief, his complaint being that 'he had something on his stomach.' Under these circumstances the skipper consulted his condensed pharmacopœia, and promptly prescribed a wine-glass full of No. 15, the drugs being numerically indicated after the symptomatic descriptions of disease. But there had been a run on No. 15, and the bottle was empty. Was Jack to die for lack of medical assistance? Perish the thought! The skipper was a man of ready resource. There was plenty of No. 8, plenty of No. 7. 'Seven and eight make fifteen,' said the captain; and Jack, to whom the calculation seemed quite natural, took the joint mixture with startling effect; for whatever *was* on his stomach came up with a rapidity that would have astonished the Royal College of Physicians."

—At a recent meeting of the Austrian Association of Engineers and Architects, Baron Von Schwarz-Senborn, Chief Director of the Vienna Exhibition, gave an interesting account of the undertaking, its general arrangements and its specialties of detail, from which we condense the facts most interesting to American readers. The Baron passed in review all of the previous exhibitions, and pointed out in detail their various shortcomings. In the first great building of 1851, much inconvenience was felt by the penetration of the rain, and the same difficulty occurred in Paris in 1867, occasioning the loss of very considerable property. The galleries, which had hitherto always formed a part of exhibition buildings, had many drawbacks; they interposed difficulties in construction and were a constant cause of dust; besides, experience had shown that only a limited number of visitors ever ascended to them. A further remarkable disadvantage of former exhibitions was in the inadequacy of entrance and exit. It happened at London in 1851 and 1862, and in Paris in 1856 and 1867, that a great number of wagons and carts accumulated in the last few weeks before the opening at the gates of the Exhibition building, and goods could not be unloaded for six or eight days for want of proper accommodations. The shape of former buildings and the distribution of space was such that the goods of one country had to be carried across the space allotted to another, and much collision, confusion, and loss was the consequence. The distribution of light was unequal. Some exhibitors had too much, others were altogether in the dark. It was the intention of the Austrian Commission to prevent the recurrence of similar mistakes in the building under their charge. The Parliament had granted three millions of gulden as a contribution and three millions more as a subscription to the guarantee fund, in all six million gulden, or three million dollars. The expenses of the Paris Exhibition of 1867 were 11,600,000 francs, which were covered partly by the admission fee and partly by the sale of the old building. The subscription of the Austrian Government was, therefore, on a most liberal scale, and likely to cover all possible wants. Mr. Scott Russell was consulted upon the plan proposed for the Vienna building, and, after a full discussion of the site and future uses of a portion of the building, a design was adopted and the work at once begun. The imposing part of the Exhibition building at Vienna is a large iron rotunda or dome placed in the centre, 353 feet in diameter and 275 feet high. The total weight of the iron-work of the dome is 4,000 tons, and it rests upon foundations made in concrete built in October, 1871, and is to be finished before the 15th of September, 1872. To convey some idea of the immense proportions of the dome, it may be well to compare it with St. Peter's at Rome, St. Paul's, London, and the Exhibition of 1862. The span of the cupola of St. Paul's is 35 metres; St. Peter's, 49 metres; Exhibition of 1862, 50 metres; Vienna Exhibition, 108 metres. The rotunda forms the centre of the main gallery or nave which is 82 feet wide and 2,968 feet long. The nave is crossed at equal distances by 16 transepts 49 feet wide and 672 feet long. Between the transepts are 24 courts, which are enclosed on three sides, and have the same length as the cross-naves, and are 114 feet wide. These courts facilitate the lighting of the Exhibition building by means of high side-windows, so that glass roofs are entirely omitted. The courts also afford ventilation, and in case of need could be covered in and incorporated in the building. Great facilities are offered by this arrangement for introducing or removing goods, and should any country be delayed in its arrangements, the section could be closed without inconvenience to visitors. The order of the nations will be according to their geographical position from East to West, and a walk through the building will be tantamount to a journey around the world. The following table shows the space occupied by former exhibitions and to be used in Vienna:

London (Hyde Park), 1851,	94,000	square yards.
Paris (Champs Elysées), 1855,	123,214	"
London (Brompton), 1862,	222,316	"
Paris (Champ de Mars), 1867,	527,645	"
Vienna (Prater), 1873,	2,783,809	"

The available area at Vienna will therefore be about five times that given to the Paris Exhibition of 1867. Without enclosing any of the courts mentioned above, the space offered by the Vienna buildings will be 130,270 square yards. It will be seen from these figures that a park of 575 acres, nearly as large as the Central Park of New York, is appropriated to the objects of the Exhibition, and that with all the halls and pavilions and the main buildings, something like 50 acres will be under cover. Notwithstanding the vast scale upon which the Exhibition is projected, it is believed by competent judges that everything will be ready before the 1st of May, 1873. Every Government in Europe has made large appropriations to defray the expenses of exhibitors, and the number of applicants for space far exceeds anything ever known before. The only civilized nation on the face of the globe which has not made an appropriation or taken active steps to participate in the Vienna Exhibition is the United States. On the last day of its session, Congress authorized the appointment of a commission provided that no expenses were to be incurred by the Government; which, if anything, was more insulting to the Austrian Government than a positive refusal to have anything to do with the Exhibition would have been. We do not now see how this error can be retrieved nor how it will be possible for the United States to be properly represented, even if the next Congress grants an appropriation and applications are made for space. The United States Commissioner, General Van Buren, is doing all he can to remedy the error, but without money and at this late day his task is a difficult one, and we fear must result in failure.

—In a brief communication to the *Athenæum* of August 31, Mr. George Finlay gives an interesting account of the revival of the University of Athens since the revolution of 1862, including the careful arrangement of the national library, which had hitherto been "a mass of books piled up in heaps without classification," and of the museums of natural history and mineralogy. The first volume of the "Catalogue of the Collection of Ancient Coins in the National Museum," compiled by Mr. Postolakas, has just been published, and Mr. Finlay pronounces it "probably the very best model of a numismatic catalogue that exists." It extends as far as Macedonia, including the kings. "To an exact description of each coin, legend, and representation, an indication has been added of its weight as well as size, and of the name by which it was designated." Thus one may find in

it the *lepton* (mite), two of which, according to St. Mark, made one farthing (*quadrans* of Tiberius, which is also figured in this collection). Examples of these *lepta*, of the coinage of Athens and Corinth, are by no means rare. The small *quadrans* weighs about thirty grains, and has the head of Hercules on the obverse, and the prow of a galley on the reverse. "The silver coins of the Athenian Republic offered a bright example of the financial honesty and the numismatic skill of the democratic mint. For a period of more than five centuries, from the time of Solon to the time of Augustus, the Athenian coinage suffered no deterioration. There is no example of any other state keeping its financial honor equally unsullied."

—H. Kiepert, in No. 39 of the *Journal* of the Berlin Geographical Society, gives the population of the kingdom of Greece according to the census of 1870. The total of the civil population was 1,437,025, inclusive of 5,261 foreigners; but to this should be added the army (12,420 men), the navy (1,315), and absent mariners (7,133), making the whole number 1,457,894—almost exactly the same as the population of Massachusetts. There is, however, a marked contrast between these two states in the proportion of the sexes. While in Massachusetts the women are largely in excess of the men, Greece counts 754,176 men to 703,718 women. As for the increase of population in the kingdom, it has averaged, during the past nine years, not more than one per cent. Many of the islands show a positive decrease.

—Carlyle, omnivorous in his digestion of all material relating to Frederic the Great, speaking of his imprisonment while Crown Prince at Cüstrin, says: "We hear of tragic vestiges still traceable of Friedrich belonging to this time: texts of Scripture quoted by him, pencil-sketches of his drawing, expressive of a mind dwelling in Golgothas, and pathetically, not defiantly, contemplating the very worst." He refers evidently to an incident, which is related further on, of Frederic's borrowing a Concordance from Chaplain Müller, and returning it with a drawing on the fly-leaf of the figure of a man on his knees, with two swords hanging crosswise over his head, and, underneath, verses 25, 26 of Psalm lxxiii. The present Crown Prince keeps in his chamber at Babelsberg a great folio Bible, published at Strassburg in 1630, and adorned with engravings on copper of some merit. It is the one furnished Frederic at Cüstrin by his father's command when denied all other books but the Prayer-book. He seems to have read it quite through, for numerous passages in the Old and New Testaments are underscored with a red pencil, sometimes with marginal comments added. In the Psalms he found much that corresponded with his miserable state, but Psalm lxxiii. does not appear to have been emphasized here. When the stringency of his confinement began to be relaxed or evaded, so that he could be furnished with colors, he set to work to illuminate the copperplates, and made creditable progress as he went on. When his exile was ended, the Bible was retained by his valet, Eversmann, from whom it passed by descent to the Witzleben family, and by them was restored to the royal possession.

FREEMAN'S GROWTH OF THE ENGLISH CONSTITUTION.*

II.

WHAT are the merits and defects of an unwritten or conventional constitution? This is the second enquiry suggested by Mr. Freeman's work, and is a question which would be easy enough to answer had it not been obscured by a mass of irrelevant metaphors. The most celebrated of these is embodied in the assertion, that the constitution has grown, and has not been made. This dictum, though it has exerted greater influence than a thousand arguments, is, as a reason either for or against an unwritten constitution, absolutely worthless. The English public, no doubt, have been led to think that institutions which can be compared, even metaphorically, to the products of nature, must possess some mysterious and transcendent excellence, and apparently forget that a weed grows no less than a useful plant. But the very small amount of truth suggested by this current metaphor amounts merely to this: that there is some presumption, though not a very strong presumption, that institutions or customs which have grown up by degrees are well suited to the people among whom they flourish. Any one who will clear his mind of the mass of rhetorical reasoning invented mainly by the ingenuity of Burke, and kept alive by politicians who wanted to throw an air of philosophy over respectable conservative principles or prejudices, will find that an unwritten constitution, depending not so much on laws as on usage, has some real though by no means mysterious merits, counterbalanced by serious defects.

Such a constitution admits, from its indefinite character, of being gradually and almost insensibly changed. No one doubts, for example, that the power of Queen Victoria is far less than that exerted by George III., and considerably less than the authority wielded even by William IV. Every one, again, is aware that the House of Lords could not offer the same opposition to any bill supported by the nation which they offered in 1832 to the Reform Bill. In other words, the constitution has been changed, within the last forty or fifty years, so as to diminish the direct power both of the crown and of the peerage. But it would be impossible to point to any statute by which this result has been produced. It is for the most part the effect of a revolution in what Mr. Freeman terms "constitutional morality," that is to say, of an alteration in the general understanding on which the government of the country is carried on. Few persons again can doubt that a revolution of this kind has been achieved with much less irritation and controversy by being carried out gradually, than if, as probably must have been the case under a written constitution, the powers of the crown or the peerage had been diminished by means of direct enactment. The flexible and uncertain character of the constitution has a further effect which has not received sufficient notice. It diminishes the bitterness as well as the permanent effect produced by any turn of public feeling in a conservative or reactionary direction. This arises from the fact that the institutions of the country can, in case popular feeling changes, be administered in a different spirit without being changed in form. In 1819 and 1820, for instance, the governing classes, if not the nation, were, as every one now perceives, under the sway of the strongest Tory sentiments. If, at that time, the comparatively liberal feelings which prevailed forty years earlier had been embodied in a definite constitution of a more or less democratic character, it is almost certain that an organic change in a conservative direction would have been attempted, and probably attempted with success. As it was, the Tories of the day were content to leave the form of the constitution untouched, while they administered the government of the country in a rigidly conservative spirit; and somewhat the same result will follow whenever, under present English institutions, the tide runs strong again in favor of conservatism.

A conventional constitution has also the merit, which in some states of society is a great one, of leaving a large number of questions, and especially the question of the exact distribution of the sovereign power, unsettled. In theory it is of course true, as is pointed out by writers of the school of Mr. Austin, that supreme power or sovereignty must be lodged in the hands of some definite person or persons, but it is in practice often a great convenience to leave it doubtful who in the last resort such person or persons may be, since even in the most civilized nations there will be found to exist a great difference of opinion, which in general leads to no practically important results, as to the mode in which the sovereign powers either are or ought to be distributed. The English public, for example, are, as Sir Charles Dilke can testify, profoundly well satisfied with their constitutional arrangements, yet there exists an immense difference of opinion on what would seem the question, both what is and what ought to be the power of the crown; and any radical who will keep his eyes and ears open may suspect that, if the authority of the Queen were to be defined by statute, large masses of the population would be prepared to give her an authority which, as a matter of fact, she never exercises, and could not exercise in accordance with the prevailing liberal theory of the constitution.

The demerits of a conventional constitution, which are closely connected with its advantages, are far more serious than most Englishmen admit. Institutions which have grown are as a matter of fact a series of adaptations, and are marked by the flaws always to be found in things little or great which, made for one end, are changed or adapted to meet another. Take any part of the English polity from the crown downwards, and you will find that it never simply and in the most direct manner accomplishes the end for which, as a matter of fact, it is used. You often hardly know whether to admire the ingenuity with which an institution which appears either useless or noxious is made to do good service, or to deplore the perverse obstinacy with which, for the sake of keeping up an old form, some good end is awkwardly accomplished in a roundabout manner, while every one knows that it might be far more easily attained by a sacrifice of the form, and making the institution in name what it is in reality. No better example of this combination of ingenuity and perversity can be found than is afforded by the maintenance of the House of Lords as a supreme court of appeal. In theory, every peer, whether a layman or a lawyer, whether young or old, whether known for his wisdom or notorious for his folly, is a member of the highest tribunal in the land. Nothing except custom and the force of opinion prevents any lordling of twenty-one, just rusticated by his college, from deciding by his vote questions which have taxed the ingenuity of all the judges in the land. Custom and opinion have, however, in this case, gradually exerted a force practically equal to that of law, and have, though within comparatively modern times (for in one case at the beginning of the century some of the bishops voted on an appeal), excluded from all part in legal discussions any peer who is not a law lord. Hence an assembly which could not be tole-

* "The Growth of the English Constitution, from the Earliest Times. By Edward A. Freeman, M.A., Hon. D.C.L., late Fellow of Trinity College, Oxford." London and New York: Macmillan. 1872.

rated as a law court if its members exerted their legal power, has been converted into a very tolerable court of appeal.

Unfortunately, the plan of pretending that a body in reality consisting of five or six law lords is the same thing as the House of Lords, involves the inconveniences which inevitably attach to such pretences. The court can only meet while Parliament is sitting; the court delivers a set of speeches and not a judgment, because the members are supposed to be simply speakers addressing the House of Lords; the court can only consist of persons whom it is desirable to make peers, and hence cannot be strengthened by the presence of judges who, though of great eminence, are, from different circumstances—for example, from want of wealth—not the men who could be offered or who would take a peerage. In other words, you have an indifferent court of appeal, because you insist upon the court appearing to be something which every man knows in reality it is not. On the wish of the House of Lords to keep up the mere appearance of being itself a law court, bill after bill for the reform of the law has been wrecked. Their lordships know perfectly well that they are not, and that no one believes them to be, a real court of appeal, but their lordships are determined that, come what will, the House of Lords shall be called the Court of Appeal; in other words, the most obvious and substantial improvements are sacrificed in order to keep up an ancient and entirely useless form. We have dwelt on the position of the House of Peers as a court because it happily exhibits at once the strong and the weak points of an institution which has grown and not been deliberately created. But hundreds of other instances may be found of the practical inconvenience caused by constantly modifying the system of government, not through direct changes, but through indirect alterations in the spirit and working of ancient institutions. The whole system, for example, of party government, which makes it almost impossible to carry through a whole mass of useful legislation which has really nothing to do with party divisions, is the result of a series of gradual and almost imperceptible changes, which have altered the whole relation of parliament to the crown, to the ministry, and to the people. It must not, however, be supposed that the evils of a conventional constitution consist only in the inconvenience caused by awkwardly adapting means to ends for which they were not originally designed. Another and in some respects more serious evil is that changes are often allowed to take place of which no one perceives the full effect until too late to apply a remedy. It is, for example, extremely probable that an alteration is gradually taking place in the English constitution which, whether it be good or bad, is a most serious one, and ought, if it be introduced at all, to be introduced after full debate and due consideration. This change is the introduction of the principle of what in Switzerland is called the *Referendum*. By the Referendum is meant the plan of referring back to the direct vote of the people any law of considerable importance. In some of the Swiss cantons the principle is, we believe, adopted, and the way in which at any rate it would, where adopted, work, is that no law, *e.g.*, changing the franchise, disestablishing the church, and so forth, could be finally passed by the parliament or representative assembly, unless it had also been approved by the mass of the electors. Now, of the merits or demerits of such a system we have here nothing to say. It is, however, pretty plain that the principle, if once admitted, would affect the whole position of parliament, and that it is one which the mass of either liberal or conservative Englishmen would admit with great hesitation. Nevertheless, the *Referendum* is in a very curious manner being in substance, though not in form, gradually erected into a principle of English politics by the action of the House of Lords. Their lordships have now in effect admitted that they are bound to yield to the clearly expressed will of the nation. But they have shown a strong tendency, notably in the case of the bill for the disestablishment of the Irish Church, to maintain that the will of the nation cannot, on any topic of importance, be considered definitely expressed by any House of Commons not elected with distinct reference to the particular subject. Suppose, for example, the present House of Commons were to pass a bill effecting radical changes in the land laws, the peers would, in accordance with their present policy, refuse to pass the measure, on the ground that it was not one on which the constituencies had been consulted; in other words, the House of Lords upholds, in effect though not in name, the principle of the *Referendum*, and thus is unconsciously establishing one of the most dubious democratic innovations of the day.

None, however, of the specific and tangible evils fostered by a constitution resting, as a conventional constitution must do, mainly on fictions, are nearly so serious as the spirit of fiction which it fosters among the people who are ruled by it. No one can examine any part of English public life without seeing that there is nothing which either statesmen or people dread so much as calling things by their right names. No one, for example, supposes that there are not a considerable number of persons in England who are, in theory at least, republicans. But when any man of position says openly that he sees advantages in making the government avowedly a republic, all persons, from Mr. Gladstone down to the gentlemen at Bolton who crush republican principles by force of brickbats, seem as much annoyed and shocked and dismayed as if it were impossible to conceive any man to be a republican who was not either a fool or a knave, or both. Look again at the endless and fatuous discussions on all ecclesiastical topics. The plain matter of fact is that the English public, like the public of all civilized nations, are divided, and are gradually becoming more and more clearly divided, by the most marked differences of belief with regard to the most fundamental of theological dogmas. Yet few persons of any kind, and certainly no person of eminence, ventures to recognize a fact which is plain as day to any one who can either think or observe; and when such a question as the maintenance of the Athanasian Creed is brought up, one set of persons, who really object to the Creed because they disbelieve it, say they object to it simply because it is uncharitable; whilst their opponents, who really support the Creed because they hold it to express the truth, pretend that they support it on the ground that its most important clauses are, for some incomprehensible reason, not to be looked upon as essential parts of the document. The fictions of the constitution seem to have entered into the spirit of the nation itself; you have a whole body of institutions which seem to be one thing and are something else, and at last every one forgets the immense advantage in politics, in religion, in law, and indeed in every department of life, of doing things in the most direct manner, of calling things by their right names, and of simply saying what you mean and meaning what you say. In one of Grimm's stories, an ingenious dwarf finds a sack, and by cutting a hole through it for the head and two holes for the arms, makes for himself a more or less passable shirt. Hans admires the contrivance, and whenever he wants a shirt, first elaborately makes a sack in order that he may cut holes through it and turn it into a shirt. If Hans had been imbued with the spirit of the British constitution, he would have maintained with many ingenious arguments that no shirts were good which were not manufactured in this round-about manner out of a sack. An ordinary shirt looks better, but, after all, your sack-made article may, if you like the metaphor, be said to have *grown* rather than to have been made for the end for which it is ultimately employed.

A NORTHERN MISSIONARY IN GEORGIA.*

MR. STEARNS'S volume has much the semblance and the opportuneness of a Republican campaign document; he asserts pretty broadly, however, that it was directly inspired by God. "It would be singular enough," he says, "for God to command one, for instance, to publish a book, and then fail to provide him with the means for so doing. I therefore believe that, on my arrival at the North, a way will be opened for the publication of this book, although at the time of writing these lines I have only a small portion of the necessary means on hand." We do not propose to consider its merits as a work of inspiration, since we find it interesting on other and more easily comprehensible grounds. It is not every day that one finds a man so serenely satisfied with himself and all that belongs to him as Mr. Stearns is, and so engagingly open in taking his readers into the secrets of his heart and conscience. His book is full, moreover, of very amusing and interesting details concerning the freedmen; it gives some important documents concerning the Ku-klux outrages, and intimates very plainly that a second term of General Grant's Administration is sorely needed to repress "the rebels."

Mr. Stearns was a self-appointed missionary, belonging apparently to none of the sects, but entertaining charitable feelings toward all of them. Perhaps we might call him a Christian Spiritualist, holding decided anti-slavery views, anxious to elevate the blacks by education, and desirous of gaining for himself and a limited number of them a sufficient maintenance by co-operative farming. He and his wife had resolved during the war that if it resulted in the abolition of slavery they would go South and do what they could "for the perfect development of the colored race." His wife died, however, and though he supposes that she "still watches over him in spirit," he took another helpmate without needless delay, and in 1866 found himself in Savannah, ready to begin his labors. The contents of his volume are pretty evenly divided between the interior and exterior troubles of Mr. Stearns and the subjects indicated by its title; and, as we intimated before, it is not bad reading on both accounts. He was not able to try co-operation, partly by reason of the opposition offered by his partner in business; and his endeavors to instruct the negroes drew down upon him very fierce anger from his neighbors. His negroes were very lazy and very great thieves, and, though they were very religious, and listened with great eagerness to his

* "The Black Man of the South, and the Rebels; or, The Characteristics of the Former, and the Recent Outrages of the Latter. By Charles Stearns, a Northern Teacher, Missionary, and Planter, and an Eye-Witness of many of the Scenes described." New York: American News Company. 1872.

Sunday instructions so long as they had no immediately practical bearing, yet when repeated depredations excited in him a great zeal for the eighth commandment, his hands stayed away from meeting, and finally appointed a committee to wait upon him and make the following suggestion: "Now, Mr. S., if you must talk about stealing, why not call us together on Monday and tell us about it, and let us have a good heavenly time on Sunday, in worshipping the God we all love so much?"

After experiencing a good deal of ill-treatment, which, by his own account, he bore like a saint, and having many serious losses—among others that of his second wife, who, however, appeared to him in her spiritual body within an hour after her death, consoled him greatly, and promised to be with him always, a promise which he says "she has nobly redeemed"—Mr. Stearns concluded that God had work for him "in a more favored portion of his vineyard," and came North with his third wife to narrate his experiences and devote himself to laboring for the colored race. This book is, we suppose, his first effort in his new field of operations.

The Southern whites seem to him to stand very greatly in need of being reconstructed by a strong hand. They are, he says, as bitter rebels as ever, and their hatred of the blacks, and their unwillingness to have them educated, amount to a monomania. He gives a good many facts and documents which seem to bear out his view. He was himself elected "Judge of Ordinary" for the town of Apling in 1868, but on attempting to enter upon the duties of his office was so roughly treated, and so severely threatened by a mob, that after endeavoring in vain "to talk to them of Jesus," and having submitted with great meekness to have his nose violently tweaked by several persons, he pacified his opponents by resigning his office. He gives a rather long account of this scene, and some of the incidents are curiously characteristic of the Southern disposition. This, for instance: "I was then invited out of doors by one of the crowd, with the humane assurance that if I ventured out, 'I will beat you into such a jelly that your own wife will not know you.' This polite invitation he repeated several times, when a bystander whispered something in his ear, and he immediately took off his hat, and said, 'I ask your pardon, Mr. Stearns. I did not know your wife was dead. Excuse me, sir.' This affected me so much that I burst into tears. I was unmanned at the sight of such a demonlike nature changed so suddenly into a humane man by the transforming power of domestic affection; for if he had not loved his own wife, he could not have felt so deeply for another's affliction. Does not this little incident afford convincing proof that the worst of men have a spark of humane feeling left within them? Is there not some good in even a demon?"

His remarks on the blacks, their characteristics and their capabilities, and the anecdotes by which he illustrates his positions, are in general very amusing. He finds in them no intellectual deficiency and a great desire for instruction. Religiously, he finds them actual heathens and nominal Baptists. Owing to the fact that what little had been taught them about the Bible by their former masters had convinced them that it was strongly in favor of slavery, they have very little faith in what Mr. Stearns calls its "divinity"; and, in particular, those in opposition to the "sinner-men," who are known as "saints"—the preachers, exhorters, and the like—hold very strong views as to its worthlessness when compared to the "witness of the Spirit within." He gives an account of a dispute which occurred in his presence between David, the "spiritual shepherd of the black flock on my plantation," and two of the "sinner-men." The latter were eloquent in defence of the Bible, but David, having first denied their right to speak at all on the subject, saying, "Dem ar sinner-men, Mr. Stearns, hab no rights at all in dis yer concussion. I protest agin dem sinners being 'lowed to teach we who are de saints of de living God," proceeded to give what he considered proof positive against the inspiration and authority of the Bible. "He arose as if under the influence of some powerful inspiration of the Spirit, and, advancing to the table, on which were lying the Bible and two hymn-books, he seized them in his hands, and holding them up before the excited audience, he exclaimed at the top of his by no means diminutive voice, 'Now, here is tree books, all de wich, ye say, comes from de Almighty,' and growing warm with the brilliancy of the idea, he dashed them down with tremendous force upon the quivering table, and yelled out, 'and yet obery one ob dem is 'tirely different from de oder. Can de holy God write all dese tree books and dey all so different from de oders?'"

Nine-tenths of the plantation hands he affirms, on the authority of an intelligent Southerner, to be disbelievers in the Bible, and though they are ardent church-members, they know so little of that volume as to warrant their disbelief. One woman told him that her "ole massa" assured her that "Jesus Christ once *got drunk*, and that one of his sons insulted him when he was drunk, but one was good to him. After he came to his senses he found out what had been done to him, and he cursed his bad son, and said his children should always be the slaves of his brother. He said we all came from the bad son and they all from the good one, and that was the reason why we were their slaves." The Virgin Mary had more sincere believers in her power, he thinks, than Christ had. He was sometimes told that she "died for de sins of de world," and, considering that there were no Catholics in the neighborhood, the fact struck him as a strange one. The only Biblical character about whom any distinct idea was entertained he found to be Daniel, of whose adventure in the lions' den they all seemed to have heard something. Their immorality, especially in the matters of lying, thieving, and impurity, he found very great, and the most religious of them seemed to see no connection between religion and morality. Here is a case in point: "Once on visiting a friend's plantation I enquired for a man by the name of Jim, who was a preacher, but usually absented himself from the religious services we occasionally held on the place because I said so much about lying and stealing, as he said. I was told he was in jail. 'In jail!' said I with great surprise, 'Jim the preacher in jail; what can that be for?' 'Oh, nothing,' said Thomas, my informer, 'he only jus' stole a few turkies, and den he sell 'em and got cotched,' and he added: 'I went to see him de oder day, and he tells me—"You jus' tell dem darkies as b'longs to my church not to be downhearted, for de Lord will bring me one day to be wid um agin, and dey must not forget to pray for me."'" That men and women brought up under such a system as Southern slavery should be both liars and thieves is a fact which ought to surprise nobody.

From a purely literary point of view, Mr. Stearns's book is not to be praised; but as a very naïve exposure of a rather peculiar interior life it very well repays reading. In thinking of it as a description of things at the South we have to recollect that all descriptions are the better for having been made by persons of sense. Of Mr. Stearns as an observer we suppose our readers will be able to judge from the glimpse of him which our notice has afforded them.

AN ENGLISH DIPLOMAT IN GERMANY.*

THERE is no more valuable commentary upon history than the memoirs of politicians and diplomatists who, from their position, have been enabled to see some one aspect of events with perfect clearness, and even to go somewhat below the surface of things. Mr. Ward's memoirs have a peculiar value for two reasons—first, that his entire diplomatic life of thirty years was spent in one nation, so that he came to know that nation more intimately than can often be the case; second, that he is a Catholic, accredited from a Protestant nation to a Protestant nation, for it was in the Protestant cities of Berlin, Leipzig, and Hamburg that his diplomatic life was passed. In view of the importance that the religious question is now assuming in German politics, students of the subject will be glad to have the impressions of an English Catholic, moderate and intelligent, upon the events which preceded and led to the present crisis. This view is not very different from what we might expect. It embraces a long series of years, comprising a sketch of the "German Catholic" movement of 1844 and an account of the later developments of materialism, in copious extracts from Büchner's "Kraft und Stoff." The author is fair and even friendly in his treatment of Protestant statesmen and writers, and appears to be a sincere advocate of religious toleration, although he admits (p. 12) "that several Roman pontiffs have laid themselves open to such a charge [of persecution]." He accepts the doctrine of infallibility as a necessary result of the Catholic system, and as "not disputed by orthodox Catholics" (p. 212). As might be expected, converts to Catholicism are mentioned with satisfaction, and at every point the Catholic aspect is prominent. This is precisely what the reader desires. We even have (p. 197) the analysis of a novel, written by the Countess Hahn-Hahn after her conversion, in which the Protestant sister turns out badly and becomes an habitual gambler, while the Catholic sister—although undergoing great sufferings, which were the penalties in this world for the misdeeds of an ancestor of her husband who had enriched himself at the expense of a monastery—is a model of piety and devotion.

The most important passage on this head is a discussion, in several pages, of the religious condition of Germany (p. 156). In this and elsewhere, Mr. Ward emphasizes the perfect religious toleration which exists in Germany as the result of the Peace of Westphalia, and bears testimony to the favorable workings of the system. In another place, he anticipates the time when all will be Roman Catholics or infidels—does he imagine that, when that time comes, and the *Church* shall have the same power concentrated that the *churches* have now, this religious toleration will continue to exist, and that the freedom of thought will still be recognized? In the discussion mentioned above, there is a valuable statement of the relation of the canon law to the

* "Experience of a Diplomatist: Being Recollections of Germany, founded on Diaries kept during the years 1840-1870. By John Ward, C.B., late Her Majesty's Minister-Resident to the Hanse Towns." London and New York: Macmillan & Co. 1872. 8vo, pp. 279.

civil law in several states, and a history of the Austrian Concordat, established by Count Von Buol-Schauenstein and abolished by Baron Von Beust. Naturally enough, the author regrets this latter act, and fails to see anything oppressive in the instrument, although he admits that it was unpopular, and "even among the Austrian Catholics it had many opponents." In conclusion, he naïvely admits that the whole difficulty lies in the claim of the Church of Rome "to be in the possession of the objective truth," and therefore to have a *right* to the control of education, marriage, etc. "M. de Beust was a Lutheran; as a good Catholic, he could hardly have disturbed the Austrian Concordat, for the principles which it sanctioned were in conformity with those which the Church maintained as an essential part of the Christian religion." "Austria," he remarks (p. 164), "is a consolidation by artificial means of a number of different nations, of which the sole common bond was the Catholic religion"—forgetting the Protestants of Hungary and Transylvania and the Greek Christians of other provinces.

These passages illustrate the tone of mind of the writer—not perhaps ultramontane, but wholly unable to appreciate or understand the idea of purely secular government, or the real character of rationalism in religion. The great movements of thought in Germany are beyond his scope; and he utterly fails to see the significance of that mighty revolution which has transferred the sceptre from Catholic Vienna to Protestant Berlin, and which has made even Austria and Bavaria the champions of freedom in the Church against the head of the Church. It is, however, as we have remarked before, this very narrowness of view that gives the book its peculiar value to a student of contemporary history; it helps to an understanding of the problem if we know how it is regarded by a school whose views are clear and decided, even if they are narrow. This narrowness is not, however, to be set down entirely to the account of theology. Mr. Ward is an old man, and the tremendous events of the last ten years form a deep chasm between the age in which he passed his life and the new and more vital controversies which are now opening before us. It is surprising to see how little he gives us that throws light on the questions of the present day, social and political, as well as theological. In this we would not underrate the merits of the book; only it belongs to the past generation, and teaches us of the diplomacy of that generation, and nothing more. A man who could have seen below the surface of society in Germany in those days when the new issues were silently taking shape, and who could have taught us something of this secret process—such a man, after all, we may say, would hardly have been occupying this diplomatic post. Mr. Ward has told us what he had to tell, and we may thank him for it. Only one might have looked for the name of Schulze-Delitzsch, at least, and some mention of institutions like the Rauhe Haus at Hamburg.

In the field of diplomacy, Mr. Ward is well informed and communicative. Naturally, the most prominent subject under this head is the Schleswig-Holstein question—of which we believe it was Earl Russell who said there were but two men in England who understood it, and they didn't agree. Mr. Ward, as was natural, took the German side very thoroughly, and certainly argues it very strongly; the point of the argument lying in the fact that a *lex regia* of Denmark (1660) which admitted the succession of the female line, did not apply to the Duchies, and that, therefore, the Duke of Augustenburg, the lineal heir of Christian I. in the male line, was the rightful claimant to these. We wish he had stated more distinctly how this line of Augustenburg and that of Glücksburg (which succeeded to the Danish throne) were related to the old line, and had made a little clearer the perplexed relation of Schleswig to Denmark on the one hand and to Holstein (which was clearly German) on the other.

The first chapter, which treats of the time before he held these diplomatic positions, gives a very good account of several of the Belgian statesmen who took the lead in the revolution which established the independence of their country. He defends the revolution, but does not state its causes quite so fully as one could desire. Other good points are an account of the Bavarian industrial schools, p. 131, of visits to the Frisian Islands and Heligoland, west of Holstein, and of the misgovernment and revolution in Hesse-Cassel. The events of 1848 and 1849 are also very well told. The book abounds in descriptions of prominent characters, many of them very well delineated, and at considerable length. These are not confined to diplomacy and politics, but comprise men of eminence in every department; for instance, the several kings of Prussia are very well characterized, and we have names of so wide a range as Niebuhr, Mendelssohn, Gottfried Hermann, Radowitz, Cornelius, Overbeck, Cobden, Wheaton, Lappenberg, and Bunsen. There is not very much incident. Perhaps as good an anecdote as any is that of King Frederic William IV. paying a visit to the King of Saxony, who, with his learned brother, John (afterwards king), waited to receive him at the foot of the staircase, when the guest cried out, "But you make too much ceremony with me, you dear little angel, and you, too, old schoolmaster" (p. 59). When John succeeded his brother, he examined personally into everything, and among other things attended a lecture of Prof. Wächter at Leipzig. The Professor, at his close, made some remarks complimentary to his majesty, who he wished had himself filled his chair, when the king, looking up, exclaimed, "No, good Wächter, we will both for the present remain what we are" (p. 137).

It is not by way of criticism of Mr. Ward, but of the absurd diplomatic custom which he follows, that we notice his Frenchifying of German names—Mayence for Mentz, adding an *h* to Coburg, Freiburg, and Hamburg, and especially in such names as Frederic de Raumer, Dr. de Fischer, William de Humboldt, M. de Bismarck-Schönhausen, Baron de Beust.

An American is interested in the account of Baron Von Gerolt, so many years minister at Washington, and is gratified at the friendly and intelligent testimony given by him as to our civil war, which he "had always foretold would end in the discomfiture of the Southern States and the re-establishment of the North American Union. Having resided twenty years at Washington, his sympathies were entirely with the North, and he knew the strength and resources of the Republic so well as never to have doubted an instant of its eventual victory over the insurgents." This testimony, Mr. Ward candidly adds, was somewhat unwelcome both to himself and to the king and court, who "would gladly have seen a federal government erected under Jefferson Davis, believing the men of the South to be more of gentlemen, more conservative, and altogether better allies than the Yankees of New England and Massachusetts" (p. 208).

In conclusion, we may ask how soon our civil service, "the best in the world," will give us cultivated gentlemen like Mr. Ward, who can publish their diplomatic experiences of thirty years, all passed in the same country, in successive grades of promotion.

LEISURE HOUR SERIES.

PALGRAVE'S NEW BOOK,

HERMANN AGHA,

AN EASTERN NARRATIVE.

BY W. GIFFORD PALGRAVE. 16mo. $1 25.

"Reads like a tale of life, with all its incidents; the young will take to it for its love portions, the older for its descriptions, some in this day for its Arab philosophy."—London Athenæum.

The unexpectedly large demand having put all the volumes (with a single exception) out of print for some days past, the publishers are now happy to state that they are again ready to fill orders.

I. MY LITTLE LADY. $1 25.
II. SMOKE. By I. S. Turgenef. $1 25.
III. FATHERS AND SONS. By I. S. Turgenef. $1 25.
IV. FLY LEAVES. By C. S. C. $1 25.
V. THE MAN WITH THE BROKEN EAR. By E. About. $1 25.

HOLT & WILLIAMS, PUBLISHERS,
25 BOND STREET, NEW YORK.

PUBLISHED THIS DAY,

A New Grammar by Prof. Woodbury.

A PRACTICAL COURSE

WITH THE

GERMAN LANGUAGE.

BY W. H. WOODBURY, A.M.,
Author of Woodbury's German Series.

The publishers present this New German Grammar to the public with the belief that it will be found to be at once the most complete and practical text-book yet issued of the language of which it treats. Mr. Woodbury's large experience as an author of German educational works, and his intimate acquaintance with the present requirements in this branch of study, have combined to ensure the rare excellence of this work as a text-book.

A peculiarly progressive plan is presented throughout. No grammatical form or principle has been permitted to add undue difficulty to the more advanced lessons for the sake of rendering easier and more attractive the earlier ones. A wholly new and practical method is employed from the very outset for the illustration of the characteristic forms and uses of the adjective words; indeed, in all respects the work is fresh, thorough, and practical.

As a specimen of typographic art the present book has never been excelled. The University Press, Cambridge, has given many months to the work, and has drawn from European and American founderies, especially for it, the most beautiful and appropriate casts of type to be had.

☞ We shall be glad to send copies by mail for examination on receipt of $1, the retail price being $1 60.

A General Index to the Contents of Fourteen Popular Treatises on

NATURAL PHILOSOPHY.

YALE COLLEGE.
THE SHEFFIELD SCIENTIFIC SCHOOL

Offers professional training to Civil and Dynamical Engineers, Chemists, Geologists, Naturalists, etc., and also courses preparatory to such pursuits as Mining, Medicine, Agriculture, Manufacturing, etc. Letters may be addressed to Prof. D. C. GILMAN, Secretary,
New Haven, Conn.

REMINISCENCES OF AN OLD MAN,
After A. B. Durand, N.A.
A MAGNIFICENT NEW CHROMO
BY
L. PRANG & CO.

Mr. Durand is the oldest of our American artists, and one of the most poetical, withal. This latter quality is shown to a remarkable degree in the picture under consideration, which is one of his earlier productions. A grove of trees on the left, a stream gliding through it, a cow-pasture, a farmhouse on the right, the village with its church-spire, and finally, a range of blue hills in the distance—these are the elements that make up the scene upon which the artist unfolds the whole drama of life. Children are playing on the meadows, the boys with ball and bat, the girls swinging in the trees, lovers are wooing in the shady grove, the farmers are busy reaping and garnering their harvest, and under the shadows of a mighty oak sits an old man with silvery locks, contemplating the spectacle before him, which is well fitted, indeed, to call up the reminiscences of a lifetime.
Size, 32½ x 21¼ (the largest so far published by us).

PRICE PER COPY, $25.

This Chromo is
NOW ON EXHIBITION
AT THE
AMERICAN INSTITUTE,
(Corner Sixty-third Street and Third Avenue),
TOGETHER WITH THE PAINTING
which served as the model, thus giving the public an opportunity to judge of the fidelity of the reproduction.
CALL AND SEE IT!
as well as the other new chromos and originals exhibited at the same place.

JUST PUBLISHED.
THE LIVES OF THE NOVELISTS.
BY SIR WALTER SCOTT.

12mo, 430 pp., neatly printed on toned paper, cloth extra, gilt top. Price $2.

"The publisher has rendered the reading public acceptable service in giving it this new issue of a very delightful and, of late, not often found, book. Not one in a hundred, perhaps, of those who have found such pleasure in the reading of "Waverley" and other works by the same author, have ever seen his estimate of the great novelists who preceded and were contemporaneous with him. . . . Of Smollett, Goldsmith, Fielding, and others, he has much to say that is marked with generous, sympathetic appreciation, and the reader will find altogether a most delightful and entertaining feast spread before him in this book."—Washington Chronicle.

Will be sent free by mail on receipt of price.

A. DENHAM & CO.,
Publishers and Importers,
Near Broadway. 17 MURRAY ST., NEW YORK.

Priced Catalogues of our English and Foreign Books sent free of charge on application.

HENRY K. VAN SICLEN,
BIBLIOPOLE,
133 NASSAU STREET,
American or Foreign Publications sent by mail, postpaid, at catalogue prices.

SPECIAL NOTICES.

[TERMS: In advance, one insertion, three cents per word; five insertions, two cents per word each. The enclosure of an addressed and stamped envelope will secure a numbered box to which communications may be addressed.]

PUPIL IN MATHEMATICS, ETC., Wanted. Address S. I. N., *Nation Office.*

TWELVE YOUNG GENTLEMEN receive the exclusive instruction of a very experienced teacher and his assistant. Fine residence. Healthy location. Address Box 82, *Hempstead, Long Island, N. Y.*

AN OPPORTUNITY.—The co-operation of one or more literary or other gentlemen with $10,000 is needed in one of the best money-making, high-class book publication enterprises ever projected. Progress made demonstrates that the realization of a fortune in five years depends only upon thorough working of new plans adopted. No risks whatever. Business—consisting of the publication of two works in a series of volumes—permanently established and paying well in Philadelphia. Address E. T. G., 218½ Walnut Street, Philadelphia.

A YALE GRADUATE, lately Principal of a classical School, desires private pupils in New York City or vicinity in English or classical studies. Testimonials from Ex-Pres. Woolsey, Pres. Porter, Professors Thacher, Hadley, and Northrop of Yale College and others. Address G. C. Box 752, *Portland, Maine.*

A YOUNG MAN, now in Berlin, desires one or two pupils, or would travel with young persons as tutor. He speaks French and German, has had several years' experience in teaching, and is a Classical Fellow of the College of New Jersey. References exchanged. Address Look Box 648, *Yonkers, N. Y.*

A.—MISS WHITCOMB'S English and French Boarding and Day School for young ladies and children, No. 84 Pierrepont Street, Brooklyn Heights, N. Y., will reopen on Wednesday, September 18, 1872. *Address as above.*

PROFESSOR CHARLES CARROLL, of New York University, will fit young men for College or form classes for private instruction in French and German. Address at the University, or personally at No. 2 East Fifteenth Street.

S. A. FARRAND'S SCHOOL, 1400 Broadway, reopens September 25. *Great pains are taken to teach boys how to study. This is done so thoroughly that they need no help at home. Among the patrons of the school are, Rev. Thos. S. Hastings, Rev. Isaac Ferris, Rev. Geo. L. Prentiss, Rev. E. H. Chapin, Rev. James O. Murray, Rev. Harvey D. Ganse, Rev. Prof. Henry B. Smith, Rev. J. F. Stearns, Rev J. Pew Smith, Rev. D. W. Poor.*

DUANE S. EVERSON'S School for Boys Reopens Sept. 23 at 1146 Broadway, above Twenty-sixth Street. Thorough instruction. Ancient and Modern Languages and the English branches.

MEDICAL INSTITUTION of Yale College—1872-73.—*The Collegiate year of Medical study embraces a winter and spring term. In both terms the Faculty are fully engaged in the work of instruction, which is so divided among the Professors, ten in number, that all departments and specialties usual in the best medical schools are fully taught and illustrated. The next winter term, devoted to public lectures, begins October 17 and ends February 13. The next spring term, occupied chiefly with daily recitations from text books, begins March 6, 1873, and ends June 26. Fees (paid in advance): Matriculation Fee, $3, payable once only. For both terms, in one payment, $100. For either term separately, $60. Tickets to the Hospital and Dispensary gratuitous. For further information and circulars, address the Dean of the Faculty, Prof.* C. A. Lindsley, *New Haven, Conn.*

PROF. AND MRS. O. P. HUBBARD'S Boarding and Day School for Young Ladies, at Grove Hall, New Haven, Conn., will reopen September 25. Circulars sent on application.

CHARLIER Protestant French Institute, Boarding and Day School for Young Gentlemen only, Nos. 126, 128, 130 East Twenty-fourth Street, near Madison Park.—Eighteenth year begins Sept. 17. College, Business, West Point, Annapolis, German, Spanish, Primary Department, Gymnasium, Military Drill. Catalogues with full details. Home after Sept. 2. Prof. Elie Charlier, *Director.*

COLUMBIA COLLEGE Law School.—The fifteenth annual term of this institution will commence at No. 37 Lafayette Place, New York, on Wednesday, Oct. 2, 1872, and will continue until May 14, 1873. By the laws of the State graduates of the Law School are admitted to the Bar without further examination. For Catalogues and other information apply by letter to Theodore W. Dwight, *Professor, etc., No. 37 Lafayette Place, New York.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 26, 1872.

The Week.

THE principal event of the week has been the flurry in Wall Street, which commenced by a "corner" in Erie stock, and ended in an attempted "lock-up" of greenbacks, which was frustrated by the refusal of the Bank of Commerce to pay greenbacks over the counter on a certified check. At this season of the year the resources of the New York banks are severely tasked to supply the demands of the West for money "to move the crops," and it is therefore the season most favorable for "lock-ups," "corners," and other performances of a similar nature. The greatness of this strain may be inferred from the fact that the general deposits in the New York banks have been over thirty-seven millions less during the past week than during the corresponding week of last year, and the excess over the reserve of twenty-five per cent. of circulation required by law was only $1,599,700, against $2,232,525 in the corresponding week of last year. The result has been, of course, extreme "tightness" of money, or, in plain English, great difficulty in borrowing it for the legitimate demands of business.

While things were in this state, Jay Gould, H. N. Smith, and other worthies who have, ever since the famous "Black Friday," been acting together, were "short" on Erie, and found themselves threatened with serious difficulty in making their deliveries, owing to the fact that a very large quantity of Erie stock was held, though quite legitimately, by German bankers in this city, who had "let in" Mr. Daniel Drew, who was joyfully rolling up money by lending the stock to the beleaguered "shorts." Under these circumstances, there was nothing for the Gould clique but to make a "corner" in money, and thus force the holders of Erie into the market. So, having plenty of stock of one sort or another, they sold out, took the certified checks received in payment to the various banks, drew out the greenbacks, and put them away. They were engaged in a similar operation in gold when Mr. Boutwell appeared on the scene, in his character of the American Jupiter, and announced that he would sell $4,000,000, but was appalled by the reply from the speculators that they would buy every cent of it, so he prudently put his thunderbolts away, and sold only one million. They then turned their attention to greenbacks exclusively, and were carrying everything before them, Smith, one of the chiefs, carrying off $800,000 in one haul, in a *coupé* hired for the raid, until they came to the Bank of Commerce, which refused to pay its certified check, except through the Clearing House, and the combination thereupon, temporarily at least, broke down. The Clearing House, the next day, refused to pass a resolution endorsing the Bank of Commerce, and that bank shortly after paid over the amount of the check with costs. Most respectable men think that its action was morally right, but everybody acknowledges that it was legally wrong, and that to establish the precedent that a bank might refuse payment of its checks because it thought the holder was going to make a bad use of the money would be very dangerous. At this writing comparative calm reigns in the Street, though there is much indignation. The combination has unquestionably failed, and the "operators" are said to be trying to drop it.

When the question, How can the community be protected against these acts of brigandage—for they are nothing else—in future? comes up for discussion, one finds the widest difference of opinion. One thing is plain, and that is, that complete protection cannot be furnished as long as stocks are bought and sold, or the quantity of money is limited, and there are clever scoundrels among us who are indifferent to public opinion. The scarcity of money at this season of course furnishes them with the occasion for their operations, but how is money to be made plentiful at the season when everybody most needs it? Our able and careful contemporary, the *Financier*, suggests the removal of the legal obligation on the part of banks to maintain the 25 per cent. of legal-tender reserve, pointing out that it furnishes no real protection either to depositors or bill-holders; but then this is, after all, only putting the point of danger twenty-five per cent. further off. There would under any system be inevitably a moment when at this season the lending capacity of the banks would be forced to its last limits, and this reached, why is not the opportunity for a "corner" as tempting to an unblushing scoundrel as ever?

The financial sky is, however, still somewhat cloudy, owing to the condition of affairs in London, where the Bank of England is advancing its rate of discount after a long period of ease, caused, says the *Economist*, by the fact that London is now the centre of international payments to an unprecedented extent, and to make these payments an amount of money has had to be kept there never before found to be necessary. In this amount is about $100,000,000 due by the French to the German Government, the withdrawal of which has begun within the past week. As long as this great hoard was lying idle, of course discount was low; but the German drafts now begin to make themselves felt, $2,640,000 in coin having been withdrawn from the Bank of England, although, if the last Cable telegrams speak truly, some "leading bankers" in London declare that the advance in discount is due to the low price of sterling exchange in New York.

The only important incident in the canvass is the acceptance by Governor Curtin of the Liberal nomination for the Constitutional Convention in Pennsylvania; but his letter is devoted solely to questions of State politics. He advocates the election of Buckalew, but does not mention Greeley's name, and says, in answer to the objection that the support of the Liberal State ticket will affect the national contest, "that he will vote for honest government in October, and meet the Presidential issue when it comes before the people in accordance with his long-settled convictions." The canvass is growing livelier every day in this city. The New York *Times* announces its intention to publish "a campaign edition" of that paper, which will contain, among other interesting particulars, "some account of Senator Fenton's career as a reformer," which it explains elsewhere as an allusion to his having been "put in jail" at some time "for a dishonest use of other people's money." This has led the *Tribune*, in reply, to hint at the possibility of unsavory disclosures with regard to one actual United States Senator, one ex-Senator, one ex-Governor for two terms, one ex-United States District Attorney, one ex-Collector of the Port, and to threaten "a pretty tale" with regard to one ex-Naval Officer. If all this comes out, what a fine odor there will be "inside politics."

The Louisville Democrats declare they have received a letter from Mr. O'Conor, in which he says distinctly that he does accept the Louisville nomination, but they refuse to publish it on the ground that it is largely devoted to personal matters. But they are making preparations to open the canvass and prepare an electoral ticket in the various States, and several of the Irish papers have already "hauled down the Greeley and Brown flag," and are declaring for O'Conor and Adams. The ticket will undoubtedly do the Sage some damage, but the chances are that he will be disposed of without help from this quarter.

The "managers" have, it appears, come to the conclusion that the old electioneering rule, which imposes silence on a candidate for

the Presidency, ought not to hold good in Mr. Greeley's case, and that under all the circumstances it is better to loose him, and let him say his say in his own way, particularly as the canvass sorely needs enlivening. So he has started on a Western tour, and is making speeches as he goes. At Pittsburg, he dwelt on the necessity of peace and reconciliation between North and South; at Cincinnati, he made first an "exposition address," which was a laudation of industry and invention in the style of an essay, and another less formal in commendation of harmony. He also delivered a "financial address," in which he declared that "corners" were simply "symptoms of financial weakness," and condemned severely the state of things which calls for "the Secretary of the Treasury, with his horn of plenty, to let loose something or other," and declared that "he wanted to see a state of things where the Government is not continually called on to help us out." It ought to be observed here, in illustration of the unblushing audacity, to use a mild word, which has characterized Mr. Greeley's canvass ever since the nomination, that he is himself the most ardent and powerful advocate which perhaps this or any country has ever seen, of the industrial and financial system under which the Government is continually called on to help merchants, brokers, and manufacturers out of all kinds of difficulties. Mr. Greeley, in continuation, said that as regarded the resumption of specie payments, all he had ever maintained was that five years ago, when we had $123,000,000 gold in the Treasury, and a surplus revenue of $100,000,000, we might have resumed, and that he now thinks gold and currency ought to be paid out of the Treasury as fast as possible, and left in the hands of the business-men, who know how to use it better than the Treasury—which is sound financial doctrine. But he meekly added, "I am not a dogmatist" —an assertion which must produce great hilarity among readers of the *Tribune*.

At Covington, Mr. Greeley again praised farming; at Newport, he praised Henry Clay and spoke in laudatory terms of reconciliation. At Louisville, he condemned the "unjust prejudices" of the colored people, some of whom he said thought he (Mr. Greeley) was "a negro trader"; maintained that the Liberals were their friends, advised the Kentucky whites to educate them, denounced disenfranchisement, and praised amnesty. Speaking of his bygone hostility to slavery, he meekly confessed "perhaps this was a mistake." At Indianapolis, he talked in the same strain. The speeches are very characteristic; would be very shrewd if they were not reported, and, considered side by side with his past preachings in the *Tribune*, are, on all points except amnesty, amazingly and amusingly barefaced.

We have refrained from noticing the scandal concerning the Crédit Mobilier to which the *Sun* first gave currency, until all the parties to the controversy should have had a chance to speak for themselves. This is always a prudent course to take in dealing with the *Sun's* charges, but especially so when, as in this case, the witness on whom it relies has not a reputation for entire trustworthiness. It was, too, a little difficult to believe, on the mere evidence of a pencilled memorandum of Col. M'Comb's—incorrectly reproduced, as it now appears, by the *Sun's* reporter—that the very cream of the Republican party, including Speaker Colfax, Mr. Blaine, and Senator Wilson, had been bribed by Mr. Oakes Ames into lending their support to the schemes of the Union Pacific Railroad Company. Mr. Boutwell, moreover—nor was he the only one of those implicated—had on several occasions notoriously opposed the company both in Congress and as Secretary of the Treasury. There were other inconsistencies and improbabilities which would have been sufficient to justify the Congressmen named in taking no notice of the accusation, except that Mr. Ames's letters fairly warranted the inference that he contemplated using the stock of the Crédit Mobilier in the manner alleged, though they only mentioned "assigning" a certain number of shares to a certain number of States, and that Ames had "spoken to Fowler" about his shares, and had not yet spoken to Bayard—as M'Comb apparently wished him to do. Mr. Blaine was the first to give a flat denial to the charge against himself, and he has been followed by Messrs. Dawes, Wilson, Colfax, and Garfield with equal explicitness. Mr. Ames, on his part, has publicly assured his constituents that he "never gave a share of stock of that or any other company, directly or indirectly, to any member of Congress," and that he, as well as all the executive officers of the Crédit Mobilier and several of its largest stockholders, had already answered to the same effect under oath, in the suit which M'Comb is now engaged in prosecuting against them in Pennsylvania. He does not, however, deny the authenticity of the letters attributed to him, as, we suppose, he cannot; and he does not, as he might easily have done, and as, we must say, he ought to do, explain away the appearance in them of a readiness to procure legislation corruptly.

The London correspondent of the *Christian Advocate* of this city makes the statement, speaking of a recent blunder of the London *Spectator*, that "the *Nation*, apropos of the impending election, invented a passage of a pretended letter from Mr. Stanley to the *Herald*, in which he represents Dr. Livingstone as saying," etc. Now, there is no excuse for this kind of talk, and we submit that the editor of the *Advocate* ought either not to have published it or to have corrected it. The *Nation* never said or insinuated that the joke it published about Dr. Livingstone had appeared in a letter of Mr. Stanley to the *Herald*. In commenting on the filthiness of the canvass in our issue of Aug. 2, we quoted the passage in question from a country paper, the name of which we have forgotten, as an illustration of "an occasional bit of relief for the newspaper reader," and as "an indication that we are not all in such desperate earnest as might be supposed"; or, in other words, as a campaign joke. The theory that we took it from a letter of Stanley's to the *Herald* was invented by the *Spectator*, by some queer mental process which might be worth examination if the *Spectator's* failure to see that it was a joke did not make the whole subject too mysterious. The joke was not the *Nation's*, was plainly not the *Nation's*, and nobody with even as much capacity for taking jokes as Sydney Smith's Scotchman could have supposed that it was.

Among the signs of the times which are worth notice is this: that at a Republican meeting at Montague, Mass., last week, at which the Governor presided, speeches were made by him and Senator Wilson, Colonel Moffitt of New York, and General Coggeshall and General Butler, and every one of the first four took occasion to make complimentary allusions to the last, who received an uproarious welcome when he presented himself. His adhesion to the party in the present trying crisis has, it is admitted, greatly "strengthened" him, and it now begins to be acknowledged, too, that his "blackguard canvass" last year not only did not "hurt him," but made his success, when he tries again, tolerably certain. In fact, there is every indication that he is one of the rising worthies who are to give us "reform within the party." The Sentimentalists, the Labor Reformers, the State Police and the militia all stand by him, and admire him with greater or less fidelity—a fact which deserves to be contemplated side by side with one other—that James Fisk, Jr., was "a popular man" in this city, and that hundreds of workingmen came back from his funeral with tear-dimmed eyes. We mention this by way of giving reformers of all kinds a clear idea of the nature of the work they have before them. We ought to add, "in this connection," as the reporters say, that Mr. George H. Butler has really and at last been removed from his consulate, but not until he had taken part in a shooting affray. His insults to the American missionaries, and his love of nude dancing-girls, though exposed months ago, apparently did not "hurt him." There is something pathetic in the deep silence of the Administration press about Casey.

Advices from South Carolina are better than anybody has for some time past been venturing to hope. Not improbably we may see there the defeat and destruction of the Scott-Parker Ring and the election of Mr. Tomlinson, the Bolters' candidate, as governor. Our readers know what that would mean—at least so far as concerns the overthrow of the Ring, which has done more to make the name of the North an offence in the nostrils of the South than any ten army corps we ever sent there. And so far as concerns the success of Mr. Tomlinson, we can assure them of our own knowledge that his election they may heartily desire as being the success of a capable and honorable man who thoroughly knows the Ring, and of a perfectly sound Republican. It is not our habit to have much to say about local elections; but there are aspects of this South Carolina election in which it is seen to be anything but local; in which it is seen to be of even more than national importance. We do not know how good Republicans, or good Democrats either, who value our good name as a people and believe in perpetuating our free institutions, could better use their influence or their money, so far as money is legitimately used in political contests, than in helping to bring the Scott gang to justice, or, at the least, to take the State out of their hands. As we say, there is a fair prospect that this may be done; but the work of doing it will be hard, and the time in which to do it is not long, the election being only three weeks distant. We will add that a question of interest in the struggle is whether the Southern whites are still so hostile to the North as to "prefer a South Carolina thief to a Yankee"—to use the language of one of Governor Scott's white constituents. The negro vote is divided, Mr. Tomlinson being known to the negroes as a long-time friend of theirs, and his election depends on the action of the white voters of the State.

The meeting of the three Emperors at Berlin has begun, continued, and ended without any light being thrown on its objects beyond a vague intimation that it was intended simply to signify the return of peace and good-will between the three states, and the frank acceptance by their governments of the order of things brought about by the wars of 1866 and 1870. There has been an enormous amount of speculation about the affair, but this is all that any one even pretends to have discovered. The meeting was, as usual, accompanied by a great military display, and there is at this moment not a country in Europe which does not seem to have gone into soldiering with greater zest than ever before. The International has been holding a convention at the Hague, which has in some degree played the part of the spectre at the royal feast, but human nature has been at its old tricks even among the "regenerators" of our corrupt society. It appears now that the Federal Council or General Council of the body is composed of "tyrants" and arbitrary persons, indifferent to the rights of man, and it has to be overthrown, and something new set up in its place. Some of the American delegates, who, we judge, were "Pantarchists," were refused admittance. Curiously enough, there was only one Irish delegate, and yet not curiously either, for the broader views of "humanity" have never found favor even with Fenians.

The tact of Burgomaster Fischer of Augsburg in his speech welcoming the Crown Prince of Prussia to the hospitality of that city, drew from the future Emperor of Germany an important assurance against imperial centralization. In reply, the Crown Prince said: "To all that you have said I give my most hearty assent. *Yes*, you have expressed what is the Emperor's conviction as well as my own. Each constituent part of the German Empire should remain in its every peculiarity just what it was; this will invest the great common fatherland with a true consecration; this will furnish the best cement to that which we have wrested from the bloody battle-field." These words had the more significance from the fact that the Crown Prince of Prussia had personally led the Bavarian troops in the campaign in France, and had publicly complimented their valor and efficiency. In yielding themselves to the leadership of Prussia, the smaller states of the empire have no reason to apprehend the fate which the King of Hanover brought upon himself by his Austrian alliance in 1866. The social culture of Germany requires that she shall retain her smaller capitals as seats of learning and art, and her true political development must come through unity of aim with individuality of expression, combination of interests without centralization of power.

Meanwhile, the church-and-state ferment continues without abatement. The Old Catholics are once more in session, at Munich. The Catholic riot at Essen, which led to a bloody conflict between the mob and the troops, is charged by the Ultramontane press to Bismarck's anti-Jesuit policy; but in reality it was the breaking out of an old sore, and called for desperate remedies. Essen, a seat of manufacturing and mining industries, with a population of over 20,000, lies in the heart of the Cleve-Jülich district, which figured so largely in the Thirty Years' War as the stronghold of Catholicism upon the Lower Rhine. Ever since its incorporation with Prussia this district has been uneasy under the rule of a Protestant dynasty; and of late years the younger clergy and the clerical press, inspired by the Jesuits, have almost made treason to Prussia a test of loyalty to Rome. In the war of 1866 the sympathies of the people were with Austria; and though in 1870-71 they were carried along with the tide of national patriotism, they are to-day more with Rome than with Germany. The ecclesiastics inflamed the people against the Jesuit law; and the rumor that the Jesuits were to be expelled by force, and even carried off at midnight by the police, was enough to raise a mob. The Government promptly sent two battalions of infantry from Düsseldorf to put down the disturbance.

Recent intelligence from China is to the effect that the all-absorbing topic of conversation in official circles is the famous "audience question." The Chinese Emperor, it is well known, claims priority over all other sovereigns, and refuses to receive any foreign ambassador unless he complies with ceremonies significant of that position, which consist in kneeling and striking the forehead on the ground nine times. The representatives of course resist this performance, and none have in consequence as yet been granted an audience. It has, however, been fully explained to the Chinese Government that they must abandon their absurd pretensions of superiority, and, furthermore, that they must notify the nation tha they have done so through the Pekin *Gazette*. This they have as yet refused to do, while profuse of promises to discuss the matter, with a view to settlement, so soon as the preparations for the Imperial marriage are completed. But the difficulty of owning themselves beaten stops the way, and, finding the discussion inevitable, they have strongly urged and obtained a postponement until spring. The effect upon the status of foreigners of proclaiming their governments to be of equal rank with that of China is not difficult to estimate, and the mercantile community rightly attach considerable weight to the satisfactory settlement of the question. It is more than half-suspected that at the last moment the Chinese will flatly refuse to entertain the idea. They are rapidly arming the approaches to Tientsin and Taku, forts with Krupp guns having been erected, while the practicable route from the mouth of the Peiho to the former city is lined with rifle-pits. Large contracts have been made for Martini, Dreyse, and other rifles with four German houses at Shanghai. The arsenals are at work day and night, turning out guns and ammunition. Great pains, too, are being taken to train the northern army according to foreign drill. In connection with these preparations, the disposition towards foreigners of Li-hung-chang, Viceroy of Chihli, regarded as the most powerful official in China, excites apprehensions. Curiously enough, he is the patron of the scheme for educating Chinese youth in this country referred to in last week's *Nation*.

HOW OUR POLITICAL DEMORALIZATION HAS BEEN BROUGHT ABOUT.

FOR the last thirty years—the third of an important century, the measure of a generation of men—the mind of the American people has been turned away from improvement and advancement in matters of government. After the Administration of Webster and Calhoun (nominally that of Tyler), the tariffs of 1842 and 1845, the Bank Bill and the Bankrupt Act, the distribution of the Public Land Fund and the adjustment of the differences with Great Britain, there were forced upon the national mind questions of the gravest character relating to national existence. As a man when his house is on fire has to stop planning improvements and betake himself to the task of putting down the flames, so a people that have foreign wars or internal revolutions on their hands have to give up the study of making that government better, and bestir themselves in the work of keeping it in existence. With the Administration of Polk came the Mexican war—not a prolonged or serious or disastrous war, but enough of one to cause a debt, and push aside for the time the study of the arts of peace. Immediately after the Mexican war the great slavery question came looming up—a darkly spreading and ascending cloud that soon overshadowed the whole political sky. Few men thought that it was to end in war on the one hand, or peaceable disunion on the other, but all men recognized it as a subject of civil contest—a political battle that had to be fought out, though there were not wanting some who wished to put off the decision, and preached and prayed that the problem be committed to the future for solution. As the Administration of Pierce went on, all public speeches, writings, and discussions, all that men spoke and thought in connection with the government, drifted into this maelstrom. Under the Administration of Buchanan came the Border strife in Kansas, and the cloud of slavery began to deepen into the cloud of secession. With such a sky over their heads, it was inevitable that men should think only of the impending storm, though they dreamed not of its extent or its fury, and study little beside it and the Constitution—the supposed arbiter of all national differences—and the extent of its pledges and obligations. At last came the rebellion, followed of course by the difficult questions growing out of the war. These questions, too, were complicated by the training of the American mind and its constitutional reverence. On the one hand was the theory that the insurrectionary States were still States, which were in and could not be got out of the Union; on the other was the practical fact that they were held by force of arms, and inhabited by a dominant people who could not be trusted, and by a subordinate race to whom the national protection was peculiarly pledged; and nine-tenths of the loyal people of the United States cannot yet make up their minds whether the South returned to us as so many constitutional sovereign States or as so much conquered territory. If either view of the case had been decisively adopted, if the nation by common consent had denied to the conquered Southerners citizenship, but assured to them law and order and rights of property and personal protection, through mild yet firm Territorial governments; or if they had cordially welcomed them back into the family of States, and entrusted to the entire society of the South the responsibility of re-establishing and maintaining civil government, it is possible that matters would have much more quickly adjusted themselves. But the American people were not accustomed to deal with conquered territory, and could not bring themselves to establish a system of government bereft of the two great characteristics of their own—*local, self* government. Though preserving form, they sacrificed substance; the rulers were Northern adventurers; the governments, tyrannies forced upon the governed. The experiment with its sequences was enough to fill the public mind, and completed the period of its alienation from the study of advancement, improvement, economy, honesty, and decency in the administration of government.

Reviewing these events, and remembering how small a part of the voters at this Presidential election were voters at the election which overthrew Mr. Clay and elevated Mr. Polk—how trivial, how nearly extinct the number and the influence of those who voted for Harrison or Van Buren in 1840 (the last election, in fact, where the manner of administering furnished the staple of political discussion)—we see clearly enough how the public mind of to-day has been educated amid civil discords, and how little the study of governing well can have entered into the thoughts of those disposed to act aright. A few centuries earlier, this period, reaching from the annexation of Texas to the overthrow of the South, would have been a period of constant intestine wars. As it is, three wars (counting the Border war of Kansas as one) appear on its record, and of its twenty years one-third may be said to have been given up to war, and the remainder of the period has been filled with the causes and consequences of war.

Just half a century ago (1820), Sydney Smith gave us this piece of information. We reproduce the passage, for it describes most accurately our present condition, and, while every one has read it, few there are who remember it well enough to bring its application home:

> "We can inform Jonathan what are the inevitable consequences of being too fond of glory—TAXES upon every article which enters into the mouth or covers the back or is placed under the foot; taxes upon everything which it is pleasant to see, hear, feel, smell, taste; taxes upon warmth, light, and locomotion; taxes on everything on earth and the waters under the earth; on everything that comes from abroad or is grown at home; taxes on the raw material; taxes on every fresh value that is added to it by the industry of man; taxes on the sauce which pampers man's appetite and the drug that restores him to health; on the ermine which decorates the judge and the rope which hangs the criminal; on the poor man's salt and the rich man's spice; on the brass nails of the coffin and the ribbons of the bride; at bed or board—couchant or levant, we must pay. The schoolboy whips his taxed top; the beardless youth manages his taxed horse, with a taxed bridle, on a taxed road; and the dying Englishman, pouring his medicine, which has paid 7 per cent., into a spoon that has paid 15 per cent., flings himself back upon his chintz bed, which has paid 22 per cent., and expires in the arms of an apothecary who has paid a license of a hundred pounds for the privilege of putting him to death. His whole property is then immediately taxed from 2 to 10 per cent. Beside the probate, large fees are demanded for burying him in the chancel; his virtues are handed down to posterity on taxed marble, and he is then gathered to his fathers, to be taxed no more."

By "glory" Sydney Smith meant war with all the attendant and consequent evils, from which a nation cannot be exempt, no matter how righteous its cause. During this half-century Great Britain has emerged from its taxed condition, and steadily sought to reduce her taxes to the fewest number of subjects, and to recast them into the simplest forms. During the same half-century we have drifted into the same flood of taxes that we, with Sydney Smith, once derided. Moreover, while we are an ingenious, intelligent people, full of devices and ideas, and duly impressed with the truth that government is for the governed, we have added nothing to the science of government or to the art of governing. Our fathers were greatly in advance of the world, and left a work which yearly grows a greater and greater wonder in the eyes of modern scholars and thinkers. Its influence is felt throughout Europe, where it overthrows dynasties and threatens states. But the influence is from the past and not of the present. The work is our fathers', and not ours. All that we have done has lessened its effect, and made mankind doubt whether great success may not yet be disastrous failure. In the last thirty years, there is no one thing that we can call to mind for which the world is indebted to us. Our postal service, which is our best instrument of government, and in which every member of the community sees that he has a direct and almost daily interest, which, of all our instrumentalities of government, ought to have been advanced, extended, and perfected by the American mind, has borrowed every improvement from other nations. "Cheap postage," "registered letters," "money orders," "postal cards," are all the product of European thought. Manifestly, if it had not been for European statesmanship our system these thirty years would have stood still. The postal telegraph we are now discussing, but not until Europe devised, demonstrated, and carried out the scheme.

From civil commotions a number of evils spring, and among the first and most inevitable is the demagogue. How a people so well informed of passing events, so given among themselves to discussion,

intelligent if not profound, so noted all the world over for shrewd, practical common-sense—how they can give employment to men in whom they do not believe, and for whom they entertain no little contempt, is a marvel, but susceptible of explanation. It may be laid down as a law that the more closely the common mind devotes itself to affairs of state, the less it is disposed to yield to control. In the great excitements of the recent past, the common mind has had forced upon it subjects of vital import, coming home to every household, and compelling all men to think and to feel. The American people, too, were taught to doubt leadership when a greater race of statesmen, such as Webster, essayed and failed. The old meaning of the term leader was not a charlatan running before a mob, but a directing mind which opened new roads, and impelled men to walk upon them, and which controlled and held the masses back, often against their will. But in a time when every man worked out an impatient conclusion for himself, agreeing substantially with his neighbor's, direction and control became irksome, and people found themselves wanting not great minds to reason, counsel, and control, but obedient agents to carry out the popular instructions. Then the natural demagogue came forth to do what he has done in all lands and ages—to demonstrate the wisdom of what he supposes everybody wants; to promise performance of what everybody asks. The intelligence of the nation has not cared much for his demonstrations, nor valued highly his promises; but on the great questions in which every one has been interested—and since 1860 all the questions of the day have been of this character—people have wanted simply obedience. The promises they have believed so far as to feel assured that the professional politician will never go against what he believes to be the popular will. Hence the apathy as to a politician's character, provided that he be "sound upon the main question." Hence the indifference to real ability, or conscientious conviction, or lofty independence of character. People go to a lawyer for advice, to a physician for help; and when they go on such missions they desire intelligence superior to their own, and integrity upon which they can rely. But of late years, when they go to a professional politician, it is with specific jobs of work to be done as to which they do not want his advice, and care very little for his intelligence. It would be supposed that moral character would be held in some estimation, and that, with obedience, people would prefer decency. They doubtless do, but in times of excitement and confusion men's esteem for moral character is in a manner suspended. We have said that when a man's house is on fire he is apt to lay aside plans for its improvement and try to put the fire out. We may go further, and say that he does not scan closely the characters of those who are helping. Some he knows to be drunkards, and some rogues; here and there he sees an active philanthropist saving the furniture who, he is morally sure, will pocket any small article that comes in his way; yet he does not order them off the premises, but on the contrary shakes hands with the worst, and publishes "a card" of thanks in the county paper.

In time, however, affairs resume their natural conditions. That time is now beginning in America, and the more thoughtful part of society recognize the fact that the questions of the day are questions of statesmanship as to which we need to seek superior knowledge and ability, just as we seek them in our lawyer or our doctor. They see, too, that the fire is over, that pilfering had better be called by its old name of petty larceny, and that it is time to stop hurrahing over the past exploits of the firemen, and, indeed, advise them to go to work in the old-fashioned way to earn an honest living. There is much in the present to provoke censure; but the operating causes of evil are of the past. Society as a political body has sunk during the last thirty years, but through acute diseases and not from natural decay. The common mind has ceased to be educated in political wisdom for a generation, but greater means for educating are at hand than ever existed before.

There are, indeed, social causes affecting the political, which must affect also the result, such as the love of money, the desire for sudden wealth, the vulgar weakness for display, the sentimental truce with crime and criminals, and the effeminate withdrawal of the better classes of society from the work and duties of citizenship. Yet, if we turn back the files of a newspaper no further than a year ago, we read that the Committee of Seventy were but breaking ground, and men who hoped most for the establishment of law beginning to ponder seriously whether its re-establishment in New York must not come through force and a vigilance committee. If it had then been predicted that within a single year we should see the Ring broken, Tweed routed and on bail, Sweeny and Connolly skulking from the sight of men, Garvey turned state's evidence, General Barlow in the Attorney-General's office, Mr. Green in the Controller's, and, above all, Cardozo, McCunn, and Barnard swept from the bench, and that all of this would be brought about by the moral uprising of the intelligent minority of the people, there probably are not a hundred men in New York who would not have assigned the prediction to the class of absurd improbabilities. While the work which has been accomplished in this city does not effect a national reformation, nor materially lessen the number of evils that are to be overcome, nor relieve us from the denunciation of what is wicked and base, it shows that there is still a moral power in society which will be effective whenever it is honestly exerted. Undoubtedly many unpleasant truths will be told and reiterated within the next four years; but no one need grow morbid over them, nor doubt the moral reaction that with proper effort and education will sweep away the baser part of our political material, and exact from what remains the decency, industry, and usefulness that we expect in the affairs of private life.

LAND AND LABOR IN ENGLAND.

THE agitation of the farm-laborers in England is now universally acknowledged to be a success, if the destruction of the feudal, or, as some have comically called it, the "parental," relation between them and their employers can be called a success. The laborer has shown that he is not the stupid clodhopper he has been so long considered; that he, too, can combine, and organize, and strike, like his manufacturing brother in the great towns. He no longer cares for the farmer's or landlord's favor or charity; he stands on his rights, and by his "rights" he means such concessions as he is able to wring from his employer by refusing to work for him and by hindering others from working for him at seasons when labor is indispensable. He has not only succeeded, however, by the agitation now raging, in raising his wages, but he has revealed the fact that he possesses enormous power over the agricultural industry of the country, and that he is capable of using it whenever he pleases, with the utmost efficiency. Now, agriculture is not a business which will bear strikes as manufactures will do; that is, a farmer cannot suspend his operations in the spring or harvest, as a spinner or iron-master can do, and enter on a fair trial of endurance with the operative. There are two seasons of the year when he must have labor for a reasonable sum, when even a week's delay would be fatal. He has been saved from all anxiety at these periods hitherto partly by the dull, bovine submissiveness to his lot of the English "hind," and partly by the consciousness that if the laborers of one farm, or of a whole parish, did refuse to work, there would be little difficulty in filling their places either permanently or temporarily. But these guarantees have been destroyed by the recent movement. It is plain that the laborer has undergone a great change, and equally plain that the formation of agricultural trades-unions has forced, or will shortly force, each farmer to treat not with the men on his own farm only, but all the laborers in England, whenever he has a dispute about wages or time. What has brought about this change in a portion of the population supposed to be so impervious to outside influences, it is hard to say; probably no one agency in particular. The spectacle of the growing skill and power of the trades-unions in the manufacturing districts have doubtless contributed a great deal to it; but, as the *Pall Mall Gazette* points out, this example would probably have been lost on

the agricultural districts if it was not for the penny press, which by penetrating to every tavern and ale-house has brought the farm-laborer for the first time into actual contact with the new ideas by which the old social organization is now so rudely shaken. The way in which the laborers' movement has been met has not on the whole been very fortunate or promising. The farmers, as a class, have resisted stoutly, and, when threats and defiance have failed, have surrendered sullenly and with bitterness. The clergy as a class have sided with the farmers, one bishop—that of Gloucester, not Ripon, as we erroneously said a few weeks ago—actually having had the folly to recommend the ducking of the leading agitators under the parish pump, thus destroying at a blow the one moral influence which exercises strongest sway over the peasantry. The landlords, too, have either looked on coldly or have given the farmers active and open support. One of them, Mr. Brand, the Speaker of the House of Commons, has come out in defence of the strikers, and has proposed a system of co-operation on his own land, under which he allows laborers to invest their savings in his farm and gives them a share of the profits, thus giving them the benefit of expensive machinery. Lord Derby, also, has taken what may be called the "reasonable" view of the agitation, but as a rule the laborer finds the landed interest arrayed against him. The agitation, too, in the presence of this hostility of the "nobility, gentry, and clergy," has been taking on more and more of a political cast. The ballot is now called for as the necessary guarantee of the laborer's rights, and, of course, it will not be possible to use it for this purpose without making it in some way an instrument for the political abasement of the landholders. For instance, there is already a loud outcry against landholding and clerical magistrates as persons unfitted by their class sympathies and associations to adjudicate in cases in which the laborer is a party.

Behind the laborers' agitation (which is on the surface thus far a question of wages mainly), and serving as a powerful support to it, is the vigorous discussion by the Radical school of politicians of what is known as "the land question," by which is meant the tenure of land in England and the political relation of landowners to the state. This has been attacked from two sides: on the legal side by those who seek simply the limitation of the power of entail, or "settlement" as it is called, still enjoyed by English families; and on the historical side by those who maintain that the manner in which property in the soil is divided in England is not only not natural, but is the result of a usurpation protracted through centuries, by which the tenancy in common, or "village communities," which were the original form of land tenure not in England only, but throughout the world, have been destroyed, to make way for the feudal régime of great estates, with all its attendant evils, and that the road to reform now lies backward. Neither of these assaults is carried on ostensibly in the interest of the laborers' movement, but what a powerful help they lend to it is easily seen.

What will be the effect of all this on country life in England is a question which is interesting in a very high degree to Americans as well as to Englishmen. When we go into our agricultural and scientific schools in this country, and find that very few of the pupils —indeed we might say none—mean to be farmers; or go into the farm-houses, and find how rapidly and generally the young men are forsaking the paternal acres and flying to the great cities; or go into the region of fertile lands, and find how rapidly farms are being transformed into vast factories, worked by machinery, with the aid of a few unskilled laborers of whom the proprietor knows less than of his horses, we hear constant lamentations over the difference between American and English sentiment and habits with regard to country life. England swarms with farm-houses and manor-houses and cottages, whose inhabitants love the ground, live on it, and till it from youth to old age. The dearest ambition of the successful Englishman, we are told, is to get "a place in the country," and make it the scene of all that is most delightful in his family and social life. In the United States, on the other hand, country life is almost as much of an exile to the average man as it used to be with the nobles of the French court under the old régime. Everybody tries by hook or by crook to escape it, except the fortunate few who, in the country or in the town, can surround themselves with luxury. Now, what renders farming more attractive in England than America is mainly the cheapness and certainty of labor of all kinds. The farmer there has hitherto filled the position simply of a superintendent or capitalist, and had few or no risks or anxieties to encounter except such as arose from the badness of the weather or the diseases of cattle. Make labor uncertain, either as regards wages, supply, or manageability, and farming would undoubtedly become even less attractive in England than here, for it is not lightened there as it is here by the sense of proprietorship in the soil. A great deal of the comfort of an English farmer's life will be gone after he finds that he has to contend with an unruly trades-union before fixing the cost of getting in his harvest, and most of the few attractions which the pursuit now possesses for capitalists would vanish if, in addition to the loss of personal comfort, the returns were made more uncertain than they now are. Moreover, the revolution, whatever its nature may be, which severs political influence from the possession of land and at the same time lessens the amount of social deference it brings with it, will undoubtedly drive most of the landholding gentry into the towns. It is reasonable to expect, too, that the education of the laborers and their children, which is now rapidly beginning, will spread among them also that horror of solitude and love of social distraction and excitement which have made country life disagreeable to so large a proportion of our own population. The example of France and Belgium, where the people cling with such tenacity to their small farms, does not tell against this view, because the peasantry is not educated in these countries. The question is, whether, when you educate the peasantry anywhere, or, in other words, raise the people out of the condition of peasants, you can get them to stay in the country, digging and delving all day long, and sleeping through the night the heavy sleep of muscular fatigue? We suspect it will be found elsewhere as it has been found here, that the common schools are the great enemies of farming, that they inevitably drive out of it all the more intelligent and enterprising portion of the population, and that it cannot and will not be carried on anywhere successfully without a real peasantry; and that in the absence of a real peasantry, the tendency of farming in every country will be towards vast estates like the Roman *latifundia*, which Pliny said had ruined Italy, but which in our day will be worked by machinery, and not by slaves.

What effect this change will have on manners and morals, or whether it may not be met and obstructed or delayed by some counteracting tendency, such as might be caused by the discovery of some cheap and simple "power" that would render possible the diffusion of manufactures, we do not propose to discuss here. But they are questions which must be discussed, and they interest all countries in nearly an equal degree; and a glance at them is sufficient to give a very chimerical air to the schemes of those who imagine we can be carried back in our day to village communities, as well as to the notion of the Russians, that their retention of the village community will save them from the inroads of the socialism which threatens Western society. The modern man may or may not be disposed to abolish individual property, but he is certainly by no means disposed to settle down to remote and lonesome agriculture, and turn away his eyes from the flaring gaslight and crowded pavements of what he calls "the great centres of industry."

THE NEW ROMAN THEATRE.

[The following extract from a private letter has been handed us for publication. It will be found to shed a curious light on the state of mind of the Pope's recent subjects.]

Rome, August.

NOT for an empire would we have missed being at the Corea yesterday. Certainly it is not every day that the opportunity presents itself of enjoying, for the sum of one franc ten centimes, such strong emotions as those prom-

ised by a piece bearing the following terrific title: "*The Mysteries of the Spanish Inquisition, with the Seventy-seven Thousand Victims of the Grand Inquisitor Torquemada.*" Only, as we judged that to assist in one single evening at the punishment of seventy-seven thousand heretics was rather too fatiguing, we went to the theatre at eight o'clock instead of six, nourishing the sweet hope that at that late hour some thirty-eight thousand five hundred would have been already hanged or burned, and that there would not be more than thirty-eight thousand five hundred left for us to see executed. We found this a reasonable number, and that no more could decently be exacted from a man just risen from the dinner-table.

When we arrived at the Corea the curtain was up and the public in convulsions of laughter. We were agreeably surprised at this hilarity. On the stage we perceived two Dominican monks, Torquemada, the terrible, himself, and one Brother Gorenflot, who was completely drunk. Torquemada called Brother Gorenflot's attention to the fact that he had dropped his rosary, and commanded him to pick it up. The brother made three staggering steps and stopped. It was this pantomime that excited the hilarity of the public. Finally, Gorenflot succeeded in picking up his rosary, and Philip the Second appeared. He enquired after a certain Jewess, Rachel by name, who was to be burned alive in the course of the day, and who was the illegitimate daughter of Don Sebastian of Portugal, dispossessed of his dominions by Philip the Second. Sufficiently complicated, you perceive.

This Don Sebastian had been arrested, and was now brought and left alone with Philip the Second. I leave you to imagine how he treated the latter, and whether he spared the Dominicans. During this scene, applause, cries, and stamping greeted every word. Philip put an end to it at last by ordering the removal of Don Sebastian, and Torquemada, entering, commanded that he should be put to the torture. Then the king and the inquisitor fell on their knees near the footlights, and prayed devotedly for the soul of Don Sebastian. Shrill whistles are heard from every corner of the amphitheatre, and the simple public indulges in the most energetic language towards Torquemada: "*Ammazzalo ! passa via, vassallo !*" "Kill him! away with you, scoundrel!" These, and other objurgations, pronounced by the lips of five hundred Roman *popolani*, with their peculiar and well-known accent, should be heard to be appreciated.

Rachel now appears. She is called upon to renounce her religion. She refuses, and of a sudden piercing, terrible, heart-rending shrieks are heard from behind a curtain at the back of the stage, which, opening in the middle, discloses Don Sebastian hanging by the hands and expiring from the torture. A veritable tempest now burst forth among the audience. A few sceptics laughed, but the mass of the public were quivering with excitement. Cries of horror were heard on all sides, and the exclamations above alluded to were repeated with redoubled emphasis.

The curtain down, we look at the audience, and see that the women are weeping hot tears, while uncontrollable sobs burst from their bosoms. The men, who are trying to be brave and repress their emotions, have red eyes and great tears pearling down over the ends of their noses. The actors are called before the curtain, and the applause is loud and vigorous, but Torquemada appears in the midst of his companions and the tempest of hisses recommences. Between the acts the audience is agitated. We overhear two young men exchanging their impressions. "And to think," says one, "that there are quantities of fine works like this that we do not know, because the Pontifical Government has always forbidden their representation."

Meantime, the orchestra, troubling itself not at all about the seventy-seven thousand victims who have been immolated during the four acts just represented, plays its little habitual polka, and cheerfulness returns to the audience. But the curtain rises, and every brow grows dark again. A funeral pile occupies the centre of the stage. We learn almost immediately that a plot has been formed to deliver Rachel from the flames, and the Gorenflot already mentioned appears in the costume of a squire. He relates that having seen frightful things in the prisons of the Holy Office, and having been himself put upon bread and water for forty-eight hours, he must have the lives of twelve Inquisitors; he must kill twelve! not one more or less—twelve! At the same moment he perceives a spy of the Holy Office, tears off his mask, and, throwing him upon his shoulders, carries him off into a neighboring house. Then he reappears alone, and announces that he has thrown his man into a well. "One!" exclaims he. The audience writhes with delight, applauds, laughs, weeps with joy, howls.

Solemn music is heard, and the procession advances—Torquemada at its head. Rachel mounts the pile. At this moment the conspirators throw themselves, sword in hand, upon the members of the Holy Office, put them to rout, and deliver Rachel. Torquemada is pursued, seized, carried to the pile, and bound to the stake. Then the fagots are fired, and while the curtain slowly descends we see the Grand Inquisitor struggling to burst his bonds, surrounded by flames, half-strangled, his eyes starting from his head, his tongue protruding from his mouth. This is the *bouquet*—the climax.

After what we have related it will be easy to imagine the reception of this *dénouement*. The cry of every animal in creation mingles with applause and frantic bravos. The audience slowly disperses, radiant with delight, and exchanging felicitations upon the chastisement inflicted upon Torquemada. We came out among the last, and were fortunate enough to see Torquemada, Rachel, Don Sebastian, and Philip the Second chatting amicably together, and, transformed into harmless citizens, directing their steps towards the *Café di Roma*, with the intention of taking an ice.

Correspondence.

"NATIONAL APATHY."

To the Editor of the Nation:

Sir: You promise to give us some explanation of the causes of this phenomenon which you so well describe. If only to elicit your comments, I venture to suggest one of the possible causes, namely, that we have in our public men only party and not personal responsibility. Take the subject, which you adduce, of taxation. The general party cry is high or low tariff, greater or less revenue. The details of adjustment, which are all-important both in themselves and with a view to continuity, are arranged in secret committee, under the pressure of private interests, and thrown into the House, to be carried, almost without debate, by a purely party vote. There is nothing in this which can possibly excite personal enthusiasm on the part of electors; and thus at the primary nominations, there being nobody who fills the public eye, the voters are quite indifferent, and the meeting is manipulated by skilful politicians like Banks or Butler. The nominees then sail into power on the most general party cries, the voters either swallowing their dislike to the individuals on the strength of these cries, or abstaining altogether—apathy, in either case, being an inevitable result. Campaign speeches are of the same nature. I have been told, by one who was with Banks in New Orleans, that the latter, bewailing in confidential moments the hard fate of politicians, would remark "that the people of Massachusetts were a set of d——d fools, and would swallow anything you chose to say to them"; which might be perfectly true of the portion who went to hear him. Sensible people, knowing what they had to expect from Mr. Banks, would stay at home, or, if they went from curiosity, kept silent, the noise being made by those who care little for matter if the manner is sufficiently inflated.

If we expect to excite public interest in elections, there must be created a personal responsibility. A scheme of taxation in detail should be introduced by the Secretary of the Treasury in the interest of the whole country. The discussion of this in public debate would command the attention of the country, and bring out the individual qualities of members, so that even silent voters would have a personal character among their constituents, and give a basis for a bolt in force if the primary nominations were unsatisfactory. Public speakers, also, would have material for attracting the attention of their fellow-citizens, instead of wasting themselves in declamations in which the feeblest can often surpass the best intellects.

The civil service affords another illustration. President Grant has undoubtedly made many bad nominations, and, while professing to favor reform, has done little or nothing to promote it. Now, when a large part of his supporters are, like yourself, condoning this failure for the sake of escaping the greater evil of Greeley's election, a very great degree of enthusiasm is not to be expected. I believe that it was simply impossible for the President to do otherwise, because the only power he has to influence legislation consists in the disposal of offices, and he is forced to use this power to satisfy the Congressional majority. If a reform is ever to be effected, if the great qualities which you recognize in the body of the people are to be made available, I believe that a detailed scheme must be introduced by a cabinet officer, upon which, with the support of independent members, he can go to the people as *against* Congress. Individuals would then be brought into a definite position, and we should go to the polls in a different state of the public mind from that which is induced by the shallow generalities of party majority.

G. B.

Boston, Sept. 13, 1872.

A WAY OUT OF THE MUDDLE.

To the Editor of the Nation:

Sir: Very many of us plain people who are not politicians, are asking each other if there is not some way out of the miserable political dilemma in the jaws of which tricksters have placed the people.

I do not know, in a somewhat large acquaintance in several States, a single

Grant man who does not freely own among his friends that he would much rather vote for somebody else than Grant; nor a single Greeley man who would not much rather vote for some other man than Greeley. Neither of the Presidential conventions did the will of the people, and the nominations of both sides are, by the almost universal private confession of their supporters, so unfit to be made that scarcely any man "not in politics" supports either, except as a choice of evils; and a very poor choice at that. It has happened before now that a person was chosen President who was odious to nearly or perhaps even to quite half of the American people; but unless some way can be found out of the present situation, we shall, no matter which party wins, have a President disliked and distrusted by nearly the whole nation, and by the whole of its disinterested intelligence. Surely, that is not republican government.

But if it is not republican government, is it not a grave danger to the Republic that self-seeking politicians of both parties should be allowed, by an unheard-of trick, to silence the common sense of the people, and to oblige the voters to vote—on either side—for men they distrust and in a great measure detest? That there was trickery and "management" for unworthy purposes nobody, I think, denies. You who support Grant, and do not like him, do not doubt, I suppose, Mr. Bromley's report, that if even twelve resolute men had, at Philadelphia, opposed Grant's renomination, they could have carried the Convention for some fit person, so little was he really liked even there. Nor have I seen a single man who was present at the Cincinnati Convention but has assured me that if the honorable delegates in that body had beforehand suspected the trick of Gratz Brown, they could easily have nominated Adams or Trumbull, or some other good and fit man.

That the two candidates are not merely disliked, but unfit for the place, is so undeniable that the newspapers on each side are filled with extracts from speeches or writings of the now prominent supporters of these candidates, declaring, within the year, their incapacity and exposing their misconduct. In fact, all reputable public men are demoralized by the political situation, and afford a disagreeable spectacle to the nation by the attitude into which they have been forced, or have allowed themselves to be put. The Grant organs make it a point against Trumbull, Schurz, and Sumner that they support Greeley, whom they have always disliked and distrusted; but it is well known that Blaine, Garfield, Dawes, and others of equal prominence, now supporting Grant, dislike and distrust him as strongly as the other men do Greeley.

What is the result of this state of things? This is one result, and one of the worst: In former Presidential elections, where parties were nearly evenly divided, the decision was made by a considerable body of independent and intelligent voters, who are not the slaves of party, and who have in such times, with great benefit to the country, held the balance of power. But in the present campaign the balance of power lies with the lowest class of our voting population, with the camp-followers, who stand ready to rush to whichever they shall, near the close of the battle, believe likely to be the winning side. Hence the extreme importance attached by the Grant organs to the vote of Maine, and the general admission that the success of the Grant men there has weakened the Greeley side. For the Greeley men did not expect to carry Maine's electoral vote; they have lost nothing which they expected or hoped to gain; but they as well as their opponents know that on such results depends the attachment of the meaner part of the voters—the camp-followers; and that on these depends the victory in November.

Hence, too, the whole canvass is bitterly and almost entirely personal. Principles are very little discussed; the whole canvass turns on the character of the candidates and their supporters; and as there is, so far as I can see, impartially reading journals of both sides, nothing to choose between the two—I mean nothing for one to choose who carries his conscience to the polls—there never was so disgusting a struggle. See how the journals and orators watch their men. If one points out that Grant has lowered the dignity of the Presidential office by his trifling conduct—a grave fault in him, as I think—the reply is pat and true, that Greeley going about the country electioneering for himself is as disagreeable and unprecedented a spectacle as anything of Grant's. When Grant is charged with avariciousness and unscrupulous greed, his friends point out that Greeley but lately lent his name, for money, to two of the worst rogues in New York, Tweed and Nathaniel Sands, to establish a tobacco monopoly. If Grant is charged with disgraceful double-dealing in the civil-service business, his allies can point to a recent letter from Greeley, in which he coolly promises in advance to divide the spoils fairly among all who support him, no matter what their party bonds. If it is said that Grant keeps such bad company as Tom Murphy, the obvious reply is that Greeley's friends, Cochrane, Colorado Jewett, George Sanders, etc., are no better. If Grant's "fuglemen," Cameron, Butler, Morton, Harlan, and others of that kind, are called by their proper names, as they deserve, Grant's friends match man for man by naming among Greeley's chief supporters and managers Cochrane, Depew, Cary of Ohio, Fernando Wood, etc. If you, a Greeley man, should charge Grant with misusing his political influence to enrich his relatives, I, being a Grant man—which I am not, by the way—should reply that Greeley has been known to accept $1,000 personally for his political influence used in lobbying a bill in Congress. So at least says Judge Hoadly of Cincinnati, and adds that a friend of Greeley's admitted the truth of the charge. If you should say that Grant is surrounded by vile and suspicious characters—and you could truthfully say that—I might as correctly point out to you an equally vile and suspicious set who surround Greeley. Finally, if you and I should look at the tails of the two tickets, we should see on one side Gratz Brown, political trickster, and accused of drunkenness; and on the other, Henry Wilson, who had such bad luck in denying that he had been a Know-Nothing.

In short, it is six of one and half a dozen of the other, and whichever way the election turns, if Grant or if Greeley is put into the White House, in either case the country suffers and is disgraced. I trust you will not laugh me contemptuously out of your columns if I attempt to show you that the Constitution of the United States provides a remedy for precisely such a case as this.

The framers of the Constitution fondly believed that party spirit could be kept down in the country, and, in the article which prescribes the method of choosing President and Vice-President, they provided that the person receiving the highest number of votes in the Electoral College should be President, and he receiving the next highest should be Vice-President. As soon as parties were formed and well-defined, this was seen not to work, for it would invariably secure the officers of opposing political opinions, which would make confusion, so an amendment was adopted, under which we now live and elect, by which the Electoral College votes first for President and next for a Vice-President; and it has become customary for the electors, who were originally designed to be an independent body of citizens, uncommitted to any man, to be the mere agents of the parties they represent, and to record as a matter of course their votes for the nominees of their respective parties.

This being a custom long in use, it would certainly be an odious and atrocious piece of treachery for two or a dozen, or any number of Democratic electors, for instance, to carry their votes to the Republican side if the Electoral College were nearly equally divided, and thus defeat the vote of the people; and probably no man would dare to perpetrate such an act; nor will anybody be found silly enough to suggest it. But suppose an entirely different case. Suppose a party saddled by the political management of bad men with candidates conspicuously unfit and improper; suppose that in some way the party thus burdened succeeded in the election; then suppose the electors chosen by this party to be men of the highest character, the strictest integrity, and the sincerest patriotism, is there anything which should make it repugnant to them to do their plain constitutional duty of selecting, as men of independent judgment, better men—the best men *of their party*—for the two places? I, for my part, see nothing. I go further, and say that, acting under oath, and with a due sense of their responsibility to the country and their party, and of their *plain constitutional* duty and obligation, they could not do otherwise. Here are the words of the Constitution:

"1. The electors shall meet in their respective States, and *vote by ballot* for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; *they shall name in their ballots* the person voted for as President, *and in distinct ballots* the person voted for as Vice-President; and they shall *make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each*, which lists they shall sign, and certify and transmit, *sealed*, to the seat of the government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and *the votes shall then be counted;* the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed."

There is not a shadow of doubt, and there has never been, that the electors are intended by the Constitution to exercise a distinct and independent right of choice. I need not quote you authorities on this question, for it has never, so far as I know, been disputed.

Now, I repeat, that for a few electors of one party to give the election to their opponents by going over to them would be an atrocious and demoralizing act of treachery. But that the body of electors of a successful party should, in the interest of the whole country *and of their party*, put aside unfit candidates, and join hands to declare the election of fit and proper men *of the same party*, that I believe to be within their power and their duty; and in doing this I believe that the electors of either party in the present case would receive the support of the people.

Bear in mind that the people do not actually vote for President and

Vice-President; they vote for Presidential electors. Go back further, and the people vote, really, to put a certain party in power. The two parties appeal to them for power and rule. The people, by their vote, say this party shall have power and rule, to the exclusion of the other. That is what the election means. It is not a gift to an individual, but an approval of a party—a declaration that the principles and policy of that party shall prevail in the Government for a stated time. And, acting in obedience to and conformity with that declaration, the electors have, under the Constitution, the undisputed right to select from that party its best men. They are put there for that purpose, and it seems to me that their independence, so carefully provided and guarded by the Constitution, is of very great importance in such a case as that which is now before the country, and ought to be exercised, no matter which party may prevail; for in this way only can the people under the Constitution protect themselves against the base tricks of caucuses and conventions. X.

[We ought to mention that the writer of the above is not a mere speculator, but a practical politician of the best kind, with exceptional claims to attention.—ED. NATION.]

Notes.

A SECOND attempt within a few years to found in this city a literary journal under the name of the *Athenæum* has just been made. The prospectus of the *American Athenæum* indicates that its field will be literature, science, the fine arts, music, and the drama. It is calculated, to quote the language of the prospectus, "to supply a want that has been long felt by publishers, professional men, and the cultivated public generally," and "its great aim will be to maintain the thorough independence of its criticisms, uninfluenced by advertisements and other means by which works of Literature and Art not unfrequently obtain a meretricious fame." Several of the reviews in the first number are unfavorable enough to supply any "want that has long been felt by publishers" of this sort of candor. The defects of most "first numbers" are visible here, but they need not be dwelt on. The London correspondent hardly allows for the intelligence of the public he is addressing, and, unless the printer is at fault, is a poor writer of English. There are some singular errors in the spelling of names of "American Artists at Home and Abroad" on the twelfth page; and the proof-reading generally is susceptible of improvement. The literary department is noticeable for its fulness rather than its quality. Mr. John Fraser, lately Deputy Professor of English Literature and Language in the University of Glasgow, is the editor, and Mr. J. Bartlett Cooke the publisher. ——An enquiring reader of the *Nation* is directed for a review of Stephens's "Constitutional History of the Late War between the States" to No. 203, Vol. VIII. p. 399.

—A correspondent of the *Athenæum* (Sept. 7) offers an explanation of the passage discussed at some length in the *Nation* last year, act iii. scene 2 of "Romeo and Juliet"—"That runaways' eyes may wink." "What," he asks, "is the meaning of these words? Obviously, as it seems to me, that people *in the ways*, or streets, *may not see* Romeo. By *runaways* the poet means those who *run in the ways*, or streets, the *wayfarers*, as we say. We may compare Jer. v. 1: '*Run ye to and fro through the streets* of Jerusalem, and *see* now, and *know*.'"

—The beginning of a new era in the usefulness of great public collections has been made by a series of photographs from the collections in the British Museum, by S. Thompson (London: Mansell & Co.) It is only necessary to enumerate the subjects comprised in the first seven parts to appreciate the very high value of the enterprise. Not only is the Museum rendered accessible to persons in all parts of the world, but they are admitted to view its contents as trained observers, as it were. The objects presented are selected and arranged on scientific principles, in a connection which the ordinary looker-on could never discover for himself, or only with great difficulty. Of the upwards of a thousand photographs now issued, about 150 relate to prehistorical and ethnographical examples of human ingenuity—tools, weapons, implements, and ornaments; 120 illustrate Egyptian sculpture, painting, and architecture; 250 treat of Assyria, 190 of Greece, 100 of Rome and Tuscany; 50 are devoted to mediæval art, 100 to seals of corporations, sovereigns, etc. Each division is accompanied by a catalogue, and may be bought separately; or the photographs may be had singly at a price not exceeding two shillings. An admirable introduction aims "to supply evidences of man's advancement, from the lowest stage of his history; the conditions of social life, of belief, and of science, from the earliest to the latest epoch." The photographs are among the best productions of the art. Any well-meaning merchant-prince, whose mind turns to the little village where he was born with thoughts of how to benefit it with some public endowment, has it now in his power to found a British Museum in miniature—systematic, compact, and for purposes of instruction practically complete. When other museums, as they must in time, take the same steps to popularize their treasures, it ought not to be necessary for American students to envy greatly the opportunities of Europeans.

—Dr. R. A. Smith, an English physician, has for forty years been engaged in studying the vitiation of air, having apparently been moved to do so by the assertion of Dalton that, scientifically speaking, he could not distinguish the air of Manchester from that of Helvellyn. This was an inability which goes far to vindicate the superiority of our bodily senses, in matters of vital chemistry, over the tests of the laboratory; for readily as we dull our perceptions by habit, which is indeed second nature in very many definitions of that term, the people are few who do not at once feel and keenly enjoy the difference between the depressing air of crowded cities and that of a mountain region. To remove the stigma from chemical analysis seems to have been at least one of the motives urging Dr. Smith in his researches; but it was not the only one, as may be seen when he comes to speak upon the duties of municipal government in respect to filthy and otherwise unwholesome houses. We wish no man could be made a member of our common councils until he had passed a competitive examination on the passage following, and had beaten all his opponents in the zeal at least with which he declared his willingness to act according to his knowledge:

"Let those courts, alleys, and streets which show the greatest mortality and the worst air be destroyed or improved, without foolish mercy. There is a want of willingness to pull down dangerous property, but a readiness to rush forward to save the life of the greatest criminals. Reason is out of the question in the matter. We are misled by an uneducated feeling. We like to save property, forgetting that deadly weapons and poisons are subject to peculiar laws, and their indiscriminate use is forbidden to the nation. And houses that produce death are not property; as well might a man claim his debts as such. If a man sells unwholesome meat the law interferes; if he sells the use of a room with fever in it, the nation seems not to complain. Officers of health point out such places, but the public still refuse to destroy them, and great numbers are slain annually by legal methods, while strict methods are taken to prevent a few annually being killed by arsenic—a death more agreeable than the lingering misery in the lower parts of our crowded towns. I know that the lowest classes living in poisoned houses die from other causes than bad air; but I am speaking of air at present, and that is one of the causes. The time must come—and the sooner the better—when it shall be enacted that no land shall contain more people per acre than we know by experience in several places can live healthily thereon. The same thing must be said regarding houses, although these are more difficult for governments to deal with, because of the degradation of some of the population. Still the limitation must be obtained, and for that we must strive."

—Dr. Smith has not found that his investigations have produced very brilliant and striking results. "I feel," he says, "that, whilst I have succeeded in doing much of that which I intended to do, I have not got beyond the limits which earlier observers attained by the mere fineness of unaided sense and by sound reasoning without experiment." But he hopes that he will be found to have confirmed the suspicions of others and to have put into plainer language and in detail what others only imagined somewhat vaguely. He has made many experiments, and in giving us the results he asks for careful attention to the value of minuteness in considering his figures. Thus, for example, a difference of nineteen one-thousandths of a single part of oxygen in the air of a given place may mean something very dangerous indeed to the inhabitants. It looks like stating an insignificant difference when it is said of the air one breathes that out of its 100 parts there is to-day only 20·980 of oxygen; while last year, before the bone-boiling establishment was set going, there were 20·999, or nineteen one-thousandths of a part more. The nineteen thousandths may be displaced by organic matter, or by the gases of putrefaction. It is as if 190 quarts of putrefying matter were present in every million quarts of drinking water, or 13·3 grains in every gallon. Or, rather, it is worse than this; for of water we drink not very much, and the thirteen grains and three-tenths we should not drink in a day, but through our lungs we draw two thousand gallons of air in a day. And it should be recollected that sometimes, as in crowded theatres, the proportion of oxygen is as low as 20·7, and that in some of our tenement-houses the air of a theatre gallery would be a draught of luxury. Dr. Smith details one experiment which sets in a clear light the fact that no great diminution of the percentage of oxygen in the air is necessary to make an atmosphere almost deadly to human beings, and the fact that we may be about as ignorant of the noxious quality of the air we are breathing even while we are taking it into our lungs, as we are susceptible of injury from it. In some of his experiments he used an air-tight chamber, the atmosphere of which he vitiated by burning candles in it. On one occasion a young lady, who was anxious

to make the experiment, got into this enclosure just as the candles were put out, and at the end of five minutes, during which she made light of the difficulty, it was necessary to help her out, the partial asphyxiation having taken place in an atmosphere in which the percentage of oxygen was about 19·0. Rain also, in which are collected the solids and liquids of the air, has had a great deal of Dr. Smith's attention, as, in examining its chemical properties, his experiments could be made without putting health or life to the test, and he has collected and analyzed samples of rain water collected from all parts of the British Isles, some being sent him from the Hebrides on the north, and some from Valentia Bay, on the west coast of Ireland. Tried by this test, the much-maligned London air turns out to be, says *Nature*, about the best in the United Kingdom, while that of Glasgow seems to be the worst. But we suppose a proficient in "gerrymandering" might cut out two or three worse Glasgows in London if he took particular districts, and not the whole metropolis in the average.

—New English publications have long been recorded in two good weekly lists—the London *Bookseller*, a subject-catalogue, and the *Publishers' Circular*, an author-catalogue. Of course, the same titles are given in nearly the same way in each. The only difference (except in accuracy, as to which we have oftenest found the *Bookseller* wanting) is in the arrangement. French literature is to see a similar duplication of labor. For twelve years C. Reinwald has issued an annual list of new publications, alphabetically arranged by authors, with an index of subjects. Now G. Bossange (successor of Hector Bossange, well known to most American purchasers of French books) has brought out the first of a series of annual catalogues, arranged in fourteen subject-divisions, with an index of authors. And the best of it is that both Bossange and Reinwald are ready to give their catalogues to probable customers; you are not obliged to pay your money in order to take your choice. Reinwald's list for the two years 1870–71 will be shorter than it has usually been for one. Publication, and perhaps literary activity, almost ceased during the siege. Lenormant relates in his fourth "Lettre assyriologique," as a fitting preface to an explanation of a Himyaritic inscription, how he stood one winter morning, gun on shoulder and up to his knees in the snow, at Vitry, and discussed with a brother archæologist the chances of their ever resuming their former studies. He had not much leisure or calmness for writing in those days, nor had others. But a certain number of important works had been prepared, or nearly prepared, for publication before the war, and appeared immediately after it; and, as in our own country, the guns had hardly ceased firing when scores of writers seized the pen to describe their experiences—in the trenches, in an ambulance, as prisoners in the hands of the Prussians or of the Communists, or to make or defend themselves against accusations of treachery. It is true that long months of enforced idleness, and the habit of receiving a daily allowance without performing real labor in exchange for it, had thoroughly demoralized the workmen. It was difficult to find a pressman or a bookbinder who would take the necessary care, and as of old make the clearness of the type and the neatness of the binding a fit vessel for the transparency and sparkle of the style. We have seen few books published in 1871 or 1872 that equal the former beauty of French typography. But books were published, if not with their previous elegance or cheapness, yet in numbers sufficient to show that France was in no danger of losing its rank as second among the book-producing nations of Europe. During the war, the most curious and in a way the most characteristic productions of the French did not appear in book-form, but in the newspapers and pamphlets. The foolish levity, the almost incredible vanity, exultant at the commencement of the campaign, mortified, bitter, enraged, as the Prussians moved on from success to success, are best seen in the *Figaro*, the *Gaulois*, and other journals; and these journals cannot be taken to represent merely the eccentricity of a few Bohemians, for some of them enjoyed a circulation of a hundred thousand copies. M. Borchardt, in his "La Littérature française pendant la Guerre de 1871–1872," has collected some of the most striking of these utterances, and commented upon them, as a German might be expected to do, not very charitably. He does not allow enough for the exciting effect of war upon even the quietest natures, and especially a war from which national vanity could draw no consolation. We wish we could think that the French are the only nation guilty of such extravagances in war times; but we have too vivid a recollection of the bad taste, inconsistencies, sophisms, lies, absurd hopes, unreasonable complaints, and the ferocity that disfigured American periodical literature at the South, and at the North too, from 1861 to 1865. In M. Bossange's catalogue, the division "Evénements de 1870–71" is surpassed in length only by "Histoire et Géographie," "Education," and "Sciences médicales," and might have received some of the works recorded under "Législation," "Economie politique" and "Sciences militaires." The classification is peculiar, and produces some startling results. Bibliography, which Brunet places among the adjuncts to History, here takes its place with Typography under "Sciences appliquées à l'industrie." One finds the new combined edition of Quérard's Pseudonyms and Barbier's Anonyms between a treatise on agriculture and another on butter and cheese, while Lorenz's "Catalogue of French Literature for the last Twenty-five Years" is preceded by Lévy on "Geese, Ducks, and Turkeys," and Lejeune's "Brick-maker's Guide." The numerous entries under Education would be an encouraging sign for France, were it not that she has always been very prolific in educational works, without, as far as one can see, any satisfactory result. Theology holds its own; Belles-Lettres and Fiction are crowded; Fine Arts, considering the costly nature of the books, is well represented; the Natural Sciences and Technology not so well; and Philosophy and Legislation come off worst of all.

—The civilized art of counterfeiting ancient inscriptions and objects of interest to the archæologist has recently made some progress in South Arabia, and even in Yemen, a country altogether impervious to the influences of art and science, where scarcely a European resides, and where it is hardly safe for one to travel. It is not a little remarkable that the natives have been so successful in their first attempt as to deceive connoisseurs and even experienced directors of museums. English curiosity-hunters and the British Museum, or rather its agents, are the unfortunate dupes in these transactions. The things counterfeited are bronze tablets, or smaller objects of metal, bearing Himyaritic inscriptions. The credit of detecting the fraud is due to the celebrated Joseph Halévy, the only European traveller who has recently entered Sanaa, the capital, or rather nominal capital, of Yemen. Halévy had made exact copies of over 600 Himyaritic inscriptions from the interior of Yemen, and showed them and other things to a coppersmith of Sanaa. It would seem that this shrewd fellow took impressions of the Halévy inscriptions, and, from an ingenious combination of parts of them, produced the counterfeit tablets—a hypothesis which is strengthened by the fact that the tablets sold to the English contain literal extracts from the Halévy inscriptions. It was quite possible, of course, that there might be discovered more tablets than one bearing the same inscription; but, unfortunately, those on the coppersmith's tablets do not point to the place where he pretends to have discovered them, but to the precise spot where Halévy's were found. There is, moreover, about these objects an appearance very unlike that of age, of itself sufficient to awaken suspicion. The possibility, however, that this appearance might be due to an exceptional preservation, and the improbability that the counterfeiting could be carried to such perfection in South Arabia, left some doubt still as to the authenticity of the tablets—a doubt which has since been completely cleared up. Herr von Maltzan relates that he was resident in Aden, and witnessed the discovery of the forgeries. The smith had sold a bronze amulet, in the form of a seal, and with Himyaritic inscriptions, to the Governor of Aden as unique and very ancient. The Governor showed his purchase to Herr von Maltzan, and informed him it was the only one of its kind. Later, Herr von Maltzan saw a duplicate of it with an English officer, a third in the hands of an Arab, a fourth with the Cadi, a fifth and even a twelfth, the possessor in each instance believing himself the happy owner of a unique. There was no doubt they had been all made from the same mould, and the name copied from Halévy's inscriptions. Several of the tablets were sold to the British Museum.

—Though the 2d of September, the anniversary of the surrender at Sedan, was widely observed in Germany with public festivities, yet in official circles, and with intelligent and thoughtful persons, the feeling prevails that it is not wise to set apart a national holiday to commemorate a victory upon foreign soil and the humiliation of a neighbor whose friendship in the future is so important to the development of the German Empire and to the peace of Europe. This feeling found utterance in journals believed to be officially inspired, and hence in Berlin the celebration was of a very mild type. Display of flags, extra performances at the theatres, school excursions, etc., but no guns, parades, processions, no general illumination, and nothing that seemed in any way to commit the court. Indeed, the attitude of Germany toward France is one of watchful sobriety rather than of boastful superiority, and this shows good taste as well as good sense in high quarters. For a time the popular enthusiasm will glorify the military successes of 1870–71; but in the end, the anniversary of the coronation of the King of Prussia as Emperor, or of the adoption of the Imperial constitution, is likely to be fixed upon as the national holiday of Germany.

—One of the most learned ecclesiastical lawyers of all Germany, Herr Friedberg of Leipzig, has an article in the lately-published German *Annual* on the subject of the Church and the New Empire, which is favorably reviewed by the *Allgemeine Zeitung*. Both articles point, in a manner not to be mistaken, to a coming contest between the empire and the Church, in which the empire will take the initiative, and of which Friedberg says that it will

be "sharp and bitter," and the *Allgemeine Zeitung* "violent." When the question of expelling the Jesuits arose in the German Reichsrath there were those who solemnly protested that the war against them was not meant as a war with the Roman Catholic Church. Views on this matter are beginning to change, and now the *Allgemeine Zeitung* asserts that the measures against the Jesuits were only the first step against the Church itself; for, it asks, "Is it not evident that the recent disturbing events in the religious world have been brought about by the Jesuits? Is it not evident that the present Pope is completely under the influence of the order? Is it not evident that Jesuitical principles govern the Catholic Church to-day? Have not Catholic priests assured us again and again that they are brothers to the Jesuits? In fact, is not the whole Catholic Church identified with the Jesuit order? It is a terrible thing to say, but we will say it: The present Jesuitical-Ultramontane-Roman Catholic Church is dangerous to the state." In view of the attitude of the Church to the state, Friedberg proposes the following questions: 1. What means shall the state take to preserve itself from the dangers threatening it on the part of the Church? 2. What power shall enforce the laws guarding against such danger—the several states composing the empire, or the empire itself? In answer to the first of these questions he proposes that the Church shall be completely under the control of the state; that civil marriage shall be made obligatory; that no schools shall be left under the control of the Church; that the poor shall not be cared for by the Church; that no clergyman shall preach or have the care of souls unless favorably disposed towards the state and the above laws; that the education of the clergy shall be superintended by the state; that no order of monks or nuns shall exist within the empire without the consent of the empire; and that the Jesuits shall not be tolerated. He further proposes that the enforcement of these laws shall belong to the empire, and not to each individual state. These methods are certainly very severe, and, if adopted, would be nearly tantamount to forbidding the Catholic Church on German soil. It is not a little significant that some of the papers that lead public opinion in Germany favor this scheme, and that the scheme itself should be produced with the sanction of so great a name, and in a work which is a manual for the use of the officers of the empire in almost every branch of the service.

—We have already noticed the promised appearance of the *China Review*, a bimonthly publication from the press of the (Hongkong) *China Mail*. The first number was issued on August 31, and the table of contents augurs well for its prospects. They comprise: 1. An introductory notice. 2. The Shih King—a review of the fourth volume of Dr. Legge's "Chinese Classics." 3. The Adventures of a Chinese Giant, translated from the Chinese. 4. A Chinese Farce, with an introduction. 5. Su Tung-p'o, from an unpublished History of the Kwang-tung Province. 6. Mr. Wade, C.B., on China—an unpublished State paper. 7. From Gotham to Cathay, being Divers Experiences in Strange Places. 8. Rhymes from the Chinese, with prose comments. 9. The Coinage of Japan, as it was and is. 10. China's Place in Philology—a review of Mr. Edkins's last work. 11. Short Notices of New Publications. 12. Notes and Queries on Eastern Matters. 13. Books wanted, exchanges, etc. We are glad to learn that the subscription list is rapidly filling.

—The Rev. Justus Doolittle, late editor of the *Chinese Recorder* (Foochow), a publication that has, we regret to notice, been discontinued, has brought out the first volume of his "Hand-Book and Vocabulary of the Chinese Language," and thereby set sinologues, who seem to be gifted with a peculiar development of the critical faculty, by the ears. A large number of local reviewers find his work to be all it professes to be, while an equally large number condemn it as next to useless. They admit its accuracy as regards concrete terms—a matter in which a dictionary-maker is scarcely likely to go wrong—but dispute its use for compound terms, which appear to be the bugbear of all who are so unhappy as to rush into print upon so delicate a matter as Chinese philology. We take it that the truth lies between the two extremes. A competent authority says it is a very fair vocabulary but a bad dictionary. The second volume (now passing through the press) promises great things, and, if it fulfils one-half of them, will be a unique compilation. Mr. Doolittle is tolerably well known in this country as the author of "The Social Life of the Chinese" (Harper & Bros.), a work containing more, and more ill-arranged, information concerning that people than any other yet published.

—A work which has caused some little excitement in Chinese circles is a voluminous publication by Baron von Gumpach, late astronomer at the Pekin College, and entitled "The Burlingame Mission, a Political Exposé," written with the avowed object of damaging the character of Mr. Robert Hart, Inspector-General of the Chinese Imperial Maritime Customs, the quondam friend and employer of the author. Its 900 pages contain as much abuse as is often to be found within the covers of a single book. Not that it is devoid of ability; but its scathing denunciations of official trickery are accompanied with such virulent personal attacks as to forfeit the attention that a more judicious writer would assuredly have gained. The chapters on the Tientsin massacre and future foreign policy in China show, however, both considerable knowledge of Chinese policy and rare command of language. The work is published at Shanghai, but bears no printer's imprint, a lawyer having expressed an opinion that any page "contained libels enough to hang a man." We learn that Mr. Trübner wrote to request that his name might be removed from the title-page as London publisher.

FAWCETT'S ESSAYS.*

THE name of Mr. Fawcett has become well-known of late years as that of the Professor of Political Economy in the University of Cambridge, as being blind from an accident, and as a representative in Parliament of the most positive and uncompromising radicalism. The volume before us contains the application of the most radical doctrines of political economy to the great social and economical problems of the day, and it adds sensibly to its value as a contribution to this discussion that it is written in full and equal partnership by the professor and his wife. So far as this fact goes, it tells powerfully in favor of female equality; for Mrs. Fawcett's papers are fully worthy to stand in the series with her husband's. The volume, as a whole, is able, candid, and up to a certain point completely satisfactory.

In saying that it is satisfactory "up to a certain point," we mean that it stops just short of a profound and exhaustive analysis of the questions discussed. We can best illustrate this by referring to the papers, by Mrs. Fawcett, upon the Woman's Rights question, which are probably those which will excite most interest in this community. The two papers entitled "The Electoral Disabilities of Women" and "Why Women Require the Franchise" contain a very complete, and we think we may say sufficient, refutation of the old stock arguments against female suffrage; but they do not touch the considerations which have most weight in the present state of the controversy. It is very evident, to the most casual observation, that the female-suffrage movement has lost ground in our community within five years, and the reason for this—apart from the unsavory performances of some of its leading champions—is simply that people see now, or think they see, that the distinction of sex is something more than a mere accident, and that enough importance has not been attributed to it in the discussion. Mrs. Fawcett, for example, treats the question just as if the sexual relation did not exist, and, by thus leaving out of consideration the most important element in the problem, has wholly failed to reach any satisfactory solution of it. Her argument is directed towards a phase of the controversy which lost all its importance long ago.

On this point we will borrow an illustration from a kindred subject of debate—education of the sexes in colleges. We noticed not long ago the sentimental names given to paths, etc., in the grounds of a very promising Western university. Now, it will take years of successful co-education in this institution to balance the discredit thrown upon the system in the eyes of thoughtful people by this deliberate naming of a path "Flirtation Walk." It was done, no doubt, as a harmless joke, but it is making real what the opponents of the experiment have all along urged—that co-education will bring together too inflammable material, and cannot but lead to mischief. All that is said and proved of the scholarship of the young ladies, and of their demeanor now while the experiment is new, has nothing to do with the real question any more than the intellectual equality of women and the courtesy shown them at the polls have to do with the question of female suffrage. It is this vulgar aspect of the movement, as we cannot but call it, illustrated by this unlucky path, that has disgusted many of its old friends; it seems to them that it is playing with edged tools. We express no opinion as to the weight that this argument ought to have; we simply say that it is on this point that the battle is at present waged, and that the champions of the reform in question must meet this issue squarely, if they would regain for their cause the ground it has lost.

As Mrs. Fawcett has missed the vital point of the Woman Question, just so her husband does not seem to us to go to the root of the even more important questions with which he deals in his opening papers. We can hardly say what is lacking; the papers are eminently clear, instructive, and judicious, and are a welcome contribution to the discussion. But we feel that after all he only touches the surface of "Modern Socialism," and that in regard to "State Intervention" we have valuable suggestions and discussions of detail, but no broad general principle. These two papers are the key to the first half of the volume, and although we may pronounce them inadequate on

* "Essays and Lectures on Social and Political Subjects. By Henry Fawcett, M.P., Professor of Political Economy in the University of Cambridge, and Millicent Garrett Fawcett." London and New York: Macmillan & Co. 1872. 8vo, 368 pp.

general and theoretical grounds, they contain much of real value, and serve as a sufficient introduction to a series of admirable papers upon special economical points—Free Education, Pauperism, Hours of Labor, National Debts, and Agricultural Laborers; all but two of these are by Mr. Fawcett himself. These subjects are all treated from the point of view of Political Economy, and often contain conclusions differing from what we in this country are accustomed to regard as "radical." Mrs. Fawcett is opposed to free education, on the ground that it is the same in principle as relief to paupers—it is as much the parent's duty to provide his child with schooling as with food and clothing; if he cannot do the latter, he is called a pauper, and treated as such, why not if he cannot do the former? "As a rule, it is not the poverty but the self-indulgence of a parent which stands in the way of his child's education; this self-indulgence would be checked by making him pay the school pence; it would be encouraged by a system of free education" (p. 62).

The lecture upon "Regulation of the Hours of Labor by the State" is a very complete exposure of the fallacies of the movement, in the interest of the working-classes themselves. The author shows, by the example of the Newcastle strike, that they have it in their power to bring about all needed reform without any aid from the state. Mrs. Fawcett discusses the economic aspects of national debts from the experience of the several nations. And in the article entitled "What can be done for the Agricultural Laborer?" her husband shows that it is only from education that any real benefit can be expected for this class—that is, that any elevation of their condition must come from their own intelligence and self-restraint, and that nothing which can be done for them will have any lasting effect, except in so far as it acts upon their minds and characters. In a postscript to this paper we have a very interesting account of the agricultural laborers of Northumberland and one or two other northern counties, where this class is far more intelligent and much better off than in other parts of the kingdom.

The article (from the *British Quarterly*) upon "Pauperism, Charity, and the Poor-Law," is the most important, and, upon the whole, the most satisfactory of these special essays. Professor Fawcett has already pointed out, in treating of socialism, that the Poor-Law of Elizabeth, "which first gave to every Englishman a legal claim to maintenance," is "distinctly socialistic in its tendencies"; and the paper in question is an excellent account of the unfavorable workings of this law. Even here, however, something is wanting to the completeness of the discussion. When we are told (p. 95) that "England is the only country in which a man can claim maintenance as a legal right," we naturally expect some comparison of the practice of England with that of other countries, as well to illustrate and prove the statement as to show wherein other nations follow a better plan. Certainly it would seem that there was the same legal claim in this country; every person who cannot support himself necessarily "comes upon the town," and the "Law of Settlement" which Mr. Fawcett criticises does not appear to differ materially in principle from the New England law. And at any rate, however formally this legal right to a maintenance may be put in the English Poor-Law, the principle itself amounts merely to this, that if a person is perishing of want, the state will step in and save his life. It is very well to point out the socialistic tendencies and the disastrous effects of the law; but after all, would Mr. Fawcett say that the state should suffer its citizens to die of starvation in open day? We wish he had met the question, what is to be done with the very destitute when this right is abolished?—which he regards "as a more than probable contingency" (p. 84).

Following the seven economical papers above described, come Mrs. Fawcett's four papers upon female education and suffrage, two of which we have already spoken of. The two upon education are admirable and instructive papers—particularly instructive to us, as showing how different the problems are in England and America. We find it hard to understand the comical resistance made to the inspection of girls' schools (p. 190); our "female seminaries" are only too glad to attract visitors. In like manner, the characteristic faults of these schools, enumerated p. 192, hardly apply, we think, to American schools of the same class; our girls, on the contrary, receive a too narrow and severe education, and have too few accomplishments—we speak of them, of course, as a whole; not of fashionable schools. It is suggestive, too, to notice that co-education is not one of the reforms considered by Mrs. Fawcett.

The three political papers which finish the book are of less importance than those already described. Mr. Fawcett discusses the House of Lords, generally from the same point of view as Mr. Mill in his "Representative Government." He differs from Mr. Mill in thinking that the present House should not be taken as the basis of a reformed second chamber—from this he would wholly exclude the hereditary character. Lastly come two papers by Mrs. Fawcett, reviewing Mr. Stern's book on "Representative Government," and describing Mr. Hare's plan of personal representation. It is not agreeable, by the way, although it is no more than we deserve, to find that American politics are referred to far oftener by way of warning than of example, as in this review of Mr. Stern, and in speaking of the Maine Liquor Law.

We will call attention to two special arguments on the Woman's Rights question where the author has failed to meet the point. When it is objected that women ought not to vote because they cannot be soldiers, this is not making the suffrage "rest on a military basis," but simply assuming that those only, as a class, shall govern who have the physical power to enforce their decrees. Again, when Mrs. Fawcett urges that at present women suffer from "class legislation," she is using an argument which is almost without weight in this country, and is rapidly losing its importance in England. The present generation is chivalrously eager to redress grievances and to establish equality. It takes time to do this, and it is better that it should; but it is a fact that when a grievance in respect to equality is once pointed out, it is sure of speedy attention. In some States of the Union women have an advantage over men in respect to property; their property is not liable for their husbands debts, but their husbands' are responsible for theirs. Just so a vigorous effort is making to gain admittance for girls to Harvard and Yale, but nobody proposes to admit young men to Vassar.

The value of these discussions to American readers will be found to be rather in the instruction they give as to English problems than the light they throw upon our own. All the leading economical questions which now disturb English society are here admirably stated and argued in a very candid tone, but with very positive convictions, and there are abundant statistics and detailed facts to support the argument. Much of the argument is of direct application to American society; but most of it, being the consideration of special questions in the light of general economical laws, has reference to problems and dangers which at present we do not feel.

A GERMAN CRITIC ON AMERICAN PHILOLOGISTS.*

THE great magazine of Germany, and of the world, for the comparative study of languages, enters with this number on a new series. Twenty-one years ago, it began with a little circle of contributors and subscribers. The philologists of the old school were still distrustful of the study and kept aloof from the new periodical; but there was a rapid growth of interest in the science. In a few years the same editors began a similar magazine for the Arian, Celtic, and Slavic languages; and now devotion to these studies has spread to the schools and the text-books of grammar, and modified the whole system of instruction in languages in Germany, America, and, more or less, the whole world. The twenty volumes already published have been most powerful aids in this progress. They are made up mostly of important original contributions or of fruitful criticism. No important book on these subjects is published without indebtedness to it; indeed, the constant references to it in German works make it almost as necessary to a student as Webster's Dictionary is said to be. A complete set is a treasure to be eagerly grasped, as the early numbers can no longer be had. A general index is to be completed this year. It has no equal or rival in its own sphere. It has always kept an open eye on America, and has had appreciative notices of the labors of our scholars.

The present number has two articles mainly devoted to Americans. The first is "Corrections," by Misteli, called forth by remarks on his theory of accent by Prof. Whitney, published in the "Transactions of the American Philological Association, 1869–70." Misteli corrects Prof. Whitney's suggestion that he is an Italian; otherwise, he differs mainly in maintaining that he never did differ, so far as he knew; and he presents his thanks very cordially to the illustrious editor of the Atharvaveda.

The other article is a review of Prof. March's "Comparative Grammar of the Anglo-Saxon," by Moritz Heyne, known to all students of such matters by his "Brief Comparative Grammar of the Old German Dialects," and his admirable editions of Beowulf, the Heliand, and Ulphilas. He begins by saying that there is little study of Anglo-Saxon in England, but it flourishes in America. In the higher schools of the northeastern part of the United States it is pretty universally taught; and it is taught in a manner thoroughly scientific, and at the height of our best and latest grammatical knowledge, making in this also a complete contrast to England, where they issued Thorpe's grammar as late as 1865, Heyne himself, it might have been added, seeing it through the press. This somewhat overstates the universality of Anglo-Saxon study among us. Eminent as is the professor in this branch at Harvard, it is there, as well as in the Sheffield School, an optional

* "Zeitschrift für vergleichende Sprachforschung auf dem Gebiete des Deutschen, Griechischen und Lateinischen, unter Mitwirkung von Dr. Ernst W. A. Kuhn, herausgegeben von Dr. Adalbert Kuhn, Professor und Director des Köllnischen Gymnasiums zu Berlin. Band XXI." Neue Folge, Band 1, Erstes Heft. Berlin, 1872.

study, and very few students take it, while elsewhere in New England it hardly gets into the catalogue, much less into the recitation-room of any college. The University of Virginia may justly claim to have been our centre of Anglo-Saxon study. President Jefferson established it there, and it has generally been one of the most popular courses, the classes often counting by the hundred. Just now, Pennsylvania, perhaps, best deserves Heyne's praise. There are more students of Anglo-Saxon at Lafayette College than in all New England; so there are at Jefferson, and perhaps at Gettysburg and Haverford. But possibly Heyne includes Pennsylvania and Virginia in the northeastern part of the United States.

As to March's grammar, he doubts whether so much and such comparative matter as it contains is desirable in the grammar of a single speech; he fears it may embarrass and mislead beginners. It may be said in reply that this grammar is not meant for children, but mainly for students well advanced in a college course, who know something of the comparative grammar of Greek, Latin, English, and German. After a student has learned one speech scientifically, he can never learn another with satisfaction without knowing the relations of everything he learns. A child may memorize mathematics at first, but as soon as he has understood anything, he relucts at every attempt to cram him. In America, even grammars for beginners are bringing in comparative matter. Within the last year or so Goodwin, Crosby, Allen and Greenough have used it successfully. It may also be said that the best way to study comparative grammar is in connection with some particular speech, where its laws can be continually applied to particular words. General lectures on such a subject amount to little. March's grammar is plainly intended for such study.

A further criticism is that rules are often given instead of laws of speech. Thus the rule for accent is given that it falls on the first syllable, instead of the law that it falls on the root syllable; old-fashioned lists of objects are given under gender; the paradigms are filled up to the full number of cases used in syntax, although the same form is found in two cases; the three persons of the verb are given in the plural, though they are all alike; the classification of irregular nouns and verbs is that of the old grammars. The fact that the laws are fully stated in the grammar as well as these rules, might not be suggested to Heyne's readers. But the principles of accentuation are fully given and compared with those of other tongues; the gender lists might have suggested the third volume of Grimm's grammar as well as school couplets; and as to filling up paradigms, there is nothing which working teachers more find fault with in a grammar than the absence of a full exhibition in this tabular way of the syntactical uses of words. That there may be nobody misled by it, a statement of the etymological facts faces the paradigms all the way through the grammar. Heyne specifies the instrumental case as in general too often given, and that in *ŷ* or *î* as not given. He perhaps overlooked the statement which yet is given in the largest print in the general caption, "The instrumentals are etymologically datives except *-é, -ŷ*." He says the adjective has no instrumental, but he has found that out since his grammar was published, and what he says about it in his new edition to which he refers is by no means conclusive. He admits that besides the common form in *-um*, there is another in *-e* which is not uncommon, and is usually found used as an instrumental. But he thinks he has found examples of it in the dative. The only one he gives is *forgifath gif ge hwät ágén aenige habbath*—forgive if ye have aught against any—which he quotes as from Matthew xi. 25. Now there is no such passage in Matthew; it comes from Mark. And the *aenige*, which he says is a dative for *aenigum*, is a mere printer's blunder for *aenigne*, the regular accusative after *ágén* ("March's Grammar," § 341), and corresponding to the Latin accusative *aliquem*, which it translates. Heyne doubtless took it from Thorpe; but the reading is *aenigne* in Marshall's edition, from which Thorpe's was printed, as well as in Bosworth's and in all the MSS. as given in Skeat. That the Friesic has a dative in *-e* is of some weight, but the old Saxon instrumental and the Anglo-Saxon adverbial forms in *-e* are strong on the other side, and a more cautious induction is plainly needed.

The explanation in the grammar of the persons of the plural should not be called *quite casual (rein beilaufig)*, quite the contrary; it is in due course, an essential part of the plan of the book.

Two things Heyne mentions as not up to the height of the latest investigations, the exposition of Grimm's law, and the statement that in Teutonic the adjective follows the pronominal declension. As to Grimm's law, there is in the grammar, besides the current German statements, which are admitted to leave the problem unsolved, another hypothesis, which we leave to its fate. But the trouble about the adjective seems to be merely a misinterpretation of an incautious expression. The definite and indefinite declensions are treated separately, and this expression is part of the discussion of the indefinite form and intended to apply to that only, as may be seen by looking at the explanation of the other form. But since it has misled a Heyne, it certainly ought to be made more precise. He remarks on the brevity of the derivation and prosody. His statement that the comparative method is given up in the syntax might mislead. The attempt to carry that method through and exhibit the syntactical relations of Teutonic, Latin, Greek, and Sanskrit is made with much labor, if with no very imposing results.

And now, having given Heyne's criticisms in the way of correction, it should also be said that he speaks of the grammar as containing wide-reaching, original investigations, based on great erudition in the Anglo-Saxon texts, andover and, above combining the results already won, as making its own contribution to the deeper knowledge of the Anglo-Saxon and the general German grammar. He especially commends the lists of verbs, the syntax, and the prosody.

ENGLISH LAWS OF MARRIAGE AND DIVORCE.*

THE English divorce act which went into effect in January, 1858, transferred nearly all the jurisdiction which had been exercised during and since the Catholic age by ecclesiastical courts and persons to a new court, consisting of a judge of a probate court which had just before been created, of the Lord Chancellor, and of the chief judges, together with the three senior puisne judges of the common law courts. The judge of probate is called the Judge Ordinary of the Court of Divorce, and by the original law (20 and 21 Vict., c. 85) needed that two judges of the Superior Courts should sit with him; but by a subsequent amendment of the law was invested with all the powers and authority of the court in the first instance, unless he chose to call for the assistance of one other judge. The full court now sits only for the purpose of hearing certain appeals, and, by an amendment of the law, all the judges of the three common law courts belong to it. The great feature of this new tribunal is that not only most of the powers of the old courts ecclesiastical are transferred to it, but that it has also the power to dissolve marriages in cases of adultery—a power which formerly belonged to Parliament alone, and was very rarely exercised. With these changes, the old suit of a husband for *crim. con.* became in name extinct. The divorce law, however, allows a husband, either in a petition for judicial separation—for so the old suits for divorce *a mensâ et toro* are now called—or for dissolution of marriage, or "in a petition limited to such an object only, to claim damages from any person on the ground of his having committed adultery with the wife of the petitioner," etc.; but we are informed by Mr. Browning that damages are now never claimed from an adulterer except in suits for dissolution of marriage. The right of limited petition is thus practically found to be useless.

The English divorce law is framed upon the principle that the wife's adultery is a greater social evil than that of the husband. Hence, while her crime, if proved, involves dissolution of marriage, his wrong, in order to have that effect, and to go beyond judicial separation merely, must be more than simple adultery: he must have committed "incestuous adultery, or bigamy with adultery; or rape, sodomy, or bestiality; or adultery, coupled with such cruelty as of itself would have entitled the wife to divorce *a mensâ et toro*, or adultery coupled with desertion, without reasonable excuse, for two years and upwards." On the other hand, the Roman definition of this crime, making it to consist in illicit intercourse with a woman in a state of matrimony, has not entered into the English law.

Either of the parties in the suits before this court of divorce may ask that questions of fact be tried by the court or by a special or common jury; but the court is not obliged to grant a jury on such request, except in suits for dissolution of marriage. Cases of nullity of marriage, on account of their peculiar nature, are usually tried by the judge in his chamber; but he must hear suits for dissolution in open court.

In these suits for dissolution, the party who is alleged to have been a partaker in the wrong with the respondent is joined—except in peculiar cases—with her or him, and is called the co-respondent. If the respondent is a wife, and the suit goes against her, the co-respondent may be condemned to pay the costs, and at the same time a claim for damages may be brought against him by the injured husband.

By an act of 1869, known as the "Evidence Further Amendment Act," the parties to any proceeding instituted in consequence of adultery, together with the husbands and wives of such parties, are made competent to give evidence. But no witness, whether party to the suit or not, "shall be liable to be asked, or be bound to answer, any questions leading to his or her guilt, unless such witness shall have already given evidence in the same proceeding in disproof of his or her alleged adultery." By a decision of the court, the charges against a husband ought not to rest on the unsupported testimony of the woman with whom the crime is alleged to have been committed,

* "An Exposition of the Laws of Marriage and Divorce as administered in the Court for Divorce and Matrimonial Causes, with the Method of Procedure in each kind of Suit. Illustrated by Copious Notes of Cases. By Ernst Browning, of the Inner Temple." London: W. Ridgeway. 1872.

especially if she is a person of loose character. In one instance the court dismissed the petition, on the ground that the evidence was of this description, without entering into the case at all.

We pass by many things of interest in the clear and succinct chapters of Mr. Browning's valuable work relating to the marriage laws of England and the conflict of marriage laws; to suits for dissolution of marriage and for separation, and to defences in such suits; to suits for decrees of nullity and for restitution of conjugal rights; to alimony and damages; to the effect of dissolution on settlements of property; to the custody of children; and to appeals, whether to a full court or to the House of Lords. We can only notice two particulars. The first of these is, that the original divorce act authorized the court, in cases of divorce and of judicial separation, if it were made to appear that the wife, being the guilty party, was entitled to any property in possession or in reversion, to order such settlement of it, or of any part of it, for the benefit of the innocent party and of the children of the marriage, as it should judge best. The court having held that, under the powers granted to it by this act, it could not touch marriage settlements, the authority to do this was conferred by a subsidiary act passed two years afterwards. This is noticeable as almost the only provision of the law which has a moral aspect and looks as if it were intended for the punishment of the guilty party. But the true explanation of it must be, as we think, that the innocent party who had enjoyed advantage, or had expectation of advantage from the other, ought not to be injured by her fault. Thus the law throughout keeps to a cold regard for the civil rights of the parties, and to those alone.

The other point which we wish to notice is this: that by the act in its original form a decree of dissolution took effect as soon as it was pronounced, subject only to an appeal to the House of Lords. But by a statute of 23 and 24 Vict., c. 144, every decree for divorce was made a decree *nisi*, and could not become *absolute* until after the expiration of three months. This period of suspense was extended to six months by 29 Vict., c. 32, s. 3. Or, in other words, the decree was to stand unless within this interval the Queen's proctor, or some other person, could show that it had been obtained by collusion, or that material facts had not been brought into court. Such intervention by persons other than the proctor has been, as Mr. Browning remarks, rare, and is not encouraging. The right of appeal lies to a full court within three months after the judge ordinary has pronounced his decision, and then, within one month, an appeal may be made from the decree absolute to the House of Lords. When these terms shall have expired and a marriage is dissolved, it is lawful for both parties to marry again immediately. In an undefended suit, both petitioner and respondent may marry again after the decree is made absolute.

We have no materials for judging whether the new English divorce law meets the wants of legislation in all respects, and whether, as in some of the United States and other Protestant communities, the door, once opened, may not be opened wider and wider, until almost every serious cause of difference between married parties will be made a ground of dissolution of marriage, and divorces be greatly multiplied by the temptations suggested by the law itself. The liberty conceded to both the parties to marry again as soon as divorce is decreed on account of the crime of one of them, is questionable on moral grounds, we must be permitted to think; it tempts to the commission of a grave moral offence; it places the innocent and the guilty on the same level; it gives one who has entered a family to destroy its peace the opportunity by his crime of forming a legally honorable connection with the partner in his guilt; and in more ways than one it weakens the feeling of the sanctity of marriage which is necessary for the maintenance of all the great interests of society.

Princeton College during the Eighteenth Century. By Samuel Davies Alexander, an Alumnus. (New York: A. D. F. Randolph & Co. 1872.)—We must offer an apology for delay in noticing this valuable and highly instructive work—the fruit of patient and loving labor sure of not being rewarded beyond its deserts, and which cannot, therefore, be too early or too widely made known for public appreciation. Mr. Alexander has succeeded in tracing more or less fully the post-graduate careers of 646 out of 894 alumni of Princeton from the year 1748 to the close of the century. The several classes are taken up in their order, and the members of each noticed alphabetically, but of those concerning whom the compiler has failed to obtain any information not even the names are mentioned, which we cannot but regret. To have inserted them in their proper places would have facilitated rendering that assistance which the compiler craves in preparing a supplement to embrace them; and it would have left the work complete even in its incompleteness. However, the biographies are very attractively written, being interspersed with anecdotes personal and historical, which make continuous reading by no means difficult. Some of the best of these are told of clergymen. Bishop Clagget (1764), for instance, who had a fancy for wearing his mitre on state occasions, was to officiate at the consecration of a church in Alexandria:

"Putting on his robes and his mitre at some distance from the church, he had to go along the street to reach it. This attracted the attention of a number of boys and others, who ran after and alongside of him, admiring his peculiar dress and gigantic stature. His voice was as extraordinary for strength and ungovernableness as was his stature for size, and as he entered the door of the church where the people were in silence awaiting, and the first words of the service burst forth from his lips in his most peculiar manner, a young lady, turning around suddenly and seeing his huge form and uncommon appearance, was so convulsed that she was obliged to be taken out of the house."

Azariah Horton (1770) was the son of a minister of the same name, of South Hanover (now Madison), New Jersey, part of whose will read: "and my further wish is that my negro wench Phillis, and her two sons, Pompey and Pizarro, be sold, the money arising from the sale to be equally divided between my wife and son Foster and daughter Hannah." To the certificate of church membership which James Crawford (1777) received from his pastor, Rev. John Craighead, the year of his graduation, were added these words: "And also he appears well affected to the cause of American liberty." This incident, as Mr. Alexander points out, is an evidence (by no means solitary) of the political preferences of the Presbyterian clergy during the Revolution, and it must be added that in their patriotic leaning they had the support of nearly every Princeton graduate of the time. Among these are to be found names of all degrees of greatness and renown in our national history, and a gratifying number of examples of what Mr. Galton would call "hereditary genius." Richard Stockton, Joseph Reed, Benjamin and Richard Rush, Oliver Ellsworth, Luther Martin, Philip Freneau, James Madison, Aaron Burr, Brockholst and Edward Livingston, are some of the more eminent alumni with whom this generation is familiar; but Princeton had also trained the teachers of Madison and Burr and Hamilton and Wirt. Indeed, it is hard to say if the obscurer names in the catalogue should not stand for even higher services to the country than the most famous. No one of us could name the founders of Dartmouth, Brown, Union, Hamilton, Dickinson—all Princeton graduates; or of the dozen other colleges that Mr. Alexander enumerates in his preface which they either founded or revived. Yet if we consider the formation of the Union to have been the work of a hundred years, ending with the surrender of Lee and Johnston, and if it is true that the schoolmaster carried the day at Gettysburg and Appomattox, these nameless pioneers of the higher education had a part not less noble than that of the framers of the Constitution and the heroes of the Revolution. Certainly they have an equal claim on the remembrance of their Alma Mater.

We presume Mr. Alexander will feel obliged to us for pointing out a few errata which lie mostly on the surface. Page 39: *Sabin's* "Loyalists" should be Sabine's. Page 54: "Shipping" should read Shippen, and "1749" should read 1754, as will be seen by reference to page 33. Page 66: the date of Dr. Benjamin Rush's death is not given, but as this omission occurs elsewhere where it would seem to have been not difficult to supply it, it may be intentional. Page 316: the sketch of Jacob Lindly would have been improved and corrected by reference to Walker's "History of Athens County, Ohio," p. 253. Walker's notice is in error in giving the year of his graduation at Princeton, but it is probably correct in stating that he became president of the Ohio University in 1808 (instead of 1804) and that he died (Jan. 29) 1857 instead of 1856. Walker, by the way, uniformly spells the name Lindley.
